NEWBERY-VAUTIN (PATENTS) GOLD EXTRACTION CO., LIMITED.—At the annual meeting of this company yesterday, held at Winchester House, nothing more than purely formal business was done, and the meeting was adjourned until Apl. 8.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN and BIRMINGHAM BANK, LIMITED.

Investors in all classes of Stocks and Shares should read Mr. Thos. Thompson's Mining and Investment Circular, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

LESTER AND HOOK,

Option, Stock, and Mining Share Dealers,

2, COPTHALL CHAMBERS, E.C., and MINING EXCHANGE, 9, OLD BROAD STREET, E.C.

A GREAT ADVANTAGE TO RAILWAY OPERATORS.

Lester and Hook are prepared to deal in Home, Colonial, Foreign, and American Rails, for two months forward on deposit of 2 per cent., and guarantee to close at any time before the expiration of the account specified on the contract.

Lester and Hook advise immediate purchase of Louisville, Mexican Ordinary, Milwaukee, Brighton "A," and Canada Pacifics. The above Stocks are leading the Market, and a rapid advance in prices is fully anticipated.

Telegraphic Address: — "LONGEVOUS, LONDON."

MEMBERS OF THE MINING EXCHANGE.

BURRELL, BRADDOCK & CO.,

Stock and Share Brokers, Mining and Financial Agents,

STOCK EXCHANGE BUILDINGS,

90, QUEEN STREET, MELBOURNE,

Undertake Agencies for Investments in AUSTRALIA, and negociate the purchase of Mining Properties.

Personal inspection by a member of the firm of all properties under negociation, thus ensuring the safest guarantee of the *bonâ fides* of mines, &c.

W. Y. CAMPBELL, F.G.S., and E. W. EVANS.

Bankers.—THE MANCHESTER AND LIVERPOOL DISTRICT BANKING COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular coutaining special information will be posted weekly from the South African Office to all subscribers.

A Special Cable Code for Prompt and Economical Communication between the South African and London Offices.

Further information can be obtained at the Head Office of the Company.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

RECOMMENDATIONS FOR CURRENT ACCOUNT:—

INDIAN CONSOLIDATED,
MYSORE REEFS,
NINE REEFS,
MYSORE WEST,
MYSORE WYNAAD,
DEVALA MOYAR.

All recommendations this month have, up to the present, been correct, and large profits to our followers the result.

We make Mines a special study, and invite correspondence, whether business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close market price of the day on 10 per cent. deposit, and carry them over as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly, irrespective of account day. We sell shares at current prices for forward delivery at one, two, or three months on 15 per cent. deposit. Clients may rely on fair treatment at our hands. We are members of the Mining Exchange, and subject to the rules and regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Allottee (M. K.)—You must pay the call in any case. We are sorry for you, but if it is any consolation others are in the same boat.

S. Duncan (Basle).—Advise you to leave them alone just at present, and wait for the next mail. It is expected shortly, and will no doubt enlighten you and others on the subject.

Shipper.—It is a good opportunity to buy, and we think you do well by grasping it.

Hide and Seek.—The rise is of a genuine character as far as we can judge. We have a better opinion than you suggest of the parties named.

Bookseller.—The meeting is to be held next week, when some important statements are expected to be made. Hold your shares.

Sinex.—The making up price of Day Dawn Block is 6s. 9d., and Transvaal Estates ⅞. The market changes will be found in another columu.

Corner Man.—Thanks for suggestion.

B. L. Mills (Midlothian).—We consider there is every chance of the re-construction going through. Advise you to act with others named.

Manchester Reader.—Cannot be relied on. It is only to suit themselves.

Sold.—Very expensive and unnecessary machinery has been bought; in fact, extravagance exists in everything that is done by the present management. Shareholders should call a meeting themselves, in our opinion, without delay.

Benbow (J. J.).—Do not think a dividend is likely. Should you wish it we will quote a few with much brighter prospects.

Araminta.—Yes. It is managed by the same firm, and you may depend upon them.

Holder (Glasgow).—Have paid several dividends. The shares fell, as you say, through the announcement. Would rather hold than sell the shares just now.

T. C. B. (Paris).—By this time you will have had the letter we sent you by post. You could only be fully replied to in that way.

The Mining World.

LONDON: SATURDAY, MARCH 14, 1891.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

MYSORE REPORT.

THE report of the Mysore Co. has been issued in anticipation of the meeting on Thursday next, of which, of course, we shall give a verbatim report. From many points of view it is to be regarded as the most satisfactory the company has ever issued. We have been unable to find a single exception to the rule we boldly lay down—that it exhibits progress all aloug the line. Every paragraph is fitted more and more to impress the reader with the magnitude and importance of the enterprise. The sales of gold this year realised 229,966*l.*, and the profit for the year was 155,799*l.*, of which 139,023*l.* has been declared in dividends, 10,959*l.* devoted to depreciation and other purposes, and 61,935*l.* carried forward. Out of the latter sum has come the dividend paid on Tuesday of 6s., which absorbed 59,828*l.* The total dividends for the year have been 15s. a share, or 75 per cent. on the capital of the company. That capital, by a resolution on Feb. 27, was increased from 200,000*l.* to 225,000*l.*

Turning to the mines, the extraction of quartz was 38,812 tons, which yielded 58,082 ozs., or an average of 1 oz. 10 dwts. 10 grs. per ton, and the report of Capt. Gilbert is encouraging in every possible way. For example, the reserves are now 80,000 tons, or an increase of 30,000 tons over the previous year, being more than two years' supply in sight. The underground developments have been of a remarkable kind. At every point of the mine there has been an improvement in old ore bodies or the discovery of new ones. Rowse's shaft has been driven through very valuable ground, and this section with that of Taylor's has furnished practically the total extraction of the year. Towards the end of 1890 a valuable shoot of ore was discovered in Tennant's shaft, and not less than 15,000 tons of quartz were laid open here, whilst other operations have been of a satisfactory kind, if not of equal importance.

The machinery has worked admirably. The mill has crushed 38,812 tons of quartz, and the tailings machinery has dealt with 18,553 tons, which yielded 5,580 ozs. When the 18 new pans are in operation, the tailings plant will be capable of dealing with about 40,000 tons a year. An additional 30 head of stamps with further plant for the direct treatment of the tailings as they come from the mills have been ordered, and will be despatched without delay. The mills and tailings machinery will then each be capable of treating about 55,000 tons per annum.

Extensive additions have been made to the machinery to keep up with the growing returns from the mine, and the rock-drills continue to do excellent work. A small railway is being built to facilitate transport, and other permanent improvements are being made with a view to increased efficiency. With the purchase of land from the Goldfields Co. our readers are quite familiar, and the confirmation of the special resolutions for that object will be proposed on Thursday. Mr. Rowse, the esteemed secretary of the company, paid (as we have already described it) a most useful visit to the mines, and returned with the rooted conviction that the company possesses a property of great value, and that at no period in its history has the mine been in a more prosperous condition. As the result of his visit, he has been able to suggest various improvements in the administration, which the directors say "will be of much value in the future conduct of the company's affairs." The report is one upon which the directors, the general managers, and shareholders may be alike congratulated.

ANGLO-PORTUGUESE INTERESTS IN MANICALAND.

AFTER a visit to this country, extending over about a month, Mr. Cecil Rhodes at the end of last week returned to South Africa, and it is said that he went away well satisfied with the success of the mission undertaken by Sir Henry Loch, the Governor and High Commissioner of the Cape, and himself. In so far as the visit was intended to remove the difficulties which have been created, or, at all events, intensified, by the action of the British Chartered Co., of which Mr. Rhodes is the guiding spirit, we sincerely trust that it will prove to have been entirely beneficial, for the future of our interests in South Africa is a matter of vital importance to British interests generally, and to the mining enterprise of the "dark continent" in particular. For reasons best known to Lord Salisbury, no authoritative statement has as yet been made with regard to the subjects discussed with the Cape representatives, nor with reference to the policy which is in future to be adopted in dealing with the Portuguese claims in Manicaland. The official reticence on this question, though it may be justified by circumstances, is nevertheless to be regretted. In an article in the *Times*, which seems to have been inspired by the British Chartered Co., it is asserted that Mr. Rhodes "has been firm in making no compromise, and approving of no concessions to Portugal. Even the concession of a patch of country to the north of Tetè, which Portugal asked for, and which it was thought might be granted, has not been acceded to. Concessions there, or in any other quarter, would do Portugal no good, and would only give rise to complications in the future." But this scarcely settles the points in dispute. We should be exceedingly sorry to undertake the defence of Portuguese policy, either in Europe or South Africa. Both at home and abroad the Portuguese Government has exhibited such a want of enterprise, and even of common honesty, that its influence is not a thing that we should wish to encourage. But it is to be remembered that the Portuguese Mozambique Co. acquired certain concessions from the Manica chief, Gungunhana, which were not disputed for a long time after they were granted, and that on the strength of these concessions considerable amounts of British capital were subscribed to work auriferous properties in Manicaland.

It is contended, on behalf of the British Chartered Co., that there is no such treaty in existence, and that the document drawn up by the Portuguese officials, in the presence of Gungunhana, is not worth the paper it is written on. As the matter is one of considerable importance, we present our readers on another page with a translation of the treaty, which was made by the Manica chief as recently as Dec. 29 last. The document is drawn up in a very quaint style, and some of its sentences are none too explicit; but it is sufficiently clear in stating that Gungunhana considers himself entirely under Portuguese protection. "His object was," said the ruler, "to make public before the strangers present that he and his people, as well as his grandfather, Manecusse, and his father, Muzilla, were vassals, faithful and submissive, of his Majesty the King of Portugal, and that further, whatever might be said or intrigued, the lands of Gaza should be Portuguese in which he lived, and he should be the Governor." It is, of course, easy enough to say that Gungunhana, if he ever made this treaty, has since desired to place himself under British protection, but it is by no means easy to disprove the one statement or to prove the other. However, the *modus vivendi* between Great Britain and Portugal does not expire for a couple of months yet, and it may be hoped that in the interval matters will be arranged in such a way as to preclude the possibility of injustice being done to British shareholders in companies deriving their titles from the original Mozambique undertaking.

THE DE BEERS CO.

IN the last issue of the MINING WORLD we referred to the position of the market for diamond shares generally, and for those of the De Beers Consolidated Mines in particular, and we strongly advised our readers, however much they might feel that De Beers shares were over-valued, not to enter into speculations for the fall in them. At the same time we expressed the opinion, as we have frequently done before, in unmistakable terms, that investors would act very unwisely in purchasing these shares at anything like the current quotation. It has since occurred to us that, in the case of such a gigantic undertaking as the De Beers Co., it would be well to enter more fully than we did last week into the reasons which have induced us to offer these bits of counsel to those who, in a greater or less degree, look to us for guidance in their investments. Upon the first of the points it is unnecessary to enlarge at any length. The De Beers Co. unquestionably stands in a thoroughly sound and healthy financial position, if it is once admitted that its capital and obligations are not unwarrantably large. We shall deal with that matter later on; but taking the company as we find it, there is ample evidence that its monetary condition is very strong. And it is indisputable that, from the market point of view, the position of the company is too firmly established to make it safe or prudent for people of limited means to "bear" the shares, even if such an operation were ever to be recommended. De Beers shares sell as freely in Paris and Berlin as they do in London. They have, therefore, something of an international character, and are subject to much the same influences as those affecting Foreign Government bonds.

It is, however, from the investment standpoint that we wish to refer to the shares of the De Beers Co. We need scarcely remind our readers that the company, in its present form, dates from Mar., 1888, the original undertaking having been established eight years previously. At the re-construction, three years ago, the Kimberley Mining Co. was amalgamated with the De Beers, and later on the amalgamated company, by successive steps, obtained possession of the Dutoitspan and Bultfontein mining areas. But the scheme set on foot by Mr. Rhodes, and most ably carried through by him, has meant the building up of a great undertaking, with an amount of

capital, of one sort and another, approaching eight and a-half millions sterling. In the following table we give the details of this capital, as shown in the last balance-sheet issued by the company :—

Ordinary shares of 5*l*. each...	£3,948,955
First debentures—5½ per cent.	2,250.000
Second debentures—5½ per cent.	1,355,500
Griqualand West debentures	158,000
De Beers Bultfontein obligations	745,400
	£8,457,855

This is, of course, an enormous amount, and it is important to notice that less than one-half of it is represented by ordinary capital. The debentures and other obligations involve the following annual interest payments :—

Interest on debentures	£198,852
Interest on obligations	40,996
Interest to leased companies	69,726
	£309,574

In addition to this, the amount properly written off machinery and property exceeds 200,000*l*. a year ; so that more than half a million sterling per annum has to be deducted from the net profits before the ordinary shareholders receive anything. This is one of the things which should make investors reflect very seriously before taking up De Beers shares. It is true that for the first year of the re-constructed company 15 per cent. was paid upon the ordinary shares, and for the second year 20 per cent. With the current month the third year of the De Beers Consolidated Mines will close, and, as we mentioned last week, it is anticipated in some quarters that the balance dividend will be 12s. 6d., making 22½ per cent. for the year, and that an enormous balauce will be carried forward. As the market for rough stones is in anything but a brisk condition, however, and as in the past the directors havc shown no disposition to pay larger dividends than could be well afforded, we are inclined to thiuk that the shareholders will have to content themselves with 20 per cent. To the original shareholders this is, of course, a very handsome return ; but some of the present proprietors went in at 23, less than a year ago, and to them the return, assuming that 20 per cent. is paid for the twelvemonth, will be just about 4¼ per cent.

Do not let it be supposed for a moment that we would fasten any blame upon the directors because foolish investors obtain such a small yield. Neither Mr. Rhodes nor his colleagues have ever committed themselves to statements at all warranting such a market valuation for the ordinary capital as something over 18,000,000*l*., the sum represented by the shares when they stood at 23⅛. That absurd inflation was produced by the manipulation of some of the big financiers who, no doubt, took advantage of the opportunity their gambling created to part with the whole or a large portion of their shares at fancy prices. Even now the ordinary capital of the De Beers Co. stands in market estimate at close upon 12,000,000*l*., while the debentures and other obligations bring up the aggregate valuation to over 16,000,000*l*. This is an extravagant sum for a series of properties, which, though undoubtedly very rich in diamondiferous soil, can only be partially worked, owing to the fact that if the whole of them were producing, the supply of diamonds would be vastly in excess of the demand. Production has to be artificially restricted, so as to maintain prices at a remunerative level. In other words, the De Beers Co., having the practical monopoly of the market for the class of diamonds found in the Kimberley mines, is able to earn substantial profits by working two of the properties, and keeping the other two closed. Even now the real difficulty is to get rid of the produce, and this is a difficulty that is not likely to diminish while European trade is far from brisk, and most of the South American States have, from circumstances beyond their control, ceased to be buyers of diamonds to any large extent.

We would only add that at the present price De Beers shares stand to pay the investor about 6½ per cent. ; while Consolidated Bultfontein shares, which are guaranteed by the De Beers Co., yield nearly 7½ per cent. Griqualand West shares, also enjoying the same guarantee, return over 7½ per cent. ; and even De Beers second debentures are good for nearly 6 per cent. at the present quotation. If, therefore, any of our readers have a particular fancy to be interested in the De Beers Co., we fail to see why they should select the ordinary shares, when securities ranking before them in the same undertaking can be purchased to much greater advantage.

THE AFRICAN GOLD RECOVERY CO., LIMITED.

Statistics show that the mines on the Witwatersrandt have since 1887 produced 1,100,000 ozs. of gold, and the serious statement, which we can well believe, is that this only represents about one-half of the precious metal which the 1,800,000 tons treated contained. Imagine, therefore, the boon it will be to the commerce of the world in general, and to the mining industry in particular, if some process, or even some combinatiou of processes, can be introduced by which this enormous loss can be avoided. Why, the effect upon mining would be of the most marvellous kind. Companies that are now struggling with the difficulties of re-construction, not to speak of those that are already within measurable distance of the dark portals of the Winding-up Court, would appear rejuvenated, and put on the garments of financial stability, and become dividend paying. It is to effect this transformation in mining that the Gold Recovery Syndicate of Johannesburg was originally formed, and the present company is established to take over its rights and to work with much increased capital the license of the Cassel Gold Extracting Co., Limited (MacArthur-Forrest process), along with the plant and business already acquired. It is claimed for the patents of the MacArthur-Forrest process that it has overcome all serious drawbacks, and that by means of the simplest description, and at comparatively low cost, ores which have hitherto defied the ordinary methods simply surrender at discretion the greater part of their metallic contents. In fact the features of the process are described as "simplicity, efficiency, and economy, as well as rapidity of treatment." We agree with the prospectus to the last word, where it says that the value of this process, granting the foregoing conditions, in the Transvaal can be scarcely over estimated. That value is accentuated when we come to remember that, although the Randt reefs become richer as they go down, the ore is more refractory, so that the ordinary methods of treatment have met with but partial success. The statements in this prospectus would, in a sense, pass by us like the idle wind had the process not been tested in public at the Salisbury Co.'s works near Johannesburg, and the certificate is to the effect that quantities of tailings, concentrates, and very refractory pyritic ores from various mines and districts were treated, and that results equal to from 80 to 98 per cent. of the assay values were recovered. This is a fact that there is no getting over, and it certainly enables us to speak of the prospectus in more confident terms than we should otherwise feel justified in employing. The process has achieved success in America and elsewhere, but it is, of course, in the Transvaal that the preseut company will find its pasture ground. The Gold Recovery Syndicate of Johannesburg will hand over to the new company their plant at cost price, and the benefit of licenses and contracts will also be taken over by this company, who will be entitled to profits "as estimated by the syndicate to amount to about 40,000*l*." It will not be forgotten that at the recent Sheba meeting it was announced that 9,000 tons of the company's tailings had been purchased, and these, which may be expected to yield a large profit, will be taken over by the company. A similar contract has been made for 10,000 tons of the valuable tailings of the Robinson Mine, and there are other contracts acquired to all appearances of a very valuable kind. It is well known that in the Transvaal at the outset only the richest ore was treated, aud that by the crudest methods, and by persons whose knowledge of mine management and ore treating was in inverse ratio to the cool audacity with which they set about it. Hence we are of opinion, that assuming the Cassel and Co.'s process to be as successful at other mines as it is certified to be at that of Salisbury and in the surrounding district, an immense and profitable business lies before it in the treatment of the refuse tailings alone, quite apart from those refractory ores that are found usually on the Witwatersrandt at a depth below 200 ft. The purchase price in cash and shares is 150,000*l*., and the total capital of the company is 200,000*l*., of which the present is an issue of 175,000 shares, 80,000 of which only are offered for public subscription. A good working board has beeu formed, and amongst the brokers we observe the well known firm of Messrs. G. H. and A. M. Jay, of Old Broad Street. We had practically finished our observations upon this prospectus, when our attention was called to the cable sent last week by the Gold Recovery Syndicate, stating that 1,574 ozs. have been recovered from 1,350 tons of Robinson Co.'s tailings for the month of Feb., leaving an approximate profit of 2,070*l*., after paying purchase cost of the tailings so treated.

WALKERS, PARKER & CO.—THE PILOT GONE.

The peace that formerly prevailed amongst the members of Walkers, Parker & Co., Limited, is fled, and when the curtain was raised on Wednesday last the directors were found to be at loggerheads amongst themselves. It scarcely seems 12 months since the chairmau, Mr. W. Wentworth Walker, before the assembled shareholders metaphorically fell into the arms of Mr. E. J. Walker, the managing director, and spoke of him as the person of all others to whom the shareholders owed the handsome profit then announced. So arduous were Mr. E. J. Walker's duties, in the opinion of the chairman, at that date, that his only fear was lest that gentlemau should break down under them. At Wednesday's meeting, however, the chairman coolly passed by the chief paragraph in the report, announcing the resignation of Mr. E. J. Walker, as though it were an event unworthy of mention, but we cannot refrain from expressing the opinion that by the departure of this gentleman the company has lost its best counsellor, and its most experienced director. But not only do the directors find themselves at loggerheads with Mr. E. J. Walker, but also with Mr. Carson, who, next to Mr. Walker, probably, knows more about the lead trade than the remainder of his colleagues put together. This gentleman was *not* recommended by the board for re-election, but after heariug what Mr. Carson had to say in his own defence the shareholders, by a large majority, re-elected him, and thus administered to the directors iu general, and to the chairman in particular, a rebuff which they will not soon forget.

We call attention to the allegations of Mr. Carson, because they are most serious, and, if accurate, go far to account for the non-realisa-

tion of those prospects which the board foreshadowed in their previous report. They admit themselves that the result of the year's trading is unsatisfactory, and say they are "now investigating with a view to discovering whether any cause other than the continuous fall in the price of lead has contributed to this result." We hope their inquiries will begin at home, and that they will consider seriously whether they have the knowledge and experience which Mr. E. J. Walker brought to bear upon the company's affairs, and whether in letting him go they have not practically lost their pilot. This view is strengthened by the remarks of Mr. Carson which, we repeat, were of a serious kind. That gentleman stated that the finance meetings, as now conducted, are a sham; that the directors' meetings, since the present chairman has presided over them, are too few; that the directors have never but once (and that at the commencement of the business) seen the property they are attempting to manage; that his suggestion to hold periodical meetings at the respective works at Newcastle, Chester and elsewhere was not adopted; that the directors never, save by chance, see the managers, and that the treatment of Mr. E. J. Walker has been most unhandsome. Any one of these statements would be serious enough, but all of them combined seem to demand in the interests of the shareholders who have put their hard-earned sovereigns into the concern, the most rigid, independent, and impartial enquiry. If Mr. Carson be found wrong in his allegations, then in justice to his colleagues his retirement should be insisted upon, but if on the other hand those allegations are proved to be correct, then the sooner the shareholders appoint more efficient colleagues to support him the better. If it be true (as we thiuk it is) that Mr. E. J. Walker "knows more about the lead trade than all the other members of the board put together," then the sooner that gentleman is reinstated the sooner will the prospects of the company be re-established. Mr. Wemyss, who admits that he knows nothing about the lead trade, and who comes to the board with the doubtful recommendation that he is a director of the North British Railway, cannot be regarded as a satisfactory substitute for a man of Mr. E. J. Walker's vast experience of a trade, which one shareholder described as "unique in the world." It appears that the chief result of last year's work has been to get rid of a gentleman who may be truly described as the only one on the board possessing technical and practical knowledge of the business, and we confess we are not surprised that the remainder of his colleagues "cannot consider the result of the year's trading satisfactory."

WEST WHEAL GRENVILLE AFFAIRS.

IT is, no doubt, disappointing to the directors and shareholders alike of the West Wheal Grenville Co. that the operations for the intersection of the Great Flat lode have not yet been successful, but we venture to say that those who went to the meeting on Wednesday last with downcast faces departed from it with renewed hope. Although the lode has not been met with at any of the points anticipated, there is no doubt, as the chairmau said, that it does exist in the company's sett, and its intersection is only a matter of time. The policy, therefore of the board (and it is endorsed by the most experienced miners in Cornwall) is to go on vigorously working at the four points now being attacked. That this will result in ultimate success appears to be the opiniou of all who know the property and who are best able to judge.

POTOSI AFFAIRS.

POTOSI shareholders yesterday afternoon came to a wise decision when they adopted the advice of the directors to re-construct on the basis of half-a-crown liability. The facts we cannot but regard as altogether extremely encouraging. In the first place the preference shareholders have not been deficient in that rare quality in business life—self-sacrifice. Originally they were debenture-holders, but some time ago when the company was re-constructed they became non-cumulative 10 per cent. preference shareholders with also a prior right to the assets in case of winding up. Now they assume the position of ordinary shareholders, and Potosi starts with a clean slate so far as preference charges are concerned. Moreover, as the preference shareholders are also ordinary shareholders they will make a handsome contribution to the funds now to be raised by subscribing on the same basis as the other shareholders for their ordinary shares. That is the position at home, and the state of affairs abroad is almost most hopeful. In the first place, the company has, as a manager, Mr. Pryor, whose honesty and economical administration have won for him the confidence of all who have a full knowledge of the facts. Then, again, Potosi has not to search for its lodes, but has already found them. In additiou to the Socorro, there is the still more valuable Potosi lode, which never looked better than it does at the present time. The expenses and the returns very nearly balance each other, and, with working capital coupled with a uew mill (which the board will only proceed to erect after they are in full possession of the facts), we see no reason to doubt the fulfilment of the belief of Major Scriven that the balance will be on the right side. These are the main facts which justify the re-construction of Potosi, and a further one is to be found in the devoted and self-sacrificing labours of the board, who, to every fresh issue of whatever kind, have always been to the front as the largest subscribers. If ever a company was well served by directors it is Potosi, and we should greatly rejoice if the result of the present attempt should prove to be a great and substantial success.

VENEZUELAN AUSTIN AFFAIRS.

THE directors of this company have issued what might be expected from them—an honest report—by which we mean a plain unvarnished tale of the actual position. It is perfectly true it is a report that cannot speak of success, but we defy any fair minded shareholder to put his finger upon a single sin of omission or commission with which the board can be justly charged. This is a company in which the shareholders have had what is commonly called "a run for their money," and the end of the course has not by any means yet been reached. The directors have selected the superintendents, most of them recommended to them in every way by which a judgment of character and ability could be formed, but whether it has been the result of misfortune or of fault, the issues achieved by these gentlemen have come far short of their predictions to the board. At the meeting in October last the directors were authorised to issue 50,000*l*. of debentures. At that time great hopes were entertained of the Corina lode with its 15,000 tons, but the ore yielded less than ½ oz. to the ton, and at the Potosi meeting yesterday it was roundly stated that with every economy that could be introduced ¾ oz. could scarcely be made to pay. With Venezuelan Austin it is gratifyiug to learn that whereas 12 months ago the milling costs ran up to 2*l*. 4s. they are now down to 33s. The property of the company is very extensive, and on other portions of it the indications are decidedly more favourable. In fact, the Corina is ouly one of eleven concessions, and the board, with the courage of the race, desire the shareholders to make another venture during the next twelve months at an estimated cost of 10,000*l*., and for this debentures will be issued on unusually favourable terms. We trust this policy will be endorsed by the forthcoming meeting, and that the further hope of the directors will be realized, that each shareholder will do his duty by taking his fair proportion of the issue.

LIBIOLA AS AN INVESTMENT.

THE Libiola directors, in spite of not a few untoward circumstances, may be congratulated upon having brought their company through a successful year. A dividend of 6s. 6d. is not to be despised, and, seeing that the shares are quoted at a considerable discount, we think the facts, as mentioned by Mr. James at the meeting on Monday, deserve to be put on record, and notably this one—that since the year 1880 the profit earned by the mine has been 233,173*l*., so that the average annual profit since that year has been 23,000*l*. The forecast for the present year is a dividend of 8s. The copper market favours this view, for whereas this time last year the price of that metal was 47*l*. 5s., it closed last night round about 52*l*. A rise in the price of copper of 10 per cent. compares with a decrease in stocks of 33 per cent. Some valuable information was given at the meetiug both by the chairman and Mr. Weir (acknowledged authorities on the state of the copper trade), and those interested in mines producing this metal would do well to read what they said. We agree with the chairman in thinkiug that Libiola shares, considering all things, are quoted much below their real value, and we are also of the opinion of the board that no great good will be doue by the reduction of the 5*l*. shares to a lower denomination. We could mention more than one case in which the shareholders bitterly regret that they did not in this respect follow the old adage, and "let well alone."

PROGRESS OF THE ROBURITE CO.

THE opponents to the policy of the board cannot be congratulated on the figure they cut at Monday's meeting. They were not particularly happy in the choice of a leader in Mr. Spark, who never at any point of his address seemed to be able to kindle the flame of enthusiasm, but whose observations were at times received with irreverent laughter and anon with ironical applause. The speech of this gentleman had been heralded by a circular, which the chairman described as a tissue of iuaccuracies, and his motiou of unqualified censure of the board was not treated seriously by the meeting. The chairman, in his speech, had described the business of the company as progressing, aud the compauy itself as having actually turned the corner. When the company commenced operations there was really no business—it only acquired a patent called Roburite. The value of this patent was well-known to Sir John Stokes and his colleagues, or they would never have become directors of the company. It is, however, one thing to have an inner consciousness of the merits of an iuvention when you yourselves possess it, but it is quite another to inspire a similar faith in those who are to be your customers. The board, first of all, had to establish their works so as to produce their article, and when they could do this on a commercial scale, to find a market for it. If Mr. Spark does not know what all this means we can tell him in a word—it is establishing the business. Mr. Spark cannot have forgotten that when the mountain would not come to Mahomet, Mahomet had to go to the mountain. Now, the users of explosives have been accustomed to

use dynamite, gunpowder, and the like, and, therefore, would not come to Roburite. Hence Roburite had to go to them, or, to put it more accurately, the directors had to send it to them by means of duly appointed agents, by experiments, by free gifts of the compound, and every means that the ingenuity of man could devise. The success of the endeavours of the directors at home has been great, but it is eclipsed by that which they have achieved abroad, which has been made so clear to the intellectual capacity of Mr. Spark that he is surprised at it. That success will be more pronounced as time goes on, and time in this case, as the lawyers say, is "of the essence of the thing." Reasonable shareholders know this, but those of the Spark class appear not to grasp the idea. Their apparent want of comprehension is somewhat explained by the side lights thrown on their proceedings both by the chairman and Adml. Colomb, but even this aid was not required by the shareholders to assist them to a decision, as recorded in our lengthened report of the proceedings, at which all well wishers of the company must rejoice.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

THE Money Market has been more inclined to firmness, partly in view of the payment for Treasury Bills to-morrow, which will take one and a half millions off the market, against 845,000*l.* released last Friday. The Stock Exchange settlement, although a very light one, caused some demand, and raised rates for the time to 2, ½ per cent. Discount, after being 2¼, ⅜, became steadier at 2⅜ per cent., and the tenders for Treasury Bills last Monday were allotted close up to the market rate. The bullion movements of the week comprised an influx of 114,000*l.*, and the return shows an increase of 183,000*l.* in the stock of the metal, while the note circulation has diminished 263,000*l.*, so that the total Reserve has improved 447,000*l.*, to 15,817,000*l.*, against 16,904,000*l.* at this time last year. The liabilities under deposits have also run off, with the result that the proportion is 1½ per cent. better, at 38½ per cent. The public deposits have decreased 475,000*l.*, against an increase in the receipts from revenue due to the repayment of Treasury Bills, and the private deposits have declined 227,000*l.*, while the private securities have run off 1,057,000*l.* The Exchanges have moved unfavourably to us, but money is dearer on the Continent than here.

On the Stock Exchange, this week, matters have not been all honey, for, apart from a continuance of depressiou, there has been the settlement to occupy attention. This has passed off without any actual default, and satisfactory as this is to the lay mind, it is an immense relief to those professionally engaged, although many dealers have undoubtedly had to claim the indulgence of their creditors. Consols have, however, been very buoyant owing to purchases by the Government broker, and the vague ideas floating about regarding the creation of small bank notes. Rupee loans again have shown steadiness, and Corporation stocks found buyers for investment. Foreign securities dependent upon the Continent have exhibited all the latter's lights and shades, but remain fairly good, with the exception of Argentine. The carrying over rate was only 1 to 3 per cent., and stocks continued scarce. English railways have declined, notwithstanding a short supply and the fact that most "bears" freely paid backwardations. The North British Co. has at length announced a dividend of 1½ per cent. per anuum on the 3 per cent. preference, and this result appears to be the minimum expected, though last year the preferred received in full, and the deferred ordinary got 3½ per cent. The weather has, of course, operated against all descriptions, and as a criterion of what the companies lost over this unfortunate *contretemps*, the Brighton, for two days only, showed a traffic decrease of 2,000*l.* In Canadian Railways prices are distiuctly lower upou the bad impression created by Sir C. Tupper's unfair and unprovoked speech, while Mexican (Vera Cruz), only within the last few days, have recovered. Nitrate Railways, and in fact all that group, are stronger, influenced by a recovery in the value of the soda. American Railroads manifested quietude and steadiness, with Wall Street doing ditto. Save Reading, Atchison, Wabash, and Mexican Central bonds, the majority of roads, if altered on balance, are no worse. Breweries tended downward, particularly Allsopp's and Guinness's, and in Miscellaneous, Salt Union Trusts, and coal and iron shares have also fallen. London Road Car advanced 15s. on the contrary.

Falling exchanges tended to maintain discount rates to-day at 2 7/16, ½ per cent. for choice three months' bills. Business was fairly active, and money rather cheaper, loans for the day being about 2. The premium on gold at Buenos Ayres has fallen to 252 per cent., and the situation in the Argentine Republic has otherwise improved.

At the Bank of England to-day 30,000*l* in gold was received, chiefly from India, while 20,000*l.* was withdrawn for South America. Bar silver advanced to 45 5/16d.; Mexican dollars to 44d., and Rupee Paper was fairly supported.

The markets have been dull, but there was, perhaps, a little more doing with a better tone and tendeucy, the difficulties of the financial house in Paris referred to during the week having been arranged, but, unfortunately, another institution there has been spoken of to-day, and Paris prices under this influence came flatter towards the close. The Government broker bought another 50,000*l.* Consols to-day and is expected to continue his operations daily until the amount he has at his disposal (about 1,500,000*l.*) for the sinking fund has been expended. Consols nevertheless left off ⅛ lower at 96 3/4, ⅞, for money and 96⅞, 97, for account. Rupee paper rallied ½. In Foreign Stocks better accounts from the River Plate caused an improvement in Argentine securities of 1½ per cent. in the Bonds, and ½ to 1 per cent. in the Cedulas. Brazilian also improved ½ to ¾, and Chilian about 2 per cent. Mexican recovered 1¼, and International stocks were firmer, except for Spanish. Home Rails, with one or two exceptions, were better, North British rallying 1 per cent. on both Preference and Deferred, and others, ¼ to ½. American stocks improved and closed firm, but prices were only ⅛ to ¼ better. Grand Trunk stocks were ⅜ to ⅝ better, but Mexican, Ordinary, easier. Nitrate issues were all stronger on the rise in soda. Bank shares were also better, and the changes in Miscellaneous securities were more favourable than otherwise.

Annexed are the final quotations to-day:—Consols Account, 96 7/8, 97 xd; Egyptian Three-and-Half per Cent. Preference, 93¾, 94¼; Egyptian Unified, 98, 98¼; French Four-and-Half per Cents., 103½, 104½; Hungarian, 91 7/8, 92⅛; Italian, 93⅝, 93⅞; Mexican, 32¼, 32¾; Peru Corporation, 10⅛, 10⅜; Ditto Preferred, 28¾, 29¼; Russian, 1873, 99½, 100; Portuguese, 56¼, 56½; Spanish, 76¼, 76⅜; Turkish, 1871, 99¼, 99¾; Turkish Defence, 103¼, 103¾; Caledonian Railway, 113⅛, 113⅜; Great Eastern, 94⅛, 94⅜; Great Western, 159¾, 160; Brighton "A," 154⅜, 154⅝; North Western, 174¾, 175; Metropolitan, 77, 77½; Metropolitan District, 34, 34½; Midland, 147⅛, 147⅜; North British, 42⅛, 42⅜; North Eastern, 162⅛, 162⅜; South Eastern "A," 94⅝, 94⅞; Mexican Railway, 41½, 42; Grand Trunk 8⅜, 8⅝; Grand Trunk First Preference, 57¼, 57½; Grand Truuk Second, 37⅛, 37⅜; Grand Trunk Third, 20⅛, 20⅜; Canadian Pacific, 77⅞, 78⅛; Denver, 17¾, 18; Erie, 18⅞, 19⅛; Milwaukee, 55⅜, 55⅝; Lake Shore, 111½, 112; Louisville, 75¼, 75½; Atlantic First, 30¾, 31¼; Ontario, 16½, 16¾; Ohio, 16, 16½; Norfolk and Western, 54⅜, 54⅝; Reading, 15¼, 15½; Reading 5 per Cent. Bonds, 48, 49; Union Pacific, 45½, 46; Wabash Preference, 17⅞, 18¼; Ottoman Bank, 14⅜, 14⅞; Anglo-Telegraph, 47¾, 48¼ National Telephone, 4½, 4¾; Hudson's Bay, 18¾, 19¼; Suez Canal, 96¾, 97¼; Guinness, Ordinary, 303, 305; Allsopp's, 29, 31; Bryant and May, 13½, 14; Eastmans 11, 12¼.

MANICA OPHIR MINING CO., LIMITED.

EXTRACT FROM MR. VAUGHAN WILLIAMS'S LETTER.

Dec. 11.—I wrote to you from Chilouane, and to tell you I was alive, and to inform you of arrangements made with the Mozambique Co. I then explored the Busi River for a distance of about 130 miles and found it navigable for that distance for flat-bottomed steam launches. I next proceeded up the River Revne and found that navigable for 40 or 50 miles, thus I can bring goods from the coast by boat to within 30 miles of the goldfields. The River Revue is in the most fertile district of this part of the world and is largely cultivated. There is a great abundance of rice and other grain, and there are no trees after the first 20 miles, until the fourth day, the whole country being flat, and the banks of the river on both sides densely populated and extensively cultivated. Game of all sorts is there in abundance, and, unlike the other river, the Pungue (Arangua), is very healthy. There is a rise of about 16 ft. at high tide, and large vessels can thus enter. The natives are very industrious, and numbers speak Portuguese. Twenty-five miles from the Revue I arrived at the Paramount chief "Umtiwan." I have located 50 claims on a ridge running due east and west; the formation is slate. On the north side we have a quartzite bar running most of the way, and there is water enough for 50 or 100 stamps, providing the water is taken out high enough to give a sufficient fall. There is a reef of banket 20 ft. wide, but all the stone shows colour. I am prospecting it, but have not had time to prospect it thoroughly; but every pan of stone and casing has so far shown colour, and in the opinion of one of the best, and certainly one of the oldest prospectors here, it is worth developing. The stone is decomposed and much stained with irou. It is my intention to prospect it carefully, putting in a drive along the reef at the low level, so that I shall be able to mill all that comes out of the drive and dump it down at the site where the battery will be erected. The country here is high land some 1,700 ft., perfectly healthy. It is a most lovely country and the climate all that can be desired. This country has been worked for gold for fully a thousand years, and is simply riddled with old workings, some of which are so extensive that one cannot grasp the idea how the natives could have worked them. To give you an idea of the age of these fields there was discovered in one shaft at about eight or 10 ft. below the leaf mould formed therein the skeleton of a lion, the fangs of which, though ivory, were perfectly friable and pulverized between the finger and thumb. This country must have been a great alluvial field and worked by slave labour. In many instances they have taken out the casing and left the reef, in others they have taken all out. Again there are workings which must have taken years to excavate, which puzzles me entirely, for there remains no trace of gold, and yet they could never have been such fools as to work on nothing, but we at the present day are nonplussed. I am satisfied with my property; after prospecting I will take a fair average of the quartz, and start for England, so that no time may be lost. But this I should only do should the property be very rich. Now that I am here, I will inform you regularly of my proceeding, and the results of my prospecting. Fortunately, I have quite recovered from my attack of fever, and am well and strong. In conclusion, gentlemen, you may rest assured that what I have pegged out has every indication of being a very valuable property, and my expenses for the present are absolutely *nil*; but that cannot last long. I would, therefore, urge you to send a draft to the administrator, so that I may be able to thoroughly develop the property. It is certainly the largest body of ore that has yet been discovered in this country, and can be most economically worked. There is the Revue River on the west and south at the foot of the ridge, and there is the other stream which cuts through from the north, so that water is in abundance. There is any quantity of wood, and, I trust, sufficient of the precious metal to last for many years. The reef can be traced through every block, and I am very sanguine. I trust, gentlemen, that you will be pleased with the promptness and the encouraging result of my prospect.—A. VAUGHAN WILLIAMS.

REPORTS OF MEETINGS.

THE LIBIOLA COPPER MINING CO., LIMITED.

A SUCCESSFUL YEAR, WITH A DIVIDEND OF 6s. 6D.—A STOCK STRANGELY DEPRECIATED IN THE MARKET, AND NEGLECTED BY THE PUBLIC—PATENT FACTS FOR INVESTORS.

THE third ordinary general meeting was held at Winchester House, on Monday.

Mr. K. H. James

(chairman of the company) presided.

Mr. RALPH S. ARCHBOLD (secretary) read the notice of meeting.

EXPECTATIONS REALISED.

The CHAIRMAN : Gentlemen, my first duty is to ask you to resolve "That the directors' report and statement of accounts be received and adopted," and in doing so I think it will be as well for me to tell you a little of what has occurred at the mine during the past year, and also to show you that the expectations we held out at the last meeting have to a certain extent been fulfilled. I daresay you will remember that we anticipated the dividends would be on a larger scale than we then gave you, and also that we looked forward to an improvement in the quality of the ore. On both points, I am happy to say, we have not been disappointed. We have earned a dividend equivalent to 7s. a share, though, owing to a desire to give you as much as we possibly could, we rather overstepped the bounds of what we should have done in the previous year, and, hence, some of that was paid 12 months ago. Therefore, we are unable to divide more than 6s. 6d., although we have really earned 7s. The amount of ore raised has been practically the same as in the previous year, but it contained 736 tons of copper against 660 in the previous 12 months. For that 736 tons we also obtained a better price, and should have obtained a still higher one, had we not unfortunately shared in the belief, which seemed to run in everybody's mind about 12 months ago, that any improvement in copper beyond the point then reached was problematical. We, therefore, entered into a contract for the sale of the ore for the then current year with a minimum price guaranteed to us, so that we only shared in the larger profits to a certain extent, and not to the full amount of the rise which eventually took place. That will account for our not having earned a little more than we are now able to declare, but this year we have gone on the other tack, and it may be for this year also disappointment may await us. I further wish to say that I cannot predict the future of copper, nor can any other man here. (Hear, hear.) We have taken the best steps in our power to obtain the extreme price for the ore we raise at the mine, and we obtained offers of such a favourable nature, that had we sold on the same basis in the previous 12 months we should have earned at least 8s. per share instead of 7s. Of course, if the price of copper remains at its present level (that level being practically the average of last year), and always provided that nothing unforeseen occurs at the mine, and that no exceptional expenditure arises which we cannot foresee, we ought to be able to

!EARN FOR THE CURRENT YEAR 8S. PER SHARE,

which, even at the par value of the shares (5*l.*), would not be an unsatisfactory dividend. Unfortunately, during the past year we again lost a little money on the Cruccueu Mine, but the loss was not so large as in the previous 12 months. Still it was sufficiently important to prevent us giving you another 6d. We carry over a balance of 823*l.* 10s. 2d., but that is not sufficient to give you 6d. a share, for it would require 1,250*l.* Without that loss we should really have given you 7s. per share instead of 6s. 6d. The Cruccueu Mine has been a disappointment to all of us. Capt. Stephens (whose sudden death we have had occasion to deplore) always believed that the mine would turn out well, and indeed the indications were of such a satisfactory character that after the purchase had been made by this company a larger offer was made to the original vendors than the sum we paid for it. Therefore in buying it, as we then did, we may be well assured that we did it in the belief that it would prove a profitable investment. Capt. Stephens told us (and I speak in the trust that you will not raise any objection to what he did say, because he is dead, and unable to defend his opinions) that after this year he would find ore in the mine, or in reserve, to practically pay back the money we had lately expended upon it. Whether that view is correct or not we are not at present able to say, because the new captain has not sent in his report. We have a certain amount of ore which, presuming we intended to close that mine, we should be able to take out, and therefore the loss might not be so large as is shown. Seeing the perpetual call upon us for a further expenditure without any corresponding return from the mine, in the summer of last year we made an arrangement with the vendors to alter the terms of the original contract, and they, still having faith in the property they sold us, consented to that alteration. (Hear, hear.) I believe the original contract was that after paying the expenditure on the mine they were to be entitled to one-half of the profits which might then accrue.

A MODIFIED CONTRACT.

We arranged with the vendors that they should waive their right to one-half of the profits, so that, presuming the mine did turn out favourably, we should only have to pay a quarter of the profits to the orginal vendors and retain three-quarters for ourselves. That is the best arrangement we could come to, and we are still waiting to hear from Capt. Mitchell as to what he thinks we ought to do with the mine in question. All gentlemen who have been connected with mines know that mining to a great extent is a speculation. I should think there is no mine in the world as to which any man could predict the future for any number of years, except in the case of such a large deposit as that at Rio Tinto. Even the existence of those large deposits, which were thought and believed to exist, was at one time doubted so much that the 10*l.* share was practically unsaleable at 50s., so that the frightened ones sold out, and I think in some two years' time those shares rose to about 34*l.* That will show you that mining is—well, a gamble. (A VOICE : A lottery.) That is the better word. We, as directors of a mining company, do not like to close down a mine which has left, comparatively speaking, only a small loss, and, therefore, I trust you will approve what we have done. Our future action with regard to that portion of the property will be entirely guided by what Capt. Mitchell will say.

DEATH OF A VALUABLE SERVANT.

I must express the deep regret of the directors at the loss they have sustained in the death of Capt. Stephens, who undertook the duty of superintendent of Cruccueu Mine at a small nominal salary, in the belief that all the trouble and anxiety it would give him would be afterwards rewarded by a proper remuneration being paid him for his services. Those services he gave us, and in everything he did we always found him an honourable, truthful and upright man, and I am sure that in losing him we have lost a very valuable servant. With regard to our mine, I have no doubt it is a matter of dissatisfaction to many shareholders that a share that stands at 5*l.* fully paid should at the present moment be about 2*l.* 10s., but I do not think it should be regarded with that feeling of despair which seems to come over people when something stands in the market at a price they would not like to sell it at. I have been looking into the question of figures, and find that since the year 1880, and including that year, the

LIBIOLA MINE HAS EARNED A PROFIT OF 233,173*l.*

That sum is large enough to practically wipe off the whole of the capital account, presuming it had been carried to the credit of profit and loss and not distributed. Formerly it stood with a small capital, and was re-constructed, and brought out with the shares as they now stand. For a long time the quantity of ore sent from the mine has practically varied but little. In the year 1880 it produced 6,300 tons, and went on as follows :—8,200, 8,100, 8,300, 9,000, 9,400, 9,700, 8,700, 8,500, 9,600, 8,100, and our largest profit was made in 1888, when the famous syndicate was on, and when the earnings were 32,000*l.*, and our smallest was in 1889, on the collapse of the syndicate, when the net profits were only 10,000*l.*; but still a mine that can show an unbroken record of profits for 11 years, of which the average is equal to 21,000*l.* a year, is a mine that should rather be treated as an investment, and not as a pure matter of speculation. As far as we can see, the mine is likely to do as well in the future as it has done in the past, always provided the article we raise can be sold at existing prices ; and will probably give a very satisfactory dividend even to gentlemen who may hold shares at their original price of 5*l.* (Cheers.) At present our account stands favourably. We have at our bank 4,293*l.* 12s. 4d. We have on deposit 10,000*l.*, and we had in bills receivable 1,500*l.*, amounting in round numbers to 15,800*l.*; and we have also a portion of a cargo for which we have not yet been paid.

A FORECAST.

As far as it is possible for any man to forecast the future, I should estimate that our profits for this present year should (always excepting the unforeseen and unexpected) give a dividend of 8s. a share, but I cannot say for certain, because it depends on contingencies over which no person in the world has any control. The copper market is now in a fairly quiet state.

STATE OF THE COPPER TRADE.

We have but moderate stocks compared with what we had in sight a year ago. In round numbers there are 60,000 tons of visible supply against 95,000 for this time last year, and the present price of copper G.M.B. (which is the quality that regulates the market) is 52*l.* 5s., against 47*l.* 5s. this time last year—a rise which I do not think anyone can say is uncalled for, seeing that the reduction in the stocks is fully 33 per cent. and the rise in price only 10 per cent. Of course we have an unknown factor before us—the supplies from America, and on that point opinions greatly differ. Some say we shall be swamped ; others that we shall not get the quantity we expect. I must confess the position of the trade is extremely puzzling, because, whereas it was thought the greatest portion of the supply would come forward in the shape of furnace material, at the present moment what is most freely offered from the other side is a very special quality, Lake Superior ingots, for which they demand a high premium, which at present European consumers do not seem inclined to pay. How the trade will go on in the future will depend on what America will do. Even presuming that America increases her supply I do not see how our stocks can be materially altered. It may be that she may increase them, but I do not see how they can be materially increased, and on that point hinges the prosperity of this company. If the stocks go up to any material extent they will naturally affect the price of copper, and if they remain where they are, or show a further tendency to diminish, we ought either to see copper steady at the present price, or a further advance in value. I do not think it possible to see the stocks reduced another 35,000 tons in the next 12 months. If such an event occurs you ought to look for a larger dividend than I have foreshadowed. Still it might be possible that we should see a further larger diminution in the stocks, and yet no advance in the value. It seems to be the fashion in the present day to

DECRY THE VALUE OF EVERYTHING.

Nothing is worth having unless it is given to the buyer below cost price. (Laughter.) We are told that the producer ought to be quite contented if we allow him to live ; in fact, as in the old fable of the stork and the wolf, the wolf says to the stork, after he has pulled the bone out of his throat that was choking him, "You ought to think yourself lucky that I did not bite your head off." (Laughter.) You hear now that iron, copper, and tin will never go up, and that stocks are not likely to further decrease. It was talk like that that landed us in the syndicate, and it is a dangerous opinion to become universally current. When copper stocks fell to 40,000 tons the trade was warned by everybody who looked at matters with a dispassionate mind that, allowing stocks to stand at such a low figure, they lent themselves to the possibility of some rich capitalists cornering the market. The warning was unheeded. Everybody said there was plenty of copper coming over. There were telegraphs, and railroads, and steamers, and copper would come to the consumers' feet in less time than it was required. All that was predicted happened, and then the gentlemen who said that they did not require to hold large stocks were uncommonly anxious to buy at 80*l.* and 90*l.* a ton what they had treated with contempt at 40*l.* I have no doubt the same will happen again, and everybody will turn round and say, "Oh dear me, who would have thought it." (Cheers and laughter.)

ROPE TRAMWAY.

We did one thing at the mine last year worthy of mention—we put up a rope tramway, in order to save the expense of carting the ore. We had a little opposition from the surrounding land owners, who are not so highly cultivated as the peasants of this country under the School Board. (Laughter.) We had some little difficulty to obtain a wayleave, but I think that is now settled, and the net result is that our profit will be slightly increased. The secretary reminds me that during the period of great prosperity, in 1888, we adopted a course which entailed a vast amount of trouble on the staff, but I do not think has been compensated by any better market value in the shares. We were earning 32,000*l.*, and thought it a pity to keep it in hand when it might be divided amongst the shareholders, and so we distributed quarterly dividends during 1888, but we had to forego that arrangement in 1889. We continued it in 1890, but have come to the conclusion that for the benefit of the shareholders themselves we should once more resort to the practice of paying half-yearly dividends. They will be on a larger scale naturally than the quarterly dividends, and will produce more effect on the market.

A POOR OPINION OF EDITORS.

When the gentlemen who write for the papers take up our quarterly dividend, and compare it with a dividend of other companies, the comparison is not favourable unless they go in for an examination of the actual facts, which they do not always do. (Laughter.) We, therefore, think it best to revert to half-yearly dividends, which will also tend to prevent errors such as occurred in 1889, when we over-estimated the sum that we would have to pay you. In our anxiety to distribute all we had, we gave you a little too much, and that possibility will be avoided by half-yearly dividends. We can see our way more clearly in six months than in three. The ore has to come by sea, and we cannot get it delivered with the regularity of a railway train, and, consequently, sometimes when we paid quarterly dividends a little delay put us into a difficulty as to how much we should pay.

SHARE DENOMINATION.

We have had several applications from shareholders to alter the denomination of the shares to 2*l.*, and also a letter has been written on the subject in which the view is taken that if we so alter there will be an increase in the market value. In order to make that alteration it would be necessary to apply to the Court of Chancery, and to go through several forms which would cost money. We do not like to venture an unknown expenditure for an uncertain result. We do not care to do it, in fact, unless it be the universal opinion of the shareholders that such a course should be adopted, as to the utility of which we are by no means clear. I conclude by moving the resolution, and by offering to give any further explanations that may be desired. (Cheers.)

CHILI PRODUCTION.

Mr. T. K. Weir (director) seconded the motion, and said: I will only supplement what Mr. James has said with regard to the copper trade, that we should bear in mind the present position of Chili which, in a most curious manner, seems to have come in at the right moment to counterbalance any little effect that may be produced by a rather larger output from America. Things are looking very unsettled out there, and it is difficult to say how they will end. In the meantime there is no doubt the exports from Chili will be considerably reduced. (Hear, hear.)

SHAREHOLDERS' VIEWS AS TO SHARE DENOMINATION.

A Shareholder: There might be a great advantage in altering shares as was done by Copiapo. What will be the expense?

The Chairman: I do not think that anybody can say, but it might amount to 300*l.* or 400*l.*, and Copiapo changed under quite different circumstances. That was originally a 20*l.* share, with 2*l.* 10s. different and was divided into 4*l.* shares, with 10s. liability. The company re-constructed at the time, and took advantage to alter its nominal share value, as it all could be done under the same expense.

A Shareholder: I agree with the former speaker. We are paying 6½ per cent., and yet our shares stand at 50 per cent. discount. There is no other copper share that stands at so low a price paying so good a dividend. The public do not understand the shares are 5*l.*, and you illustrated the position by your own remarks. If you were to divide the shares, I think the result would be a rise in the general market value of about 20,000*l.*—in other words, the 2*l.* share would probably be 2*l.* 10s. or 3*l.*, and, I think, it greatly to the interest of the shareholders to have it done. Moreover, it places this company's shares in a position for comparison with those of other copper companies.

Mr. Adams: In supporting the idea of the alteration, I would draw attention to the fact that the Creccueu has already entailed a loss of 12,000*l.*, or equal to a 5s. dividend, and it seems to me that the proper plan is to close the mine down. I do not think the expense of lowering the share denomination would be so much as the chairman has indicated, and that we should see a considerable increase in the value of the shares.

A Shaleholder: I am an investor in this mine, and do not see that to lower the price of the shares would increase the output of copper or the price of that metal. I should like to know what the directors think of the matter.

A Shareholder: Are the results of the new gallery satisfactory?

IDA GALLERY.

The Chairman: The Ida gallery, which has taken so many years to pierce, has not yet attained the end for which it is being driven. It has had to be driven through a large quantity of unproductive rock before coming under the place where the ore deposits are to be found. There is something favourable in the present rock, but I understand we have come to what is called the serpentine formation, where the rock-drills are not so powerful, because of the uneven character of the ground. It has been a long and expensive work, but the result of it we cannot yet determine. As to the alteration of the share value—we have had several letters on the subject, and have always felt it to be rather a delicate subject. We could see no practical reason why a 5*l.* share should stand at 2*l.* 10s., and we also fail to understand why, if the shares are made 2*l.* each, by giving five shares for each two of the present denomination, they should retain the present selling value. I honestly believe that anyone putting his money into these shares now will have no reason to regret the purchase, but I do not think we should take a hasty step, which might end proportionately in diminishing the valuc below what it is now.

HINT TO SHAREHOLDERS.

I think the present low pricc offers a fair opportunity to you to increase thc number of your shares, but if we find a change of value forced upon us by the general concensus of opinion, I am sure you will not find the directors stand in the way. I think you had better wait for another meeting, and not take a hasty step which will cause a certain amount of money to be expended, with an uncertain result to follow. As Carlyle said, in this world you have to deal with so many millions of people—the majority of them fools; and that applies to the public for the most part in the matter of investments.

A Shareholder: I have no wish to press the matter

Mr. Adams thought the subject should be left in the hands of the board.

The Chairman: We see the feeling of the meeting, and in the report which will go out it will be discovered that there is some idea of change in the share denomination, and let that sink gently into the public mind, and when saturated with the idea we might then proceed. As to the knowledge of brokers about these matters, a friend said to me the other day that he was told by a broker the Libiola Mine was worked out, the whole of the capital was not paid up, and therefore he recommended him not to buy any shares. In my opinion each person should ascertain the facts for himself, as brokers do not know everything, and it is fortunate they do not.

The report was unanimously adopted.

The Chairman: I propose, "That a dividend of 6s. 6d. for the year ending Dec. 31, 1890, be declared, and that thc interim dividend, payable on June 18, and Sept. 15, of 2s. respectively, be considered as part thereof, and that the balance of 2s. 6d. per share bc paid on and after the 31st inst."

A Shareholder: I second the motion.

Carried unanimously.

A DIRECTOR WHO WILL GO AND SEE LIBIOLA.

Mr. Reeves, in proposing the re-election of Mr. Hemery as a director, said: A year ago you did me the honour of putting me on the board, because I was one of the largest shareholders. Naturally, I have been able to study affairs, and my 40 years' business experience gives me the character of being very severe, I understand—(laughter)—and so far from selling any of my shares I have taken advantage of the market being at 2*l.* 10s. to considerably increase my holding, and have taken within the last few days the decision, that as I am advised to get out of thcse easterly winds I will make my holiday, at my own expense, a visit to your property. I have not the experience of my colleagues, but at the same time can learn something.

The motion was seconded and carried unanimously, and Mr. Hemery, in returning thanks, felt satisfied that Mr. Reeves would be pleased with his visit even as he was when he went to Libiola.

The auditors were re-elected, and the meeting closed with a cordial votc of thanks to the chairman.

THE SAN BERNARDO SILVER MINES, LIMITED.

THE DIFFICULTIES IN CONNECTION WITH THE STARTING OF THE COMPANY OVERCOME, AND THE MINE IN WORKING ORDER—THE CHAIRMAN'S VIEW OF THE SILVER QUESTION.

THE first ordinary general (statutory) meeting of the San Bernardo Silver Mines, Limited, was held at Winchester House, on Monday last.

Mr. P. W. Thomas

presided.

Thc Secretary (Mr. Alfred E. Westley) read the notice calling the meeting.

The Chairman said: We have no business to transact to-day, but we have been obliged to call you together, as the law insists upon a meeting of shareholders being held within four months of the incorporation of a company. Now, our company came into existence on Nov. 12 last. On that day we took over the whole of the assets and liabilities of the San Bernardo Syndicate, which, as you are aware, had for some months been energetically opening up the San Bernardo Silver Mines, and proving by steady development what a valuable property it had acquired. Moreover, the syndicate, by erecting for our staff all the necessary buildings and offices, a tramway, and a concentrating mill of 50 tons per day capacity, had practically done all the deadwork inevitable upon starting a new concern of this kind, and with the forward condition in which the mill was when we took over the property, there seemed every reason to believe that it would almost immediately be running, and giving us regular returns.

BUT DIFFICULTIES AND DELAYS SEEM TO BE INSEPARABLE FROM THE STARTING OF NEW MACHINERY,

and we have certainly had our full share of these. In the first place came that unfortunate accident to the retaining wall of the wheelhouse, which gave us a set-back of some weeks' duration, and when that trouble was rectified, and we got to run, portions of the machinery were found to be defective, and had to be replaced, and in more than one instance the portions sent to replace defects were wrong, and had to be supplied over again. Theu Mr. Mason found, by careful experiment, that it would be possible to effect a greater saving of silver by some additions to our plant, and he thought, very rightly, that it would be better to move along slowly rather than crowd the mill to its full capacity simply for the sake of making returns. His view was that it was nothing more or less than robbing the mine to run good concentrating material through the mill, and not get out of it all that we might reasonably hope to save by waiting for the completion of the subsidiary process. It is a known fact that these San Juan ores require very careful handling, as they run high in silver, and rich particles of the mineral are apt to escape if the tailings are not very carefully looked after. Our lead we apparently have no difficulty in saving. But our troubles seem pretty well at an end now. That the

mill is doing good work is evidenced by the considerable amount of concentrates already turned out. Now, these concentrates, though valuable, must not be taken as a fair sample of what we may expect later on. They have been made mostly from inferior, I may almost say refuse, stuff, Mr. Mason having, I take it, reserved the better-class ore until our process is perfected. I must confess these delays are provoking, and to no one more so than to myself; but I do not know that we ought to be so very impatient. I question if many other mining companies can show an equal amount of good solid work done in the time. After all, it was only last May that the syndicate commenced work on the property, and already we have begun to ship considerable quantities of ore. Had we had no set-back of any kind, it is not at all impossible that we might have been in a position to declare a dividend to-day.

I SEE NO REASON WHATEVER TO ALTER THE OPINION I HAVE HELD ALL ALONG,

and that is that in time we shall not fall far short of the original estimates. The developments that are taking place in the mine are the best augury for the future. They go to show that the lode is improving, both at the lowest point of our workings in level No. 3½ and as we go further in towards the heart of the mountain in level No. 5, and I am pretty sure that when we push forward our lower tunnels, as we intend doing in the spring, we shall find ore bodies quite as good as anything we have yet met with. It is the opinion of experts that the San Juan Mine, which we have leased, is on the main San Bernardo vein, in which event we have a property of greater extent than we imagined, for the San Juan is situated on the mountain opposite the San Bernardo, and right on the other side of the valley. This San Juan Mine is likely to prove a most valuable addition to our property, for we are now finding there quite a considerable amount of first-class ore, in addition to the large quantity of concentrating material already exposed in the workings; and it shows great foresight on the part of Mr. Mason and Mr. Douglass to have secured the property for us when they did. We have received from Mr. Mason a very complete report up to the commencement of Feb. on the work done on the property since we took possession. It is too long to read to you in detail, but I will give you a few of the salient points. Level No. 5 has been driven 671 ft. into the mountain, 236 ft. being new work. New timbering has been necessary for 362 ft., and all the old timbers have been repaired besides. For the last 140 ft. we have had ore continuously, the pay-streak averaging throughout about 2 ft. in width. In a drift above this level we are finding solid first-class heavy galena, and there is little doubt that this ore body extends from this point to the surface. Level No. 4 has been driven 635 ft., 262 ft. being new work; 205 ft. had to be newly timbered, and all old timbers repaired. The ore body met with in No. 5 has not been struck yet; but, allowing for difference in distance from the mouth of each level, we are now within 10 ft. or so of the point where it was encountered above. The slopes and drifts above No. 4 look very well, and show a quantity of high-grade ore. Trial shaft: 246 ft. from the mouth of No. 4 level a trial shaft has been sunk some 49 ft. A drift has been run 30 ft. each way, and there is ore the whole way, and of a more excellent class than above, showing that the lode is improving as it goes down. Level No. 3½: This is 120 ft. vertical below No. 4. It is now in 391 ft., all new work. From where the cross-cut intersected the lode to the breast—203 ft.—with the exception of a few barren spots, the lode has contained a pay-streak of from 2 ins. to 3 ft. in width, and the ore has been uniformly of a better grade than anywhere else in the mine.

A RECENT ASSAY FROM HERE RAN AS HIGH AS 745 OZS. SILVER TO THE TON.

This level has to be driven some 70 ft. further into the mountain, when it will be directly under the trial shaft in No. 4; then an upraise will be made, and the mine will be connected throughout. With the completion of the upraise the contract under which this level has been driven ends. Nothing, in short, can look better than the San Bernardo Mine at the present time, and there is more ore in sight there to-day than ever before. The San Juan Mine I have already alluded to as very promising. From having been unworked for some time, in consequence of the owners not having funds at their disposal to put up the necessary machinery for treating their low-grade ores, the mine was in a very bad state when we took possession, and we have had to do a great deal of re-timbering, laying of new track, putting up buildings and the like, in order to get it into condition.

THERE IS PLENTY OF ORE IN SIGHT,

and it will shortly be in a state to produce a considerable amount per day. Everything, including even that troublesome mill, appears to be now in good working order, and I think we should give ungrudgingly a vote of thanks to Mr. Mason and his brother, to Mr. Douglass, Mr. Murphy, and our staff for having worked as they have. I do not hesitate to say their labours have been immense, for the development of the mines, great though it has been, is but a small portion of what they have done. Weather, moreover, has handicapped them severely. Believe me, it is by no fault of theirs that we have not been shipping ore faster than we have done. Mr. Mason is most anxious to prove to you that all he has claimed for the property is true, and he is sanguine that it will not be long now before he does. Now, I daresay, as silver mine owners, you will like your chairman's views upon the silver question. It may possibly surprise you to learn that

I AM ENTIRELY OPPOSED TO THE PASSAGE OF A FREE COINAGE BILL

pure and simple by the Government of the United States. I am convinced that were such a Bill to become law, it would lead to wild speculation and inflation but for a time only, and that this would be followed by a crash and an ultimate fall in the price of metal to the lowest point yet recorded. I believe that any legislation having for its object the raising of the price of any particular commodity is wrong, and must in the end injure where its intention is to benefit. It is absolutely certain that the passage of the Free Coinage Bill would stimulate production to such an extent that a glut of the metal would assuredly occur, and, I imagine, much sooner than anyone supposes. In Colorado alone there are mines innumerable which could be opened up and made to pay with silver at $1.25 per oz., but which cannot be worked successfully with the price below $1. And in this respect we are at an advantage, as owing to our natural facilities for working we can make a profit where many mines would have to shut down, and you may, perhaps, remember that Mr. Murray promised us, in his report on the property, those extraordinary returns with silver selling at 95c. per oz. I should like to see silver left to take care of itself for a time, for I believe that although it may go lower temporarily, it will before long find its level in a higher quotation than that at present ruling. One other matter I should like to refer to. The public has been so hocussed and humbugged from time to time by doubtful mining ventures that it is slow to believe in the absolute *bonâ fides* of any mining company. Now, we want you, our shareholders, to feel that in the San Bernardo you have this advantage that you have invested in a perfectly honest concern. Your directors have never wished to keep anything back from you in the past, and will never want to keep anything back in the future, and any information in reason will always be at the disposal of shareholders whenever they like to come to the office and ask for it. Beginning with Mr. Mason, whose heart and soul is in his work, we are all—directors, managers, and workpeople—striving together for the common weal, and we are interested in the success of the company in an even greater degree than you are. We rely, as you know, mainly on the principle of payment by results. The workpeople are to share in the net profits, and I look for great good to result from the introduction of this system. Not only do I believe we shall obtain a better class of labour, but I am sure it will lead to a kindly feeling between employers and employed. I have always thought it a right principle that those who labour should feel that they have a more direct interest in their work than is supplied by the receipt of a mere wage. Shareholders must not be disappointed if they do not see our shares move up all at once. It is a fact, which ought to be better known, that it is not so much the worth of a thing as the ability of those behind the scenes to rig the market which causes the ridiculous premiums one sees sometimes on new issues. Your directors have no intention of resorting to any questionable devices for raising the price of your shares. They have sufficient confidence in the property to abide by events. For my own part—and with my personal knowledge of the property I am able to follow the developments that are taking place far better than a mere on-looker—I do not hesitate to say that I believe your mines to be more valuable to-day than when we took over the property, and I feel that it will only require the exercise of a little more patience on our part before we reap an ample reward for all our labours. (Cheers.)

Mr. A. PURSSELL: I beg to move a vote of thanks to the chairman for presiding, and to the directors and officials and staff at the mine.

Mr. D. RUSSELL: I second the motion. I have the greatest respect for the chairman. It has been my lot, I may say my unfortunate lot, to attend a great many meetings, but I must say I have never heard a more explicit statement than that just made by the chairman. It was sensible and practical, and I wish every chairman would give as clear and distinct a statement. I am perfectly contented with the property and with my shares, and I shall increase that holding as soon as possible. (Applause.)

The resolution was put and carried unanimously, and the CHAIRMAN having acknowledged the vote, and said that he and his co-directors would do all in their power to further the interests of the company, the proceedings terminated.

UNITED STATES GOLD PLACERS, LIMITED.

[IN LIQUIDATION.]

REMOVAL OF THE LATE SECRETARY FROM THE POSITION OF LIQUIDATOR, AND APPOINTMENT OF MR. HENRY NAIDLEY, CHAIRMAN OF THE COMMITTEE, IN HIS PLACE.

A SPECIAL MEETING of this company was held on Wednesday last, at Winchester House, Old Broad Street, E.C., under order of the Court.

There was a fair attendance of shareholders.

Mr. William Scott

presided.

The CHAIRMAN, in opening the proceedings, said: Gentlemen, it is now just five minutes past two, and I may just as well tell you that I am ordered to call this meeting by Mr. Justice Kekewich, and I have called it in order to know whether you want me to continue to be the liquidator of the old company or not. I will first read the notice I have sent out, and if any gentleman has any resolution to propose I shall be pleased to put it to the meeting, and report the result to his lordship. The notice, gentlemen, is as follows:—

"In the Matter of the Companies' Acts, 1862 and 1867, and in the Matter of the United States Gold Placers, Limited (in liquidation).

"Notice is hereby given that pursuant to the directions of Mr. Justice Kekewich, given on the hearing of a motion on the part of Anthony Gibbs, John Hanson Sperling, and Reginald Merivale for an order to remove William Scott, the present liquidator. A meeting of all the persons who on the 24th April, 1889, the date of the resolution to wind up, were on the register of shareholders of the above company, will be held at Winchester House, Old Broad Street, in the City of London, at 2 o'clock in the afternoon, on the 11th day of March, 1891. The said meeting is called for the purpose of ascertaining the wishes of such persons, as were on the register of shareholders on the said 24th April, 1889, as to whether William Scott, the liquidator of the company, shall continue as such liquidator, or whether he shall be removed, and Henry Naidley, of 17, Cumberland Road, Kew, in the county of Surrey, gentleman, or some other fit and proper person, shall be appointed in his place.

"The said judge has appointed the undersigned William Scott to act as chairman of the meeting, and has, pending the ascertainment of the wishes of the said persons, adjourned the further hearing of the said motion.

"Dated this 2nd day of March, 1891.

"WILLIAM SCOTT, Liquidator.

"229, Gresham House, London, E.C."

The CHAIRMAN: I have now only to ask you, gentlemen, to put any resolution (if you have any to put) that I may report it to the judge.

Mr. MERIVALE: Gentlemen, I have a resolution to put before the meeting, but perhaps before I do so I had better make a statement to

you. You will remember that a circular was issued of which all received a copy, and I propose first to go through it.

A Voice: Oh, no.

Mr. Merivale: Unless you will agree to take it as read.

A Voice: Hear, hear.

Mr. Merivale: You will remember that we were appointed some months ago as your committee, and we have been into the question as far as we can, and we find everything in a most unsatisfactory state. The prospectus stated that the company would be purchased——

Mr. Tyser (interrupting): I have no wish to intercept this gentleman's speech, or to interfere with the due course of the procedure of this meeting, but it occurs to me to ask whether anyone is present here who was not a shareholder at the time—the date of the appointment of the liquidator—when that was fixed. If anyone is present it seem to me he should be asked to withdraw. (No, no.) Now, as far as we shareholders at the present moment are concerned, we did not appoint that committee which Mr. Merivale has referred to. The appointment of that committee was made by a meeting of shareholders which existed at that time, and not by this present meeting. I call your attention to that. It is not worth while going into any foreign matter of which you have no notice. I take it that this committee was not appointed by the shareholders as indicated in your notice.

The Chairman: I may say I shall only notice in this matter any resolution which is passed by this meeting, whether for the removal of the liquidator or not, and I shall report that to the judge in my report. Any other

EXTRANEOUS MATTERS ON SUB JUDICE QUESTIONS

I have nothing whatever to do with.

Mr. Merivale: Then I will keep to the point. Since the committee was appointed we have come to the conclusion that we cannot carry out the charge which was put upon us of going thoroughly into the affairs of the company until we have the books and papers and everything connected with the company before us. In order to do this it is necessary to turn out the present liquidator and appoint in his place some other fit and honest person. We were obliged to resort to the Court, and the judge ordered a meeting to be called, and the opinion of the shareholders taken, and that opinion to be laid before his lordship, and he will act regarding it. Now, gentlemen, I wish to say that we have had no report whatever from Mr. Scott, and, therefore, I beg to move the following

RESOLUTION:—

"That this meeting is of opinion that, having regard to the disclosures which have been made as to the formation of the company, the manner in which the liquidation has heretofore been conducted, and the non-compliance of William Scott, as liquidator, with the statutory requirements, it is desirable, in the interests of the shareholders, to take steps for the removal of William Scott from his office of liquidator, and to secure the appointment of Mr. Henry Naidley, of 17, Camberland Road, Kew Gardens, in the County of Surrey, gentleman, or some other fit and proper person, in his stead."

Mr. Lakeman: I beg to second the resolution.

Mr. Francis: May I ask, Mr. Chairman, whether you have been applied to for any statement of accounts?

The Chairman: No, sir; I have only been applied to by the Board of Trade.

Mr. Francis: Have you any objection to post up your accounts at once?

The Chairman: They are now being prepared to be submitted to the Board of Trade.

Mr. Francis: How long will they take?

The Chairman: About another week I should think—quite that.

Mr. Francis: Well, gentlemen, it seems to me that this point

OUGHT TO BE CLEARED UP,

as there seemed to be some little unwillingness to render these accounts. I should like to know why the name of Mr. Naidley is proposed in place of Mr. Scott. I cannot grant that Mr. Naidley is a fit and proper person—I cannot grant that.

Mr. Larchin: In reference to the proposition, I think that we shareholders have one or two points to consider. We are asked to remove the liquidator we appointed as the liquidator of the old company and for the re-construction of this company. The liquidator for the purpose of the old liquidation and re-construction was appointed in no hostile sense. Such a liquidator was appointed to be simply the medium for the transfer from one company to the new company in order that it might be started as a going concern. At the present time, under the circumstances, it was not our intention to elect a hostile liquidator, who might do his best to wreck the concern. It was simply his duty to perform the transfer for the formation of the new company. There might possibly creep in some acts that would have been considered legal, or it might be that they would be held to be illegal, since the discussions in the High Courts have shown us that the highest legal authorities in the land have taken an entirely different view of the same facts on a liquidation question as to the validity of going to the Courts, and as regards legality. There was a certain number of shares in the hands of the directors at the creation of this company, which were issued as bonus shares, and however you may protect yourselves—and the directors of the company did the matter in a perfectly legal way—there is always the thought before us that something may crop up that we did not anticipate. You ask men to subscribe a certain sum of money, and in consideration of their so doing you offer as an inducement to give them bonus shares. This, of course, is an act of kindness, and in so doing you do not wish that in the future these men should be called upon to be responsible for the money on those shares, but it is just possible that a liquidator, if appointed in the place of the one we have now got, might possibly not go into matters with the same feeling for the welfare of the holders of these shares. It is a question that we have to consider. We do not know Mr. Naidley very much. We presume he is not a philanthropist, but this we do know that he spent 12*l.* or 13*l.* to buy some 500 shares in the company. Did he assume that the shares would soon have a good rise in price, or are we to assume that he had the deliberate intention of wrecking the concern and

GETTING INTO THE SADDLE HIMSELF,

and obtaining the conduct of the affairs? If so, his 13*l.* would be a very profitable investment for him. As far as I am concerned I do not think Mr. Naidley is a fit and proper person to be liquidator of this concern. Is there no other independent person that can be appointed as liquidator? It certainly appears that his action in carrying out this purchase would indicate his desire to obtain this appointment. I certainly think the accounts ought to have been rendered. What the shareholders have to consider is whether they are to make a change which may be prejudicial to us. It has come to my knowledge that certain proxies have been issued to some of the shareholders, and I think the attention of the Court ought to be called to the matter, as we have met to-day under order of the Court. We all should be in the same position, and I ask whether you are going to admit those proxies. Every shareholder ought to have equal voting power, and if you are going to admit those proxies I shall ask you to adjourn the meeting.

The Chairman: I have no power to adjourn the meeting, and, as far as the proxies are concerned, I do not know anything about it, beyond that they will appear in my report to the judge in the usual way, just as they were handed into me by Mr. Merivale—I think it was he.

Mr. Merivale: Yes. As to the appointment of Mr. Naidley, as liquidator of the new company, you can appoint an independent liquidator if you please. You can

APPOINT, IF YOU LIKE, THE OFFICIAL RECEIVER OF THE WINDING-UP ACTS.

We only have to suggest a name. Now, as to the question of accounts, Mr. Scott was appointed the liquidator of the old company in Apl., 1889, and we have never had any accounts—that speaks for itself. (Hear, hear.)

A Shareholder (in addressing Mr. Merivale): I understand your chief reason for wishing to remove Mr. Scott is that he has not presented any accounts.

Mr. Merivale: Precisely. That is one reason.

The Shareholder: I think you said the chief reason. So it appears in your circular.

Mr. Merivale did not answer the question.

A Shareholder: Mr. Merivale cannot answer. (Laughter.)

Mr. James: I presume it is

A FOREGONE CONCLUSION WHAT THE RESULT OF THIS MEETING WILL BE

—the proxies you have you cannot use. I represent shareholders of 2,000*l.* or 3,000*l.*, and I shall certainly support Mr. Naidley's appointment. I think the very arguments that Mr. Larchin used against his appointment are the very arguments that most forcibly uphold his purpose of entitling him to obtain and enabling him to enforce his admission to the meetings, and I am thankful to him that he did so, because he revealed the state of affairs which I was not aware of, and which I am only able to regard in one way. Mr. Larchin has expressed his view upon the state of affairs, and many of his friends and the friends of the Gilberts are here. They sympathise with the other side, and would like to have a majority of the votes for Mr. Scott. I prefer the appointment of Mr. Naidley by this room, notwithstanding we have

A BATCH OF PROXIES.

The Chairman: I am here to take the sense of the meeting now, and to admit the proxies that there are.

Mr. James: I do not think you have any option.

The Chairman: I did not ask you, sir, whether I had or whether I had not. I am here to put the resolution to the meeting, unless anyone else has anything more to say. I will put it to the meeting, and report the result to the judge. This resolution has been proposed by Mr. Merivale, and seconded by Mr. Lakeman: "That this meeting is of the opinion that, having regard to the disclosures which have been made as to the formation of the company, the manner in which the liquidation has heretofore been conducted, and the non-compliance of William Scott, as liquidator, with the statutory requirement, is is desirable, in the interests of the shareholders, to take steps for the removal of William Scott from his office of liquidator, and secure the appointment of Mr. Henry Naidley, of 17, Cumberland Road, Kew Gardens, in the County of Surrey, gentleman, or some other fit and proper person, in his stead." I will put it—those in favour——

A Shareholer (interrupting): I should like to clearly comprehend what we gain by a change of liquidators. (Time, time.)

A Voice: A great deal.

Another Voice: We cannot lose much.

Several Voices: Time, time.

The Chairman: I leave it to the meeting.

A Shareholder: Put the resolution.

Another Shareholder: May I ask will there be any improvement in our position if we make the change?

The Chairman: Well, I cannot tell you that, sir.

The Chairman: The resolution has been moved by Mr. Merivale and seconded by Mr. Lakeman. Those in favour will signify the same by holding up one hand.

CURIOUS VOTING.

Mr. Cook: Stand up—count them.

The Chairman: 15, I make it.

A Shareholder: 14.

Another Shareholder: 16.

The Chairman: Well, take it at 16.

Mr. Francis: I want to know how many supported that resolution.

The Chairman: I counted 15 and another gentleman counted 16.

Mr. Francis: You must take it formally.

The vote was then taken again.

A Shareholder: Make them stand up, then.

The Chairman: I count 17 this time.

Mr. Cook: Put those to the contrary.

The Chairman: Those to the contrary, gentlemen. Fourteen, I make it.

A Shareholder: I presume, Mr. Chairman, you declare that resolution carried?

RESOLUTION CARRIED.

The Chairman: Yes, the resolution is carried—certainly. That

is all, gentlemen, the meeting is called for. I will report to the judge.

Mr. Merivale: You will tell the number of proxies to his lordship?

The Chairman: Yes, sir, certainly.

A Shareholder: I wish to propose a vote of thanks to the chairman.

Another Shareholder: I will second it.

The proceedings then terminated.

THE MYSORE-WYNAAD CONSOLIDATED GOLD MINING CO., LIMITED.

PAYMENT TO DIRECTORS REDUCED BY THEIR OWN VOLUNTARY ACTION—GOOD NEWS FROM THE TANK BLOCK PROPERTY—ATTENTION CALLED TO ITS CHEAP ACQUISITION.

An extraordinary general meeting was held at Winchester House, on Tuesday, "for the purpose of making the following alterations in the articles of association":—

Article 77.—Strike out the words "The number of directors shall at no time exceed seven or be less than five," and substitute the words "The number of the directors shall at no time exceed five, or be less than three." Article 85.—Strike out the words "The directors shall be paid out of the funds of the company by way of remuneration for their services the sum of 1,000*l*. per annum," and substitute the words "The directors shall be paid out of the funds of the company by way of remuneration for their services the sum of 800*l*. per annum."

Col. G. B. Malleson, C.S.I.

(chairman of the company), presided.

Mr. L. J. Woodman (secretary) read the notice of meeting.

OBJECT OF THE MEETING.

The Chairman: Gentlemen, it will be in the recollection of those who were present at the annual general meeting that some remarks were made regarding the fees drawn by the directors. Well, it so happened that a very short time ago one of the directors resigned, and the board thought it would only act in a conciliatory spirit to the shareholders if they took that opportunity of not filling up his place, and reducing the total emoluments sanctioned by the articles, but on referring to those articles they found that the minimum number of directors sanctioned was five. It became necessary to ask the shareholders to meet for the purpose of altering the articles in that respect by reducing the maximum from seven to five, and the minimum from five to three, and in order that the directors might not benefit from this change they determined also to reduce the emoluments sanctioned by the articles. It is a very simple proceeding, the result of which will be

A SAVING TO THE COMPANY OF 200*l*. A YEAR.

I beg now to propose the first resolution. (See above.)

Mr. Shaw Kennedy: I second the motion.

Mr. J. C. Bolton: I should like to make some remarks upon this resolution. I do not quite see the necessity for this meeting. Had you kept the number of directors up to five that would have been the minimum under the old articles, and you would not have required these meetings.

The Chairman: If we had kept them up to five; but we were anxious to meet the wishes of the shareholders.

DIRECTORS SHOULD BE PAID.

Mr. Bolton: Following upon that I do uot see how the wishes of the shareholders are met. I am not at all one of those who think that because a company does not succeed, therefore directors are not to be paid—I hold quite a contrary opinion. (Hear, hear.) I consider that so long as a company is considered worth working, so long are the board of directors worthy of their remuneration. (Hear, hear.) But if we accede to this proposition, we shall be paying the smaller number at a higher rate than we are paying the larger number now. (No.) Let us look at it. Seven directors form the maximum and five the minimum, and are to have 1,000*l*. a year between them; taking this as the average that gives 166*l*. 13s. 4d. to each director. Taking the new arrangement—five as the maximum and three as the minimum, and an average of four, that gives 200*l*. to each director. If, again, we take off two-sevenths for 1,000*l*. that will be more than 200*l*. Therefore, while you are apparently keeping the word of promise to the ear you are breaking it very considerably to the sense. I do not at all wish you or the directors of any company, of which I am a shareholder, to work for nothing, but if they come to us aud say—we are willing to meet your views and reduce our allowances, I expect them to keep that word of promise to the sense, and I do not see that in the present instance, reducing 1,000*l*. a year, with a maximum of seven and a mimimum of five, to 800*l*. with a maximum of five and a minimum of three, is doing anything but increase the average amount of pay.

MR. BOLTON MISTAKEN.

The Chairman: Mr. Bolton is entirely mistaken. We have always had the minimum of directors. We never had more than five, and never had the smallest intention of having one more than five, and five divided into a thousand makes 200*l*. a year each. By reducing that seven to five maximum to five to three we propose to keep four directors at precisely the same pay, that is. 200*l*. a year each, and therefore we actually lop off for the benefit of the company 200*l*., and the directors do not receive one farthing more than they did before. (Hear, hear.) That is the explanation. We have had a minimum of five with no intention of raising it. We find we can work very well with four, and propose to keep the amount at the same relative proportion to each individual. But I will even go further than that, and say that if we find it practicable to carry on the business of the board with three directors—I can speak for my colleagues and myself—that not one of the present directors would increase the emolument he actually receives at the present moment. (Hear, hear, and cheers.) This is a *bonâ fide* proposal for you, either to accept or reject. It does not put a farthing more into the pockets of any one of the directors, and it saves the company 200*l*. a year. If it is not carried we shall have to put on another director, but I can assure Mr. Bolton that, unintentionally, he does us a great injustice. Not a single member of the board would have consented to have accepted one farthing more under the new arrangement than he has done under the old one. (Hear, hear.)

A Shareholder: I do not know whether the few shareholders present will really settle the matter, but really I do not think we have very much to thank the directors for. (Oh.) The shares are now worth 3s., 19s. paid, and the only gentlemen who have got anything out of the company are the directors. I should like to move an amendment.

The Chairman: You cannot move an amendment; you must either accept or reject, and it is a simple question for you whether you will sanction an economy of 200*l*. We cannot effect that economy without your consent, or we should have done it.

Mr. Bolton: I understand you to say that I have done you an injustice.

THE ONLY PEOPLE IN LONDON WHO WORK.

The Chairman: I thought you did us an injustice. It seemed to me that your remarks tended to show that we wished to increase our remuneration, whereas we wished nothing of the sort, and under no circumstance would we increase it. I think I may say that without offence to you, and as to the remarks to the other gentlemen, that the directors are the only people who have benefited by this company, *the directors are the only people in London who have worked, and do work, for it.* (Hear, hear.) We came to you with an understanding. There was a contract on both sides that five directors were to get 1,000*l*. a year, and on that contract you subscribed for your shares, or bought them in the open market, and we have worked and, therefore, we receive our pay. You pay us just as I would pay my coachman, with whom I had made a contract.

SUGGESTED AMALGAMATION.

A Shareholder: I have been thinking for some time that the interests of this company and those of the Mysore West are almost identical at the moment, and they are so much working as one company that it would be very much in the interests of the shareholders if some scheme of amalgamation were put before them, and if the two companies became one. It would save a large amount of working expense, and as they are practically developing one block, and the old workings remain in abeyance, and as we are depending entirely upon the Tank Block, I do not see why the two boards should be other than one when they are working conjointly. It is a "pool" practically.

The Chairman: The proposal sounds very well indeed, but when reduced to business I think a great many practical difficulties would be found in the way of carrying it out. The capital of Mysore West is smaller than that of Mysore-Wynaad, and I doubt very much whether you would get Mysore West shareholders to accept the arrangement. Mr. Walker, however, who is one of our directors is also chairman of Mysore-West, may be able to express an opinion on the subject.

The Shareholder: I am a shareholder in both companies.

VIEWS OF THE MYSORE WEST CHAIRMAN.

Mr. Robert Walker, J.P. (director): So far as Mysore West is concerned the management is on a very moderate scale. The directors have only had 500*l*. a year, and I think they could easily have had more if they had asked for it. But at the time of the re-construction I was determined that no shareholder in a company of which I was a director would have reason to grudge the amount the directors were paid for their services, and I can only say, so far as amalgamation is concerned, that, as Col. Malleson has said, the difficulties appear to me insurmountable, at present at all events. The capitals of the two companies are different, and there are arrangements which would require to be made which I do not see my way to at present. Circumstances may change, but I do not think the proposal practical at present. I have often thought that shareholders who do not know the difficulties of the position would suggest such a thing, and have turned it over in my mind, but cannot at present see how it can be done in a way to do justice to all concerned. The Mysore Wynaad has double the capital of Mysore West, and how you are to adjust things surpasses my wit in the meantime to say. I can

CONFIRM ALL THAT COL. MALLESON HAS SAID.

We would not have had to call you together to-day if it had not been that our solicitor had advised us we could not carry on, in consequence of the resignation of one of the directors, with less than five. If we could have done so we had all agreed that we would not benefit one farthing by the absence of this director, and that we would not have drawn more than 800*l*. a year. We thought it better, in the interests of the company, that we should meet you and state the circumstances rather than do anything different by drawing amongst ourselves the fees to which the other director would have been entitled. We are here to tell you the exact circumstances, and, in consultation with Col. Malleson, that was the agreement we arrived at.

The Shareholder: My suggestion was prompted by a desire to do good to both companies; and as to the matter of details, I feel sure they can be easily arranged. Other companies are being amalgamated every day.

Mr. Walker: Our capital is only 125,000*l*. in Mysore West, and that of Wynaad is 250,000*l*., and the consequeuces of amalgamation would be that each shareholder of this company would have one share in the amalgamated company to two.

A RASH CONCLUSION.

The Shareholder: That would amount to the same thing. They have "pooled" now, and as the other two properties have so far proved to be of no value whatever——

Mr. Walker: You must not say that. From what is going on in the Colar district I would not be surprised at anything. A large amount of money is being paid for land to the west of the Ooregum and Mysore, and as I said just now to a friend, I should not be surprised if the Kaiser-i-hind should turn up trumps yet. Even as regards the Wynaad I have not lost hope. The Indian Gold Mines of Glasgow have in the Wynaad refractory ore, and are putting up

machinery to work it. It shows by assay 3 to 4 ozs. to the ton. I look upon

INDIA AS THE GOLDFIELD OF THE WORLD.

It is not only the Colar district, but we have the whole of the Bengal district, and there are many companies in Calcutta. Then you have another goldfield 150 miles away from the Colar district. (Hear, hear.)

The SHAREHOLDER: I shall bring this subject forward again.

The resolution was carried unanimously.

The CHAIRMAN: I now propose the second resolution (see above). This leaves the remuneration at 800*l.* instead of 1,000*l.* We are four directors now, and I do not think we can carry on the work of the company under that number.

Mr. BROGDEN seconded the motion, and it was carried.

GOOD NEWS FROM TANK BLOCK.

The CHAIRMAN: We shall have to call a meeting to confirm these resolutions, but meanwhile I would ask your attention to the plan we have hung up upon the wall. It is a plan of the Tank Block, and shows almost our latest workings thereupon. I am glad to tell you that the reports we receive are of a most encouraging character. (Cheers.) The further we go down the more extensive we find the old workings, and it is absolutely certain that the Champion Reef runs through it, and that there are other reefs which, I believe, will prove equally gold bearing. I may say here that I quite endorse every word which Mr. Walker has spoken in appreciation of the goldfields of India. When we see, as we saw the other day, the Mysore Co. giving 150,000*l.* for a piece of land, which I do not believe is worth more than that for which we (with another company) only gave about 6,000*l.*, I think we have every reason, especially judging from the small sinking that has taken place, to congratulate ourselves upon having a property which will eventually prove very valuable. (Cheers.) I think any gentleman who knows anything about mining, if he were to look at that plan would admit that we have

GREAT REASON FOR SELF-GRATULATION.

Mr. WALKER: This only confirms what I have said as to the enormous increase in value that has taken place in these mines within the last two or three years. The very fact that there have been two purchases made within the last two years—the one mentioned by the chairman, and the other by Champion Reef, for 88,000*l.* in shares and 17,000*l.* in cash, for a property very little larger than ours, abundantly confirms what has been said to-day.

The proceedings then terminated.

WEST WHEAL GRENVILLE, LIMITED.

THE OPERATIONS TO INTERSECT THE GREAT FLAT LODE NOT YET SUCCESSFUL, BUT PROSPECTS OF DOING SO FAVOURABLE.

THE annual general meeting of the shareholders was held at Winchester House, Old Broad Street, on Wednesday, Mar. 11, 1891.

Mr. Charles Clark

(chairman of the company) presided.

Mr. D. JULYAN (secretary) read the notice convening the meeting, and the report and accounts were taken as read.

HOPES NOT REALISED.

The CHAIRMAN: Gentlemen, I beg to move, "That the directors' report, and statement of accounts and agents' report, as presented to the meeting, be received and adopted." It will be in your recollection that at our last general meetiug we exhibited a plan (which is now againu upon the wall), giving the transverse section of the mine, which had been prepared by Messrs. Hendersons, of Truro, in order to show the probable position of the Great Flat lode of the district in connection with the workings then in progress in our mine, and we held out to you the expectation that at one at least of the three points indicated on that plan we might intersect that lode in a very few months, presuming, of course, that the run would prove to be the same as shown on the plan. Unhappily, that hope has not been realised, and, although during the past year we have extended our workings considerably beyond each of the anticipated poiuts of intersection, we have to admit, in spite of all our efforts, the mine is not yet emancipated from the prospecting or development stage. Calculations such as we have been working upon are necessarily based principally upon probabilities, and the distance between West Wheal Grenville and the nearest mine to the east is so great that many causes may have occurred to disturb the regular course of the Flat lode. That we possess the Flat lode in our sett is I thiuk unquestionable, and the members of the management consider that the present iudications in the 120 cross-cut north are such as to encourage the belief that we are probably not very far from it. We are therefore pushing that cross-cut forward as vigorously as possible. In course of the drivage here

SIX DIFFERENT VEINS OR BRANCHES HAVE BEEN INTERSECTED.

Two of these (Nos. 2 and 4 on the plan) are of special interest, and you will see by the agent's report that we are continuing the drivage upon each of them. We have also begun to cross-cut at the 130-fm. level at the bottom of the engine shaft, where the old lode (which became separated into two divisions at a little below the 110-fm. level) is uow presumably stauding on either side of the shaft in the granite. We have had the mine inspected and reported on at intervals by Capts. John Jenuiugs and Francis Hodge. We have also had the advantage of occasional consultation with Capt. Rich, of South Condurrow, aud Capt. Bishop, of Wheal Grenville. The reports cau be seen by any shareholder on application at the office. The practical outcome of the whole is a recommendation to

GO ON VIGOROUSLY AT EACH OF THE FOUR POINTS

I have mentioned as now in operation. I ought to state that a very large proportiou of our drivage during the year has beeu done by machines with steam power. This, of course, has considerably swelled our expenditure on the mine, as you will see by the accounts, the amount being 5,420*l.* 15s. 1d. for the year, or nearly 1,600*l.* more than in 1889. For this outlay we consider we have received ample value iu the additional work doue. We consider it a wise policy to continue machine work; it involves no increase in our standing charges, and it is of vital importance to us to ascertain as speedily as possible what payable ore ground we possess. That this work will necessitate calls goes without saying, but the large aggregate holding of the directors is the best guarantee you can have that the calls will be made with discretion, and only when absolutely necessary. The amount shown in the balance-sheet for calls over-due (485*l.* 15s.) is now reduced, we having since received 243*l.* 10s. The board had arranged for Capt. Skeat to be present at this meeting to-day, in order that the shareholders might question him as to the work going on, but I suppose the extremely bad weather has prevented him.

SUBSTANTIAL REASONS FOR CONTINUING THE DEVELOPMENT.

Mr. F. G. LANE (director): I have much pleasure in seconding the motion. No doubt many of you are disappointed at our not attaining the point which we started for at the commencement of this company, but we went upon the evidence of men of repute—such men as Captains Thomas Hodge, Josiah Thomas, and Wm. Rich. Better authorities than these we could not have—men well versed in the workings of the Great Flat lode, the run of the same, and the riches that it turned out. Now, gentlemen, the mines that had been worked upon this lode, which proved so productive, had not done so except at a very large expenditure. In the case of Wheal Grenville Mine, more than 90,000*l.* was spent there before the shareholders received substantial results for their outlay. In West Wheal Grenville, however, a very large amount of work was done, and development work that would come in to very great advantange for this company if the Great Flat lode had been intersected at the points at which we were led to believe we should find it. However, that lode has not yet been found. The evidence that we have from all the authorities that our chairman has mentioned to you confirms the course we are now pursuing, and they still advise us to proceed vigorously with our present operations. Gentlemen, we have

ONLY SPENT 15,000*l.* IN THE DEVELOPMENT OF THIS MINE

up to the present time. 15,000*l.* is a very small sum to develop a large property, for this is not by any means a small property, and at any time the experts who have reported upon this property assure us we may meet with great results. I do not think we have any other course to pursue than to follow their advice, and to do so we shall require more means. In the uear property Wheal Grenville, we have been obliged to make a call of 15,000*l.* in one sum upon the shareholders to develop the eastern portion of their property. I may tell you that this was to contiuue the operation of the old compauy to cut the Great Flat lode there, and that compauy, after spending a very large sum of money, abandoned the workings when within a few feet of intersecting this Great Flat lode. That, gentlemeu, may be an inducement for us to procced. But you may say, are you certaiu the lode is in your sett? We are certain of nothing in mining. We cannot assure you that it is so. All we can do is to ask you to allow us to proceed ou our present course, and we will see your money is spent as economically as possible. Upon these grounds I beg to second the motion for the adoption of this report, and I would ask you to look iuto the accounts and see what the directors' fees are. We ourselves are paying about 100*l.* out of the 300*l.* allocated to us, and therefore it amounts to about 40*l.* each for the management of this company. No travelling expenses are charged in the accounts. We each of us visit the miues at different periods, and we do our best to work the mine as economically as possible, and I may say, if there is any person to-day who will begrudge the amouut given to the directors, we are all willing to retire if you have better men to take our places. However, I do not think you will say so, and I do not think it would be to your interests to adopt that course.

MR. ALFRED THOMAS CONCURS IN THE POLICY ADOPTED BY THE BOARD.

Mr. ALFRED THOMAS was sorry that better results had not been attained iu the endeavours made to reach the Great Flat lode. The only question with him was whether they had actually intersected the Flat lode in connection with the leader course referred to in the report, but as they were driving upon that they would soon prove whether that was the case or not. He was inclined to think, after going thoroughly through the plans, that they would have to drive their cross-cut some distance further, because there was such a distance between the nearest eastern mine and their workings, and there were evidently some influences in the intermediate space, which had altered the direction of the lode. The lode, being the Great Flat lode, it might have taken a more vertical dip; hence the reason they had not intersected it. The chairman had given them a very full explanation of everything, and had told them they (the directors) were following the recommendation of the best authorities in Cornwall. He (the speaker) certainly concurred in that, and thought they could not do better than proceed in the way they were doing.

A CHAMPION LODE LIKE THAT DID NOT DIE OUT,

and it was certainly somewhere in their sett. The only thing they had to do was to proceed with the cross-cuts, and hope that at an early date they would have an agreeable surprise in the discovery of the lode.

The motion was then put to the meeting, and carried unanimously.

The CHAIRMAN then read a letter just received from Mr. Skeat as follows:—"I beg to inform you that since this morning water has been flowing freely from the bottom of the forebreast in the 120 cross-cut north. This surely should be a hopeful sign."

Mr. GOLDSMID proposed the re-electiou of the chairman as a director of the company.

Mr. BATTERS secouded the motion, which was carried unanimously.

Mr. WILLIS proposed the re-election of Mr. Sydney W. Jackson as auditor.

Mr. SUCKLING seconded the motion, which was carried unanimously.

The proceedings closed with the usual vote of thanks to the chairman.

REMOVAL.—In consequence of the approaching demolition of No. 51, Threadneedle Street, for City improvemeut purposes, the offices of the City Press Agency have been removed to No. 1, Tokenhouse Buildings, E.C.

A NEW LIGHT ON THE SOUTH AFRICAN ARRANGEMENT.

REPORT OF THE MEETING HELD IN VIOLANTE, DEC. 29, 1890, AT THE INVITATION OF THE RULER GUNGUNHANA.

ON the 29th day of December, in the year of Our Lord Jesus Christ 1890, near the Chigocho of the Ruler Gungunhana, in Violante, at 11 o'clock in the morning, where were assembled the said ruler and his more favoured Indunas, as well as the Intendente Geral of the Native Affairs in Gaza, o Conselheiro José Joaquim d'Almeida; the Intendente do Mussurize, Arthur Antonio Matheus Serrano; the Intendente do Alto Save, Adriao Miguel Xavier; the Sub Intendente do Inhaoxe, Ricardo Carneiro de Souza e Faro; the Ensigns of the Army of Portugal, Antonio Moreira de Souza, José Augusto de Quadros, and Manuel de Jesus Barriera; the Russian subject, Maurice Torbeau Brettermann; the British subject, Alexander Deans; the interpreters, Quehimane and Victorino; with me, Ignacio de Paiva Raposo, Intendente do Biléne, serving as Secretary of the Expedition to Gaza, there appeared at the command of the powerful potentate Vatna, the Englishmen, Auriel Schultz, Frank Colquhoun, J. MacKillican, M. A. Barnett, Fels and his wife, who had been camping in these parts for some time, and before whom the said potentate desired spontaneously to make, according, as he affirmed, some declarations which he considered indispensable, although they were a repetition of similar others which he had already made at various times, and at different epochs has made subsequently.

Taking our places, on the right of the ruler was His Excellency the Intendente Geral, and next him all his officers and Mr. Brettermann and Deans passing the Indunas to the left of Gungunhana, who had seated in front of him and quite separated from Portuguese and Vatnas, Mr. Colquhoun and his companions.

After the assemblage had been disposed thus, the ruler was requested by His Excellency o Conselheiro Intendente Geral to open the proceedings, and to explain what he had to say, which he then did, stating that his object was to make public before the strangers present, that he and his people, as well as his Grandfather Manecusse and his Father Muzilla, were vassals, faithful and submissive, of His Majesty the King of Portugal, and that further, whatever might be said or intrigued, the lands of Gaza should be Portuguese in which he lived and he should be the Governor.

That the flag which all were seeing floated near his dwelling, never to be substituted by another of any other nation, and that so sincere was this, his promise, that in the design which his sons should respect, he had handed them over to the secretary with some other children, who in the future would be the grandees of the country, so that all should be educated in Portugal, and there study the language and customs of the nation to which they would belong and should be imbued with the love, fidelity and respect which they would owe to it.

That he and all the Jamine family, descendants of the great Zulu chiefs, only had one word, and that, if in his heart he had the least tendency to accept the English flag, he would have the courage to state it here before the Portuguese, as he had the courage to give the refusal before the English who were hearing.

That this remained settled once and for all, and he would ask the secretary never more to doubt his loyalty, for such doubt was for him an annoyance profound, such as an innocent and true wife would feel when accused of being unfaithful.

That it is a fact that many Englishmen, confessing themselves all his friends, and giving him presents, more or less valuable, came to visit him, asking him to do business with them in hides and ivory, others to obtain concessions of auriferous lands, and some to persuade him to go to Great Britain; but he was sure that with the first he would limit himself to business if it suited him; answering the second, and amongst this number was the Shiboquana (Colquhoun) now present, and Dr. Bertrand, who, two months ago, left these parts, that only the king and the secretary would attend them. To the third the reply was invariably the same, that he wished for his shroud a flag like that which enshrouded the body of his mother, the venerated Uzio.

That he had said already, and now repeated it, that he sent at times the Guio-Guio to Natal; when seeing himself abandoned by the residents, and threatened by Inhambane and Lourenço Marques, he judged that he had lost the esteem of His Majesty, and that Portugal desired to make war on him, because he had beaten Binguana; but that, as he then affirmed, this emissary was not charged to say anything which compromised his Portuguese nationality.

That it was with great difficulty he could ascertain if they contemplated war against him, and to ask the English, if in case of its being so, they would intervene with the king in his favour. And if he turned to this matter it was because also was present here the Englishman Bubé (Aurel Schultz) who came on the part of the Governor of Natal to learn the footing of the relations on which Gungunhana was to day with Portugal, as well as to bring him a Saguaste, and whom he summoned on this occasiou in order to give him the lie.

That these and only these were the declarations which he desired quite publicly to make; and that feeling himself alleviated by having made them, he had nothing more to add. His Excellency o Conselheiro Intendente Geral then asked Gungunhana to say before all to whom Chifambobsico belonged; son of the late Mutaça and ruler of Manica. To this enquiry the ruler Vatna replied that all the people knew that Chifambobsico was his since the submission imposed on Mutaça by the arms of Manecusse, that in such respect there could be no doubt, neither on the part of the secretary that there are many people in Manica to explore mines, and a Portuguese authority, nor on the part of the English, seeing that these addressed themselves to him every day to solicit concessions in that territory, and that such region could not fail to belong to him since the moment in which his dominion extended itself to Dumas (Mashonas) and reached to the Motoco. That besides this Manica always had, since its conquest, a Governor Vatna; Maguiguana in the time of the Manecusse; and Muzilla and Michava, at present, aud that as this would be so found in Violante, he would bring it to our notice. o Conselheiro asked if the ruler had regularly received taxes from Manica; he answered in the affirmative, saying that the last oxen brought from there as tribute had arrived less than two months ago, and that they could be found feeding in Chopes de Matuche, a slight distance from this place.

A quarter of an hour having passed, there appeared Michava, whom Gungunhana introduced to all. After this, the Intendente Geral said he believed in the loyalty of Gungunhana, and that he rejoiced to have heard him, but that the strangers who came to visit him, and who on the coasts represented him as not very sincere, and a bad Portuguese. And that this was not an idle affirmation, for that, before all, Mr. Colquhoun, also present, had accused him of having asserted in Lourenço Marques to the Intendente Ignacio de Paiva Raposo, that the fact of meeting him here under our flag signified nothing; seeing Gungunhana had told him that he (Colquhoun) also could raise his flag. That to Mr. Brettermann also, the same individual said in the before-mentioned place, that the Indunas offered their sons to be educated in England, and that there was even among them one who desired to become English.

The ruler and the Indunas answered that all this was false, and they told Mr. Colquhoun to present his reply, if the accusations were not true, which face to face they were making of him, but it limited itself to declaring that Mr. Brettermann and Raposo speak the truth, and that it was he who was wanting in truth, as he was drunk when he conversed with him.

By order of Gungunhana, o Conselheiro Intendente Geral asked Mr. Colquhoun if he obtained from the Vatnas any concession; the interrogated, however, refused to answer, notwithstanding that the same Exmo. Snr. had made him feel that the Portuguese authority being legitimate here, and recognised, he was asking officially, and that he knew what to do to obtain the reply he desired.

It being already three o'clock in the afternoon the meeting closed, of which the present is a report, which, after this, is signed by o Conselheiro Intendente Geral, likewise by those holding office, by Messrs. Brettermann and Deaus, and by me, Ignacio de Paiva Raposo, Intendente do Biléne, serving as secretary, who wrote, subscribed and signed it.

THE MAMMOTH GOLD MINES, LIMITED.

A RETURN OF $20,000 FOR FEB. BEATS THE COMPANY'S RECORD.

Mar. 4.—The manager, Capt. Johnstou, reports that during the month of Feb. the mill ran 18 days, producing $20,000 bullion, which is the most favourable return, for the time run, yet made. Unfortunately the mill was stopped by an accident to the engine, but the repairs will be completed and the mill restarted about Mar. 6. Developments are being pushed vigorously with most gratifying results. Referring to explorations in new ground, Capt. Johnston says that the vein was struck at 50 ft. below the 300-ft. level. A drift was run 25 ft. along the vein, and at this point the width of the ore body was proven for 20 ft., and no walls yet in sight. This large body of ore is of the same high grade as that in the stopes above the 300-ft. level, now being milled. The anticipation that the mine would improve as depth is attained is thus practically demonstrated. A further report will be issued as soon as the walls are reached, and the width of the vein realised.—C. GOODYEAR, Secretary.

The manager reports that the mill began to run again on Mar. 6, as anticipated. The vein at the new discovery has now been cross-cut, and shows an ore body 35 ft. wide.

REPORTS OF MEETINGS.

WALKERS, PARKER AND CO., LIMITED.

AN UNPLEASANT MEETING FOR THE DIRECTORS, WHO ARE CHARGED WITH BADLY TREATING MR. E. J. WALKER, THE LATE MANAGING DIRECTOR, WHOSE SERVICES THE CHAIRMAN EXTOLLED AT THE LAST MEETING—THEY TRY A FALL WITH MR. CARSON, ONE OF THEIR COLLEAGUES, AND GET THROWN THEMSELVES—CAN SHAREHOLDERS "EXPRESS AN OPINION?"

THE ordinary general meeting was held at Winchester House, on Wednesday.

Mr. W. Wentworth Walker

(chairman of the company) presided.

Mr. J. BARRETT-LENNARD (secretary) read the notice of meeting.

AN INDIFFERENT YEAR'S TRADING.

The CHAIRMAN: Gentlemen, in moving the adoption of the report and balance-sheet, I am not going to take up your time with expressions of regret for an indifferent year's trading. You, as business men, want to know the reason of that result, and the means your board wish to take to obviate it in the future. I will at once come to close quarters with both questions, and at the outset may say I consider the balance-sheet a fair and honest one. Nothing has been done to minimise the result of the year's trading. Everything has been written off just as if we had had a more successful year. Although we started the year under promising auspices, we could not but be aware, as time went on, that the course of prices was not in our favour. The custom of selling iu the lead trade is not favourable in a rising market, and most disastrous in a falling one. I see several gentlemen here, more or less connected with the lead trade, who will uuderstand what I mean, but to those who do not I will explain that the almost universal custom of selling in the lead trade is to sell, not as in most other trades, according to the cost of the article and all its charges added, but to sell it manufactured at a price based upon that of pig lead upon the day on which the sale is made. Suppose we purchase 100 tons of pig lead at 12*l.* (for the sake of argument), and suppose the cost of manufacture, including the profit, is 1*l.* per ton, you arrive at the total sum on which we are prepared to sell, of 13*l.* per ton. If there had been no fluctuations in the market between the date of our purchase and sale we can sell at 13*l.*, but supposing between these dates the price of pig lead has fallen 1*l.* per ton, we are obliged to sell at 12*l.*—that is to say, there will be a loss of 1*l.* a ton upon the transaction. In a falling market therefore you are mulcted in a loss over which you have no control, and in a rising market you enjoy additional profit, which you have not earned by any labour of your own. I say this is

A PERNICIOUS SYSTEM OF SELLING,

and as long as it exists it places our trade in all its ramifications at the mercy of speculators, and I am afraid our annual profits will be subject to fluctuations. I see no reason why lead manufacturers should not follow the example of manufacturers of articles in cognate trades, and by reasonable combinations fix the selling price upon a rational basis, which would save such losses as are sustained by lead manufacturers alike by a continuously falling market, and at the same time not injure the ultimate consumer of the lead. These, however, are general ideas that have forced themselves on my mind, but I want to fix your attention upon the prices of last year as they affect this company. There were two sharp and quick advances in lead during two months of the year, but during the remaining 10 months the market is what is known as a "drooping" market. From 14*l.* 10s. per ton, the price fell, by half-crowns, to 12*l.* 5s., or 12*l.* 10s. It is impossible to determine or assess what the company has lost by this course of prices. It is our custom to take stock, not at the price the stock costs us, but at the price of the day—upon the day when we took stock. (A laugh.) Now, the nature of our business compels us to keep large stocks. At the end of last year we had about 16,000 tons of lead, manufactured or unmanufactured, in stock, and we took that large quantity in stock at prices averaging 10s. per ton less than it cost us, showing a depreciation in value of no less than 8,000*l.* We are obliged to sell our manufactures at the price of the day, and not at cost price, and therefore if any of our materials, incidental to the manufacture of lead, advance during the process of manufacture, that advance is absolutely lost to us.

PRICES RISE, AND ADVERSELY AFFECT THE COMPANY.

Unfortunately, during 1890 the prices of almost all the principal articles we required rose, fuel alone costing about 3,000*l.* more than it did in the previous year. Newcastle is a large seat of the lead trade, and we were unfortunate enough to have a strike in the early part of last year amongst the female operatives, who chose our works as a test of the strength of the movement, and a 16 weeks' strike ensued. We eventually won the day, and the operatives returned to work at practically the old rate of wages, but the loss of profit we sustained was between 6,000*l.* and 7,000*l.*, and a smaller strike at Chester cost us 1,000*l.* of profit. To tabulate, therefore, the figures, you would have for depreciation of stock. 8,000*l.*; loss by advancing fuel, 3,000*l.*; loss of profit by strikes at Newcastle and Chester, 7,000*l.*, makiug up a total of 18,000*l.* Those are the best reasons I am able to give you for the indifferent results of the year's trading, and you may or may not think them satisfactory. (Laughter.) As far as I am concerned, I will be perfectly frank with you. I have such a

HIGH OPINION OF THE IMPORTANCE AND VALUE OF OUR PROPERTY,

and its capacity for turning out profitable work, that I do not, and cannot, consider these reasons altogether conclusive or satisfactory. My frame of mind is shared by some other directors round this board, and therefore it is that the enquiry mentioned in the report has been thought advisable. That enquiry is now going on. It would be premature, I think, for me to indicate what the results of it may be, but we think we see our way to minimise the loss caused by a continuously falling market, and to change the system of management in a way to be beneficial to the company. As to our prospects, we have sold something like 3,000 tons more manufactured lead than in the previous year, which was a substantial advance on the year before, showing that we keep our valuable connection together aud are looking out for new outlets for our manufactures. Their quality is being kept up, and I hope we will enjoy still

THE HIGH REPUTATION WALKERS, PARKER AND CO.

have always held. Having regard to the exceedingly large import of foreign pig, I think it possible we may see permanently lower values for lead. The imports last year reached the large total of 168,000 tons. We are now getting pig lead from France, Germany, Belgium, Spain, Greece, Mexico, and Australia. It may be that the incidents of the McKinley tariff may divert larger quantities of Mexican lead to this country than heretofore, and much larger shipments may be expected from Australia, the Broken Hill Mines alone turning out something like 1,000 tons of pig lead a week. I may say I do not think (if my prognostications are fulfilled) we need have any fear of this permanently lower value in lead. It would naturally affect us adversely at first, but in the long run would be beneficial. We should require less capital to carry on our business, and the lower value of lead would certainly tend to a larger consumption of that metal throughout the world. We may expect greater competition in white lead during the year, and consequently lower profits in that branch of our business. I am sorry to say that lead is being manufactured in different parts of the world to a larger extent than ever before, and especially in Australia. Five or six years ago when I went out there I noticed that pipe presses were in pretty general use in all the large cities. Since then they have put down cheap metals, and I hear last year that a shot tower was erected in Melbourne. This, aided by a prohibitive tariff, would shut out all our manufactures of blue lead in that market, but we are taking steps to increase our sales there of white lead. The

CLAIMS AGAINST THE OLD PARTNERS

have at last been settled, and you will have noticed by the report that the matter was referred to an official referee, who has given us substantial claims, the bulk of which had not yet been confirmed by the Court, but the board have no reason to doubt but what they will be eventually in their entirety. We are disappointed that we have not been successful in getting the larger amount. We think the old partners' firm were entitled, both morally and legally, to have made good (I do not wish to use any words that cast a slur on those gentlemen)—I say that, what I mean to express is that the works were not left in the condition they ought to have been, and therefore we think that the claims we have been successful in obtaining do not cover our loss. It is said that our loss should properly come into this year, and not last—that is in respect to white lead, which requires very long in the process of manufacture. The litigation with respect to our Dee Bank works still drags along; and it is principally to that cause that the large item for law expenses appears in the accounts. We hope to be able shortly to report that the matter is settled, and that the deposit of 10,000*l.* is forfeited to the company. Your attention is drawn to the large amount standing at the vendors' credit in balance-sheet. This is an account I have disapproved from its inception, but am not prepared to say that it could have been obviated. It may ally your anxiety if I say at once that the board hold security for this debt—a security which we think more than ample to cover it. I would remind you that

MR. E. J. WALKER LAST YEAR MADE OVER TO THIS COMPANY THE LARGE SUM OF 8,000*l.*

Had not this been the case this sum would have gone to the credit of his account. The claims against the old partners were understood to be principlly personal to Mr. Walker, and that the bulk of them would probably belong to him, and, therefore, Mr. Walker gave us a lien upon those claims which we thought would more than wipe out the amount of his debt to the company. However, it was found that the claims upon which we have been successful—that the bulk of them belong to the company and not to Mr. Walker. I hope, and shall be disappointed, if this amount is not wiped off the books altogether by this time next year. Nothing has been written off this

year for preliminary expenses, and the auditors approve. Mr. R. E. Wemyss has been elected a director, and Mr. Carson retires and offers himself for re-election.

SERVICES OF THE STAFF.

I cannot conclude without recognising, as I do, in the fullest manner the great services the managers at the different works have rendered. I am sure their work has been as hard, as assiduous, and unremitting as if the result had been successful. Specially, I have to thank the secretary and auditors for the great ability and assistance they have given to the company, to the board, and to myself in particular. The office of chairman of this immense concern, I can assure you, is no sinecure, and if it had not been for the valuable aid of these two gentlemen I am quite sure I should have been unable to carry on my duties. I move the adoption of the report and balance-sheet.

Col. BAILEY: I second it.

WHAT WAS SAID LAST MEETING.

Mr. FOSKETT: I should like to call attention to your remarks of the last meeting, in which you stated that in order to explain the balance-sheet, you would state that the company took over Mr. E. J. Walker's (the vendor) agreement, dated Oct. 29, 1888. I do not see how, if you took over that agreement, any claim of the old partners could be for his benefit.

The CHAIRMAN: I have no doubt from my experience of Mr. Foskett in past meetings that he has other questions, and perhaps he will put them all at once.

Mr. FOSKETT: This is not a question, but simply calliug attention to a specific statement by you.

The CHAIRMAN: If you have any other remarks to make it would be convenient to make them at once.

Mr. LAKE: Are the preference shareholders paid free of income tax?

The CHAIRMAN: They are paid as usual.

Mr. LAKE: I ask the question.

The CHAIRMAN: No.

DISSATISFIED WITH THE ACCOUNTS.

Mr. LAKE: Then why is it that you only carry forward 2,336*l.* 1s. 5d.? If you deduct income tax from 12,000*l.* you will find you only paid out of your 14,000*l.* 11,700*l.*, and therefore the balance is not properly carried forward—not the right amount. I am not allowed to go into the accounts of last year when the same objectiou arose. But I have a stronger objection, and would ask whether in a large concern of this sort the shareholders are not entitled to more explanation as to the way in which the profit and loss is brought out. We are told in one year the profit was 58,476*l.*, and next year, 23,627*l.*, but there is nothing to show how the sums were made up or the expenses—nothing by which a business man in this room could offer a suggestion for reducing expenses. I never saw any accounts in my life like these, or any that were not made up more in detail, and I ask the directors to pledge themselves, not to any alteration now, but that in future years

THEY SHOULD GIVE A TRADING ACCOUNT.

(Cheers.) I repeat there is nothing to enable us to form the slightest opinion as to whether we are having our business done on an economical basis, and though the board are to be trusted, yet, in a multitude of counsellers, suggestions might be offered by which expenses might be reduced. I contend I am right in the point I bring before you, but when you carry forward 2,336*l.* it should be more.

The CHAIRMAN: We deduct income tax on the prefcrence dividend and pay it direct.

Mr. FOSKETT: The prefereuce shareholders are not entitled to any payment at all. There is only sufficient to pay the debeutures.

Mr. WEMYSS (director): What is (to Mr. Lake) your holding? (Order.)

Mr. LAKE: Only a small holding in preference shares, but it is sufficient to entitle me to say you should carry forward not 2,336*l.* but 2,666*l.*

The CHAIRMAN: If you have five minutes' conversation with the accountant after the meeting he will be able to satisfy you. (Laughter.) You are wrong about a trading account being usual—it is very unusual and inadvisable. We do not want our competitors to see our trading account and show them our hands.

A SHAREHOLDER: I do not see any objection. (Hear, hear.)

BALANCE-SHEET SEVERELY CRITICISED.

Mr. J. WORMALD: I must say I never saw any document brought forward as a balance-sheet of this nature. I do not call it a balance-sheet at all. A balance-sheet is a document which shows liabilities on one side and assets on the other. The liabilities consist of debentures, preference and ordinary shares, and sundry other things, and there may be income-tax if you like to put it in. The assets are represented by the land and buildings, stock, plant and machinery, the sundry debtors to the coucern, and all amounts due. If the preliminary expenses and good-will are to be written off by degrees they, I presume, would be reckoued amongst them, but the surplus between the liabilities and assets is either the profit and the loss, as the case may be. In the account you simply give us a statement of the liabilities in the shape of capital and debts due by the concern, &c., and the assets I do not see auything to object to, but then, instead of giving us this surplus, to show what the profit is, you simply put down iu profit aud loss "by profit on trading," and we have to take your word for it, and that of the accountants. No doubt it is correct, but I say that in a sheet of this kind it would be very much better if you would show the surplus under the liabilities and bring it down to the profit and loss account, and then show how the profit and loss account is used. Here is the profit brought up from the profit and loss account into the balance-sheet, amounting to 17,835*l.* 3s. 11d. There is the half-year's interest on the debit side, due Jau. 1, and also 12 months interest on debentures paid and agreed, deducted from the profit and loss, leaving 2,116*l.* 13s. 11d. That I know is correct, but it appears that you have debited the liabilities with three half-years. You have not done so, I am well aware, but it would be much better if you would in future submit a balance-sheet more in the way I have suggested that would cause less difficulty to shareholders, and that would be understood better.

AN ALLEGATION.

Mr. FOSKETT: The real object is to hide that there was no interest earned upon the preference shares. The interest is not due on Jan. 1 in each year, but on Dec. 31, and I do not know what the accountants could be thinking about.

Mr. STEPHENS: What is the amount of profit made on our respective works?

The CHAIRMAN: We could not give that information. I do not think it would be to the interests of the company to do so.

Mr. LAKE: I do not wish you to disclose trade secrets, but I wish to see a little more of your outgoings, and some consideration should be shown to us in this respect. I happen to be a director of trading companies, and I know the sort of information that can be given. I should not like to meet my shareholders with such a bald statement as this.

The CHAIRMAN: In reply to Mr. Wormald—the auditors are present, and I have no doubt have taken due note of his valuable remarks.

Mr. FOSKETT: I do not wish you to close the discussion until I have asked further questions. The income tax for 1889 is charged under 1890, and the auditors' fees for 1889 and 1890 ought to have been included iu the latter year. The sums are not large (708*l.*), but coming in a bad year, the accounts are made so much worse.

DIRECTORS LAUGH.

Are there any other charges that have not been put in? (The directors here began to laugh.) This is not a laughing matter, and I hope the directors will view it scriously. (Cheers.) Are there any other charges due to the past year not provided for. I see there is a loan, 42,000*l.*, and it is odd that it should be an exact sum, for I suppose there is some accrued interest. I think these are serious questions, and not laughing matters. With regard to the indebtedness of the vendor—Mr. E. J. Walker—I think the amount last year was 3,000*l.*, but has now increased to 15,000*l.* I should like to know for what purpose the company have paid Mr. E. J. Walker 12,000*l.* iu the last 12 months. It seems to me that in a matter of that kind the directors should be held personally responsible for it. Mr. Walker has, it appears to me, already had sufficient out of the concern and those connected with him, and it is no part of this company's business to let him get into their debt to the extent of 15,000*l.* on the simple assurance of the board that they have security. I should like to know the nature of this security. It is not a proper thiug, and it is not the business of the company to lend their money, especially when they have to appear as borrowers. In addition to 350,000*l.* debenture capital, there is 42,000*l.* of loan, and 36,000*l.* besides. You have not the money to lend, aud it is not right to the concern to lend it.

The CHAIRMAN: I thought you would have another question. (Laughter.)

Mr. FOSKETT: I know something about the lead business, and although you put your remarks very well, I cannot agree with your facts. My experience of last year is, that in regard to the price of lead it was comparatively steady.

THE CHAIRMAN LAUGHS,

but if he wants evidence of that, I have the daily prices in my pocket. There was uot a fluctuatiou of 15s. a ton in lead for months in the year. When we met this time last year, you told us the prospects for the past year were eminently satisfactory. At that time the high price of lead had passed, and we had reached a price of about 12*l.* 10s., or 12*l.* 15s., and for about eight months it ranged between 12*l.* 7s. 6d. and 13*l.* 5s.—a most unusually small fluctuation. That does not accord with the remarks you have made, and I hope you will answer the question I have put, and to them I would add this one—the stocks are put down at 242,653*l.*, and you have stated the quantity as 16,000 tons. Therefore a proper valuation of that stock is of the utmost importance.

The CHAIRMAN: You put one serious question as to a date that should have been Dec. 31, instead of Jan. 1. (Laughter.)

Mr. FOSKETT: I did not say it was serious, but that the valuations of the stocks on Dec. 27 was serious, and ought to have been stated.

The CHAIRMAN: I do not think it will interfere with the gaiety of nations. (Oh.)

Mr. FOSKETT: I do not think that is the manner in which the questions of shareholders should be auswered. (Checrs.)

The CHAIRMAN: With respect to the auditors' fees, Mr. Foskett was here last meeting and knows the sum was then fixed, so it was impossible to put the fees for 1889 into the previous account. (Hear, hear.) As to further liabilities not put down—I must decline to answer the qucstion. I consider it a reflection, and little less than insulting to the responsible auditors. As to Mr. Walker's debt, Mr. Foskett asks the nature of our security. I have already said we consider it more than ample, and I speak with the full responsibility of my words. As to the prices of lead, I am afraid Mr. Foskett and I will not agrce. We took the price of stock based on the price of Spanish pig lead at 13*l.* nett.

A SHAREHOLDER: I sec it is proposed to pay a dividend on the preference shares, but where is it to come from?

The CHAIRMAN: From the 14,306*l.* If you deduct the 12,000*l.*, the difference is the 12 months' interest on the preference shares, and it leaves the amount we carry forward.

The SHAREHOLDER: I thought that was to be kept with the other reserve accounts.

The CHAIRMAN: It comes out of last year's reserves, which will now be 1,689*l.* subject to the Court.

Mr. FOSKETT: You have not answered all the questions.

The CHAIRMAN: Those in favour—those against; carried with two dissentients.

A NEW DIRECTOR.

The CHAIRMAN proposed the re-election of Mr. R. E. Wemyss, and mentioned as his qualifications that he was a director of the North British Railway, chairman of the Danube Colliery Co., a large landed and colliery proprietor, and one of the largest shareholders in the company.

Mr. T. J. WILLIAMS: What are the qualifications of Mr. Wemyss? Unless he is intimately acquainted with the workings of such a

business as this, which is unique in the world, he is not fit to be a director. (Hear, hear.)

Mr. BRANDOM seconded the motion.

Mr. WEMYSS: I have not been in the lead trade, and

CANNOT SAY I KNOW MUCH ABOUT IT,

but will do my best. I have a very large interest in the company, but if shareholders do not want my serviees I am perfectly willing to retire, subject to the majority. Has Mr. Williams any more questions to ask me? (Oh! and laughter.)

Mr. WILLIAMS: No, I have not.

The CHAIRMAN here mentioned that Mr. Carson retired from the board, but he did not propose his re-eleetion.

A SHAREHOLDER: Does Mr. E. J. Walker still remain a member of thc board, although he has retired from the post of managing director?

The CHAIRMAN: No, he is not a member of the board.

Mr. DOTT: I have great pleasure in proposing the re-election of Mr. Carson.

DIRECTORS LAUGH.

Mr. WILLIAMS: I second the motion. I am bound to say I do not think that the hilarity on the directors' side of the table is a decorous proceeding on their part. The less that sort of thing is shown the better. (Loud cheers.)

THE BOARD AND MR. CARSON.

The CHAIRMAN: It will be convenient if I state, as shortly as I can, the position of the board towards Mr. Carson's re-election. Whilst we shall be very sorry personally to lose his services, we eannot disguise from ourselves that Mr. Carson, on many serious points, has been in a minority at our board meetings, and though I am in favour of an independent board, I think on main priuciples of poliey every board should be unanimous. Now, as we have very important matters bcfore us, such as changing the position of management, and as we have reason to think that Mr. Carson may not altogether approve of those changes, we are constrained to oppose his re-eleetion, and regret to say we cannot recommend it.

Mr. CARSON: You have said, "many serious points," but will you state what they are?

The CHAIRMAN: I must decliue to enter into the private proceedings of the board. (Cries of "Oh.")

MR. CARSON DISCOMFITS HIS COLLEAGUES.

Mr. CARSON: Then I must offer a few remarks. (Cheers.) We have heard a great deal of the policy of this board. Now, the policy of this board for the last three or four months has been to get rid of Mr. E. J. Walker, the managing director. My sin, as a director, is that I have supported Mr. Walker, bccause I think it suicidal policy to part with a man who knows more about the lead trade

THAN THE WHOLE OF THIS BOARD PUT TOGETHER,

and, without egotism, I may say that after him the person who knows most about it is myself. (Cheers.) I have stuck to Mr. Walker, no doubt, out of the friendly feeling to some extent I have towards him, but much more because I knew his knowledge and experience would be useful to this company. If Mr. Walker has failed in his duty, it was the business of the board to pull him up to it and make him do it, but there is no such charge. He has been merely requested to resign, or practically that. Another matter as to which I have objected not to the policy of the board—there I defy the chairman to mention anything approximating to "several serious points"—is that I know something of directors' work, and think that whilst directors are fairly paid they should do a fair amount of work. I was provisional chairman of this company for five months, and during that time we had weekly board meetings, but the moment our present chairman took the chair—possibly he lives at Wolverhampton, and cannot come up—the board meetings were turned into fortnightly meetings, and we have even gone as long as three weeks without a board meeting, and sometimes they have been held on Mondays, sometimes on Tuesday. Now, I submit to any gentleman who knows anything about the working of a company, that that is eminently improper, and I think a company of this sort should have its board meetings at least once in every week. Then you come to the finance meetings. As conducted by this company,

THE FINANCE MEETINGS ARE A COMPLETE SHAM.

As I understand it, accounts should be brought forward at one meeting and passed for payment at another. I am aware we have large accounts, but it may not be possible so to deal with them, but there are a large number that could be thus dealt with, and that is the proper way to treat them, but it has never been done here. I have looked upon myself, at this board, as the representative chiefly of the trading shareholders in this company. I have donc business with Walkers, Parker and Co., and bcen assoeiated with them in business for 35 years, and my firm for 50 years, so that I may say that I represent the trading interest. Not long after the formation of the company, the chairman, who is a hardware merchant, and, therefore, accustomed to merchants, and trading on terms usual in that business, interfered with the custom in this trade.

A VERY SERIOUS MATTER.

I opposed that, and, I believe, it has resulted in a loss, of which I have no doubt can be put down at from 50,000*l*. to 100,000*l*. I know 10,000*l*. was lost at Liverpool, and 5,000*l*. or 6,000*l*. morc, with two or three other accounts of large amounts. Now, there is another matter I should like to place before the meeting. The chairman says that he likes to have an independent board, but he does not like mc because I am independent. (Laughter.) That is rather au anomaly for a gentleman who professes to want independent directors. (Cheers.) Now, I happen to be one, and because I am so, I am arraigned before this meeting, as you have heard. Mr. Wemyss has only recently joined the board, but says I have objected to its policy. Why, this board has no policy. It has simply its duty to carry on the affairs of the company, and take as big a profit as possible, and it is that duty I have endeavoured to fulfil. I have taken a special interest in our Lambeth department, and look upon it as a sort of affair of our own, to which I devotc spccial attention, and under the present able manager it is as succcssful as any other part of this affair. I think there is another reason why we should have some independent members, and I should like to see another one added, if we can get him. There are a variety of things that want looking into, but of late, when I have made any suggestion. there has been half-and-half kind of listening, and finally pooh-poohing. I will tell you one suggestion that I made that might have obviated the raising of this question of invcstigation, and I think you will all agree with me it was reasonable.

A REASONABLE SUGGESTION.

I suggested a board meeting should be held at Chester and at Newcastle at least once every three months. We never see our managers unless by chance they come to town, and the board have only once been round these works to make an official inspeetion, and that was at thc beginning. (Cries of "Oh.") That simple suggestion of mine I consider is valuable, but it was wasted on my colleagucs. It was admitted it might be good, but nothing was done to carry it out, although I have spokcn of it two or three times. If I am placed continually iu a *non possumus*, it rather wears one out. To say, however, that there are "several serious points" of difference is not correct, and I emphatically deny the statemcnt, and in the presence of the chairman call upon him to substantiate it. (Cheers.)

TREATMENT OF MR. WALKER.

I have only to add, with referencc to Mr. Walker, that I think he has bcen unfairly dealt with by this board. The chairman has receded from him bit by bit for the last six months, but never seems to have known his own mind until lately. I will, however, tell you what his mind was 12 months ago by reading the remarks he made.

WHAT THE CHAIRMAN THOUGHT OF MR. WALKER "ONLY A YEAR AGO."

"Before leaving this subject, I should feel myself lacking in my duty if I did not refer to the great indebtedness we are under to our managing director, Mr. E. J. Walker. I ean say, without hesitation, that the handsome profit we are able to mentiou is in great measure due to that gentleman. His services, and thc whole of his time, are given up to the benefit of the company, and I am only anxious in my owu mind that hc shall not break down under his arduous duties. He is a manager of exceptional ability."

Gentlemen, your managing director has retired, and your chairman has not said a word about that matter. (Hear, hear.) He has left you in the dark. He has passed out into oblivion. He ought to have been here to-day, but the chairman thought it much better not, and

A MERE QUIBBLE WAS RESORTED TO.

I can call it nothing else—to prevent him from coming. He has placed a large number of his shares in foreign hands, and I suppose it never occurred to him, when he passed thc balance he did into the name of his wife, that he left himself without his full qualification. That was found out by the secretary. I do not wish to make this a public matter, and shall be glad if the Press will uot take notice of it.

A SHAREHOLDER: I hope thc Press will put down every word of this. It is most important for the shareholders to know of it. (Cheers.)

Mr. CARSON: Very well then; the secretary wrote to our solicitor to know if Mr. Walker were or were not a director, aud the solicitor said that he, having parted with his qualification. was no longer a director. It was taking a peculiar advantage of Mr. Walker (who was really the vendor to the company) becausc of an accident, especially as there is a transfer in the office to rectify the mistake, which eannot be registered on account of the closing of the books. Advantage of that accident has been taken to seal the mouth of Mr. Walker, and prevent him from saying a word in his defence. (Loud cheers.)

THE BOARD DEFEATED, AND MR. CARSON TRIUMPHANT.

The CHAIRMAN: I must put thc motion to the meeting.

Sixteen hands were raised in its favour, and only eight against, and the proposal was declared carried by the CHAIRMAN amidst loud cheers.

Mr. STOGDEN proposed a resolution to appoint Mr. Reginald James Neville, of 23, Rosetta Gardens, a direetor, and urged that this motion should be earried, because from what had taken place it was exceedingly desirable to strengthen the board, and there was a vacaucy which hc might fill. Mr. Stogden went on to say that hc with his friends held an interest in this company to the extent of 60,000*l*.

Mr. MASKELL seconded the motion.

The SOLICITOR said that as no notice had been given the resolution could not be put.

Mr. BRANDON said that hc would propose that resolution simply "as an expression of opinion," and Mr. STOGDEN seconded the motion in that sense.

STRANGE RULING OF THE SOLICITOR.

The SOLICITOR: It is better to kecp in order and to pass only resolutions of whieh notice has bcen given rather than expressions of opinion.

Mr. BRANDON: I cannot scc why we are called together if we are not allowed to give expression to our opinions. (Checrs). I propose "That this mceting desires to express its opinion that the board should be strengthened by thc addition of this gentleman to its members. and would ask the board to give due eonsideration to that expression of opinion."

The SECRETARY: I do not think thc solicitor heard you.

The SOLICITOR: The resolution is out of order.

ARE SHAREHOLDERS "DUMMIES?"

Mr. BRANDON: The position is this: The shareholders desire to express an opinion, and it is contrary to all my cxperienee of public mectings, extending over 30 years, that it should be ruled that shareholders caunot do so. (Cheers.) I have never heard of sueh a thing. In such a case we are pure dummies. (Loud cheers.)

Mr. STOGDEN said he would withdraw the motion.

The CHAIRMAN proposed, and Mr. WEMYSS seconded, the re-elcction of the auditors, which was carried, aud a far from agreeable meeting was then brought to a close.

THE ROBURITE EXPLOSIVES CO., LIMITED.

A PROLONGED DISCUSSION ENDS IN A VICTORY FOR THE BOARD OVER THE WRITER OF THE CIRCULAR AND HIS SUPPORTERS—AT THE REQUEST OF THE BOARD A FRIENDLY COMMITTEE IS APPOINTED TO CONSIDER THE POSITION GENERALLY.

THE fifth ordinary general meeting was held at Cannon Street Hotel, on Monday, "to receive the report of the directors and the accounts to Dec. 31, 1890, to elect directors and auditors, and to transact the general business of the company."

Lieut.-Genl. Sir John Stokes, K.C.B.

(chairman of the company), presided.

Mr. H. A. KROHN (secretary) read the notice of meeting.

THE CORNER TURNED.

The CHAIRMAN: Gentlemen, we come before you to-day in a happier frame of mind than we did a year ago. There is no doubt that the work we commenced three years ago has made a thoroughly good start, and has reached a sound and wholesome basis. (Cheers.) Wheu we met you a year ago, although we had done a great deal to put the business in that position, and had several important irons in the fire, we had to confess to a loss of a couple of thousand pounds, but this year I am glad to say the profit has amounted to rather more than 1,000*l*., which means that you have improved your position to the extent of 3,000*l*. (Cheers.) The actual business of the year has wiped off 1,000*l*. of the loss. The actual increase—if you look at it in that light—shows we have really done 50 per cent. more business this year than last, with an expenditure of 300*l*. less than in 1889. The 1,000*l*. has been made by economy in manufacture, and cutting down expenses in all directions. It is the diligent attention of our *employés* at the factory, in the saving of pennies and half-pennies and various pounds, that has produced the 1,000*l*.—due, I repeat, entirely to economy. (Hear, hear.) To put the matter briefly, we have done 50 per cent. more trade, with 300*l*. less general expenditure, than in 1889, and in addition have manufactured that quantity at a saving of 1,100*l*., against the manufacturing price of 1889. At the International Mining Exhibition

WE WERE AWARDED A DIPLOMA AND GOLD MEDAL

—not a great thing—but a satisfactory recognition of the value of your explosives. (Hear, hear.) I now come to the actual state of your trade. We began last year with very good deliveries in Jan. —quite up to the average of the preceding year, but Feb. and Mar. showed a fall, owing to the coal strike. After that there was a marked recovery in Apl., and the sales went on increasing until we arrived at a satisfactory total for the year.

GOOD BUSINESS ABOUT WIGAN.

In the Wigan district, an important coal centre where our factory is established, there is shown the largest increase, namely, over 26 tons, or 25 per cent. more than the previous years—the total increase of the year being 31 per cent. Taking the whole of the business of the United Kingdom, 60 per cent. of it is being done in the Wigan district (a radius of 8 miles) under the direct superintendence of the general manager, whilst 40 per cent. has been done by the agencies—the same proportion as in the previous year, but the agents' figures show a far healthier state of affairs than the previous year, which has still further been improved upon during the last few weeks of the present year. I think I may say one word about the position of our business this year. The two months elapsed of 1890 show an increase of more than 50 per cent. over last year's business. I think we have

MADE A MOST EXCELLENT START IN 1891,

with every chance of continuance. The actual figures were for Jan. and Feb., 1890, 29½ tons, whereas in 1891 they were 46½ in this country. I now come to the export trade.

THE EXPORT TRADE

shows a large extension. We do a great deal in this country, but when we come to deal with countries abroad you will see that they must eventually give you a much larger return. For instance, Australia I have always looked upon as your best customer so far. I have just received the aunual report of the Australian Roburite Co. They have only been at work seven months, beginning on May 15 last, and in those seven months nearly 25 tons were manufactured. There has been a gradual reduction of cost, and the increased number of cartridges made shows the marked improvement as the hands become proficient. They have had even greater difficulties than we have had here with the labour question, because they have not the abundance of hands to turn to when men get discontented, and they have not the women and girls, as we have here, who now do so much of our work. Of their prospects, they show a series of satisfactory trials at Broken Hill mines, which are likely to lead to a considerable demand for roburite, though they have had difficulties with the Adelaide officials as to conveyance, &c. The difficulty lay in getting roburite through the Custom House. Railway contractors find roburite a valuable explosive, and a testimonial is given in proof of the statement:—"We have used your roburite on our works for the past four months, and are satisfied it is one of the best and safest compounds ever used by us.—ANGUS and MOONEY." They have promises of a good market in other directions, and notably in the military department, the director of which has given a valuable order for submarine mines, and advises its use in place of gun cotton. Its value in collieries is also confirmed, and then a return is given of their sales. In the latter half of the year they mixed 27 tons of ingredients, and their sales were for: June, 162*l*.; July, 201*l*.; Aug., 314*l*.; Sept., 593*l*.; Oct., 649*l*.; Nov., 701*l*.; Dec., 994*l*. The increase is month by month, and the importance of this to you is that you sell all this stuff, and

ON EVERY POUND THEY SELL YOU GET A PROFIT,

as they are bound to take their ingredients from you. Therefore, these figures have a significant meaning for the English Roburite Co. After months of effort we have at last arranged a working agreement with South Africa, which ought in itself to be more important than even that of Australia. Our new licensees are going to work through the same agent as before, who has, had such success in his efforts to make roburite known that his services will be of the greatest value in connection with the important business house with which we have made arrangements. We have begun with a substantial order of 8 tons, paid for, and going out at once, so that we now feel we are sure of the ground in South Africa. To Brazil we have shipped a small consignment, which we hope will produce further orders, and also to the United States of Colombia, from whence we have had favourable reports. This is an important field, and will become more so when present restrictions are removed. Small consignments have also been sent to Ecuador and Peru, and a large one has been shipped to British Colombia, where our licensee has formed a powerful company with a capital of 10,000*l*. 10 tons of components have been shipped and paid for. As to Canada (except British Colombia), Mr. Starr came over in June last, and visited the works, and saw the directors, and has entered into an arrangement for a license which has since been transferred to the Canadian Explosives Co., of which Mr. Starr is managing director. The company have erected a manufactory at Halifax, and the first 10 tons have been shipped and paid for. From China we have several orders, and in India we are awaiting a report from the Mysore Gold Mines with regard to its use there. Japan has been detached from the China license, and a Japanese firm are prepared to have a contract as soon as they send an agent to be trained here. To Persia we sent out a consignment, and the engineer to the Persian Mining Corporation promised to use nothing else if the trial was satisfactory and the report favourable. We need be under no misapprehension in regard to people who talk like this, for

NO PEOPLE WHO HAVE EVER USED ROBURITE GO BACK FROM IT

—they take more. (Cheers.) From Spain I have a good report to give. In the Carthagena district we have introduced a partner with capital, who is now at Gathurst learning the practical part of the business. He has returned to London practically proficient, and will presently go to Spain for the sole purpose of pushing roburite. We have also appointed a licensee at Huelva, where the necessary plant will be set up for the manufacture of the minimum annual supply asked for. Altogether the export trade for these two months is not equal yet to the home trade, but I have shown you the various promising lines on which it is going to work. Taking the export and home trade together we have 72 tons this year against 33 last. (Cheers.) I think you will consider that a fair business for the two months of this year. I must now refer to the most interesting experiments conducted by Mr. Hall, one of Her Majesty's Mine Inspectors, to test the influence of roburite on coal dust. This gentleman has proved that blown out shots of gunpowder may immediately produce explosions of great violence even when gas is not present. The result of his report was to discredit still more the use of gunpowder in coal mines, and to give an impulse to explosives fired by electricity. Further trials are deemed necessary, and it is believed that the claim of roburite will be justified to be considered the

SAFEST EXPLOSIVE ON THE MARKET.

We have ourselves made numbers of trials in coal dust, and never had any explosion when it has been fairly tamped. In a great measure, in consequence of stress laid upon this point by some of Her Majesty's Inspectors, and a desire, on the part of colliery managers, to use the safest method of blasting, we have issued a quantity of electric fuses—that is to say, detonators fitted with electric fuses. A safe explosive like roburite should be fired by electricity. Hitherto the quality has been satisfactory, but still we have had complaints arising from the defects in the fuse itself, and the maker has admitted them. This we propose to remedy, and may even go further, and manufacture the detonators ourselves. We have gone so far as to take out the license, and have laud to put up the proper buildings and plant, but shall have to talk to you later about that. We have been accused of

NOT SUFFICIENTLY ADVERTISING ROBURITE.

We began by spending so many hundreds a year on advertisements. Well, I do not know that the result was satisfactory. We adopted what we considered a better form of advertising—sending our circulars direct to every colliery owner, and wherever we can get these owners to admit our experiments, we send experts to show them how to use roburite, and the results produced thereby, which are almost invariably followed by orders, and repeated orders. This is a form of advertisemcnt the cost of which appears in your accounts principally as travelling expenses and wages paid to our trained and reliable men, who have done enormous service. We have a man in Wales specially employed, who goes from point to point to make trials in the collieries, and this we think far more profitable than newspaper advertising. I am reminded by the secretary that there is also an item called experiments, and that a great part of our new form of advertising is included in that. 64 experiments were carried out, of which 45 were in collieries, 1 in a metalliferous mine, 8 in slate and other concerns, and 10 miscellaneous. There is another point in which we have gone through trying experiences, and that is in the

MANUFACTURE OF NITRATE OF AMMONIA.

We therc followed a *ignis fatuus*. It was brought to us by one chemist and then another, one being the inventor of roburite itself—Dr. Roth—a system by which we werc to make it at a saving of 14*l*. or 15*l*. a ton. A year ago I was able to tell you that we hoped for good results from the plant we were putting up for his process, and I am now accused by a gentleman, who has circulated a tissue of absurdities, of saying at the last meeting that the nitrate of ammonia plant was then working satisfactorily. That is a statement I could not have made, for the plant was not working—in fact, we were waiting for Dr. Roth to come over and work his process. I am glad to tell you that we have utilised a great deal of the plant, which we took over when we originally bought the old Gathurst factory, and a great deal of that we have converted into the ordinary nitrate of ammonia process, by which we now manufacture, and hope shortly to manufacture all we want here; and, therefore, save the ordinary manufacturer's profit we should have to pay if we bought it. We are increasing our turn-out—last week being the highest we have yet

manufactured—4 tons. We have altogether produced 70 or 80 tons. That is a further economy we shall be able to show in the returns for 1891, and we have utilised for this purpose, as well as the old plant, some of the plant set up by Dr. Roth for his process. I am happy to tell you he has rescinded the contract we made with him to pay so much a year for his services when we first started. His advice for a long time has been of no value to us, and now that he has rescinded the contract, we thereby save 180*l.* a year. The general health of our people, I am glad to say, has much improved last year, owing to more interest being taken by the men in the important matter of cleanliness. I think I have now shown you that the sale is making good way.

THE NUMBER OF ORDERS INCREASES.

I am afraid I have not the increase for last year, but I have the numbers for this year. In the two months we have received 343 orders, as against 251 the year before—English orders only. This company commenced from a small beginning, and has never gone back. Every year has been an improvement upon its predecessor. We have a first-rate system for keeping the product dry and sealing it up in cartridges. That is most important. We know the quality of the chemicals we require, and are able to get them. The factory is erected at a spot where we can deliver by cart more than one-half of our present output, and for export we have the advantage of shipping our materials as chemicals. If we can only induce our Home Government to look at roburite as less dangerous it would be valuable, but I am afraid it will be a long time before they look upon roburite as they do on brown sugar. In Germany it is carried on the railways as ordinary merchandise. I feel bound to touch upon

THE CIRCULAR SENT OUT BY A GENTLEMAN FROM MANCHESTER,

who has thought fit therein to attack us on several points. I have already answered the one point personal to myself. I do not propose to go into details at this moment, because it will be better to answer the writer when he thinks it fit to make his attack. All I can say is that we feel the board have no reason to fear his attack. We stand upon the merits of our case, but do feel that with this sort of circular going broadcast a great deal of injury is done to your business. (Cheers.) It very nearly stopped the completion of the South African arrangement, for the people said, "What is all this about? We are not going to make an agreement with a company in this position." It was easily explained, but it might have been very harmful. (Hear, hear.) I do not think any of you owe a debt of gratitude to the gentleman who wrote and circulated that circular. (Hear, hear.) I do not think he will get much change out of it, and it was a pity he should have circulated it, more particularly as his statements are unfounded. (Cheers.) Your board have had under consideration for several months the one point which blocks the way to the early dividends on the ordinary capital, and that is the cumulative preferential dividends that have first to be paid. There is no doubt, however large a business we may do in years to come—with that millstone hanging round our necks we shall have great difficulty in issuing a prosperous balance-sheet. Therefore, we have devised a scheme for removing that difficulty, but do not wish to bring it cut and dried before you from our own hand. We want to take counsel with you in the matter, and, therefore, I shall presently make

A PROPOSITION FOR APPOINTMENT OF A COMMITTEE

to confer with the directors for the purpose of considering the position and prospects of the company, and of settling such a re-construction of its affairs as may be thought advisable to lay before you. I do not bring that formally before you now, because I am going to do so presently, but did not think I could conclude my remarks on the general business without telling you what was lying at the back of our thoughts. I think that with your help we may be able to turn the corner, and I now propose "That the report and balance-sheet and accounts submitted by the directors be received and adopted." (Cheers.)

GOOD OFFICERS.

Col. J. COPLEY WRAY (director), in seconding the motion, said: There is one point to which only I need allude. You are aware how much the well-being of the company depends upon the ability of those who act under the directors as permanent officials of the company. In this company we are especially fortunate. If we have ever to submit to our permanent officials any matter to be carried out, it is carried out by them with the utmost accuracy, and if we ever receive any report from them, it is absolutely reliable. I should like to refer to this diagram (circulated with the report), and say that it is an absolutely true and accurate representation of the progress of the company for the past two years, and is such that any child can understand it. The red line represents our home trade, a great proportion of which comes from the Wigan district, and depends in great measure upon the ability and energy of our general manager. It is indeed largely owing to him that we have been so successful in that part of England. There is no doubt that the agents are working better, and I hope to see them rival our home district, which is at present greatly ahead. The foreign business has considerably increased.

WORK OF THE SECRETARY.

It was absolutely impossible for our general manager to undertake all the details connected with the business, and our secretary, notwithstanding his other work, which is very arduous, and which he carries out with great ability, has conducted the whole of the correspondence respecting the foreign trade, which is very large indeed, when you consider the number of countries we are connected with, and the details as to transport and shipping that have to be gone through. It, therefore, depends a great deal on him, and we are much indebted to him for the ability he has shown. We are also indebted to our chemist, and everywhere have testimony that the roburite manufacture during the year was of the highest quality. Ever since our present chemist has been with us we have been free from all those difficulties with which we had to contend in the first year or two. We could not depend on uniformity, but during last year could do so absolutely. We have now come to a turning point, at which the path of success opens before us. I have great pleasure in seconding the report.

THE AUTHOR OF THE CIRCULAR SPEAKS.

Mr. WILLIAM T. SPARK, who read his speech, said: I rise to move an amendment, "That the report and accounts of the directors be received but not adopted, pending an inquiry by a committee of shareholders into the working of the company and its future prospects." Before I say anything more I desire to make an explanation about the nitrate of ammonia plant working satisfactorily. At the last meeting I asked that question of the chairman, who was about to say that it had not so far proved satisfactory, but, unfortunately, the general manager leaned forward and prompted him that he had heard that morning that it was going all right.

The CHAIRMAN: The remark I made at the time was that nitrate of ammonia had actually been produced.

Mr. SPARK: Then I suppose the plant might be considered to be working satisfactorily. (Laughter.)

The CHAIRMAN: Not necessarily so. (Cheers.) You misunderstood me.

Mr. SPARK: Then I withdraw my remark, and apologise for any imputation thrown out. (Cheers.) I hope all shareholders have received my circular, in which I criticised the balance-sheet and report issued by the board as likely to mislead shareholders unfamilar with business affairs, and in which I urged them to make every endeavour to attend this meetiug, or obtain due representation by proxy, and not to pass the accounts without demanding a thorough investigation into the whole working of the company's business with a view to putting the affairs on a sound basis and in prudent hands. I have received expressions of sympathy and promises of support from various quarters. What I have said in my circular amounts to

AN UNQUALIFIED CENSURE OF THE BOARD,

and I desire to emphasise this now, and to make it distinctly understood that my remarks do not include every member of the board. There are at least three exceptions—Col. Smith, Mr. Loewe, and Mr. Cockson, whose names do not appear on the prospectus, but who were subsequently elected directors as large shareholders; especially Col. Smith, who represents a very substantial body of the proprietors. I know it is commonly considered that when a man has joined a board and fails materially to modify the policy and action of his colleagues, and does not protest, he therefore endorses, and becomes more or less legally responsible for what is done. I do not share that sentiment. Men so placed are in an exceedingly difficult and responsible position. If they protest from their position as directors, and fail to obtain the support of the majority of the shareholders, it would necessitate their resignation, or if they simply resigned their position, they would leave the affairs of the company in the hands of men over whom before they at least exercised some check. (Laughter.) Because they cannot do all the good they would, it does not follow that they have not done a great deal, aud I believe that these directors have done a great deal. Col. Smith is a gentleman of substantial position, with a large individual stake in the company, and I have no doubt his services have been useful, but at the last meeting he said he could not attend meetings often when held in London. Mr. Loewe I have heard is the hardest working member of the board. (Hear, hear.) Mr. Cockson is also a large shareholder, and has been useful in introducing roburite in his own neighbourhood. I do not wish my remarks to be taken personally by these gentlemen. We are informed in the report that the business has increased more than 50 per cent., and the profit one-third, or a little more.

AN ADMISSION.

The diagram is the only gauge we have of this statement, but I confess that the chairman's statement as to foreign trade is more favourable than I expected. (Cheers.) The diagram would show very clearly the state of the company (provided it be correct) if it were not for the black line.

The CHAIRMAN: Do you think we publish falsehoods? (Cheers.)

Mr. SPARK: I was going to criticise the black line, which I do not approve of. There is nothing in this which is a falsehood, but I do not think the impression it conveys correct.

Adml. COLOMB: It is an absolute question of figures.

Mr. SPARK: At the end of the year you made a sudden jump in your sales. (Yes.) That is due entirely—apparently a jump, for with the exception of about 2 tons there is no difference in the home trade between the fourth and third quarters, but you made a heavy shipment at the end of the year, which does not necessarily represent consumption, but may lie unused a year or two.

The CHAIRMAN: What does that matter to us? it is paid for. (Cheers.)

Mr. MCMILLIN hoped the speaker would be heard without interruption.

The CHAIRMAN: He ought to be corrected on obvious matters of fact.

Mr. SPARK: It is a different thing to say your diagram is false to saying that it is liable to produce a misleading impression. (Hear, hear.) In the second paragraph of the report we are informed that the expansion of the business has been most marked in the Wigan district. This falls into line with the belief that the business elsewhere has not been pushed. Last year you explained that a reduction would take place in advertising, and I was misled by the balance-sheet into supposing that very little travelling had been done; but, as explained, that item is not inclusive of all travelling expenses, but some of it is put under gratuitous supplies, which is an improper allocation. There ought to be something to show that these experiments and gratuitous supplies involve a certain amount of advertising. Otherwise, I should not have made the remark I have done in putting advertising and travelling together. In 1889 Col. Smith said you must advertise largely, and employ more travellers, and in the report of 1888 meeting the chairman, in calling attention to the fact that 50 per cent. of all roburite had then been disposed of and consumed immediately about the Wigan factory, said "that shows that the miners and mine owners of this district have been thoroughly well worked." This leads to the inference that the

OTHER MINING DISTRICTS HAVE NOT BEEN PROPERLY WORKED.

I am certainly in favour of judicious advertising. On the debtors side of the balance-sheet you will find 7,000 preference shares, but why is it not stated that they are 7 per cent. cumulative? There is an overdraft at the bank of 5,868*l.* which requires explanation, and then I see nothing down to the important item of depreciation. I find the directors have paid 100*l.* more for salaries this year than last in additiou to their owu fees, though I am not implying that such a

business as this can be worked for nothing, or that ill-paid men in responsible positions are likely to prove an ultimate economy; but would there not be economy in reducing the number of directors and paying a fair salary to a managing director? The London office has been criticised, and therefore we ought to know how much it costs. I am not prepared to advocate its total abolition, but think the business should be centralised as much as possible. In my circular I accuse the dircetors of issuing a report, attempting to mislead shareholders, and to conceal from them the true position of affairs; and I conclude by urging the shareholders to have a thorough investigation in the terms of my amendment.

THE CHAIRMAN ATTACKED.

I have always considered it the duty of sharcholders to support the board when they can conscientiously do so, and therefore am the more impressed with the necessity under existing circumstances of speaking out plainly, and not mincing matters in justification of the attitude I have assumed. In 1885 the chairman was director of one company; in 1890 of five; deputy chairman of three other companies; director of two others, and vice-president of another. It would be interesting to know if he has piloted one of these companies to suecess.

Col. SMITH: I think this is assuming rather the nature of a personal attack on the chairman, and if Mr. Spark will take my advice I think he will do wisely if he kecps off the dclicate ground he is now treading on. (Hear, hear.)

Mr. SPARK: I shall be presuming not to ignore the advice of a gentleman like Col. Smith if I proceed, but I was about to remark this—I will cut out one or two thiugs I might have said—that our chairman is on the boards of eleven companies. There are generally 300 working days in the ycar, and the eleventh of that timc would be a month, and it is a question for shareholders to consider whether Sir John Stokes is worth his annual fees for a month's work. I am assuming that he does his duty by all the eleven companies. What is his interest in the company? In a year-old list he held 35 shares, and his yearly fees are worth more to hiu than the whole of his shares put together.

THE GENERAL MANAGER'S TURN.

Attacks have before been made and severe criticism offered upon the general manager. If I regard the circumstanees which led to his original appointment as open to fair critieism, to say the least, I am not now so sure that he is not as qualified to look after the Gathurst works as any other man you could get. (Cheers.) We have paid him three years' salary by training him for the work, and he ought now to know something about it. But I have never heard any statement that when he was appointed he had auy other qualifications than that he was an amiable, honest gentleman, willing to work—qualifieations I should not wish to dispute. I am not prepared to advocate more than the reduetion of his pay. I do not doubt he will be glad to take less if he ean get no more. (Order.) I believe we have a splendid property, and a most valuable patent if only properly worked and pushed. As to the foreign trade, I see there have been purchases of new foreign rights, and the justification thereof lies in the success hitherto attending the working of them, which is a question for a committee of investigation. I think I have made out the necessity for a committee of enquiry into whether or not they are satisfied as to the way in which the company is being managed and the works carried on.

"COME OUT RIGHT IN THE END."

Mr. MCMILLAN scconded the motion, and said that however the business had been increased the shareholders had no benefit, though he believed the company would come out right in the end. (Hear, hear.) He did not know at what period the ordinary shareholders might look for dividends, and he agreed that it was not by hushing up the whole matter that the present state of things could be remedied. The skilful physician did not conceal from the patient or his friends the necessity for the use of the dissecting knife if he were goiug to do one or the other any good. A very good firm in Liverpool engaged in tunneling work tried various explosives, and at last came across roburite. In the result he was informed that better stuff for the purpose was never put under the earth. They had used it, and would use it. But he saw in the Liverpool papers a paragraph ruuning down roburite, but no advantage had been taken of the experience of this tunnelling company.

A VIGOROUS REPLY FROM THE BOARD.

Adml. COLOMB: I have been asked by my colleagues to reply to the mover and seconder of the amendment. I would say, first of all, I was exceedingly pleased with the tone of the seconder's remarks, and am sure they will find an echo with most of us. We are most anxious for the well-being of the company, and have no other thought behind to interfere with it. (Cheers.) The objection we take to the circular is that it seems to infer the directors are thinking of other things than the prosperity of the company. I can assure you it is not so. Our continued endeavour is to promote that prosperity. I cannot separate my colleagues into sections as Mr. Spark has done, for there is not one of us who does not believe that

WE ARE NOW ON THE TABLE-LAND,

and that you will have no more of what has been called promises of good behaviour, because the matter will speak for itself at our next general meeting. Mr. Spark stated that Wales was not properly worked, but we shall be very glad if he will show us how to do better than we are doing. Wales has been somewhat of a trouble to us, for we have not been able to progress there as we hoped. We have taken reeently a fresh departure with the view of meeting the present criticism. The bank overdraft is not understood. Like all new companies, we were short of capital. We pay at the end of each fortnight for what we have received, and take our discount, but do not get paid for what we deliver, save at the end of three months, with the exception of *our foreign business, which is paid for in cash.* With regard to salaries, no doubt, with the amount of busiuess now done, they seem high, but if things go as we have every reason to believe they will this year, that item will seem small, as it only seems large now because we have really been making the business, and have now got it very nearly made. (Cheers.)

VALUE OF THR LONDON OFFICE.

With regard to the London office, I can tell you it pays its expenses over and over again. The whole of the foreign trade is conducted therefrom, and without the London office I do not think we should have much (if any) of that trade. It is said the balance-sheet is calculated to mislead the shareholders, and that may be so, but it was carefully debated, and the endeavour was to put everything as clearly as possible. We decided to put in nothing about the cumulative dividend until we had one or two shareholders to consult with us as to what should be actually done in putting the company on a better basis. We were a little over careful, perhaps, of what your feelings might be, and were anxious to have a committee of conference.

AN UNJUSTIFIABLE ATTACK ON THE CHAIRMAN.

As to the chairman—a most unjustifiable attack has been made on him. (Cheers.) There is not one of my colleagues who did not personally feel that attack to be one made upon himself. No man could have worked more zealously on your behalf than our chairman, or worked with greater skill, intelligence, and sound judgment. (Loud cheers.) This testimonial (holding it up) is the strongest that has been given to you to-day, and is from Col. Russel, the commanding engineer at Weymouth, representing practically all the Government work of that kind that is carried on there, and it comes not to the company, but to Sir John Stokes personally, who is using his exertions individually in addition to those he puts forth at the board. You are very much mistaken if you suppose you have not one of the best chairmen you could possibly have in the person of Sir John Stokes. Our manager has been called "an amiable, honest gentleman," and he is so; but it was not entirely for these qualities that he was elected general manager, but because from his antecedents we knew he would turn out as he has turned out—one of the best officials it is possible for any company to have. (Cheers.) I do think (as I said to a co-director a few weeks ago) that

WE HAVE THE BEST GENERAL MANAGER AND THE BEST SECRETARY

of any company in London. (Loud cheers.) That is our feeling, and, therefore, I hope that the remarks made about our general manager will slide off hiu like water from a duck's back. As to the foreign patents, we bought them in a lump because we got them cheaply. We did not suppose all would turn out successfully, and had great doubts of Franee; but Spain alone will pay for the whole of them, and I have no doubt we shall do well in Portugal and Italy, but, unfortuuately, these things take time. (Hear, hear.) If Mr. Spark in his circular had beeu more careful in his language he would have carried more people with him. He says you have been put off by promises, but if you take the balanee-sheets year after year you will see how those promises have been kept. (Cheers.) As to the expression used in regard to the diagram,

IT HAS BEEN CALLED A "TRICK."

I think Mr. Spark should have explained his definition of that word, for it appears to me distinctly libellous. (Cheers.) I cannot read the word "trick" as applied to that diagram (which is an accurate representation of the progress of the business) in any other way.

Mr. SPARK: I called it a trick to make this sudden addition to the shipments at the end of the year on account of foreign trade of ingredients which may or may not be used—to make it appear as a genuine addition to our trade in the same sense as the home trade.

Admi. COLOMB: How can you explain your word "trick" in that way?

Mr. SPARK: To combine the two trades in that way is what I call a "trick." (Oh, oh and laughter.)

The CHAIRMAN: Why the foreign trade is paid for before the home trade. (Cheers and laughter. Cries of "Withdraw.")

Mr. SPARK: I will withdraw as I am advised.

The CHAIRMAN: There has been no attempt to make any sudden shipment as alleged, and I have here the figures that will prove it.

Mr. JAHNCKE: What is the amount of foreign trade this year?

The CHAIRMAN: Last quarter (as the diagram shows) we sold 28½ tons for export. This year, up to date, we have delivered, or have on order for export, 26 tons.

Mr. BARNES supported the motion for a committee, and

Mr. SHARP, in the course of a long speech (listened to with great impatience towards its close) also spoke in the same sense.

Mr. NEWTON thought the meeting was indebted to Mr. Spark for the action he had taken, but did not think that gentleman ought to have used the word "trick" in the sense in which he did. (Hear, hear.)

Mr. GEORGE KING referred to the subsidiary companies that were being formed to promote the sale of roburite, and could fully endorse what the chairman had said as to the progress in Spain, having seen for himself during a recent visit what was being done in that country. He ventured, from what he knew, to think that the attendance of directors was far beyond the average of those of other companies, and he spoke from considerable personal knowledge.

A VAIN APPEAL.

Col. SMITH was of opinion that the discussion had done good, and that possibly the classification of the balance-sheet might be improved. He was one of those who had urged his colleagues to have the re-construction and consultative committee the chairman had suggested. The views of all parties, therefore, would be met, and he suggested that Mr. Spark should, therefore, withdraw his amendment.

Mr. SPARK said he was willing to do so, but not that part of it refusing to adopt the report and accounts.

Col. SMITH: That puts the fat once more into the fire, and we shall probably see in the papers that, this meeting having lasted five hours, terminated in confusion. (Hear, hear.)

CHAIRMAN'S REPLY.

The CHAIRMAN, having answered one or two general observations and questions, proceeded thus to speak of the personal points raised: We never held out a hope of immediate dividends, but trusted we could get results sooner, though we have never hid from you the difficulties that lay in our way, and the causes why those results were not obtained. I might perhaps say something unkind about the people whom we employed in the first instance, and whose chemical processes aud machinery did not always answer, and I might retaliate upon some friends of Mr. Spark's in a manner that neither he nor they would like. They received the engineers' and chemists' fees, which are in the accounts. As to results—they are coming, and I think we

have this year shown you they are coming. We have turned the corner, and that is the first difficulty of a company like this. At this moment, after we have borne all the heat and burden of the day, these gentlemen now come forward and say, Let us turn them out and get in ourselves. (Hear, hear.) That is the object of this agitation. (Loud cheers.) That is the object of the amendment, and I know it. (Renewed cheers.) I will tell you more, that the gentleman who promoted this attack is one who

WANTED TO BE GENERAL MANAGER,

but I did not think he would do your business in a way that would be to your advantage, and, therefore, I recommended "an honest and amiable gentleman" to go into that business, who has done your work thoroughly and well. (Cheers.)

Mr. SPARK: Who wanted to be general manager?

A SHAREHOLDER: Heenan.

The CHAIRMAN: Your friend did—he asked me to make him general manager—Mr. Heenan.

"HE DID."

Mr. SPARK (surprised): Mr. Heenan asked you to make him your general manager?

The CHAIRMAN: Yes, he did.

Col. SMITH: He also asked me. I asked Mr. Heenan when he came to see me at my office what position he proposed to occupy, and he said he proposed to be nominated general manager. (Laughter.)

The CHAIRMAN: Mr. Spark was in the employment of Mr. Heenan at that time. You have read us a long sermon, and you now wish to interrupt me.

Mr. SPARK: I insist on being heard.

The CHAIRMAN: And I insist on your sitting down, sir. One of your early remarks was that the mining districts had not been worked. You can work a district better close to your factory, where you are brought into personal contact with the colliery owners, and can send your carts with the goods, than you can others far away. We have endeavoured to work other districts through agents and by sending experts, but our success has not been so great as near the factories, though we are getting far better results from the agencies than heretofore. The London office has fully justified its existence, and you have heard that to that practically we owe our foreign trade. We are accused of misleading shareholders, and I take great exception to that expression, and also to the one that we have made promises year after year, whereas we have made no promises that have not been realised, and concealed no information that it was necessary for you to have. I have never hesitated to tell you the exact state of affairs, and if you had had a committee every year you would have found out nothing in addition. There has never been any attempt to mislead. It is those persons who cannot understand honest behaviour who accuse others of being dishonest, and the very statement made that this diagram is a "trick" (which is simply the tabulated results of actual facts) shows how incompetent a man who utters such criticisms must be to understand what is really true and honest himself. (Cheers.) It is true I belong to other companies, but in no sense whatever has work in connection with them interfered with yours. I have never spared myself night or day to benefit the company. You have never suffered in your business from any other to which I have put my hand. (Cheers.) Some men can do more work than others in 12 hours. I do not think that any company would be benefited by the board always sitting at the elbows of the officials interfering in little trifles. (Cheers.) I have been attacked through the general manager, but I stand here without the slightest shame or confusion on that score. He is my son-in-law. He was not my son-in-law when he was appointed, but I had known him 24 years as one of the best, most honest and careful workers I ever came across, and I defy anyone to pick a hole in his character. It is

A MOST MEAN AND DASTARDLY THING

to strike the general manager through me. (Loud cheers.) It is not worthy of a gentleman—in fact, a gentleman would not do it, and I scorn the very imputation. (Cheers.) I put him into this business because I knew he could do it well; and he has done it well, and that is the universal testimony of all who are acquainted with the facts; and for fellows like this (pointing to Mr. Spark) to get up and say he is put into office because he is my son-in-law—I ask you, gentlemen, whether you will condone such conduct. We use every effort to get the stuff introduced, but miners are apt to be prejudiced, and require a good deal of persuasion. The accusation that we are asleep is not a fact, for we are always pushing roburite in all directions. I will now put the amendment.

Mr. MCMILLIN (the seconder of Mr. Spark's amendment) rose to repudiate any knowledge of Mr. Heenan.

Mr. SPARK withdrew his amendment.

The chairman then put the motion for the adoption of the report to the meeting, which was carried.

The CHAIRMAN then proceeded to make a few remarks concerning

THE PROPOSED RE-CONSTRUCTION OF THE COMPANY.

The company was originally formed, he stated, with a certain number of preference shares and ordinary shares. All the ordinary shares were taken up, and a portion of the preference shares. The preference shares were offered with an accumulative dividend of 7 per cent., and that accumulation had been going on for three and a-half years, and now stood at the rather large sum of 16,000*l*., which would have to be paid off, before a dividend on the ordinary shares could be recommended. There was besides this a sum of 10,000*l*. for preliminary expenses, which would have to be dealt with before any dividend could be divided. But by a process of re-construction they hoped to arrive at an arraugement, by which both classes of shareholders would be satisfied, and the preliminary expenses be written off. When the company got into that position which they saw before them, they would be able to pay a dividend on the whole share capital of the company. The gross profits, too, which would come in in future would go to swell the nett profits, beeause the incease of business would not imply an increased cost of administration. In conclusion, he moved the following resolution: "That a committee of three shareholders be nominated to confer with the directors, for the purpose of considering the present and future prospects of the company, and of settling, if thought advisable, the terms of a re-construction scheme to be afterwards submitted to a special general meeting of the shareholders for their approval."

Col. GERARD SMITH seconded the motion. In doing so he remarked that the resolution had not been decided upon by the directors suddenly, but had been so after very mature deliberation. Some such idea was mooted in Nov. last. Re-construction was rather an ugly word to deal with, but, at the same time, they had got to face it, and they must make up their minds to do so. He was up for re-election as a director that day, but he should decline to accept that re-election unless some such scheme as the directors had formulated were adopted. There were two things to be considered with regard to the re-construction. First of all, the present state of affairs was very detrimental to the ordinary shareholders, as there was no hope of paying a dividend on the ordinary shares within a reasonable period; and secondly, they must take into consideration that the alterations they proposed to make should be reasonable alterations, and should not bear too heavily on one section of the proprietors by requiring them to give up more than what might be justly asked of them—in the matter of re-construction they must meet each other.

IT MUST BE SO.

There was never a re-construction carried out without some sacrifice being made. He would show by a few figures how detrimental the present state of affairs was. In the first place, they had got to deal with the preliminary expenses, which amounted to 10,500*l*., then the accrued dividend on the preference shares, viz., 16,625*l*. These amounts would have to be cleared off before the shareholders received a penny. The whole thing amounted to this—that if the company made a profit of 10,000*l*. a year, the ordinary shareholders would not receive any dividend for five years There were several things the committee would have to consider. They might write down the origiual capital, or abolish the cumulative dividend on the prefereuce shares—in fact, unless this latter recommendation were resorted to they would never do anything. They might make debenture stock out of the cumulative dividend, but there were many grave objections to this course. He did not see how a re-construction scheme could be formed unless the preference capital was made non-cumulative, and the original capital was written down, and he thought if they did not insist on that, the preference as well as the ordinary shareholders would never see a penny on their investmeut. Referring to the Stock Exchange quotatiou, he might add that it could not be obtained until more of the capital had been called up. It would be for the committee to decide whether that uncalled capital should be written off, or whether a call should be made to comply with the technical rules of the Stock Exchange. Referring to the proposed committee, he observed that in his judgment no conclusion could be arrived at unless that committee travelled over a considerable range of subjects, and unless they ravelled out the past history of the compauy and its future prospects. He had his colleagues' authority to state that the committee should have every facility for information. In conclusion, he said he cordially seconded the motion, and he hoped the shareholders would nominate three of their body to confer with the board, and out of their consultations he had no doubt great good would come, and some scheme which could be submitted at an early meeting, which would be advantageous to everybody, would be arrived at.

Mr. SPARK: May I suggest that the committee should have power to increase their number to five, if it be considered desirable.

The CHAIRMAN: I think it is better to leave it as it is.

Col. SMITH: I should not recommend that the number be increased.

Dr. JAGOE: Will the preference shareholders be represented in this committee?

The CHAIRMAN: I may mention that one of the largest preference holders is on the board of this company—Mr. Loewe—and another large preference holder is Col. Smith.

The chairman then put the resolution to the meeting, and it was unanimously carried.

COMMITTEE APPOINTED.

Five gentlemen were nominated by shareholders as being eligible to serve on the committee:—Mr. Geo. Bohn, Genl. Sim, Mr Weatherley, Mr. Spark, and Mr. Barnes. The first three of these gentlemen had 19, 18, and 15 votes respectively in favour of their appointment on the committee. Mr. Spark had 11 votes, and Mr. Barnes 7, so it was decided to appoint Mr. George Bohn, Genl. Sim, and Mr. Weatherley to act as a committee to confer with the board.

The retiring directors, Messrs. Loewe, Maynard, and Col. Gerard Smith were re-elected, and the auditors, Messrs. Price, Waterhouse aud Co., being re-appointed, the meeting concluded with a vote of thanks to the chairman.

LETTERS of allotment in the De Lamar Mining Co., Limited, have been posted. We understand that the amount offered was subscribed about three times.

LONDON AND UNIVERSAL BANK.—The third annual general meeting of the shareholders of this bank was held recently at the bank, Strand, Major-Genl. Sir J. W. Campbell, Bart., presiding. In moving the adoption of the report, the chairman said that during the year two interim dividends at the rate of 8 per cent. and 10 per cent. respectively had been paid, and it was now proposed to pay a further dividend at the rate of 10 per cent. These dividends absorbed 21,000*l*., and out of the balance it was recommended that 20,000*l*. should be placed to reserve and 5,892*l*. carried to the next account. They could have paid a larger dividend, but the directors were anxious to see a fair reserve fund in order to be prepared for any loss that might occur. Next year he had no doubt they would be able to pay a larger dividend. During the year the bank had opened up accounts on the Continent, and the results had been wholly satisfactory. The report was adopted, and the retiring directors re-elected. In answer to a shareholder, the chairman said the bank were not in a position at present to obtain a Stock Exchange quotation, but he anticipated that next week they would get a quotation on the tape, inasmuch as the shares of the bank were being dealt with in the City. The shares were now being sold at from 12*l*. 10s. to 13*l*., and he had no doubt that when they obtained a Stock Exchange quotation the shares would command 18*l*. to 20*l*.

YANKEE GIRL SILVER MINES, LIMITED.

OUTPUT FOR FEB. MONTH.

Mar. 9.—The mine superintendent cables this morning to the following effect :—"Total output for Feb. month, 600 tons, of which we have shipped 220 tons : total approximate value of output is 14,460*l*. ; mine expenses, 3,080*l*. ; mine is looking well." Mr. Harvey in his monthly report of the Yankee Girl, Orphan Boy, and Robinson, states :—Yankee Girl.—No. 4 level : north-east drift : A stope is being worked over the back of this drift on ore of fair quality, 2 ft. thick ; length of stope 12 ft. Orphan Boy : 70 tons of ore was shipped from here last month, 40 tons of which produced from 119 to 155 ozs. of silver per ton. Some rich stromeyerite ore (a rich ore, composed of sulphide of silver and copper) is also being met with. No. 5 level.—Yankee Girl : The stope from over 5½ level (south of shaft) has been worked up to No. 5 level. This stope is 20 ft. long, with scattered ore for 15 ft. in width. At one point in the stope for a length of 6 ft. by a width of 4 ft., rich stromeyerite ore is being extracted. Orphan Boy : This point continues the same as when last reported ; fair ore is being raised from here. No. 6 level—Yankee Girl : Drifting is being continued north-east of shaft ; nothing of importance has yet been met with. Winze : Drifting is being carried on east of the winze ; there is nothing of importance to report here. The stope between 5½ level and No. 6 level continues to look well. The ore is from 12 to 15 ft. wide, of rich quality. No. 7 level : The east drift is without change. In the south-west drift, ore producing silver, 20 ozs.; gold 1-10th of an ounce, with 15 per cent. of copper has been met with. Shaft : The water is pumped out to about 15 ft. below No. 8 level. Trouble has been experienced with the sinking pump which has retarded the progress of sinking. Robinson shaft : The shaft has been sunk 117 ft. below No. 4 station, and a cage-road put in. At a depth of 100 ft. below No. 4 level, No. 5 station has been cut, and a drift driven 12 ft. towards the ore. The water is being taken out of the mine by means of a tank. It occupies 32 minutes to hoist water which accumulates in 48 hours. No. 2 level south : There is a streak of ore 1 ft. thick in the face of the south drift, producing from 75 ozs. to 100 ozs. of silver per ton. The stope is 110 ft. long, with a streak of ore from 6 ins. to 4 ft. in thickness. No. 3 level south : There is a streak of low-grade ore, 1 ft. thick, in face of drift. In the south drift stoping has been commenced about 10 ft. behind the face, on a streak of low-grade ore about 2 ft. thick. In the north drift operations have been suspended for the time in the stope over back of drift. No. 4 level : The south drift has been driven on the ore break 57 ft. ; ore of medium grade is being met with. The north drift has been driven 55 ft. There is no change to report. Surface : The concentrating mill is working satisfactorily. About 10 tons of concentrates is being milled per day. The machinery at surface is all in good working order. Weather : Up to within a recent date we have had a very mild winter, but of late the weather has set in very severe, closing down, *pro tem.*, the Silverton railway.—B. MCNEILL, Secretary.

THE NEW GUSTON CO., LIMITED.

TOTAL OUTPUT FOR FEB. MONTH.

Mar. 9.—The mine superintendent cables :—"Total output for Feb. month, 640 tons, of which we have shipped 390 tons. The total approximate value of output is 11,330*l*. ; mine expenses, 2,170*l*. Storming daily. Mine is looking well." Mr. Harvey reports as follows :—No. 4 level—New stope : Fair ore has been broken here during the past month. Ore streak from 6 ins. to 2 ft. thick. No. 5 level—Stope : The north end of this stope has been worked to No. 4 level, and has been securely timbered. Fair ore continues to be taken from the south end of the stope. Winze : This point continues to look well ; the ore streak is from 1 ft. to 3½ ft. thick. Winze near to Robinson boundary : We have suspended sinking this winze for the time, and set the men drifting south from the bottom. I hope to open a fair piece of stoping ground between this winze and our boundary line. Depth of winze 46 ft. Back stope, close to Robinson boundary : The ore streak continues from 6 ins. to 18 ins. wide, of fair shipping ore, and we are still drifting from north end of stope on a fair streak of ore from 10 ins. to 15 ins. thick. No. 6 level : Stope, fair ore continues to be broken here. No. 6 drift : Throughout the past 21 days we have had a fine body of ore in No. 6 drift. For the past 15 ft. of drifting the ore has been 10 ft. thick, of excellent quality. This is a most important discovery, and is one of the points that bears out the remarks contained in my report of Dec. 16, "That the property improves in value as development work is being pushed ahead." I am sanguine we shall open here between No. 5 and No. 6 levels (90 ft.) a fine and probably magnificent piece of stoping ground, as the winze in No. 5 has already been sunk 34 ft. on a fine body of ore, with good ore still going down. The face of the drift continues to look well, and speaks well for No. 7 level. No. 7 level : We hope to complete cutting station and timbering same during the coming week, when drifting toward the ore break will be commenced at once. General remarks : The mine looks well throughout.—B. MCNEILL, Secretary.

LEAD ORE SALE.

PUBLICATIONS RECEIVED.—We have received from the Institution of Civil Engineers the following publications :—"Milne and McDonald on the Vibratory Movements of Locomotives," "Sheibner on the Carrara Marble District Railway," "Stevenson on the Gas Supply of Buenos Ayres," "Sykes on Rao Shri Pragmalji Bridge, Mandvi Kutch," "Hall on Failure of the Limerick Dock Walls," "James on Timber in the Tropics," "Kinder on Railways and Collieries of North China," "Maclean on the Sidhnai Canal System," "Moyle on Conversion of Metre Gauge to Indian Standard Gauge," "Sadler on the Flow of Water in Earthen Channels," "Robertson and Stoney on Indian Bridges."

FOUNDED 1871. BANKERS:—ALLIANCE.

"MINING WORLD" Stock and Share Agency.

CORRECT INFORMATION IS THE BASIS OF SUCCESSFUL DEALING IN MINING SHARES.

THE AGENCY CAN COMMAND AND SUPPLY THIS TO INVESTORS.

GENERAL FOREIGN MINES.

Many of these deserve special attention. Profits may be secured by acting upon sound advice in Buying certain Shares, whilst losses may be avoided by timely sales.

INDIAN MINES.

The upward movement has commenced. The information possessed by the Agency is invaluable for those wishing to Buy or Sell Shares in this Market.

KAFFIR MINES.

Special efforts have been made to secure the best and most reliable information as to the management, resources, and prospects of South African Mines in which the profits and losses have been alike phenomenal.

GREAT CARE IS NEEDED BEFORE INVESTING.

Those doing business through the Agency are kept informed as to any exceptional news in connection with the Companies in whose Shares they are interested. Purchases can be made for forward delivery, and sales effected for Cash

All communications should be sent to

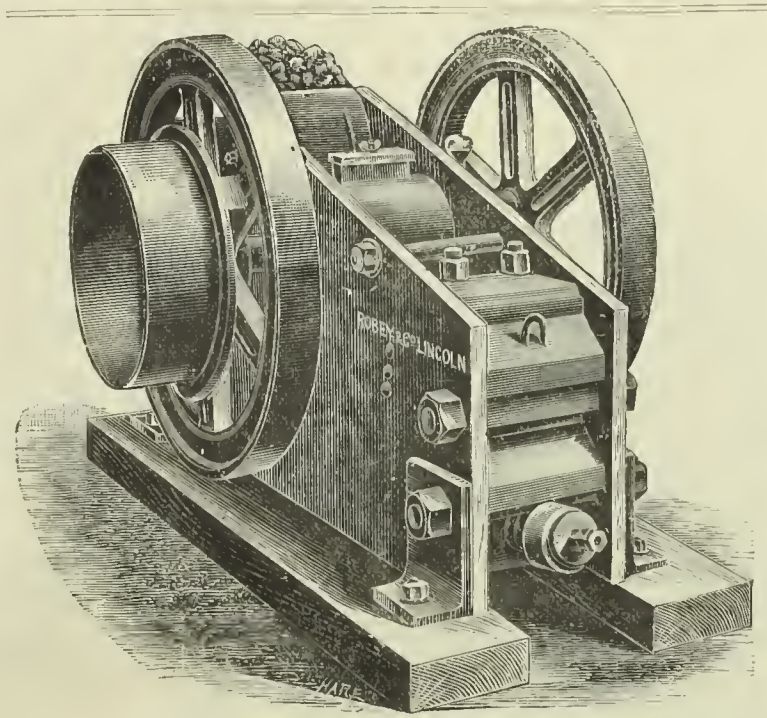
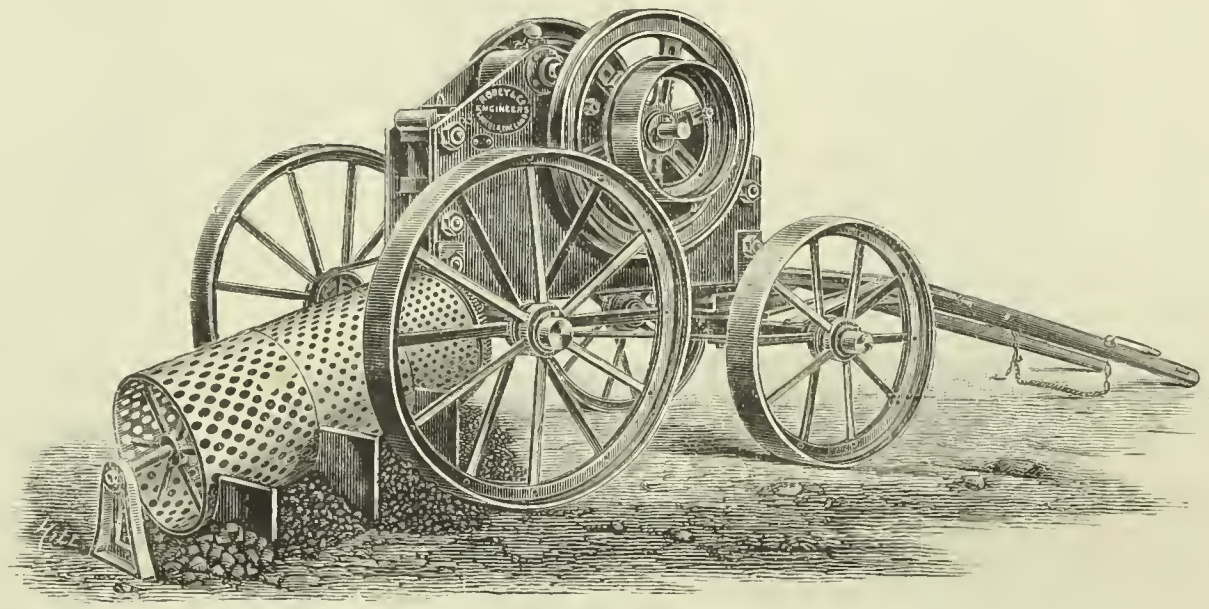
ROBEY & CO., Globe Works, LINCOLN.





ROBEY & CO.'s IMPROVED STONE BREAKER AND ORE CRUSHER.

ROBEY & CO.'S STONE BREAKER AND ORE CRUSHER, for crushing Ores, Quartz, Road Metal, Railway Ballast, Cement, Phosphates, Coke, Coal, &c.

The above illustrates the most simple form of Stone Breaker made, and has no equal for easy transport over bad roads or mountainous countries. Steel has been largely employed, and in the place of the usual heavy Cast-iron Frame, a neat and much stronger Frame of rolled steel is used, with a saving of some tons in weight. The great depth of the side gives it increased stiffness, and the materials of which the machine is constructed ensure great rigidity and thorough adaptability for heavy work.

The parts are few and simple, and thoroughly accessible for oiling, adjusting, and cleaning, and the liability to breakage is reduced to a minimum.

The jaws are easily renewed, and are made of our own special mixture and treatment, rendering the face well suited for quartz. These jaws can be adjusted while the machine is running so as to reduce the material to any desired size, and are adapted for either cubing or crushing.

QUINLAND—LONDON.

MINING MARKET.

MARKET MORE LIVELY AT THE CLOSE—SPECIAL NOTES ABOUT MYSORE, MONTANA, GLENROCK, AND YURUARI —ARE WE FRIENDLY TO HOME MINES?

City, Friday Evening.

The vagaries of the Mining Market this week have almost surpassed belief. In its earlier part it took decidedly a back seat, but yesterday and to-day it put on a bolder face and advanced somewhat to the front. It did so, thanks to the tonic administered by the Mysore meeting, which was the most gratifying that has ever been held by this most interesting and successful company. The telegram read at the meeting was brilliant to a degree—in one part of the mine the lode being worth almost 7½ ozs. to the ton. We need not pursue the subject further, for our columns, both leader and reporting, are teeming with matter relating to this famous property, the value of which does not appear to have been overstated by even the most sanguine of its critics.

At the same time the record has not been a satisfactory one from the brokers' point of view. They have been standing idly in the market place, because no man hath hired them. They have watched the stream of prices, but it has not floated orders in substantial quantities to them. At the same time the last two days have been decidedly better than the whole of the "blizzard week" put together. From the effects of that dreadful period, not only did brokers suffer, but also home mines. Great damage was done to surface works and machinery, whilst access to many of the properties was impossible, and, in fact, one meeting, that of West Frances, had, in consequence, to be postponed.

Some little activity was observable in certain quarters and took the direction of a determined attempt to depress the price of Loma shares. The effort wholly failed, and the discomfited "bears" retired to their dens to growl over the firmness of a market that had defeated their machinations. The facts brought out at the recent meeting were too strong for the enemies of Loma, and thus its friends were able to give a good account of them, and will, doubtless, be prepared to do the same as often as occasion requires.

Montanas fell upon the issue of the report announcing the resignations of Mr. Bayliss and Mr. Robinson, but, on reflection, it was seen that these gentlemen had only nominally severed their connection with the company, which practically will remain as heretofore under their superintendence. The leading facts of this interesting document are reproduced in another column.

The "Battle of Yuruari" will be fought out on Thursday next. A more convenient day for the repulse of the enemy could not have been selected by the directors. This is the statement roundly made on the market, and motives are assigned to which we will not give the publicity of priuter's ink. It would be a good thing if the shareholders only met to adjourn, say, for a week or fortuight. If the directors resisted this adjournment, they would give force to what the malicious are now saying; if they did not, they would show their own *bonâ fides*, and their desire to have a full and free discussion on a day reasonably convenient to the shareholders.

Glenrock is to the fore with an advantageous offer to the shareholders, to which we call pointed attention elsewhere. We hold that the shares of this company should be bought. We understand that Mr. Samuel Jennings will leave London on a visit to Colorado on Apl. 1. We trust that on his return the shareholders will have an opportunity of receiving from him, verbally or in writing, the impressions produced by his visit.

Referring to general foreign mines, the market has been in a weak condition—unsupported to any considerable extent by buyers. They have been asked to "walk up," but have turned away, and so the show has had to go on without them. But it has been a rather slow affair, for the actors (sellers) have had the dispiriting task of playing to empty benches. A telegram states that a fire has occurred in Tirito Mine of the Almada property, and the shares are fractionally depressed, but holders should remember that the recent discovery was made in the Almada section, the damage to which, if any, is not yet known. Amador, Frontino, Flagstaff, Gravel Gold and Orita are all down, but quoted prices represent the absence rather than the presence of dealing.

In the Copper market the movements have been uneven, and its firmness alone is represented by Rio Tintos. Cape Copper has declared a shilling dividend.

In the Indian market, Goldfields of Mysore advanced rapidly on the speech of Genl. Beresford at the Mysore meeting. They have been as high as 42s., but close at about the same price as last week. No good was done to Balaghats by the news of the cholera scare, and Nine Reefs suffered in sympathy. A determined attempt has been made by cliques operating in Glasgow and London to depress Mysore shares, but the facts of the meeting were too strong for the "bears," whose bad deeds are likely to recoil like unnatural children upon the parents who begot them.

In the Australian section the news is decidedly better all round. Large transactions have taken place in Australian Broken Hill Consols on the receipt of gratifying intelligence from the mines. A substantial profit can now be realized by those who took the advice we tendered when this concern first made its *début* on the Mining Market. A good deal of business has also taken place in Day Dawn Block, which has again developed into a mine earning big profits. For example, the last monthly crushing is of the value of 3,790*l*., whilst the expenses were only 1,460*l*. Day Dawn P.C. has also made a return of 2,822*l*., but we cannot tell what were the expenses. Better news has been received from Gympie Great Eastern, and the mine has rarely looked better than it does now. It is long since we have been able to speak in such satisfactory terms of the Colonial market.

In the Kaffir section the movements, though uneven, have on the whole been of a downward kind. De Beers in the diamond section, Oceanas in the land section, and Wemmer in the gold section, represent the firmness of the market, whilst its feebleness is shown by Explorings, London and South African, South African Gold Trust, Stanhope, Piggs Peak, and Langlaagte. Simmer and Jack is to the fore with a profit of 4,630*l*. for Feb.

The question has been raised by one of our Western contemporaries as to whether the Mining World is a friend of Cornish mining. It most certainly is, for, when all is said and done, it is a patriot of the

soil, but it cannot ignore the fact, patent to everyone outside Cornwall, that so far as the general public are concerned the Cost-book system is dead, has been buried, and will know no resurrection. We had hoped to find room for an article already written, on our position in relation to Cornish mines this week, but the pressure on our space is so great that we have to defer its publication.

Dolcoaths and Tincrofts show a fall on the week, and our regret is sincere when we say that the solitary mine which shows a rise is Wheal Crebor, of which Mr. John Schofield is at once the chief prophet and supporter. Mr. Schofield deserves well of Wheal Crebor shareholders.

The outlook is not encouraging for next week. Brokers will be on "holiday intent," and moreover the week will be a short one. Both the Mining and Stock Exchanges will be closed from Thursday afternoon until Tuesday morning.

KAFFIRS.

A very neglected market has caused prices to drop, and dealing has often been difficult. The chief fall has been in Stanhope and Piggs Peak Preference, while the only rises to call for notice have been in Johannesberg Waterworks and Wemmer.

Business.—The falls are as under :—Piggs Peak, $\frac{1}{16}$; Piggs Peak Preference, $\frac{1}{4}$; Sheba, 1s. 6d.; Crœsus, 6d.; Dornkop, 6d.; Gleucairn, 6d.; Great Gold Zone, 6d.; Langlaagte Block B, $\frac{1}{8}$; Main Reef, 1s.; May Consolidated, 1s. 6d.; Randfontein, $\frac{1}{16}$; Stanhope, $\frac{3}{8}$; and Vogelstruis, 6d.

The rises are noted in the following :—Bothas Reef, 6d.; Forbes Reef, $\frac{1}{16}$; Johannesberg Waterworks, $\frac{3}{16}$; Moss Rose, 1s.; and Wemmer, $\frac{1}{4}$.

SOUTH AFRICAN LANDS.

Dealings have been few. Oceanas have received an impetus of 6s. 3d., and Transvaal Lands have also risen, whilst Explorings have fallen heavily, and London and South African Exploration and South African Gold Trust are also down.

Business :—Those that have receded are, Bechuanaland, $\frac{1}{16}$; British South African Chartered, $\frac{1}{16}$; Exploring, $\frac{3}{4}$; Goldfields of South Africa, $\frac{1}{16}$; London and South African, $\frac{1}{4}$; South African Gold Trust, $\frac{3}{16}$; Transvaal Estates, $\frac{1}{8}$; and Ditto Gold, 1s. Those up are Explorations, $\frac{1}{16}$; Oceana, $\frac{5}{16}$; Silati River, 6d.; and Transvaal Land, $\frac{1}{16}$.

DIAMONDS.

There has been very little doing in this class, but a flutter was caused on the market in De Beers by our recent articles on the statistical position; those most interested have come to the fore, and purchased shares, thereby causing a slight momentary improvement.

Business : The rises are in De Beers of $\frac{1}{2}$; Gordon, 2s. 6d.; North-East Bultfontein, $\frac{1}{8}$; whilst the only fall is in Burma Ruby, $\frac{1}{16}$.

INDIANS.

Prices have remained remarkably firm, taking into consideration the general depression in other departments. Goldfields have been exceptionally strong, and changed hands at $2\frac{1}{16}$, caused, seemingly, by a discovery to the south-west of the property in entirely new ground.

There is no particular change to note, but prices are firm.

Business.—A fall is shown in Balaghat of 1s.; Mysore Reefs, 3d.; and Nine Reefs, 1s.; whilst the only rise is in Champion Reefs of 1s. Mysore Gold remains firm at last week's quotations.

AUSTRALIANS.

One of the features of the week has been the free and extensive dealing in Australian Broken Hill Consols up to 25s., which do not close at best. Day Dawn Blocks have been 9s. 3d. buyers, and a fairly good business has been done, but prices do not close so good.

Business.—The upward move is in Australian Broken Hill Consols of 6s. 6d. on the week, and Day Dawn Block, 6d. Those lower are Cumberland of 3d., and Day Dawn P.C., 1s. Others remain as last quoted.

GENERAL FOREIGN SHARES.

Golden Gates and Golden Feathers have again come to the fore. Apart from this it must be admitted that the Mining market

remains in a weak condition. Almadas have fallen on the reported fire, but to what extent damage has been done is not yet known. Shareholders should not part with their holdings on vague and interested reports, but rather should await official news from the secretary. Flagstaffs have fallen. The "bears," as ever, are ready to make the worst of absence of news. Lomas and Russells have been largely dealt in, although no substantial change has taken place. Montana and Frontino are both slightly lower.

Business.—Those lower on the week are Almada and Tirito, 6d.; Amador, 2s.; American Belle, 6d.; Callao Bis, 6d; Colon, 6d.; Flagstaff, 9d.; Frontino, 1s.; Gravel Gold, 1s.; Lisbon Berlyn, 6d.; Montana, 1s; New Gold Hill, 3d.; Orita, 1s.; Pahang Corporation, $\frac{1}{16}$; Port Philip, 3d.; Spitzkop, 3d.; St. Augustine's, 3d.; and Tetuan, 3d. Those up are Golden Feather, $\frac{1}{8}$; Golden Gate, $\frac{5}{16}$; and Pestarena, 3d.

COPPER.

The only changes in copper shares have been caused by Paris orders. Rio Tinto close somewhat better, while others show a fall.

Bnsiness.—A fall is shown in Capes and Copiapo of $\frac{1}{8}$ each. The only other alteration is a rise of $\frac{3}{8}$ in Rio Tintos.

The following list shows the principal changes which have taken place:—

LATEST FROM THE MINES.

INDIAN MINES.

BALAGHAT MYSORE.—A telegram from the superintendent, dated Mar. 18, states:—"Mill stopped since Mar. 13; mine nearly idle from cholera panic."

COLONIAL MINES.

BROKEN HILL PROPRIETARY.—A cable from Melbourne states that during the week ending 12th inst. there were 5,262 tons of ore treated, yielding 947 tons of lead, containing 173,646 ozs. of silver. For the week ending 19th inst. there were 5,056 tons of ore treated, yielding 860 tons of lead, containing 176,960 ozs. silver.

DAY DAWN BLOCK.—A cablegram from the general manager gives the resnlt of the crushing for the month ending 14th inst.:—"Tons crushed, 547; yield of gold, 1,099 ozs. Approximate value, 3,790*l.*; month's expenses, 1,460*l.*"

DAY DAWN P.C.—A cable gives the crushing for the fortnight ending Mar. 14, viz.:—"1,050 tons; 830 ozs." (Estimated value, 2,822*l.*) The directors have received a cable from Charters Towers stating that in sinking the No. 1 shaft (main shaft) a reef 2 ft. 6 ins. thick has been struck of good quality.

GYMPIE GOLDEN CROWN.—Cablegram:—"300 tons; 226 ozs.' (Estimated value, 768*l.*)

MIDAS.—Cable from the mine: "Yield for week, 28 ozs."

MOUNT LEYSHON.—A cablegram, dated 18th inst., from the manager at Charters Towers, gives the fortnightly crushing:—"780 tons crushed, 260 ozs. gold. 20 stamps mill ran 288 hours. Estimated value, 620*l.*"

NEW QUEEN.—A cablegram gives the result of crushing for the past fortnight: "310 tons, yielding 285 ozs. gold."

FOREIGN MINES.

ALMADA AND TIRITO.—Cablegram from the superintendent: "Tirito Mine took fire Saturday evening; could not stop with men extinguishing with steam; damage unknown." Official note.—The discovery of the new ore body, recently reported, was made in the Almada Mine. It is not yet known how far this mine may be affected by the fire.

KETCHAU (PAHANG).—A telegram has been received as follows:—"Important discovery at the mine; machinery will be required." In reply to enquiry for further particnlars, the dirccors received the following reply:—"Have struck rich chute in south drift, Bukit Siam Mine; average width, 1 ft."

NEW CALIFORNIA.—Cable from the mine manager: "February output, 620 tons; yield, 370 ozs. of gold; value, 1,290*l.*; costs, 800*l.* (mining profit, 490*l.*); expenditure on new claims, Governor Adams and Rhode Island, and general development account, 420*l.* Shaft continues in good ore.—RICKARD."

OURO PRETO.—A telegram, dated Mar. 12, gives last month's return of gold as follows:—"2,964 tons of quartz produced 8,976 oits. of gold (1,035 ozs.)."

RIO TINTO.—The company announce payment of the drawn bonds of thcir 5 per cent. issue of 1880, and coupons on their 5 per cent. issues of 1880 and 1884, dnc 1st prox. They invite holders to present coupons and drawn bonds at once.

HOME MINES.

ATLAS TIN.—The directors draw the attention of the shareholders to the report of the agent, Capt. Grose, which they consider to be very encouraging, as it shows the lode to be greatly improving in depth.

WEST FRANCES.—A meeting was to have taken place on Thursday last, but in consequence of the severity of the weather, was postponed. The accounts will show a loss on the 16 weeks of 1,808*l.* A call of 5s. will be needed to liquidate the balance.

WEST SETON.—It is stated at Redruth that Capt. Bishop, of East Pool Minc, has declincd making a report upon West Seton, as suggested by the adventurers at their last meeting.

TIN TICKETING.—A tin ticketing took place at Redruth on Tuesday last, when 221 tons were offered, realising 11,373*l.*

FOR LATEST PRICES

AND ALL PARTICULARS OF FOREIGN AND HOME MINES

SEE PAGES 454 AND 455.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

SIMMER AND JACK.—Cablegram:—"Feb. profit, 4,630*l.*"

GLENCAIRN MAINREEF.—Crushing for Feb., 641 ozs.

GEORGE GOCH.—Result of working for Jan.:—Mill ran 23 days 16 hours; 1,890 tons of ore crushed; 962 ozs. of gold yielded.

CERRO DE PASCO.—A cable dated Barberton, Mar. 19, from the manager, Mr. Howse, states:—"Middle reef ore is improving in the drift as we advance; assays average 10 dwts. per ton."

TRANSVAAL MORTGAGE, LOAN AND FINANCE.—The company notify that they have been appointed Londou agents to the Princess Estate and Gold Mining Co., Limited.

SHEBA.—A cablegram from the general manager, dated Eureka, Mar. 16, is to the following effect:—"Total amount crushed since Mar. 4, 500 tons. Tramway is not in full working order."

GRASKOP MILL AND MINING.—The consignment of gold from the Jan. crushing (282 ozs.) has been sold through Messrs. Johnson, Matthey and Co., for 1,086*l.* 6s. 11d., or 3*l.* 17s. 0½d. per oz.

THE CONCESSIONS TRUST, LIMITED.—On and after Monday next, the 23rd inst., the business of the Concessions Trust, Limited, will be carried on at their new offices in Dashwood House (first floor), New Broad Street, E.C.

PIGG'S PEAK ESTATE.—Cable from Barberton:—"Heavy rains continue. Total amount crushed is 74 tons. I do not advise clean up the end of the month. Have made a fresh contract to haul 1,000 tons. Devil's (Reef) shall continue prospecting in." No reports from the mines have been received by this week's mail.

MAY CONSOLIDATED.—The total of ore in sight, after careful measurement throughout the mine, being returned at 135,081 tons, and the development account standing at 24,814*l.* 14s. 3d., redemption on the basis that the ore in sight must redeem the cost of development, has been put down at 3s. 6d. per ton milled. The total cost of working, including all and every expense, during the half year, but exclusive of interest on the loan of 30,000*l.*, compares very favourably with the cost of working of the best properties on the Randt; the more so wheu due consideration is given to the fact that this result has been achieved with 20 stamps only. There is every prospect that the expenses will be further materially reduced after the 70 stamps arc in full operation. The accounts show that up to the present 30,000*l.* have been raised upon the bond for 40,000*l.*

AKANKOO.—The manager writes as follows:—New reef: I can say nothing more about this until the water is down, and I can get below the level I have sunk to, but I think it is a *bonâ-fide* fissure vein, and that I can trace it over ¼ mile. Winze shaft down 25 ft., completely timbered in solid ground. South-west end of adit driven in the week 27 ft.; north-east end driven 8½ ft., and timbered; total distance from collar, 211½ ft. Unwatering Mine: On Wednesday last I sent you cablegram: "Mine sumped; Tangye down." I am glad to say that the mine is drained, and the Tangye pump placed in the shaft. At present we are busy clearing out the sump, which chokes the pump repeatedly, and causes much delay, but in a few days I hope we shall be in full swing clearing out 100-ft. level, where at present there seems to be a good deal of dirt.

ORIENTAL AND SHEBA VALLEY.—In a lengthened circular, for the full text of which we are unable to find space, the directors say:—"The Sheba Co. have, from time to time, been fully informed of

the intentions of the company; and now that the Sheba Co. are transporting their ore otherwise than by the Tramway Co.'s line, thus breaking the terms of the agreement, instructions have been given for proceedings to be taken against the Sheba Co. for a declaration of the rights of the representatives of the Tramway Co. The company are in no way advancing a litigious position, but are prosecuting a claim well known to the Sheba Co., and one which could not be abandoned. The work at the mine is going on in a satisfactory manner, and the mine is improving on development. The new mill has been restored, and all the stamps are now at work. The directors anticipate that the next month's report will show a considerable improvement over the previous results.

CAPE COPPER.—A dividend of 1s. per share, free of income-tax, has been declared, payable on Apl. 11, 1891, to the shareholders on the books of the company on Mar. 26, 1891, and the transfer books will be closed during Mar. 26. No. 11 coupons will be paid at the above rate of 1s. per share, free of income-tax, on presentation at the company's office. Jan. report :— Ookiep: The 117-fm. level east of 72 winze northward has been temporarily suspended, and the men are put to cross-cut north from bottom of 72 winze to prove the ground in that direction; the forebreast is yielding stones of copper ore, but not to value. The ground in the 105-fm. level (No. 6) north of main east level at the present is unproductive. The rock in the 105-fm. level north-west of 72 winze having become unfavourable for copper ore it has been suspended. The 92-fm. level (No. 8) north-east of 45 winze produces occasional stones of copper ore. The stope in the back of the 105-fathom level east of 68 winze is yielding 6 tons of copper ore per fathom. Trial Mines: Springbok: The ground in the 59-fm. cross-cut north of north-west level has during the month produced a few stones of copper ore. Nothing of importance having been met with in the 59-fm. level east of north-east cross-cut, it has been supended. The ground in the 59-fm. level north-west of south-west cross-cut (No. 2) is composed principally of quartz containing spots of copper ore. Kotzees Mine: The ground in sinking the shaft below the 25-fm. level at times produces stones of copper ore. Nababeep south: The 59-fm. cross-cut south-east of main level is still worth 1 ton of copper ore per fm. The ground in the cross-cut opposite yields rich stones of copper ore. Ookiep east: The stopes in the back of 66 and 58-fm. levels are producing about 1 ton of copper ore per fm. Spectakel: The ground in the 86-fm. cross-cut having become hard and unproductive it has been suspended, and the men put to prove in depth the branches of copper ore passed through in driving the 86-fm. level north-west of No. 1 winze. The stope in the 36-fm. level south-east of Kelly's shaft is yielding 2 tons of copper ore per fm.—Capt. HENWOOD. Returns for January: Ookiep, 1,760 tons of 23 per cent. Arrivals at Swansea: The Foxhound and Andaman. Arrivals at Port Nolloth: The Douglas Castle, Serena, and Cicero. Bills of lading received: 840 tons of ore per Swansea Castle; 1,000 tons per Gateside; 880 tons per Sindbad; and 650 tons per Hinda.

HORO CONCESSION (Feb. 2).—Report of the manager at the mine for the month of Jan.—No. 1 tunnel, No. 2 west drive: The drive to the west from No. 1 tunuel towards the winze in No. 2 tunnel has been advanced 23 ft. 6 ins. in rather hard ground, carrying very little free gold, but a fair amount of pyrites. The distance now remaining to drive to connect with the winze in No. 2 tunnel is about 14 ft., and I hope to get through this about the 9th or 10th of this month. No. 2 tunnel, east drive from winze 45 ft. down: The drive to the east from 45 ft. down the winze in No. 2 tunnel has been advanced 10 ft. towards the drive coming to meet it from No. 1 tunnel. The ground is very difficult, being hard and tough. It contains very little free gold, but a fair amount of pyrites. West drive from 45 ft. down winze: The drive to the west from 45 ft. down the winze has been advanced 9 ft. in the month. The ground is similar in character to the eastern drive. Connecting the winze in No. 2 tunnel and the intermediate tunnel: As the intermediate tunnel has been advanced very quickly during the last six weeks, after consulting Mr. Edgar Taylor, I have decided to drive from the bottom of the No. 2 tunnel winze to the intermediate tunnel, instead of from half way down, and sinking a winze, as suggested in my letter of Dec. 18, 1890. This drivage from the bottom of the No. 2 tunnel towards the intermediate tunnel being on the same level will, I think, enable us to connect quicker. Intermediate tunnel: This tunnel has been advanced 66 ft. 8 ins. towards the No. 2 tuunel winze. The ground is fairly easy, and good progress has been made. The distance now left between the face of this tunnel and No. 2 tunnel winze is 160 ft. The rock contains pyrites but no free gold. Battery: Mr. Castle has completed his work on the battery, and has left the concession for England. The delay in the arrival of the pipes for the Pelton wheel has prevented the turning of the mill before Mr. Castle left. However, everything appears in good order. I am keeping on three carpenters for a short time to complete the trestle work for the tramway at the back of the mill from the mine. The delay in the arrival of the large pipes is very serious, and is occasioned by the very wet weather we have had during the last month. The rivers are flooded and the roads almost impassable. Pipes from falls to battery: I have now over 700 ft. of pipes rivetted for the pipe line from the falls to the battery. I intend rivetting a few more pipes, and then with those coming from Delagoa Bay, which do not need rivetting. I shall have enough ready to pipe from the falls to the battery. Battery reef: I have put a short cross-cut above the battery to try to cut the reef we met with in excavating for the battery foundations; so far, however, I have not met with anything of value, although I have found quartz carrying a little gold. Prospectors: I have three prospectors out on the higher, or northern part of the concession. This part is the only part where there is any possibility of prospecting at this time of the year. One of the prospectors has discovered stone carrying a little gold in the north-western corner of the concession, but it is as yet too soon to know anything as to the nature of the discovery.

ELKHORN MINING CO., LIMITED.

A DIVIDEND OF 40 PER CENT.—THE WEEK'S RETURN.

WARRANTS for the interim dividend at the rate of 40 per cent. per annum were posted on Monday to shareholders. The following cable information has been received from Capt. Plummer :—"Bullion shipped for week ending Mar. 14 was $8,800."

COMMERCIAL NOTES.

METALS.

COPPER has been steady. G.M.B. Warrants improved from 51*l.* 5s. to 52*l.* 5s. cash, closing at 52*l.* 2s. 6d. cash and 52*l.* 5s. three months. The figures issued for the half month were favorable. Stocks show a decrease of 1,909 tons for the fortnight. arrivals having been 4.547 tons, and deliveries 6,456 tons. No Chili charters advised. We quote English tough 55*l.* 5s.; best selected 57*l.* to 58*l.* 10s.; strong sheets 65*l.* to 66*l.*; India sheets 60*l.* to 61*l.*; yellow metal 5¾d. to 6d.; Ore 9s. to 10s. 6d.

TIN has been quiet. Straits, after touching 90*l.* 7s. 6d. cash, has declined to 90*l.* 2s. 6d., and three months from 90*l.* 15s. to 90*l.* 10s. The shipments from the Straits for the month have been large, amounting to the present to about 2,700 tons. English ingots 93*l.* 10s. to 94*l.* The Dutch sale yesterday went at an average of 54⅝ fl., or 91*l.* 5s. for the 24,000 slbs. banca; 54 fl., or 90*l.* 15s., for the 1,216 slbs. refined; and 54⅛ fl., or 90*l.* 15s. for the 3,219 slbs. billiton.

TINPLATES have been steady, and we quote ordinary coke 17s. 9d. to 18s. Liverpool.

SPELTER quiet. We now quote ordinary brands 23*l.* 5s. ex ship here.

LEAD quiet, but firm. Soft Spanish, 12*l.* 8s. 9d. to 12*l.* 10s.; soft English, 12*l.* 12s. 6d. to 12*l.* 15s.; L.B., 13*l.*; sheets, 13*l.* 10s. to 13*l.* 15s.

QUICKSILVER quiet. Rothschild quote 8*l.* 5s.; seconds, 8*l.* 3s. 6d.

ANTIMONY quiet. Hallett's price for America still 67*l.* 10s.; ordinary brands and delivery, 63*l.* to 64*l.*

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING MAR. 21.

Africa City Properties Trust	3 per cent.
Alliance and Dublin Gas Consumers, Old ...	10½ per cent.
Alliance and Dublin Gas Consumers, New ...	7½ per cent.
Amazon Steam	4 per cent.
Anglo-Romano Gas	32s. 9d. per share.
Anglo-Italian Bank	8 per cent.
Burton and Lincoln Breweries...	7 per cent.
British American Land	27s. per share.
Bridport Railway	1¼ per cent.
Calcutta Trams	1½ per cent.
City of Chicago Brewing	8 per cent.
Colonial Securities Trust	2 per cent.
Chapman and Hall	7 per cent.
Conde D'eu Railway	8s. per share.
Dick, Kerr, and Co., Preference	7 per cent.
Dick, Kerr, and Co., Ordinary	5 per cent.
Fraser and Chalmers	10 per cent.
Great Western Steamship	2½ per cent.
Horncastle Railway	7½ per cent.
Henry Bucknall and Son, Preference ...	6 per cent.
Henry Bucknall and Son, Ordinary	8 per cent.
London Assurance Corporation	35s. per share.
London Guarantee Co.	7s. 6d. per share.
Mansell, Hunt, and Catly	13 per cent.
Mid-Wales Railway	½ per cent.
National Bank of India...	6 per cent.
New York Central Railroad	1 per cent.
New England Breweries	8s. 4d. per share.
Neath and Brecon Railway	3¼ per cent.
Ottoman Gas	7 per cent.
Otis Steel	6 per cent.
P. and W. McLellan	8 per cent.
Partagas and Co....	7 per cent.
Swan and Edgar	4 per cent.
Spiers and Pond	4s. per share.
United Asbestos	5 per cent.
William Jessop and Sons	6⅔ per cent.

WEST ARGENTINE, LIMITED.

A CIRCULAR TO THE SHAREHOLDERS EMBODIES ENCOURAGING NEWS.

Mar. 16.—In pursuance of the board's policy, endorsed at the ordinary general meeting of the company, held on Monday, Dec. 29, when necessary steps were authorised for the liquidation of the outstanding debenture debt of the company, your directors have pleasure to inform you that the prompt response to the final call has enabled them to liquidate very nearly the whole of the company's indebtedness, the balance of which will be liquidated as further outstanding calls are paid. Argentine Interests.—The agreement for option given by this company for the purchase of its entire Argentine interest has been exchanged and the deposit paid. It has, however, been found necessary to slightly modify terms in respect to the royalty, as its reservation in the shape of a percentage royalty (viz, 1 per cent.) was considered practically unworkable, and your directors, therefore determined, in order that the scheme might have every chance of success, to capitalise same for a cash payment, based upon a realisation by sale of products to the value of 50,000*l.*, or, in the alternative, for shares in the Purchasing Combination Co., the cash for which, as paid, is to be recouped by that company. Colorado—Silver Ledge Mine.—The board are pleased to report that good progress continues to be made. The energy of the manager and staff at the mines is concentrated on deep sinking, this having proved to be the key to the richer ore bodies in other mines in the same locality. The character of the ore bodies rendered available, together with the improved features as sinking progresses, appears fully to warrant the conclusion that depth will reveal rich shipping ores, similar to those being produced from properties not far distant from the claims in which the company's interest is now

centred, and present appearances may therefore be taken as indicating a period of prosperity at hand for this company. It is with pleasure the board communicate that Mr. Samuel Jennings has consented to rejoin the board, and will shortly visit the property, and the directors look with confidence to his visit as being productive of much good for the mutual interests concerned.

EXTRACTS FROM RECENT LETTERS FROM THE MANAGER OF THE MINES, MR. J. H. SUTTER.

Per letter of Jan. 28 :—"Workings of mine : The shaft has been sunk about 54 ft. and timbered ; here we have cut a station 6 ft. wide, 7 ft. long, 8 ft. high. We are driving three headings. The north level has been driven about 8 ft. ; here we have some low grade ore. The cross-cut to the east has been driven about 10 ft. from footwall. We cut a streak of talc. We are driving to see what will come next. We have some low grade in this cross cut in streaks and bunches. The south level has been advanced about 23 ft. ; we are driving on the gouge and have met ore from ⅛ in. to over 2 ins. ; it comes and goes like all mines in this district have done at this depth (see assays) ; we have also low-grade ore in this drift, of which you have the assays. We must sink shaft at least 100 or 125 ft. further, though 150 would be better ; it has improved very much in the last 50 ft. As depth is required for rich minerals in this district, it will be to our advantage to go down as speedily as possible. I have taken five assays, which gave the following :—No. 1. 70 ozs. silver 2 per cent. lead ; No. 2, 27 ozs. silver, 2 per cent. lead ; No. 3, 1.20 gold, 48.80 silver ; No. 4, 20 ozs. silver ; No. 5, 26 ozs. silver, 3 per cent. lead."

Per letter of Feb. 12 :—"The south level is now driven about 60 ft. About 45 ft. in we got some very fine lead ore. Have taken an average of same to the sampler. Will send return shortly, as soon as I receive assays. The cross-cut is 36 ft. 6 ins. from east to west walls. The ledge is 24 ft. 10 ins. wide, and we found specks of grey copper in the gouge. The north level is 38 ft. in, with low-grade ore and some heavy lead mixed through."—W. P. OWEN, Secretary.

OSCAR GOLD CO., LIMITED.

(In Liquidation.)

APPEAL TO SHAREHOLDERS TO CONSULT THEIR OWN INTERESTS.

Mar. 17.—I would remind you that not having applied for the shares to which you are entitled in the New Company (Oscar Gold, Limited), you have forfeited all your interest. I am exceedingly anxious to afford the shareholders of this company every possible facility of retaining an interest in the property, and therefore, enclose you a form of application on which you can apply for any shares you may desire to take. Applications received by the bankers, with deposit of 3d. per share, on or before Mar. 31, 1891, will be entertained, provided all the shares are not previously taken. The new company you will recollect is registered with a capital of 40,000*l.* in 160,000 shares of 5s., each, 100,000 of which are issued as credited with 1s. per share as paid, and leaving a liability of 4s. per share ; 3d. per share is payable on application and 3d. on allotment. Cheques should be made payable to the Imperial Bank, Limited, Lothbury, London, to whom they should be forwarded with form of application duly filled up and signed. Nothing herein contained shall be deemed to vary or extend the terms of my circular letter of Feb. 9, 1891. The special resolutions, the draft contract between the old company and myself as liquidator, and the new company above referred to, together with the memorandum and articles of association of the Oscar Gold, Limited, can be seen at the office of Messrs. Kerly, Son and Verden, 14. Great Winchester Street, London, E.C., any day between the hours of 11 and 2 o'clock, and subscribers will be deemed to have notice of the contents thereof respectively, and be bound thereby.—C. H. SMITH, Liquidator.

P.S.—A report from Mr. Daw has just been received, in which he states Hewlett's lode has been cut. He has not yet had time to test the average value of the lode, but picked samples have given highly satisfactory results. The full report will be published in the MINING WORLD of Saturday next.

A MINING COMMITTEE FOR BENGAL.

IT has for some time past been considered desirable to establish an association in Calcutta in connection with the mining interests, which have assumed such large proportions. The aggregate capital of the various mining companies now amounts to over 100 lakhs of rupees, and that fact alone would fully justify those entrusted with the management of the industry in establishing a body which would greatly strengthen their hands, and enable them to aim at uniformity of policy. There are (says a local paper entitled the *Gold Gazette*) many mining questions which affect individuals and firms alike, and it would be an advantage, especially in dealing with Government, were the interests of the industry to be advocated by a strong and representative body. Nor is this a matter solely affecting the gold interest. Coal mining companies are equally concerned, and this interest is a large and growing one in Bengal. The necessity, indeed, for such a body is obvious, and the wonder is that it has not been called into existence long ere this. However, the reproach of not having a central mining authority is not likely to rest much longer upon Calcutta, for we hear that a special committee on the subject will in all probability be added to the list of committees affiliated to the Bengal Chamber of Commerce. This body will doubtless take active steps to place mining interests upon a firm footing, and ought to do an infinity of good. Much depends upon how the committee is constituted, but the leading names in the industry are so conspicuous that there can be little danger of going wrong in the matter of selection.

The same paper states that the Sonapahar Gold Prospecting and Mining Co. has acquired a block of about 30 square miles from the Kharsawan Syndicate, and is now negotiating with the Central Chota Nagpore Co., with a view to taking over that company's 10 miles area. The whole will be converted into a large company with a capital of 6 lakhs, of which 5 lakhs have been privately placed. The agency is in strong hands (Messrs. Shaw, Wallace and Co.) and the agents have, we believe, arranged for a report from Messrs. John Taylor and Son. Should the report be favourable, the company will be placed on the London market.

BRITISH MINING INTELLIGENCE.

DEVON GREAT CONSOLS (Mar. 19).—Wheal Maria, Eastern shaft, Capel Tor lode : In the 112-fm. level west the lode is 2 ft. wide, composed of a large proportion of killas, with capel quartz and a little mundic. In the 74-fm. level east the lode, about 1 ft. wide, is composed of capel and quartz, with a small quantity of mundic. Watson's engine shaft : In the 172-fm. level west, the lode part carried about 3 ft. wide, continues to yield saving work of copper and mundic ores. In the 160-fm. level east the lode continues of good size, 4 ft. wide, and is composed of strong capel and quartz, with fluor and a little copper and mundic ores. I am very pleased to say that since the storm of last week has abated all surface operations are proceeding with regularity. The railway to Morwellham has been cleared of snow, and running over the line was again established on Friday last. The repairs to damaged roofs, &c., are being got on with as fast as possible, and in the course of another week we hope to complete them. We were fortunate enough to be able to keep the calcining furnaces at work during the rough weather the greater part of the time, so that the loss in the arsenic manufacture was very little indeed.—I. RICHARDS.

DRAKE WALLS (Mar. 18).—Cutting ground for tip plat at 160, and propose to begin sinking engine shaft. Lode in 160 east, 6 tons mundic per fm., and saving tin ; exceedingly promising for improvement; 2 fms. 2 ft. driven in month. The 160 west : 10 tons mundic, saving tin, with stones of copper ; 4 fms. 0 ft. 6 ins. driven. Stope in back of 160 west : 12 tons mundic, intermixed with tin. In stope bottom of 147 east : Lode worth 10 tons mundic. In 147 east : 4 tons mundic and a small proportion of tin. In 147 west : 2 fms. 0 ft. 6 ins. driven ; cross-course unproductive. Stope back of 132 west : 6 tons copper and mundic. Stope in bottom of 132 west : 4 tons of copper and mundic. Coome Co. carting away mundic, which will occupy nearly all the week.

MID-DEVON.—Report for week ending Mar. 14.—Surface : The snowstorm which raged during the week was severely felt in this district ; fortunately we escaped without actual damage to machinery or buildings, but the water courses and pits were filled with snow and stopped the machinery for 20 hours, necessitating clearing the leats, thus allowing a portion of the water to flow to wheel, and kept it at about two revolutions from Wednesday to Saturday. All our men with extra hands were thus employed to clear the obstruction. A shaft : Water rose to within 14 ft. of the 70 plat ; it is now being drained. C shaft, the No. 3 stope : Only eight hours' work done at this point, consequently no change to report.—J. NEILL.

ROMAN GRAVELS (Mar. 19).—The stopes throughout the mine are without any change since last week. The 50 tons of lead ore sold to-day realised 418*l.* 15s.—A. WATERS.

SOUTH CONDURROW (Mar. 18).—During the past week the operations on the mine have been at a standstill owing to the great fall of snow, but the roads are now clear, and the stamping and other works are again in full swing. We have cut the lode to the north of the heave in the back of the 123 at Marshall's shaft, and are rising on its course with a view to hole to the 100-fm. level as soon as possible. We have six men cleauing up the winze and the 100-fm. level, with the intention of working below the 100-fm. level to meet the rise. The stope in the back of the 123 is worth 8*l.* per fm. We are forcing on the sinking of Marshall's shaft by nine men. The 40 end east of engine shaft is worth 8*l.* per fm. Two stopes in the back of this level are worth 12*l.* per fm. each. We are driving the cross-cuts north at the 40-fm. and 70-fm. levels.—W. RICH, W. THOMAS.

SOUTH DARREN (Mar. 19).—The tribute pitch in the bottom of the 142 east is worth about 1 ton of silver lead ore per fm. Drawing and dressing has been carried on regularly this week, with a fair supply of water.—J. MITCHELL.

WEARDALE (Mar. 14).—Ore raised for week, 76 tons ; ore dressed for week, 43 tons ; ore, slag, and fume smelted for week, 106 tons, producing 50 tons of pig lead.

WEST WHEAL GRENVILLE (Mar. 17).—The 130-fm. level driving north is extended about 2 fms. 1 ft, and reset on Saturday last to six shaftmen at 11*l.* per fm. The ground in this drivage continues of a mixed character, containing copper and mundic. The 120 cross-cut north is extended about 93 fms. 3 ft. Water is still issuing from the east side in this drivage, and the granite of much the same character as when reported last. The 120 east on No. 4 is extended about 6½ fms., and reset to six men at 9*l.* per fm. From the appearance of forebreast, we think we have just intersected the footwall of cross-course, and shall now drive out in settled rock to form level preparatory to driving south to find the heave of vein. The 120 driving east on No. 2 is extended 16 fms. 5 ft. The vein in this drivage is of much the same size and character as for some time past.—Capts. J. SKEAT, N. TEMBY.

FOREIGN MINING INTELLIGENCE.

ANGLO-MEXICAN.—The superintendent at the mine reports for the week ending Jan. 17 as follow :—East drift : 814-ft. level has been advanced during the past week 2 ft., making a total distance of 271 ft. West drift : 814-ft. level has been advanced by hand drilling 14 ft. during the past week, making the total distance 243 ft. East drift : 726-ft. level has been extended during the past week 7 ft., making the total distance 509 ft. The "face" of this drift now shows a small streak of ore about 4 ins. wide. Surface drift, above St. Herlinda tunnel level, has been advanced during the past week 8 ft., making a total distance of 173 ft. We have been extracting ore from the stopes above the 814, 646, 572, and 506-ft. levels, the latter two supplying the larger portion of the ore extracted. The stopes above the 814-ft. level are looking very fine indeed, and Mr. Ham describes the bottom of the stope as one mass of solid ore of about 10 ft. in width. Samples taken assayed 96 ozs. per ton in silver. Mr. Ham proposes to begin stoping with a machine drill during the coming week, and to resume work with another in the east drift of the 814-ft. level.

ARGENTELLA (Mar. 12).—No. 2 Mariue : Distance driven since last report, 4½ metres. The forebreast shows more carbonate of lime and quartz ; we continue to find spots of lead in driving. The hanging-wall has taken a slight dip south, but continues its course east as reported. Quartz reef, cross-cut : Distance driven, 2 metres ; the ground easy for driving ; set to four men at 47f. per metre. Ogliastrone Valley : Under cover 1 metre ; the killas we find under the cover of surface rock is rather hard, full of iron pyrites. I intend to continue this level alongside the large body of iron pyrites, cutting

into it at intervals. There is now a small bed of oxide of manganese running across the forebreast, but not sufficient to save. This is a very important point, and I think it will prove to us that the pyrites is a separate lode. If we can find this in No. 3, Rowe's workings, I shall be expecting good results; set to four men at 80f. per metre. No. 3, Rowe's workings, south cross-cut: Distance driven, 2 metres; the ground a little easier. Have had this week two small veins containing very good galena running across the end at an angle of 60 degs. east of north. They do not produce any saving ore; nevertheless, it is a proof that there must be mineral in the vicinity. We have good work at all the points of operation. I am pushing on to find whatever is to be found.—J. B. Roberts.

ASIA MINOR (Mar. 7).—Ara Dere: The level east is producing a little silver-lead. The winze is sinking on a lode 6 ft. in width, and has laid open fair stoping ground. Stoping has been commenced here by 12 men. Chief Mine: The lode in the end east from long cross-cut is 6 ft. wide and worth fully 20 cwt. of rich silver-lead per fm. The end east from Savalan Pass is looking more favourable. Stopes in the rise have been commenced on ground worth 20 cwt. Petri air shaft is going forward on a lode carrying patches of silver-lead. Ends east and west have been started from long pass on a lode 9 ft. wide, which is of an encouraging nature. Dolu Dere: The cross-cut north to intersect the three Pappa Sawa lodes is daily expected to cut the first lode. The winze in the bottom of the level east from brook, is going down on a lode which has greatly improved the last two days.

AUSTRALIAN BROKEN HILL CONSOLS.—Extract from the *Silver Age* of Broken Hill and Silverton, dated Jan. 26:—This mine continues to turn out phenomenally rich ore, and, next to the Proprietary, promises to become the most wonderful property in Australia in the matter of silver production. When the vein of native silver, chloride, iodide, and sulphide of silver was struck some months ago, the general impression was that it was too good to last. Subsequent operations have dispelled this impression, for not only has the vein held out well in the rise, but it is now pretty well proved to continue underfoot below the 280-ft. level west. Of the curious appearance of the deposit we recently gave a detailed account, and pointed out how the vein, after being followed in the rise for 50 ft., had now doubled back in what was supposed to be footwall rock, and was as strong as ever. Originally the ore consisted principally of chloride, iodide, and sulphide of silver, but a change came in and it now mainly consists of fahlerz and native silver. Fahlerz, according to Dana, is a copper and antimony ore, but the copper is often partly replaced by iron and zinc, and sometimes by silver and mercury, and part of the antimony by arsenic, or rarely bismuth, the argentiferous (Freibergite) sometimes contains 30 per cent. of silver. According to this, freibergite would appear to be the more appropriate name to give the ore found in the Consols Mine. The shareholders will not, however, trouble about the nomenclature so long as the silver is present in good quantity. The native silver produced is in large masses, and when broken presents a crystalline appearance similar to the broken ends of a bar of fine silver. During one week the Consols has yielded 3 tons of ore, containing 23,140 ozs. silver. This will follow former parcels in being consigned to London, and the shareholders in that city will have ample evidence that good things can come out of Australia. For the few months that have elapsed since the vein was first opened the yield of silver has been simply wonderful, amounting to about 103,140 ozs., or a value, at 4s. per oz., of 20,628*l*. In addition to this, 62 tons of mixed ores have been shipped, of an average silver contents of 63 ozs., or 3,906 ozs. aggregate, value rather more than 781*l*., the total shipments amounting to 21,409*l*., without calculating the 40 per cent. lead contained in the parcel of 62 tons. As previously mentioned, the vein is making below the 280-ft. level, and is being followed by an incline drive. The face is showing silver-ore in the forms of sulphide, chloride, and iodide. Slugs of sulphide were broken out a day or two ago, and behind these was obtained a piece of horn silver weighing 30 lbs. The prospects of this drive appear to be of the fairest.

— The mine manager reports for fortnight ending Feb. 5:—Engine shaft, 503 ft. deep: Water all drained and tenders called for sinking a further 50 ft. The 280 level west: Driven, 9 ft.; total, 322 ft. No change; galena and carbonate of iron showing through face. The 280 level west, rise No. 2: After continuing on the fahlerz vein up to a point about 50 ft. from level, a vugh came in which cut us out of the rich ore for about 5 ft., when we struck it again, and are still in it; the ores which we have been breaking, consisting of fahlerz, sulphide of silver, chlorides, iodide, and native silver. Of these, we have raised since last report, including several bags of the first-mentioned ores from the incline, 6 tons in all, containing 13,500 ozs. of silver. Inc ine level from 280 level west: Driven, 6 ft.; total, 18 ft. The face has been widened out to 12 ft. Though not as yet on solid portion of rich vein, ores we are breaking are increasing in richness and thickness, and the great flow of water, through it retards progress, indicates the proximity of something better than we have yet reached. The 280 level west: North-west cross-cut driven 9 ft.; total, 9 ft. This cross-cut has been started from the west corner of No. 1 rise, and is following a large vugh in calcspar formation, similar to what surrounds the rich vein. The 180 level west: Winze No. 3 sunk 6 ft.; total, 15 ft.; no change. The 180 level west stopes in fair grade galena. Block 95: Shaft sunk 9 ft.; total, 98 ft.; no change. Block 97. north shaft: Underlay portion sunk 9½ ft.; total, 9½ ft. Formation about 6 ft. wide, with small spurs of iron appearing in the matrix. Rock-drill plant expected daily. Foundation for air compressor nearly completed.

AVALA.—February report: In Shuplia Stena 131 metres of exploratory levels were driven, the unexplored parts of the main adit, and above the 42-metre level are now engaging attention. The excavation for the shaft, with timbering and poppet heads, is completed, and sinking was begun on Mar. 2. We stoped 287 tons. The reduction works treated 314 tons. We are about to begin building again as the winter has broken up.—W. E. Franks.

BONNIE DUNDEE.—Report for fortnight ending Jan. 17:—In the stopes from the back of No. 7 south-west level we have had an improvement in the reef since the commencement of the fortnight, and we now have from 3 ins. to 4 ft. 6 ins. of reef in the face of stope; some of the stone shows good gold, and should crush well; this stope looks particularly well at present. Have also formed and timbered pass, and put in stull timber a further distance of 30 ft., making a total of 60 ft. timbered east of winze; this is, of course, the length of stope east of winze. Have had four men driving west of winze; they have also bent out the leading stope, and put in the necessary timber in the level and winze. Have driven the level a further distance of 12 ft., making total distance from the old underlie 162 ft. Although we have had no stone for the most of this driving, there is considerable improvement in the ground, which is coming in much softer and better for carrying reef. There is also a little nice-looking stone putting in on the hanging-wall. Have had two men underhand stoping from this level. The reef was small when we started, but has improved a little in size as the stoping was continued, and is now from 6 to 15 ins. fair looking stone, showing a little gold. We shall start a winze from this stope during next week. It being necessary to put on four more men to have the required number to represent the two leases, it was considered advisable to call tenders for driving No. 7 south-west level a further distance of 50 ft. Tenders will be opened to-day, and the contractors start work on Monday. We shall put the four men, who have been working in the level up to the present, stoping from the south-west side of winze. The reef to start on is from 2 ins. to 5 ft. good stone. Have raised about 60 tons of stone for the fortnight; total in hopper, 127 tons.

COLORADO.—The manager's report for fortnight ending Feb. 28 is most encouraging. The 8th level west is daily improving in general appearance and character, and in consequence of the improvement in the western ground he has re-commenced driving the 9th level west, which is only 100 ft. behind the 8th level, and soon will start other levels west of the shaft, as he thinks that he will uncover some valuable ore bodies as a result of this work. It now appears that the main shaft has been sunk between two ore shoots, east and west of shaft. The eastern shoot has gone down through the 14th and 15th levels, and a raise is being put up from the back of the 14th level to connect with the Austin winze in the bottom of the 12th level. Good returns were made at this point. Drift on the Brown adit level shows a much better grade of ore in the breast, last assay running 216 ozs. silver per ton. Rockwell adit level now driven 175 ft. from the junction of the Brown and Coin lodes; lode 4 to 5 ft. wide. Mineral vein, average 2 ins. wide. Cross-cut north to intersect the north vein of the Coin lode driven 15 ft. Brown lode—Mammoth tunnel level: Drift advanced 10 ft.; now in 455 ft.; lode continued 4½ ft. wide; mineral vein 2 ins. wide. Glasgow lode: Mammoth tunnel level advanced 5 ft.; lode fully 5 ft. wide; mineral vein 1 in. to 3 ins., and scattered throughout with solid ore. There are over 20 points at work in the mine, and the main drifts were advanced 58 ft. in the fortnight.

EMMA (Mar. 2).—The improved condition presented in the different levels of the mine, as noted in my report of 23rd ult., I am glad to say maintain with every indication of further improvement as explorations in this new ground are advanced. The outlook from the week's work is certainly most flattering. In the north-west part of the mine, in the drift from point of connection, we have drifted, raised, and cross-cut 20 ft.; total, 132 ft.; working four men. The vein here is from 5 ft. to 8 ft. wide; ledge matter strongly impregnated with carbonate and galena ore, besides several seams of ore of this same character running through the vein. We are saving some first grade ore now from this level, but the great bulk, so far, will have to be concentrated; however, the quality is improving. The cross-cut from Illinois or Cincinnati level extended 15 ft.; total, 85 ft.; working four men. We have from 8 ins. to 12 ins. galena ore, upon which we are drifting. This ore is both in the top and the bottom of the drift. We will commence upraising and sinking on this as soon as drift is far enough advanced to admit of more miners working without interfering with each other. From this Cincinnati level and the No. 4 level drift we mined some 4 tons first grade ore while extending the drifts only; more could have been mined, but as it will be impossible to get any more ore to market until the snow melts, I, to avoid the expense of storing the ore away in abandoned drifts, and re-handling before shipping, have thought it best to leave the ore in place, and confine work to developing the vein in the levels where we now have ore exposed. The south-east part of the mine also gives great encouragement; both the hanging and footwall drifts from Emma tunnel are in ore bearing ground. In the hanging-wall drift we now have from 6 to 8 ins. first grade ore. In the footwall drift the ore is second grade, but improving. I hand you with this letter assayer's certificate of four hand samples taken from the different seams mentioned in this letter. No. 1 giving 70 5-10ths per cent. lead, and 77 80-100th ozs. silver per ton is from the hanging-wall drift from Emma tunnel. No. 2 giving 46 per cent. lead, and 40 20-100th ozs. silver is from No. 4 level drift. No. 3 giving 72 per cent. lead, and 66 72-100th ozs. silver is from cross-cut, Cincinnati level. No. 4 giving 36 3-10th per cent. iron, 4 per cent. lead, and 10 20-100th ozs. silver is also from Cincinnati level. This is certainly a good showing, and without doubt the best we have had.—H. C. Wallace.

EMERALD (COLUMBIA).—The manager at the mine, writing on Jan. 25, says as follows:—We have worked this week in the part from the bridge downward a length of 72 metres, which we have lowered on an average 1 metre. Another 50 hands I have kept on working in the narrow part or Angosta at the foot of Fruto Tovar, where we shall have to keep on lowering in order to increase the fall. Depth at bridge, 8½ metres in rock.

ESMERALDA (Feb. 24).—The manager reports:—We have driven the intermediate drift from raise No. 3 40 ft. during the week; total, 62 ft.; the vein is small. Average samples of 10 ins. of the ledge assayed about 19 dwts. of gold per ton, but we have had rich spots, in which we could see gold. The ledge has swung sharply to the west, and we are following it round. According to our compass survey, if we continue running on the ledge at this level we should connect with the bottom of the south winze, Duraud. (Since connected.)

— By cablegram:—"No change since last report. We have extended our south drift 40 ft. during the week."

FLAGSTAFF (Feb. 28).—I have the pleasure of again reporting fair work in the mine. Sixth level: Main level has been extended 10 ft. the past week. This drift is looking very good; there is plenty of iron mixed all through the rock. I think that we will find another body of ore out in this direction. South drift below sixth: This is still continuing to turn out a fair quantity of very rich ore. One man has taken out this week 4 tons of first-class ore while driving this drift ahead; he has extended it only 5 ft., as he has to shovel the rock back to the shaft, and then windlass it up 20 ft.; it is very slow work. Last week the ore here was full height of the drift, but it has pinched now to a pipe some 18 ins.;

in a few days it might open out again. There are four other pipes here going up towards sixth level that are from 18 ins. to 2 ft. The character of this ore has not changed since my last—all first-class ore. Winze : I have started a drift north-west at bottom of incline to see if I can find where the ore will continue on down. This incline is down 34 ft. ; the ore at the bottom is some 6 ins. or more, at the top it is 4 ft. thick. I now have it opened up over 20 ft. wide. This is the place I cabled you about. Then it was all first-class, but since then it has turned into second-class. It looks as though we ought to find where it goes down to, as it is such a strong body of ore. Seventh level: I have started a shaft at the point where we struck. Hanging-wall : We are now down 7 ft. ; have a seam 4 ins. wide, and full length of shaft. Number of tons of ore mined the past week, 25—12 tons of first-class, and 13 tons second-class.—A. L. SWOPE.

GOLDEN FEATHER CHANNEL (Mar. 2).—Since my letter of the 17th ult., we have had severe storms of wind and rain, followed by warm weather, which, with snow in the mountains, has kept the river near flood-mark. We have experienced no loss or damage of any kind despite the severity of the storms, and as stoppage of work during the rainy seasou was, of course, allowed for iu all calculations as to the length of time required to complete the works, and as we have only lost some 10 days' time to date, where we expected to lose fully a month, we can regard the weather as having been most favourable for our operations. Miocene Ditch : The heavy rains have caused no damage beyond small slides in three places, which can be handled by the ditch-tenders themselves. This speaks volumes for the character of the work done upon this section of the works, as will be readily recognised by any one familiar with ditches built for hydraulic purposes. Canal : The canal, receiving, as it does, nearly all the watershed of the South Table Mountain and its numerous raviues, during the rains has carried a vast amount of water, which gave it a thorough and severe test, yet we find no leak whatever in the entire length now graded. Walls : The walls show no leak or break of an description, and have passed through the storms uninjured in any manner. Despite certain criticisms of my weather bulletius, I must continue to post you on that important subject, from the commencement to the endiug of our labour, and I know full well that this is so understood by our board and sharcholders, who must realise that the very keystone of our success is the weather, as by it the chances for and time of successfully diverting the river must be gauged. The weather is still cloudy and unsettled, but so warm that the snow on the mountains is melting and passing off very rapidly. As the snow fall is comparatively light, should the warm weather continue for a few days, we can depend upon a very early season for low water in the river, as such snow as may fall from now on will soon be melted and passed off.—Col. T. MACLAUGHIN.

GOLDEN GATE ALLUVIAL SYNDICATE (Mar. 2).—We have had very severe storms since the severe one of Feb. 13-15, but have passed through unharmed, and the head-dam stands as though it had only been beaten upon by Apl. showers. It is truly a monument of stability and strength. It is not my opinion alone, but that of all competent judges also, that, with the unsurpassed advantages we possess, of head-dam in place, all flume ready for assembling, &c., &c., we will be miuing at a date heretofore regarded as impossible by river miners. I beg to acknowledge receipt of your favour of Feb. 13. Your query therein, as to why I believe that the floods will wash away the *débris* looking at the fact that it remained all through last year's floods, is fully explained by my report of Dec. 1. The large amount of *débris* found in the claim was caused by the gradual breaking up of the old dam, which continued until late in the summer, thus allowing the vast mass of material accumulated back of it to gradually flow into the claim after scouring by the winter floods had partly ceased. The *debris* left iu the claim is but a small part of the quantity washed through it by the river on its way to the Sacramento. The flood waters now rush through the claim cleared of *debris* by the head-dam, scouring throughiand widening out the great cut I carried throughout the bed of the claim. Towards the end of the rainy season such *debris* as may be sluggishly moving down stream will remain at the upstream face of the dam, and will have no chauce of reaching the claim, the formation of which forms a natural lodging place for river gravels and *debris*, and a riffle for the catchment of gold. I am pleased to be able to report that all matters are in most satisfactory order.—Col. F. MCLAUGHLIN.

GLENROCK.—Extract from letter, dated Dunedin, Feb. 4, received Mar. 19 :—Premier Mine : The contractors are making rapid progress both in the low level adit and No. 1 or Main top tuuuel. The progress, however, is more marked in the low level, where the contract has been let at a very low price, for contrary to expectation, it has become easy breaking ground, in consequence of a fissure vein of quartz some 6 ins. thick; making right in the centre of the drive. This stringer will in all probability lead us right into the lode, which its present course seems to indicate, and, if so, good progress and cheap driving will be secured. Already they have driven over 30 ft. within the past fortnight, which is excellent work in such a big tunnel.

GYMPIE GOLDEN CROWN.—Report for the fortnight ending Jan. 29 :—Since my report of the 15th, work on the Crown and March reefs at the 240-ft. level has been carried on as usual. The body of crushing stuff continues about the same. We are crushing with 10 head of stamps, and from a washing up on the 28th inst., 3.0 tons of stone gave a return of 226 ozs. 9 dwts. smelted gold. Lease 777, Two mile. The cross-cut being carried in east from main shaft at 210-ft. level is now advanced a total distance of 236 ft. ; the water is increasing in the face, and some quartz veins have just been met with. On the Peter and Paul reef the drives north and south are being continued. No reef has been broken down, as the shoot which is being erected to receive the quartz is not quite finished, but will be completed in a few days. At the Eastern shaft, the cross-cuts east and west at the 130-ft. level are now extended 54 ft. each way.—T. RAMAGE.

HARRIETVILLE (Feb. 6).—Fortnightly report :—The following progress has been made during the past fortnight :—Mons Meg Miue : The shaft below the drive south of tunnel J on the main Mons Meg shoot is now 6 ft. deep ; the lode is 3 ft. wide, and of very good quality, some fine specimens being obtained. It is not, however, so wide as it was in the level, but there is every indication of its widening on the hanging-wall side. On the new shoot north of tunnel J we have taken out a stope 40 ft. in length and 6 ft. high, and are now putting through a trial crushing, in order to definitely prove its value ; so far, the amalgam collected represents about 4 dwts. per ton, which should leave a fair profit, as the lode is very wide, soft and easily treated. From the old stopes we have during the past four weeks excavated 270 cubic yds. of lode matter. Guerdon Mine : Tunnel J has been extended a further distance of 20 ft., making a total of 403 ft. from the Mons Meg main lode. At 389 ft. we met with a belt of syenite 10 ft. wide, which gave place to a schistose clay casing, beyond which we have penetrated 3 ft. into a massive and well-defiued lode, which is, however, poor at the point of intersection. This I believe to be the Guerdon lode, which in the upper workings is also bounded on the western side by a belt of syenite. We are at the extreme south end of the auriferous shoot, so that after extending the tunnel sufficiently to establish its identity, we shall commence to drive north on the lode. South Mons Meg Mine : The drive north of the lower tunnel has advanced 38 ft., makiug a total of 284 ft. ; the lode is much disturbed and poor. We shall suspend driving here for a time, and take advantage of the dry weather to continue the rise at the back of the south drive. Tiddledee Mine : The drive south of tunnel D towards Mons Meg has been suspended, so as to start a cross-cut east near the end. The cross-cut is in 12 ft., and having passed through the lode is now in hard sandstone. We have to-day resumed the extension of the drive, and both drive and cross-cut will now be carried on simultaneously by the same party of men, with the aid of rock-drills. The drive south-east of tunnel D towards Tracy's old workings has advanced 28 ft. 6 ins., making a total of 54 ft. 6 ins. We have passed through the main slide, and found that the lode contiuues on the eastern side, carrying quartz and pyrites, but no gold as yet. New lease : The drive south of tunnel D on the new shoot has advanced 3 ft. ; total, 161 ft. The lode is 3 ft. wide, and carries a little gold. The shaft before the foregoing drive, on the new shoot, has been sunk a further distance of 5 ft. ; total, 23 ft. The lode is 6 ft. wide, and payable throughout ; the footwall portion producing some very fine specimens. The drive south-east of tunnel C towards new shoot has advanced 37 ft. ; total, 99 ft. We are here following a well defined wall. The ground is soft. The drive south-east of tunnel B towards new shoot has advanced 36 ft. The ground is much softer than hitherto. We have stoped out 212 cubic yds. of lode matter at the back of the drive south of tunnel D, on the new shoot, during the past four weeks. Surface : The drive north of the shallow tunnel, near tunnel D, has advanced 14 ft. ; total, 21 ft. ; the lode so far is small and poor. Returns : During the past four weeks—23 days crushing—the following ore has been crushed and gold obtained, viz. :—Mons Meg, 508 tons of ore and 72 tons of sand, yielding 270 ozs. 4 dwts. ; new lease, 402 tons of ore, yielding 110 ozs. 6 dwts. of gold. We have also obtaiued 5½ ozs. gold from the free mercury drawn from Wheeler's pans, and after putting through a few charges of roasted pyrites ; 8 tons of pyrites have also been saved during the month, assaying 4 ozs. per ton. Furnaces : We have been roasting pyrites since the 28th ult., and the furnaces are doiug excellent work. Assays of tailings show that we are saving 83 per cent. of the gold contained in the roasted ore, and this should still be improved upon so soon as we shall have supplied the Wheeler's pans with new shoes and dies, the old ones being almost worn out. Machinery : The whole of the machinery at mines and works is working most satisfactorily.—T. G. DAVEY.

INDIAN GOLD (Feb. 24).—Koorumber tunnel has advanced 4 ft. iu ground which shows improvemeut on assay ; total length, 1,000 ft. 9 ins. Stopes, No. 1 D : About 10 tons of fair quality ore excavated. Stopes, No. 3 B : 2 ft. 6 ins. stoped ; reef, 5 ft. wide ; ground a little disordered. Stopes, No. 9 : 2 ft. 9 ins. cleared ; reef, 5 ft. wide ; good ore next footwall. Under stopes, Nos. 1 and 3 : 5 ft. 3 ins. cleared ; reef, 3 ft. wide ; assays, 8 dwts. 4 grs. Uuder stopes, Nos. 4 and 5 : Ground stoped equals 7 ft. 1 in. ; reef, 5 ft. wide ; assays, 8 dwts. 4 grs. About 48 tons of passable ore broken from pillars. No. 11 north : Part of week engaged dressing off a side ; 3 ft. driven ; ground changeable. No. 11, south : Drivage during week, 3 ft. ; totalling from cross-cut, 59 ft. 6 ins. A sample of 95 ozs. of ore from No. 11 north washed down to 4.6 per cent. assayed 9 ozs. 16 grs. Another sample from No. 11 south weighing 76 ozs. washed down to 1.8 per cent., assayed 4 ozs. 11 dwts. Operations proceeding satisfactorily for introducing air to No. 11. Water and power abundant.—PHILLIPS.

KANGARILLA PROPRIETARY.—Mr. Rosewarne writes under date of Feb. 9, as follows :—"I have been at the Aclare Mine this week, and everything is going on all right. I expect it will take five weeks yet to make the adit connection with the 180 ft. level, but the adit is close to the lode now, and it may be struck at any time. I intend doing my level best to get the concentrators at work at the earliest possible moment, so that returns will come in." Mr. Rosewarne spent two days in Paris examining and testing an improved ore dressing and concentrating machine, the invention of Mousieur Castelnau, of Paris, by which the "slimes" are so treated that all the ore is practically extracted therefrom. The directors, having made an exceptionally advantageous contract with the manufacturers, have ordered this concentrator, which is now in course of transit to Australia.

LA PLATA.—The results for Feb. as cabled are : "Mine royalties $1,300 ; dump royalties $315 ; profit for the month $1,150." Note by secretary.—The manager reports by letter that some of the lessees were engaged in re-timberiug the levels, and doing other development work that prevented them from shipping the ore now broken in the mine.

MONTE DEL ORO (Mar. 3).—Fortnightly report of mine agent. —Taylor's engine shaft : During the past fortnight 12 ft. were sunk in this shaft, making the total depth on the underlie below the 244-ft. level, 60½ ft. The lode is still composed principally of slate, and in width averages 3½ ft. A sample taken from it yielded 1 dwt. 7 grs. of gold per ton. The water has increased so considerably that sinking is temporarily suspended to enable us to drop the bucket lift. All the required preparations have been made, and to-day the pitman and miners commeneed this work. Shaft No. 6 : Very good progress was made in the 244-ft. level north, the advance for the two weeks amounting to 18½ ft., or a total of 416½ ft. from the shaft. The lode is about 2 ft. wide, 6 ins. flookan, and the remainder slate. Two samples were assayed, yielding respectively a trace and 15 grs. of gold per ton. The west cross-cut is in a large body of quartzite from which a sample has beeu taken, the result of the assay being nil. The driving is prosecuted at a satisfactory rate, as the cross-cut is now 183 ft. long, showing that 19½ ft. have been driven since the last report. In the

intermediate level north of No. 8 winze the lode just now carries no quartz, but a sample taken from a small stringer yielded 2 dwts. 14 grs. of gold per ton. For the fortnight 14½ ft. were driven, making the length of the level 88 ft. The lode in the 186-ft. level north does not contain any quartz, its present composition being slate and flookan and width about 2 ft. Two samples have been assayed, the first showing 1 dwt. 23 grs. of gold per ton, and the second a trace. The ground being more favourable, the level is advancing rapidly, 23 ft. being driven, making its total length 559½ ft. Low's engine shaft: In this shaft, although the men have to contend with a considerable quantity of water, good progress is made in sinking since a depth of 44 ft. has been attained, and the timbering completed, the amount sunk in the two weeks being 18 ft.

MOUNT MORGAN EXTENDED.—The directors have received from their local committee (per Mr. R. Ballard, M.I.C.E.), a report dated Rockhampton, Feb. 1, which states that the weather has been very wet, and has interfered with the getting in of our stock of firewood, which is getting low. All rivers, water-courses, in a state of flood. Influx of water into the shaft has been a great delay, and we have lost at least five shifts in connection with pumping. On the 27th we had improved matters by pumping out No. 2 shaft, making it better to work in No. 3, but the water has been an expensive item this fortnight, and had it not been for Mr. Paton's wisdom in arranging long steam pipes from our mill boiler we should have been overwhelmed. We are using the mill boiler now to work the mine, finding it more economical. Air pipes have been fixed in position, and rock-drills went below on Jan. 26 to work in the eastern cross-cut of No. 3 shaft. No. 3 shaft, up to the fortnight ending Jan. 26, had only been sunk during the fortnight 2 ft. to a level of 90 ft. deep. At this level it will remain for some time while we are putting in the eastern cross-cut. The eastern cross-cut in No. 3 shaft is at the 86-ft. level. On Jan. 26 it had been driven 8 ft., and with the rock-drills now at work we may hope to make better progress. The strata through which we are passing in the cross-cut, so far strictly resembles that in the shaft. General sample from the 88-ft. level in the shaft assayed 3 dwts. 18 grs. of gold, while special samples taken from various parts at that level for the purpose of trying whether the stone was patchy, gave results ranging over the six samples from 2 dwts. 11 grs. to 4 dwts. 22 grs., confirming the general sample and establishing the fact that what little gold there is at this level pervades the stone. I shall be very much surprised with all this mass of distinctly auriferous pyritose stone; if we do not in driving to the eastward strike a special vein, which may be profitable to work—at any rate, the prospects are very promising.

MOUNT ZEEHAN.—The manager writes under date Feb. 2:—Montana section: The west cross-cut has been extended a further 15 ft., 4 ft. of which is a continuation of the lode mentioned in my last letter; the total width of this lode is 12 ft., carrying galena throughout the whole width. We are now just through the footwall of this lode, and country is graphite slate. The course of this lode is 20 degs. east of north, with an underlay east of 3 ft. in 6 ft. Open cast stope: Here we have stoped 11 ft. by 7 ft., and raised 20 tons of first-class ore. This lode is 4 ft. wide, with a horse of slate running through the centre, but will produce about 12 tons of ore per fm. There have been 25 tons 8 cwt. of first-class ore packed out to the road, leaving 30 tons at grass. Queen Extended section—No. 1 engine shaft: The 110-ft. level has been extended 8 ft., making total driven 153 ft.; country passed through hard, black slate, and very bad for blasting. The drive north on No. 1 lode has been extended 10 ft. 6 ins.; total from level, 18 ft. 6 ins.; country hard slate. Air shaft on this lode has been sunk 6 ft., and timbered up 6 ft.; total depth, 45 ft. An air shaft on No. 2 lode has been sunk 4 ft., and timbered up 4 ft.; total depth, 20 ft.; about 1 ton of ore has been raised here. The width of this lode is 2 ft. 6 ins., 8 ins. of which are solid galena.

MYSORE REEFS (Feb. 25).—Fortnightly report:—Harvey's shaft: During the past two weeks this shaft has been sunk 9 ft., which makes a depth of 21 ft. 2 ins. below the 460-ft. level; the lode is very small, just a tracc. Winze below the 460-ft. level: The lode is of great width; quartz remaining in the hanging and foot, but the ore is of low grade, assaying 2 dwts. 12 grs. of gold to the ton; 3 ft. have been sunk since my last, which makes a depth of 11 ft. 6 ins. below the level. The 400-ft. level south: We are driving this end by six men with hand drills; they have driven 7 ft., which makes a distance of 64 ft. 5 ins. from shaft; the lode is 6 ins. wide, composed of quartz and pyrites, and worth, according to assay, 1 oz. 3 dwts. of gold to the ton. Stopes in back of 400-ft. level: The lode is 15 ft. wide, and worth 3 dwts. of gold to the ton. Prospecting shaft south of Harvey's: During the past two weeks we have sunk this shaft 51 ft. There is a little gold in the formation we are going down in, worth, according to assay, 1 dwt. 23 grs. of gold to the ton. I intend to sink this shaft to the water level, and then cross-cut east.—M. SCANTLEBURY.

MYSORE-WYNAAD AND MYSORE WEST.—The mining manager reports for fortnight ending Feb. 25:—North shaft: This shaft has been sunk 9 ft. 6 ins., making a total depth of 116 ft. 3 ins. from surface. There is no change in the bottom. This shaft shall be pushed down as quickly as possible with a view to cutting the lode at 200 ft. at an early date. South shaft: This shaft has been sunk 4 ft. 6 ins., making a total depth of 60 ft. from surface; the rock here is very hard. Rock-drills: The compressor is now ready, and I expect the air and steam pipes to be fixed so as to allow of starting drills next week. I propose to put one drill in each of our shafts, and if the compressor will work three satisfactorily I shall put two in south shaft. I hope to make good sinking in north shaft with one drill, but south shaft is exceedingly hard, and I do not anticipate fast sinking, but we shall do all that can be done in such ground. The sinking of south shaft was delayed somewhat during the first part of the fortnight for timbering and casing the shaft, but this has been completed, and the winding engine is working satisfactorily. Ground has been excavated for the loading of the pumping engine and boilers, and we have commenced building the chimney. All our surface and other work is going on satisfactorily.

NEW DEVALA (Feb. 24).—The 116-ft. level, drive east: We have started a cross-cut north at this end to see that nothing is left standing to the north, and we have driven 7 ft. In the underhand stope in the 78 level we have a large reef, but of low grade, to the west of the winze 100 ft. west, but the reef improves in quality as we get eastwards of the winze. The reef in the east and west of the stope in the bottom level is large and of good quality. The eastern portion of this stope has been carried across No. 1 winze, and is in a large mass of good milling quartz. The reef in the stope at the back of the 78 level is large, but work has been suspended here for a time until we get the underhand stope protected, when work will be resumed here. Crushing is going on at the mill and a fair quantity of amalgam is being obtained. The secretary is instructed to add that the produce of the Dec. and Jan. crushings (159 ozs.) has realised 56*l*.—R. B. JOHNSTON.

NEW EBERHARDT (Mar. 1).—The mine manager reports as follows:—Number of tons of ore extracted and assorted for the week, 32 tons; assay value of same, as per mine samples, $36 per ton. Mine: The output of the mine has increased a little during the past week. The outlook of the mine now is somewhat better than that reported last week. Bullion sales: Enclosed please find certificate for the sale of seven bars of bullion.

NEW GOLD HILL.—As one of the directors of the Company was proceeding to America on business, the board requested him to visit Gold Hill, and furnish a report on the position of the mine. His conclusions, summarised, are:—That large quantities of ore are already in sight in the mine. That some system must be found to save the refractory gold. That the existing machinery is in very fair order; and that the present system of management should be remodelled and improved; also, that it may be two or three years yet before the Roanoke and Southern Railroad reaches Gold Hill (provided it is decided that the line should pass through there), and consequently there is but little prospect of making remunerative sales of the company's lands for some considerable time to come.

NEW RUSSELL.—Mine report for week ending Feb. 28:—Work in the mine has again been confined to stoping in the No. 1 south stope, big lode, from which point 92¼ tons of ore have been raised during the week. There is no perceptible change in the value thereof, all of it averages a fair point of gold in panning. Referring to the telegram published last week, the secretary desires to state that the profit mentioned was after all expenses had been paid, viz., mining and milling.

OSCAR (Mar. 13).—Hodgkinson shaft: The men are making good progress, and we anticipate being able about the end of next month to open two new levels at about 300 ft. from surface. We are glad to report that the lode is 5 ft. wide, whereof 18 ins. is quartz, well impregnated with rich auriferous pyrites. It is important to note that this shaft has been deepened from the disturbance or throw of the lode, reported several months ago, nearly 200 ft., through a well-defined and promising lode. It has been letting water very freely during the last fortnight, and the assays have shown a better percentage for gold. Our last mill value was 7 dwts. Its real value, however, is much higher, as this does not include the refractory ore. We are glad to report arrangements are being made to treat these ores, which will add considerably to our returns. The 200-ft. level north: The lode still runs very flat, being about 4 ft. wide, with about 10 ins. of quartz on the footwall. This quartz shows specks of visible gold, and as there is also a good deal of iron and copper pyrites, with a little galena, the assays yield a value considerably over 1 oz. to the ton. Our last mill test gave 6 dwts. free gold; we think, however, it has improved. We are also working a small stope in the back of this level, which is producing stuff of equal value to the level, and we are arranging to sink a winze to communicate with the 300-ft. level, which will unquestionably open a very valuable section of stoping ground. The 200-ft. level south is advancing rapidly, and will soon be in under a winze, which is being sunk and is 40 ft. below the 150-ft. level. The quartz is 7 ft. wide, very white, and by assay showing but little gold. We are only taking 5 ft. at present. On the footwall there is a small run of decomposed quartz, which contains some iron pyrites. This has assayed from 2 dwts. to 6 dwts. to the ton. Appearances predict an early improvement. The rise in back of 150-ft. level south is in a very fine lode of quartz, but the assays at present are running low. There is no alteration to note in any other point. As already reported, we have cut Hewlett's lode in the cross-cut. The same influence which caused the disturbance in Hodgkinson lode has also been at work here, which is the cause of our having to drive much further than the outcrop at surface led us to suppose. We are not through the lode, but its character where exposed is identical with the surface outcrop. We took yesterday a few pounds of what we consider the best quartz, and which contained a good deal of iron pyrites and assayed it; result, 5 ozs. 7 dwts. 2 grs. gold to the ton. Panning showed a good deal of fine free gold, from which we estimate that at least one-half is free. Assays and tests as to the average value of the whole will be made and reported on in due course. It is important to note that this lode can be worked in conjunction with Hodgkinson shaft; hence no extra drawing machinery will be required for some time. To ascertain somewhat the value of the concentrates, we yesterday collected from the several workings a large sample of almost clean concentrates (copper and iron pyrites, with a little galena), which when crushed showed a good deal of fine gold. The sample, by assay, gave value: Gold, 85 ozs. 1 dwt. 4 grs.; silver, 47 ozs. 4 dwts. 20 grs.—J. DAW, jun.

RAVENSWOOD (Dec. 31). — Crushed during month, 199 tons. 102 company's stone balance public, which was very poor and did not get full rates, overhauled plant during holidays, cleaned boiler, &c, placed new tables to battery. Chloriuation plant: Put through 91 tons 4 cwt.; average, 3 ozs.; gave plant a thorough overhaul during holidays; all now in capital order, furnaces, necessary repairs, and cleaned flues.

RUBY.—Report upon mines for week ending Feb. 23:—Dunderberg: We have 12 tributers, and six men on day's pay at work here. The 800 drift has been advanced 14 ft., making a total of 144 ft. driven. We are within 18 ft. of the centre of the shaft. Two tributers on the 600 level have a little ore, with good prospects. Lord Byron: We have two men on day's pay and 21 tributers at work here. Two of the latter on the summit of the mine have a good prospect of finding considerable ore. Contract drift advanced 8 ft.; total, 48 ft., in very favourable looking lime. Have stopped the contract, and will put the day's pay men to work to make connection with the bottom of the winze, as the winze has got so deep that very slow progress can be made. I stated in a previous report that the ore was making away from the winze, and am now pleased to state that iron and soft lime is again coming in in the bottom thereof. Bullwhacker: We have five men at work doing considerable dead work.

SOUTH-EAST MYSORE (Feb. 21).—Fortnightly report:—I have been underground this morning, and find there is very little change to note. In the 500-ft. level south a branch of quartz has been met with containing a little gold. This in all probability is part of the lode. We shall continue the present end for a few feet more in the same

direction, and if nothing more is seen drive on this branch. In the 500-ft. level north cross-cuts both east and west are being pushed ahead as fast as possible. The east cross-cut is extended 20 ft., but this cross-cut will have to be driven at least 60 ft. to prove this point, judging from the change of the underlie of the lode as seen in the shaft just underneath the 295-ft. level. The main part of the lode should be at least 60 ft. east of the shoot of quartz driven on at the 500-ft. level, that this, of course, assuming that what the shaft is sunk on is an offshoot from the main body of quartz.—M. Scantlebury.

VALLEY.—Advices from the manager, dated Feb. 23, state that on Feb. 9 they had 3 ins. of snow, and up to the 16th it had been freezing slightly. They had been able to hydraulic about two hours every other day from the lower dam only, and with hardly any ground sluice, and have cut 50 ft. further up the Valley; gravel was 3 ft. thick, and of about the same class and value as heretofore. This news has been already supplemented by the telegram on the 12th inst., and published, which ran as follows:—"Have advanced 180 ft. The thickness of the gravel in face of hydraulic cut is 5 ft., and the cement bedrock is sinking."

VISHNU (Mar. 1).—Since my last report 25 ft. has been added to the Vishnu raise; total distance now up from cross-cut 50 ft. The raise shows from 6 to 8 ins. of quartz and considerable vein matter. From present indications we are liable to get into good ore any day. We have now, from surveys made, 80 ft. further to raise to conuect with the old Vishnu incline and drift, which was driven east from the bottom of the incline mentioned—some 250 ft. all the way in ore. Miners inform us that there was good milling ore below, and in the face of the drift, when they were compelled to abandon the work on account of the heavy flow of water. We expect to get paying ore before we make connection with the old incline.—G. McCormick.

WEST INDIAN (NEW).—Below are extracts of a letter received from this company's manager at San Domingo, dated Feb. 10, received on Friday, being about 10 days delayed:—The first square yard of bed-rock we cleaned produced 1½ ozs. of gold; it has not all been as good as the first, but some places have been very good. In one batea taken from the bed-rock we had $1.52 gold. We ship by this steamer 10 ozs. gold as a sample of the quality we are now getting. The company are in receipt of bill of lading for the above amount of gold.

REPORT OF MEETING.

FRASER AND CHALMERS, LIMITED.

A 10 PER CENT. DIVIDEND GIVES A FURTHER PROOF TO THE SHAREHOLDERS OF THE SOUNDNESS OF THEIR INVESTMENTS—CHICAGO WORKS FULL OF ORDERS—PROGRESS OF THE ENGLISH BRANCH AT ERITH.

The ordinary annual general meeting was held at Winchester House yesterday, "to receive the accounts to Dec. 31, 1890, with a report of the directors; to elect directors in place of those retiring by rotation; to appoint auditors and fix their remuneration; and transact the other ordinary general business of the company required to be dealt with at such meeting."

Mr. Hamilton Smith, Jun.

(chairman of the company), presided.

Mr. Walter McDermott (secretary) read the notice of meeting, and the report of the directors was taken as read.

DIRECTORS IN A PLEASANT FRAME OF MIND.

The Chairman: Gentlemen, we regret the absence of Mr. Wernher, one of our London directors, who is now absent from England and hence is unable to attend this meeting; had it been possible he would have been with us to-day. Your directors meet you in a pleasant frame of mind, as they have been able to present you accounts showing the operations of the company for the first year of its existence, which substantially make good the promises held forth in the prospectus. Dividends have been paid you amounting to 10 per cent. on the called-up capital, and after charging off to capital account, $50,000, being the approximate net earnings at Chicago for the months of Nov. and Dec, 1889, there remained a surplus in hand with which we could have paid you 1½ per cent. additional dividend, or 11½ per cent. in all. I think the prospectus promised 12 per cent. After the Chicago accounts had been submitted to your board, it was decided to advise the directors of the American Co. to also write off $20,000 for depreciation; in Chicago they regard this action as an excess of caution, as they consider their valuation of machinery, stock in hand, &c., made at the end of 1890, as being exceedingly conservative, and requiring no deduction. As the $50,000 before spoken of was earned prior to the organisation of the company, it follows that it is a proper credit to the purchase price of the business. After writing off this total sum of $70,000,

THERE REMAINS, APPLICABLE FOR FUTURE DIVIDENDS,

$1,172.18 in Chicago, and 2,282*l.* 12*s.* 5d. in London, or in all about 2,500*l.* The accounts appear to be a little complicated, as balance-sheets of both the American and English companies are preseuted, and also for the reason that the last American dividend could not appear in the profit and loss account of the English company for the year 1890, as the fiscal year of the latter closed before this dividend was made. You will remember that the American and the English companies are two distinct corporations, each keeping distinct and separate sets of books.

A NEEDED EXPLANATION.

Several shareholders have asked me how it happens that while the American company paid 14 per cent. on its capital stock, the English company has only declared 10 per cent.; this is easily explained by the fact that the purchase price of the American business was 575,000*l.* while the capital raised in London, including debentures, was 670,000*l.*, we hence have 95,000*l* on hand, which is bringing in only a moderate rate of interest; when this sum is expended in the construction of the plant at Erith, we hope it will earn as large a rate of interest, as is the case with our Chicago investments. The

CHICAGO WORKS IN 1890 WERE OVERCROWDED WITH ORDERS,

the output being in value much in excess of the product of any previous year; hence delays in delivery of machinery occurred, which were both annoying to customers and costly to the company on account of forfeits paid for time contracts. I may remark that Fraser and Chalmers have always endeavoured to be exceedingly prompt in filling orders, and have never shirked responsibility under their contracts; to this fact, indeed, is largely due the phenomenal increase of their business. The new shops, which will be built in Chicago this year, will be of large capacity, so that in the future we hope to be able to fill orders with the greatest promptitude.

VALUABLE SITES.

Fraser and Chalmers own two sites of land in Chicago; one is in the centre of the city, and is occupied by the existing plant; the other comprises a tract of 10 acres near Douglas Park, and has almost unrivalled railway facilities, being very much more conveniently situated in this respect than the existing site; it is intended, by degrees, to remove the entire plant to the 10-acre tract, and when this is done, to sell the land and buildings now occupied. Chicago is growing very rapidly, the present increase being chiefly due to new manufacturing enterprises. Very likely in 20 years Chicago may be one of the largest manufacturing cities in the world. Should this growth continue, as in every probability it will, the present site of Fraser and Chalmers before many years can be sold for double the price it is inventoried at on our accounts. In fact, while in Chicago, in January last, I was assured by well-informed people that the lands of the company could then be sold for near 20,000*l.* more than the price at which we took them over. As many of you are debenture-holders as well as shareholders, I may remark in this connection that our debentures, amounting to 250,000*l.*, form an exceptionally good investment, owing to the large intrinsic value of the property securing them. The present

MAGNITUDE OF THE CHICAGO BUSINESS

is shown by the fact that sales were made during the year to some 600 customers, scattered almost over the whole habitable world—the orders from a single one of these customers amounted to about 90,000*l.* during the year. Mr. D. R. Fraser is expected to arrive in London within a fortnight, when he will at once proceed with the

ERECTION OF THE WORKS AT ERITH.

Machinery can be manufactured somewhat more cheaply on the Clyde than on the Thames, but after full consideration, it was unanimously decided by the directors that the site on the Thames was decidedly preferable. Nearly all the orders for these English works will originate in London, and in such a business it is most desirable that our customers should be able to easily and frequently inspect our works, and the machinery which is being constructed for them. (Cheers.)

Mr. Robert R. Symon (director): I have much pleasure in seconding the resolution.

Carried unanimously.

Mr. Curston: I see in the profit and loss account 1,350*l.* debited for law charges. No reason is given for these law charges. If Mr. Fraser and the Exploration Co. have any litigation between them, that is no reason why the shareholders should be saddled with such excessive law expenses, and, hence, an explanation is desirable.

NO LITIGATION.

The Chairman: The law expenses to which the shareholder refers are simply for the organisation of the company. They are chiefly from our New York lawyers, and have not been connected with any litigation whatever. We have no litigation here, I am glad to say. (Cheers.) We were compelled to form an American company, and it was rather costly to do it, and required a great deal of care and attention. The directors think that the charges of the American solicitors, and also those of the solicitors in London, exceedingly reasonable. (Cheers.) I have now to propose that Mr. Robert English and Mr. C. E. Atkinson, the directors retiring by rotation, be, and are hereby, re-elected directors of the company.

Mr. Symon seconded the motion, which was carried unanimously.

The Chairman: I invite the shareholders to now deal with the question of the auditors.

AUDITORS RE-ELECTED.

Mr. Lucas: I have great pleasure in proposing the following resolution, which, I feel certain, will be carried unanimously:—"That Messrs. Deloitte, Dever, Griffiths and Co. be, and they are hereby, appointed auditors for the ensuing year, and that their remuneration be 50 guineas; and that a like sum be paid to them for their remuneration as auditors up to this date.

Mr. Matesdorf: I second the motion. Carried unanimously.

Mr. Saalfeld: I have much pleasure in proposing a vote of thanks to the chairman.

The motion was carried by acclamation.

The Chairman, in a word, replied, and the meeting then closed.

MANICA OPHIR MINING CO., LIMITED.

LATEST REPORT FROM MR. WILLIAMS.

(Dec. 25).—The 50 claims of the company are pegged and registered, and I have obtained at each end the same kind of quartz all carrying good prospects. Block No. 1 and part of No. 2 has been worked out to the depth of 150 ft. in some shafts. The remainder, however, is not touched. The sketch on the side will show you how I have pegged, and will give you a slight idea of the ground. The dip of the reef is to the north, and the angle I suppose is about 30 degs., though I have not measured it. We shall make a very good thing out of these 50 claims as they are very very rich, easily worked and plenty of water. The whole of the Hill Block 1 can be put through the stamps, in fact you might even sluice it, for it is all decomposed, and so rich that it will pay you to run it all through.—A. V. Williams.

African Gold Recovery Co., Limited.—The allotment letters and letters of regret have been posted.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN and BIRMINGHAM BANK, LIMITED.

Investors in all classes of Stocks and Shares should read Mr. Thos. Thompson's Mining and Investment Circular, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

LESTER AND HOOK,

Option, Stock, and Mining Share Dealers,

2, COPTHALL CHAMBERS, E.C., and MINING EXCHANGE, 9, OLD BROAD STREET, E.C.

A GREAT ADVANTAGE TO RAILWAY OPERATORS.

Lester and Hook are prepared to deal in Home, Colonial, Foreign, and American Rails, for two months forward on deposit of 2 per cent., and guarantee to close at any time before the expiration of the account specified on the contract.

Lester and Hook advise immediate purchase of Louisville, Mexican Ordinary, Milwaukee, Brighton "A," and Canada Pacifics. The above Stocks are leading the Market, and a rapid advance in prices is fully anticipated.

Telegraphic Address: — "LONGEVOUS, LONDON."

MEMBERS OF THE MINING EXCHANGE.

BURRELL, BRADDOCK & CO.,

Stock and Share Brokers, Mining and Financial Agents,

STOCK EXCHANGE BUILDINGS,

90, QUEEN STREET, MELBOURNE,

Undertake Agencies for Investments in AUSTRALIA, and negociate the purchase of Mining Properties.

Personal inspection by a member of the firm of all properties under negociation, thus ensuring the safest guarantee of the *bonâ fides* of mines, &c.

BANKERS.—THE MANCHESTER AND LIVERPOOL DISTRICT BANKING COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A Special Cable Code for Prompt and Economical Communication between the South African and London Offices.

Further information can be obtained at the Head Office of the Company.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

RECOMMENDATIONS FOR CURRENT ACCOUNT:—

INDIAN CONSOLIDATED,
MYSORE REEFS,
NINE REEFS,
MYSORE WEST,
MYSORE WYNAAD.
DEVALA MOYAR.

All recommendations this month have, up to the present, been correct, and large profits to our followers the result.

We make Mines a special study, and invite correspondence, whether business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close market price of the day on 10 per cent. deposit, and carry them over as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly, irrespective of account day. We sell shares at current prices for forward delivery at one, two, or three months on 15 per cent. deposit. Clients may rely on fair treatment at our hands. We are members of the Mining Exchange, and subject to the rules and regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Earl.—No. 1. See article in this issue. No. 2. Nearly all the shares have gone back, owing to a sluggish market. The mines, we think, have a fair chance. The opinion you express as to the other matter is that generally entertained by persons best acquainted with the facts.

Pseudonym Mass.—If you deal with the firm named you can rest assured all transactions will be faithfully carried out. The shares you should hold for the present.

M. Edgar.—Yes. Take them up, if possible. It will not only save extra charges, but help to support your market.

Reserved.—Do not sell your shares until something more definite is known.

Robert.—Our advice is to hold until after the meeting. It is almost a nominal market.

Bank.—They may go better within the next few days, so we advise you to hold.

Herbert (Bishops Stortford).—We are of your opinion. The company will lose a good man when he goes.

Suspense.—The market is not so firm. Seeing the price you gave we think you should hold on.

Victory.—We hope to do as you wish next week. Indian affairs demand, as they deserve, all our spare space.

Scotia.—There is not likely to be a serious drop in them. We think you should hold on to them for the present.

Doctor.—Yes. The agency is for the benefit of our subscribers. Send us the list you name.

McB.—We are afraid that re-construction is inevitable as more capital is required to work the property.

Lady Reader.—As an investment—no.

R. J. T. (Ballyshannon).—Both parties named are of old standing, with respectable connections. You need not be afraid to trust your money with either.

F. C. D.—It appears to us that the low-priced shares named should be purchased. We feel sure they cannot go much lower.

The Mining World.

LONDON: SATURDAY, MARCH 21, 1891.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

THE MYSORE MEETING.

IT is not often the lot of speakers to deliver, and of shareholders to listen, to such addresses as those which fell from Sir Charles Tennant, as chairman, Mr. John Taylor, as manager, and Mr. W. H. Rowse, as secretary, of the Mysore Mine, on Thursday last. Too much of late have shareholders of other companies found themselves wandering in the wilderness of re-construction, and only occasionally getting a glimpse of the promised land of dividends beyond. The Mysore shareholders have, however, metaphorically, not merely crossed the Jordan, but entered into a land veritably flowing with milk and honey. In thinking over Mysore affairs one is almost oppressed with the temptation to go into ancient history by way of pointing a moral, if not of adorning a tale. To that temptation we shall not yield now, but merely ask our readers in general, and the shareholders in particular, to read the full report of the proceedings which will be found in our present issue, and which, we can assure them, will well repay the time it may require. The speech of the chairman dealt with the brilliant facts mentioned in the annual report, and summarised in these columns a week ago; but he added one or two important points, as, for example, when he put upon the extra reserves (30,000 tons) a cash value of 200,000*l.*, the valuable discovery at Rowse's shaft, and the opening out of what he estimated to be the value of 100,000*l.* worth of gold at Tennant shaft "within the last few months." The chairman closed his remarks by reading the most brilliant telegram that has ever been received from the Mysore Mine. The shareholders listened to it with bated breath—particularly its opening words, that the lode in the 700 north of Rowse's shaft is of the width of 3 ft., assaying 7 ozs. 8 dwts.—this being the deepest level yet driven upon it.

Needless to say, this was a point not overlooked by Mr. John Taylor in the short and concise speech he delivered when the chairman had finished. He pointed out on a diagram—a "picture" he called it, and one far more interesting to the shareholders than any they will see in this year's Academy—that Rowse's shaft is now down 780 ft., and that the lode has been productive the whole distance. He showed that it had improved most of the way, until at the 700 north it is of the striking value already mentioned. The bottom of the shaft is at present in a band of trap-dyke, which authorities in Australia and elsewhere agree does not ultimately impoverish, but, on the contrary, enriches the lode. In referring to the 700 north he described it as "the best information he had yet been able to give in connection with the mine," and emphasised the statement by the further one that "in the deepest level driven upon the lode the vein is the best." Glen shaft is 1,000 ft. to the north of Rowse's, and 2,160 ft. from that there is Tennant shaft, where the remarkable discovery has been made to which the chairman attached the value we have given—a value, be it remarked, achieved within only the past few months. This summary of Mr. Taylor's speech is imperfect, we know, for it is one of those discourses that must be read in full to be grasped in detail. But his general conclusion was inevitable from the premises upon which it was based—that the shareholders may look, without misgiving, to a continuance of the prosperity they are now enjoying.

Mr. Rowse succeeded Mr. Taylor. He has just returned from several months visit to the spot, during which time he investigated the Mysore Mine, at surface and underground, from every point of view which the ingenuity of man could suggest. He confirmed from personal observation all that Mr. Taylor and the chairman had said with reference to the working of the different mines, into which we need not follow him; but he mentioned incidentally one or two facts which must bring the magnitude of those workings home to the most unprofessional mind. For example, he told the shareholders that 113,778 tons of quartz have yielded 164,172 ozs. of gold, of the value of 638,610*l.*, or about 6*l.* per ton of quartz, the bullion weighing 6½ tons! "If you add to this extraction 65,000 tons, now estimated to be in reserve on this shoot, you get altogether 178,778 tons of quartz, of a total value of somewhere about *one million sterling*, as representing the value of this shoot of ore between the 173 and 700-ft. levels. The profits for the year have been 155,799*l.*—for the past two years, at the rate of 75 per cent. upon the capital of the company, and equal to about *70 per cent. of the gross value of the gold obtained.*" He is also of opinion that since the end of the year the reserves have increased at Tennant's by over 10,000 tons. To give an idea of the work done, Mr. Rowse put it thus: The ground extracted from the shafts, levels, and winzes, amounted during the year to 1,047 fms., in addition to 1,923 fms. taken from the stopes, together 2,970 cubic fms., being 1,000 fms. in excess of last year. To put it in a form which may be more easily comprehended, the ground excavated during the year is equal to that of a tunnel 7 ft. high, and 5 ft. wide, for over 3 miles in length. There are now 22 rocks-drills employed, and this number will be almost immediately increased. Costs have been reduced to such a point that ore containing only 6 or 7 dwts. per ton can be made to pay. He spoke of the continual additions to the machinery and plant, which are now of great magnitude; of the precautions taken to prevent robbery of gold; of the production by the tailings plant of 22,000*l.* during the last year; and of the number of stamps, which will bring their capacity up to 55,000 tons a year. Native labour is no longer a difficulty, and the coolies are developing into such admirable workmen that soon the company will be able to dispense with a good deal of the English labour now employed, which is much more costly, but not correspondingly more efficient. The production of coal in India is beginning to solve the question of fuel, and expenses will be further reduced by the short railway, which is on the point of completion. Various improvements, such as those connected with the new offices and the weigh-bridge, are in course of completion, and every effort is made to improve the sanitation of the field, with this happy result, that though there was an outbreak of cholera some time ago, not a case occurred in the Mysore Camp. Mr. Rowse bore testimony to the valuable services of Capt. Gilbert as superintendent, of Mr. Mudge at the head of the machinery department, and of Dr. O'Donnell, the responsible medical officer. Shareholders will without question consider that they have been admirably served by their staff on the spot, and not less so by Mr. Rowse himself, whose Indian visit cannot fail to be productive of beneficial results.

The discussion that ensued was scarcely worthy of the speeches upon which it was presumably based. We most decidedly differ from Mr. Fergusson when he said the Mysore Mine would have expired in about two and a half years but for its Goldfields purchase. We are quite of his opinion that this purchase is most valuable, but he must have paid but little heed to the remarks we have been endeavouring to summarise if he thinks that Mysore, with the various points it is at present developing, and the vast amount of ground it has untouched, would have died the death within the period named but for the Goldfields purchase. Mr. Rowse promised further information to any shareholder who will call upon him at the office, and one of the first to do so should be Mr. Fergusson, who, on Mysore affairs, really seems to require a little elementary instruction. In the result the report was adopted by acclamation, the remuneration of the directors was increased (a partial redemption of the pledge the shareholders gave years ago, when the company was in low water, as to what they would do when the management got them out of their difficulties), the officers on the spot were thanked, and the resolutions as to the Goldfields purchase were unanimously confirmed. Of the many meetings the Mysore Co. has now held this must be regarded as the most satisfactory. There does not seem to be a spot upon the smiling tableau of the company's prosperity.

GLENROCK—A VALUABLE OFFER.

THE Glenrock directors have issued to their shareholders the prospectus of the Tipperary Gold Mine, Limited, with a capital of 30,000*l.*, of which 6,000*l.* is offered to them for subscription, and will doubtless be taken up. The terms upon which this company has been formed bear upon the face of them evidence of *bonâ fides* on the part of the original proprietors of the mine, whose only anxiety appears to be to retain as large a share of their property as they can. Reckless as successful miners proverbially are, they have distributed amongst themselves the profits earned, and omitted the ordinary precaution of saving a portion of their earnings as reserve against the rainy day that was inevitable when the cost of hauling the ore (as depth was reached) should become nearly equal to the value of the product, and the dead work of adit driving should necessitate further capital expenditure. From 4,000*l.* or 6,000*l.* must now be raised to enable them to deliver the ore at the mill without hauling and handling, and the Glenrock directors have secured a good bargain for their shareholders in contracting for one-third of the mine out of which to provide this requisite capital.

A mine that has yielded 15,120 ozs. of gold, and made itself—providing machinery, tramways, water-races, and much development work, and besides all this has distributed 13,500*l.* amongst its fortunate proprietors cannot be over capitalised at 30,000*l.*, and by retaining 5,000 shares for the benefit of the company, whilst offering 6,000 for subscription, the directors have shown that it is the interests of their

own company they have mainly considered. They have, moreover, dealt with the money part of the payment in a most satisfactory manner, for the 1,000*l.* in cash which the vendors required is not to be paid to them as part of the purchase consideration until the mine has yielded an equal amount of profit, and distributed it as an earnest of what it may reasonably be expected to yield in the future: so that vendors and purchasers stand on precisely the same footing. If the mine is worthless, the vendors' shares—and they get nothing else—are worthless too. If, on the other hand, the mine is what it is represented to be, then the Glenrock Co., without any expenditure of its own capital, has acquired for nothing a fair interest in another property, and their shares are, of course, proportionately more valuable.

This is a legitimate and business-like way of pushing the company's interests in New Zealand, and we cannot doubt that the shareholders will endorse the action of their board by taking up the small amount of capital now offered them. If they do not respond they will not be able to reproach their directors with permitting a good prospect to slip through their fingers for lack of energy and courage. Amongst the mining shares that are likely to experience a substantial and rapid advance when the present depression passes away, we are inclined to put those of Glenrock, more particularly if the shareholders embrace the highly advantageous offer the directors have now placed within their reach.

YURUARI.

THE COMBAT THICKENS.

We owe to the courtesy of certain shareholders, and not to that of Messrs. Merino and Brunker, the receipt of a circular, dated Mar. 7, addressed to the proprietors and signed by them. This circular has culminated in a requisition to the board, which requisition has found its climax in the calling of a meeting the day before Good Friday—a day as to the inconvenience of which we need make no comment. The fault of this lies with the board, whose conduct in this matter merits censure, because they must know perfectly well on a day like that most people are hurrying into the country, and for the time have put business affairs on one side. We have received so many letters with reference to this circular and the action of the committee that we are unable to resist the pressure put upon us to offer some guidance in the matter, though we should have preferred to have remained silent until the full facts had been thrashed out at the meeting.

The case of the committee as well as that of the board may be briefly put. The committee is self-constituted, but it is composed of gentlemen who, with two exceptions, certainly have substantial holdings. The committee appear in the first instance to have put themselves into communication with some of the larger shareholders, though greater justice would have been done if they had addressed their circular to them all. As to the nature of this communication, the circular of Mar. 7, is either silent, or points to the notice convening the meeting of elucidation. Shareholders are urged to either attend persoually or give their proxies. Those who do attend should make it their business to see that the fair play which the committee themselves desire should also be extended to the opposite side. We say this because at the last meeting a noisy clique in the room hounded down the chairman in such a manner that at the close of the meeting he left the room in a state of complete exhaustion. The board may have committed all the crimes in the decalogue, but they are at least entitled to a fair hearing. The committee stigmatise the charges in London as excessive, and here we agree with them, and also share their view that they ought to be reduced. At the same time if a comparison be made with other companies on this score it should be a fair one. It is idle to expect a company like Yuruari, with, we believe, about 4,000 sharcholders, to be conducted at the same expense as one with only 400. The committee roundly say that this expenditure can be reduced three-fourths, and they will render an essential service to shareholders if they can show at the meeting how they propose to do it, but they must not sacrifice efficiency to cheeseparing, for there is an economy that is no economy at all. The most serious part of the committee's attack is with reference to the Eureka property. This is most important, and we trust it will be gone into in a judicial spirit, and not with that animus to Mr. Watt personally which asserts itself in almost every paragraph of the circular. In the statements in this circular the committee appeal for the support of the shareholders, but before that support is given they should read what has to be said on the other side.

This appears in the board's rejoinder of Mar. 16, in which shareholders are urged to resist an attempt "to ruin the company," and the first count in their indictment of the committee is the alleged fatal result that would have occurred in Venezuela had one of their number been fully successful in upsetting the legality of the call lately made. The gentleman whose name appears second in the circular of the committee is Mr. Brunker, whose action on the call question is stigmatised by the directors, and the second is Mr. Merino, who is stated to have acted as agent to the vendors, who obtained 425,000*l.* for these mines. If this be so, Mr. Merino must have been an uncommonly good agent—much better, indeed, than those who at the time acted on behalf of the company. The subsequent action of Mr. Merino is described in no halting terms by the directors, and assuming that their statements are anything like correct, it is a serious point whether, even if the allegations against the present directors were well-founded, it is to Mr. Merino, or any of his friends to whom the affairs of the company should be entrusted. No point in the committee's circular that we can trace has been evaded by the directors in their rejoinder. The Eureka Concession matter is fully dealt with, though this is a case in which it seems necessary that enquiries should be made by an impartial committee. As to directors' fees, the board allege that they are nothing like they were when Mr. Merino was a director of a board who are alleged to have drawn their pay "until there was not sufficient cash in the till to pay for the hire of a room in the Cannon Street Hotel." The present board have drawn nothing since the mill was shut down; they say they have reduced expenses; they represent themselves as holding an enormous number of shares, and subscribing to each issue of capital, whereas Mr. Merino is alleged to have done nothing of the kind.

On one point we are in accord with both parties—that all shareholders who possibly can—should attend the meeting. Failing that, what are they to do? That is the question which has been addressed to us, and we cannot evade it. On a review of the possible results that may attend a complete change of administration, we advise the shareholders to send their proxies to the present board. We cannot, we do not, approve of all the directors have done; but when Hamlet, in his soliloquy, said, "He preferred the ills he had to others that he knew not of," he showed the wisdom of the true philosopher. We have seen other companies in which violent changes of management have been brought about, but must sadly own that in the overwhelming majority of instances disaster has resulted to the shareholders. We know that in respect to the Yuruari affairs there has been a strong undercurrent of dissatisfaction for some years, and that a certain feeling of distrust has been engendered, but the shareholders should look at the matter as business men when they are asked to get rid of the present crew and put a scratch one on board, and they should also remember that they are invited to do so by a committee that has received no mandate from the shareholders. They should ask themselves — are we likely to be better served by a new board? Instead of disorganising the whole management of the company, should they not rather steer a middle course by adding some fresh member, or members, to the board. We have looked down the names of those who have signed the circular, and observe that of Mr. Robert Walker, J.P., a gentleman experienced in business, and particularly in mining matters. Now, if this gentleman and another like him could be persuaded to join the Yuruari board, we feel that the interests of the shareholders would be far better served than by upsetting the coach entirely. The shareholders know the worst that can happen to them under the present direction, for the last call has been made, and, should another re-eoustruction be necessary, they need not join it unless they like, or, preferring to do so, they could make that a suitable occasion for electing whatever board they please. On the whole, therefore, whilst infinitely preferring that the shareholders should attend next Thursday's meeting and give a full and true verdict upon the evidence then submitted—failing their ability to do so, past experiences of compauies in a similar position points unmistakably to the desirability of not swopping horses at the present juncture, because if that course be pursued the probability is that directors. committee, and shareholders alike will find themselves engulfed in mid-stream. .

THE NEW DIAMOND MINE.

In recent letters from our Kimberley correspondent extended reference has been made to the discovery of a new diamond mine, situated at Wesselton, which is close to Beacousfield. The discovery is evidently awakening keen interest at the Cape, though operators for the rise in De Beers shares here affect to regard the whole matter as of about as much importance as the sea serpent or the gigantic gooseberry of the dead, or silly, seasou. It is true that similar discoveries in the past have led to little or no augmentation in the production of diamonds; but we learu from an entirely independeut source that the Wesselton Mine is really diamondiferous, and that the stones are of such an excellent quality that the De Beers people, who keep a special staff of officials to explore likely properties, are anything but indifferent with regard to the discovery. Our readers will remember that the people of Beacousfield have been very adversely affected by the practical closing of the Bultfontcin and Dutoitspan Mines by the De Beers Co., and that it was partly to appease the growing hostility of the Beaconsfield miners that Mr. Rhodes and his colleagues set up a large number of *débris*-washing machines, so as to give employment to some of the men whose condition had become extremely serious.

The "farm" upon which the discoveries have been made is known as "Benaudheidfontein," which means, literally, fear, or anxiety, fountain, as our Kimberley correspondent pointed out in the letter which appeared in the Mining World of the 7th inst. The property is, for the most part, situated in Free State territory, a small portion jutting into Griqualand West. The "farm" was granted to Mr. Wessels uuder a Free State title, and under Free State law the owner of the soil has the right to turn his "farm"

into public diggings if he chooses to do so, whereas nnder Colonial law all the minerals and precious stones found in a property are claimed by the Government, and can only be leased to prospectors by public proclamation. The curious position of the "farm" has already given rise to some nice legal complications, of which the solution is not easy to foresee. Mr. Wessel, the original owner has, we are informed, parted with different portions of the estate to various capitalists, including Mr. H. A. Ward and Mr. Corouel. The latter gentleman's share came into the hands of the Cape of Good Hope Bank, and from the liquidator of that undertaking it has been purchased by the De Beers Co. This action on the part of the De Beers Co. is a sufficient answer to those who have pooh-poohed the whole business. The Beaconsfield Town Council and the Claimholders' Association have endeavoured to get the principal owners of the "farm" either to sell it to them, or to throw it open for public diggings; but, when the last Cape mail left, neither proposition had been acceded to, and it was thought probable that Mr. Ward, who holds the lion's share, would strenuously uphold his right, under Free State law, to do what he pleases with the property, subject, of course, to the approval of his partners.

Meanwhile, the mine is being worked in a tentative manner, and we hear that very encouraging results are being obtained. The "blue" ground yields about half a carat to the load, and as the expense of working in the primitive fashion at nresent adopted is only about half a crown a load, there is a good margin of profit, and there is, apparently, every reason to believe that with more extensive and more systematic operations the Wesselton Mine would become productive. It is understood, locally, that the managers of the De Beers Co. have bid for the whole property, but that the terms offered have not been considered nearly good enough by Mr. Ward and his other partners. We shall watch the development of events with interest. It would be absurd to suppose that the Wesselton proprietors would, in any case, be able to interfere seriously with the existing monopoly of the De Beers Co.; but it is obvious that with a monopoly, purchased at such an enormous price, Mr. Rhodes and his colleagues cannot afford to disregard any prospect of an increased production of diamonds from other sources.

ANOTHER CHANCE FOR VAN.

YESTERDAY the shareholders of the re-constructed Van Co. selected an admirable working board of five members. Its chairman is Mr. Chas. Clark, than whom better could not be found. He will have as his chief henchman Mr. Peter Watson, and both gentlemen will be supported by Mr. Hamilton, who has taken a leading part in the re-construction, and who represents a large interest held in the neighbourhood of Southampton; by Mr. McIlquahan, who resides near the spot; and Mr. Catling, a former director. If the combined wisdom of these gentlemen cannot bring Van mine to a successful issue with the present available funds, then we think that no other board need address themselves to a task which we shall deem hopeless. Capt. Paul was present and gave an excellent report as the result of his minute inspection of the property. He showed that there are many points of considerable promise, and that even at the present time 35 tons of ore can be profitably extracted, with every chance of more to follow, when the contemplated developments have taken place. The subscription of shares has been between 35,000 and 40,000, and as the directors will not be indisposed to receive further applications, if promptly made, shareholders who have not joined the reconstruction will be wise in their own interests to do so at once. It is, however, a case of "stand not upon the order of doing, but do at once." The new directors will at once proceed to appoint their manager. They will take care, of course, to select one in whom they have perfect confidence, and when appointed we trust he will be allowed a free hand, and that no undue interference with his plans will be permitted to take place.

MONTANA.

THE chief feature in the Montana report lies in its closing paragraphs in which Mr. Bayliss, after seven years' residence at the mine, tenders his resignation, and announces his intention for the future to reside in London. He has, in fact, entered into partnership with Mr. G. H. Robinson, the deputy manager, as mining and consulting engineers; but, happily, arrangements have been made by which the services of both gentlemen will be retained, and they will, as heretofore, be responsible for the efficient management of the company's mines and business in Montana. Mr. Bayliss retires in this (happily) partial sense with a record of which he has every reason to be proud. The mine has paid in dividends 537,057*l*., nearly the whole of which has been declared under his management. It is quite true that he leaves Montana in days when somewhat of its pristine glory has departed, but he still has faith in its future, which he expresses in his report, and to which he will doubtless give vocal expression at the meeting called for Mar. 31.

Turning to the report, the accounts for the half-year ended Dec. 31, show a profit balance of 16,994*l*., out of which two quarterly interim dividends have been paid at the rate of 5 per cent. per annum, leaving a net balance of 494*l*. to be carried forward. Out of the actual profit of Jan. and Feb., and the estimated profit of Mar., the directors declare a quarterly dividend at the rate of 5 per cent. per annum amongst the 2,890 shareholders whose names are now found within the four corners of the register. The total profits to date have been 673,687*l*., and the difference between this sum and that which has been declared in dividends as given above, has been allocated to the improvement of the mine, depreciation, purchase of adjoining locations and stores, whilst 123,122*l*. in addition has been spent in exploratory work alone since 1884. The price of silver has greatly fluctnated, and the company has suffered or benefited accordingly. The ore crushed during the six months was 42,753 tons, the increased tonnage being 3,771 tons, and the average cost of prospecting, mining and milling per tou for the same period was $8.30, against $9.19 for the previous six months. The proportion of gold in the ore has increased, whilst that of silver has decreased. The high-grade ore in reserve is estimated at 40,400 tons, and the low-grade ore at 146,800 tons. The directors publish a longitudinal section of the underground workings of the Drumlummon Mine, and it is to be regretted that they have not also issued one of the Empire claim where the greatest development of pay ore made during the year has taken place. Exploratory works have not led to any substantial discoveries, but both Mr. Bayliss and Mr. Robinson are confident that they will ultimately do so. On this point, Mr. Robinson says:—"The output for the year 1890 has fallen short in value of that for 1889 by about $200,000, and is approximately the same as that of the year 1888. Any discovery, however, of new ore bodies or an improvement in the value of the ore extracted from the old ones, would probably admit for this year a considerable increase in production over that of 1890." The report certainly suffers in comparison with the brilliant issues of former years, but there is much in it to encourage the shareholders to believe that Montana will yet experience a renewal of something like its former prosperity.

BRATSBERG COPPER CO.

THIS company has been having a hard time lately, and the directors wisely called their shareholders together on Monday last to hear a statement as to the general position of affairs. In the first place, a difficulty arose in getting the smelting works into operation on account of the impossibility of obtaining a sufficiently strong lining for the Manhés converters, to resist the great heat caused by the large percentage of sulphur iu the ore, and which difficulty, though now in a fair way of being overcome, has caused considerable delay; in the second place, a fire occurred at the dressing house; and, in the third place, the winter set in a month earlier than usual, thereby stopping the shipment of ore to this country. This combination of circumstances has had the effect of putting the company into a state of temporary impecuniosity, and though there is no doubt credit could be obtained in Norway, the directors have considered the wisest course is to raise the necessary mouey and pay all bills. They have therefore decided to issue 6,000*l*. of debentures, bearing interest at 8 per cent. per annum, commencing Mar. 31 next, the principal being repayable by three half-yearly drawings, the first drawing to take place in Sept. next. The scheme appears to us to be a good one under the circumstances, and the debentures ought to be taken up by the shareholders themselves. By so doing they will prevent persons coming in who will have no interest in the company beyond their debentures, which is very objectionable in any compauy, and particularly so in the case of a mining company. However, it is satisfactory to note that applications have already beeu received for over 1,000*l*., and after the statements made by Mr. Ball at the meetiug there is no doubt the shareholders will see the wisdom of coming forward and subscribing for the remaiuing 5,000*l*. That the difficulty is only a temporary one is evident. The new process for treating the ore, which was explained at the meeting, is to submit it to a preliminary roasting process, which will drive off the excess of sulphur; and should it prove successful there is little doubt but that the company will soon be in a fair way to earning satisfactory dividends. So far the results of the process, which has already been tried on a small scale, are entirely satisfactory, and both the manager and the assayer believe that when the roaster is erected the former difficulty will be done away with, and the company's ore will be able to be treated in a satisfactory manner.

BOARD OF TRADE RETURNS.

THE Board of Trade (Customs) returns for Feb. last are more favourable than expected from the contraction of trade and business generally, but this may be partly due to the severe weather during the month of Jan., which interfered with navigation, so that since the check has been removed produce has more freely arrived and goods been more largely shipped. Our home exports for the month were 20,470,000*l*., or a decrease of 3 per cent. upon the total for the corresponding month, making the average decrease for the two months 5½ per cent. The imports were valued at 33,311,000*l*., or an increase of 7½ per cent., reducing the decline on the two months to 3 per cent., while the re-shipments were 5,862,000*l*., being an increase of over 9 per cent., and representing an improvement for the two months of 1 per cent. Home exports show some increase in most classes, but there has been a heavy decrease in those of metals and metal manufactures, the total being 2,850,000*l*., or nearly three-quarters of a million less, mainly due, as will be seen below, to

a falling off in the exports of unwrought and mixed copper, lead, and iron aud steel, the latter showing a reduction throughout, except in tin plates, &c.; these have been in demand for the United States, whither, however, smaller shipments have been made of both pig iron and other manufactures. Reduced exports have, however, been made to the River Plate and South America generally. More tin was taken for the Continent and the States, and the principal decrease in lead was to China. Of copper, France has taken less by a good deal, but Turkey and Egypt more. In machinery, the total value amounts to 1,187,000*l.*, or a slight increase; steam engines, however, show a decline, chiefly to Italy, South Africa, and the River Plate, although more were taken to the East Indies and Australasia. Of other machinery, the Continent took a large amount, as well as the United States and Brazil. The exports of coal increased, but more in quantity than value, and this principally to Italy, Egypt, Spain, and the North of Europe. The imports of copper ore, tin, and lead all declined. The supplies of copper, however, increased from most quarters, except Spain, and regulus from Spain and the States increased.

The following table in our usual form shows the results for the month in regard to the imports and exports of metals, &c.:—

Imports.

Article.	Quantity Tons.	Value £	Increase or decrease per cent. Quantity.	Value.
Copper ore	5,262 ...	48,184 ...	—33.4 ...	— 6.8

FRASER AND CHALMERS, LIMITED—10 PER CENT. FOR THE FIRST YEAR.

The shareholders of Fraser and Chalmers, Limited, have every reason to be satisfied with the result of the first year's operations, for 10 per cent. on one's capital is not easily obtained in these days of cheap money. The company appears to have done a large and remunerative business during the past year, and the indications are that still further success will be achieved in the current year. The erection of works on the Thames is about to be commenced, under the supervision of Mr. D. R. Fraser, and when these are completed they will no doubt result in a considerable augmentation of business on this side of the Atlantic. The meeting, held yesterday, and reported in our present issue, was in every way satisfactory, whilst the report and dividend reflect great credit on the management.

VENEZUELAN AUSTIN AFFAIRS.

If, at this juncture, the shareholders of Venezuelan Austin find themselves short of funds, it does not lie in the mouth of any one of them to say that those they have already provided have not been expended with watchful supervision and care. So far, success has not been achieved, but there is no shareholder who can truly say—indeed, there was not one at the meeting who was disposed to say—that the board are in any sense to blame for the present position of affairs. After a gallant struggle to overcome difficulties of which they have not complained, and to surmount misfortunes which they have not merited, the board now present their case to the shareholders and ask for further funds. What is that case? The Corina mine has not yielded ore of that richness, which every expert who has been within a mile of it said it would. Failure staring them in the face in this direction, the board then directed Capt. Moyle to search about amongst the numerous other concessions to see whether better deposits could not be found, and fortunately in Austin No. 2 there has been struck a new vein of ore which can be cheaply worked. The outlook is now so encouraging that Mr. Lee (the chairman) feels justified in asking the shareholders to test its real value, and he was able to point out that every facility for doing so exists on the spot, as the mine is fully equipped in every respect.

But Mr. Lee will have nothing to do with re-construction. He has passed through the fiery furnace before, and the voice of the tempter, "charm he never so wisely," will not induce him to traverse it again. He will raise this capital by the old-fashioned way of debentures, or, practically, he will have nothing further to do with the management of the company. We are sorry for this decision, and trust it is not final. We agree with every word Mr. Lee said against re-construction, but after all the fact remains that of late years it has been the only means by which money could be raised to work mines in the position in which Venezuelan Austin finds itself to-day. It has been, as Mr. Somes, the chairman of Potosi said last week, "Hobson's choice." We are also sorry for his decision, because of this we are certain, that should Mr. Lec retire from the company there is scarcely a shareholder in it who would have the courage to go on without him. He has in the past infused into his constituents something of his own indomitable pluck and unflinching determination, and we do not hesitate to say that should Venezuelan-Austin turn out the success we all trust it will yet become its saviour, to all intents and purposes, will stand incarnate in the person of Mr. Lee himself. We therefore urge the shareholders most earnestly, for the sake of their mine, for the sake of the money they have put into it, and for the sake of retaining the invaluable services of Mr. Lee, to respond to the debenture appeal. We also urge the board to make the issue temptingly liberal, well knowing, under ordinary circumstances, how difficult it is to obtain money for mining purposes by preference issues. The present circumstances are not ordinary, and therefore we trust that a special effort will be made by the shareholders.

THE MONEY MARKET.

City, Friday Evening.

The Money market, in sympathy with the improved position of Argentine financial affairs, has been easier, although the supply of money, through the payments for Treasury Bills last Saturday, which took one and a-half millions off the market, has continued rather short. Discount relapsed to 2¼, ⅜ per cent., and money at call to 2, ½ per cent. The new issue of Treasury Bills for a similar amount to the above will be met by over 3,000,000*l.* falling due just before the Easter holidays, but it is doubtful if the market will benefit from these, as the bulk may be held by the Bank. The Bank return shows an increase of 300,000*l.*, due partly to the balance of 86,000*l.* in gold received from abroad, and the return of coin and notes from circulation, but as the collection of the revenue has augmented the liabilities under public deposits by 1,150,000*l.*, the proportion of reserve is rather less than last week at 38¼ per cent. The private securities, owing to the demand for accommodation, have increased over 900,000*l.* and the private deposits have also been drawn upon to a slight extent. The exchanges have not been so favourable to this country as the continent, but the New York rate has advanced to gold point, which ought to lead to shipments, but the United States Government has refused to allow the export of bar gold.

Upon the Stock Exchange things in general have been more cheerful, a sustained recovery of 5 per cent. on the average in Argentine and Buenos Ayres sterling stocks, and from 10 to 15 in the railways of the River Plate, having promoted some confidence, which found an outlet in buying for investment, while the arrangement of Messrs. Murrieta's affairs into a company with a nominal capital of three or five millions has not only tended to clear the atmosphere, but has, with the fact that Uruguay has contracted a loan in Brazil for 1,000,000*l.*, and arranged for the next coupon to be duly paid, greatly enhanced, in the course of the week, the price of Uruguayan bonds. The Government broker has been a good friend to the Consol market, but nevertheless Two-and-Three-Quarter per Cents. are a shade weaker on speculative realisations. English railways are better, assisted by traffic considerations, and even a bad report of the North British Co. has not materially affected their issues on balance, owing to extensive "bear" purchases. Foreign bonds have risen, including Turkish on the appointment of a new Finance Minister, and Chilian because of the apparent successes of the Parliamentary party, but Grand Trunk railways are lower. Mexican (Vera Cruz) have fluctuated considerably, ostensibly through the liquidation of a heavy "bull" account, while all Nitrates are stronger. Miscellaneous, Banks, &c., were unsettled, if partially better, while Allsopp's Brewery stocks have recovered almost continuously on talk of a change in the management. In the American section, there is an advance based entirely upon cable advices and New York support, for as regards the home position, sales have preponderated; Atchison, Denver Preferred, Norfolk, Union Pacific, Wabash and Ontario have been most conspicuous, and with reference to the last named, it is said that the system is to be acquired by the New York Central in order to facilitate the ingress into New York of the Canadian Pacific Co.'s rolling stock.

Despite another advance in the New York exchange, discount rates this afternoon are firmer, three months bills being quoted at 2 5/16, ⅜ per cent. Money has continued in demand at 2 to 2¼, and the market has now to contend with a withdrawal of the India Council's balances, an operation which has just began.

Bar Silver is firmer. Rupee Paper remains steady, and there were no bullion operations at the Bank of England to-day.

The Stock Markets to-day have been extremely idle, and the variations for the most part have been of an insignificant character. Consols remained unchanged, but Indian Government stocks moved a trifle in buyers' favour. Amongst Foreign Government Bonds, Egyptian issues were again in favour, and with Turkish 1871 advanced about ¼. Italian recovered a portion of yesterday's decline, and Spanish also improved. South American Loans, however, were less favourably affected, closing ¼ to ½ lower than yesterday. Buenos Ayres 1882-1886 Loans again gave way 5 on the "passing" of the dividend, and Costa Rica "A" fell 2. The premium on gold at Buenos Ayres has advanced to 238 per cent. Midland and Great Eastern Railway stocks met with a good demand, the former closing ⅜, and the latter ½ higher than yesterday, and Brighton "A" was also a trifle higher, but South Eastern "A" and North British stocks receded ⅛ to ¼ per cent. United States Railroad securities were lifeless until the receipt of the opening values from the other side, when a few shares changed hands at about New York parity, the closing values here were, nominally, ¼ to ½ below last night's prices, with rather heavier losses in Milwaukee, Louisville shares, Reading bonds, and Union Pacific shares. Grand Trunk stocks rallied a fraction, while Mexican have advanced 1 to 2½ per cent. Brewery issues were good, notably Allsopps' stocks, which further advanced 5 per cent., though not upon the result of the

appeal of Sharp *v.* Wakefield, decided in the House of Lords to-day. In these important proceedings the highest tribunal in the kingdom has decided that the magistrates have absolute discretion as to the granting or refusing of licenses. The importance of this to the public-house interest will be obvious. Trustees, &c., shares have advanced ¼ to 5½, ¾, and Salt Union ½ to 8⅜, ⅝.

Annexed are the final quotations to-day :—Consols Account, 96$\frac{15}{16}$, 96$\frac{13}{16}$ xd ; Egyptian Preference, 94¼, 94½ ; Egyptian Unified, 98⅜, 98½ ; French Four-and-Half per Cents., 104¼, 104⅜ ; Hungarian, 92¼, 92½ ; Italian, 93⅞, 94⅛ ; Mexican, 1890, 90, 90½ ; Peru Corporation, 10¼, 10⅜ ; Ditto Debeutures, 82, 83 ; Russian, 1873, 99¾, 100¼ ; Portuguese, 56½, 56¾ ; Spanish, 76$\frac{1}{16}$, 76$\frac{3}{16}$; Turkish, 1871, 99¾, 100¼ ; Turkish Defence, 103¼, 103⅜ ; Caledonian Railway, 115⅞, 116⅛ ; Great Eastern, 95¼, 95½ ; Great Western, 159⅜, 159⅝ ; Brighton "A," 155⅛, 155⅜ ; North Western, 171⅝, 171⅞ ; Metropolitan, 77¾, 78½ ; Metropolitan District, 29¼, 29⅜ ; Midland, 148⅝, 148⅞ ; North British, 43½, 43¾ ; North Eastern, 162¼, 162½ ; South Eastern "A," 94⅞, 95⅛ ; Mexicau Ordinary, 42⅜, 43¼ ; Grand Trunk 8$\frac{1}{16}$, 8$\frac{3}{16}$; Grand Trunk First Prcference, 57, 57¼ ; Graud Trunk Second, 36⅞, 37⅛ ; Grand Trunk Third, 20⅛, 20⅜ ; Canadiau Pacific, 78, 78¼ ; Denver Preferred, 59, 59¼ ; Erie, 18⅜, 18⅝ ; Milwaukee, 55½, 55¾ ; Lake Shore, 112¼, 112¾ ; Louisville, 74⅝, 74⅞ ; Atlantic First, 31, 31½ ; Ontario, 17⅜, 17⅝ ; Ohio, 16½, 17 ; Norfolk and Western, 54, 54¼ ; Reading, 15, 15⅛ ; Readiug 5 per Cent. Bonds, 49½, 50½ ; Union Pacific, 45, 45¼ ; Wabash Prefereuce, 18, 18½ ; Ottoman Bank, 14⅞, 15 ; Anglo-Telegraph, 47¼, 47¾ National Telephone, 4¾, 4⅞ ; Hudson's Bay, 18¼, 18¾ ; Suez Canal, 97¾, 98¼ ; Guinness, Ordiuary, 307, 309 ; Allsopp's Ordinary, 39, 41 ; Bryant and May, 13⅜, 14 ; Salt Union, 8½, 8¾ ; Primitive Nitrate, 8½, 9.

STOCK EXCHANGE COMMITTEE.

In the absence of much business, the chief excitement to-day has been over the contested committee election. The result of the poll will not be known until to-morrow, but the total has been an unusually heavy one—amountiug to 2,088. It was thought that some of the old members would have resigned and gave way to "fresh blood," but they madc no sign, and two new members were proposed, Mr. Marzetti, a jobber in the Foreign Market, and Mr. Whitchead, a broker of the firm of Whitehead and Coles. The committee consists of 30 members, including Mr. H. Rokeby Price, the chairman, and Mr. S. Underhill, the vice-chairman.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

OOREGUM GOLD MINE, INDIA.

SIR,—In a very short time the "tailings" machinery at this mine will be erected and working, and I venture to prophesy that the return will exceed 8 dwts. per ton. This will go very largely towards paying the working expenses of this very valuable mine, when there is sure to be a "boom."—I am, &c.,

KOLAR.

Umballa, Feb. 25, 1891.

WANTED.—A PROCESS.

SIR,—I venture to trespass on your space to inquire what process is recommended for the separation of sulphuret of iron from phosphate of lime. A large deposit of the latter has been discovcred, but analysis shows that there is enough sulphuret of iron present to destroy its value. Thanking you in auticipation—I am, &c.,

JAS. E. PICKERING.

Regent Street, W.,
17th March, 1891.

YURUARI AFFAIRS.

SIR,—You will be conferring a favour upon myself and other subscribers if in ycur Saturday's issue you can give us a few lines of advice upon Yuruari matters. I, at present, hold some thousands of shares ; and besides have friends who are large holders. It appears to me that the company exists for the sole benefit of Mr. Watt and his satellites. In their circular, just issued, the directors profess to consider the last mining report as "exceediugly good ;" but to my mind the constant reiteration of the word "waiting" is far from encouraging. It appears to me they have been "waiting" more than six months out of 12—either for dynamite, or wood, or rock-drills, or labour—and now for money. Meanwhile the enormous expenses are not "waiting," but galloping along at a rate that is positively appalling.—I am, &c.,

Mar. 19. A LARGE SHAREHOLDER.

[We have received many letters to the foregoing effect, and have responded to them, as will be seen in our leader columns.—ED. *M. W.*]

HINTS ABOUT MINES.

SIR,—In the face of certain improvement in value, it seems strange that a comparative cessation should have taken place in purchases, and probably this may now continue till Easter is over. But I may, perhaps, be allowed to name a few mines of which the merits are apparent, and which those who can pay for their shares will do well to secure before the sharp rebound in prices comes.

In Africans.—May Consolidated, Transvaal Gold, and Balkis—all fully-paid, with dividends in the near future for both the former, and a big rise for the last-named.

In gold mines.—New Gold Hill, rapidly coming to the front, and its first crushing just reported ; Mount Leyshon, one of the phenomenal successes of New Zealand, already divideud-paying, and to be picked up for a few shillings per share.

In silver.—Almada and Tirito, conspicuous for its small capital, its certain richness, and now for its admirable and trustworthy management. Any slight misgiving caused by the last report should disappear on a careful reading. This mine is going to be a real "big" thing before long.

Let me also name two "specs" at rubbish prices, which, I believe, are worth attention.

Potosi, just undergoing re-construction, and Appalachian, whose board are playing a wise and waiting game—a few pounds in these may realise hundreds by and by.—I am, &c.,

London, Mar. 16, 1891. TENAX.

DE BEERS MINING CO.

SIR,—I was very much struck by your last article on this company. You have a better grasp of the facts and figures than any paper I have ever read, either London or South African, and your deductions and conclusions are mainly just and reasonable.

There are one or two thiugs I would like to point out in reference to the capital of the company, which, although large, does not at *par* fairly represent the amount paid for the diffcrent properties now amalgamated.

When Mr. Rhodes conceived this scheme he quietly secured large blocks of the different companies' shares at very low prices in the interest of De Beers ; but when the principal companies had to be dealt with, he secured Messrs. Rothschild's powerful assistance and agency. By this means he was euabled to purchase other interests by giving De Beers shares at 100 per cent., and more, premium, so that really, if the other companies had been purchased with cash the capital would have stood at *double* the present amouut, and then only represented the market value of the miues. I think this fact should not be lost sight of, as although it does not affect the amount of profit to be divided, it does seriously affect the percentage of return to original shareholders, of whom I happen to be the first English one.

You also stated neither Mr. Rhodes nor his colleagues ever committed themselves to statements warranting such a market value, as once existed. I must differ from you on this point. Mr. Rhodes, both publicly, at the annual meeting, and privately, expressed the strongest opinion that the shares would go to 70*l.* (equal to 35*l.* on 5*l.* shares), and had his scheme uot contained the one fault of allowing diamond dealers to be De Beers directors they *would have gone*, and, what is more important, would have *remained there*, or *gone still higher*.

Mr. Barnato also from the chair assured the shareholders that 66 per cent. would be made duriug the then present year, so evidently the public had some grounds to think the shares had not touched their highest when they were under 50*l.*

Now, what is the mine doing at the present time? It is quietly producing about 40,000 carats a week, which realise 60,000*l.*, leaving a net profit, after providing for every interest charge, redemption of debentures, &c., a clear *30,000l.* a week. This limited output is less by one-half what the world took ouly a few ycars back, so that there is no doubt, when things recover aud the next boom comes along, De Beers' production will be largely increased, and there will be no accumulated stocks to be worked off before De Beers begins to feel the full benefit. I hope the directors will build up a cash reserve, invested in *Consols*, of at least 1,000,000*l.*, and until such time I think a 12s. 6d. dividend semi-annually quite large enough. Once let the diamond trade know that the reserves of the company render it independent of monthly sales, and that, if necessary, it can go on stocking its finds for a twelvemonth, then the diamond trade will be firm and steady, and the demand fully equal to an output of two and a half or three million carats, against the present say, 2,000,000.

Having closely watched every phase of the company's existence, I have every faith in the value of its shares, and feel certain that now is a most favourable opportunity for the real investor to purchase at nearly bottom prices, while to the time speculator I would merely say "Buy the call for the eud of May."—I am, &c.,

Potters Bar. J. W. D.

MANICA AND ITS TREASURES.

SIR,—The prominent position given in the pages of the *Times* for some months past to the discussion of the events connected with the partition and adjustment of the boundaries in South Africa between this country and Germany on the one hand, and Portugal on the other, is a significant proof of the national importauce of the great interests involved. You have in your last week's paper adduced the conflicting evidence besetting the claims of England and Portugal to the priority of possession on which the question at issue turns. The *Times* recently suggested that, under the circumstances, an agreement might be made between the two Governments to hold the localities in dispute jointly—a suggestion well worth considering.

Whoever obtains the chief coutrol in the Manica country, it is quite clear that the main channel of utilising it profitably must be through the territories unquestionably belonging to Portugal, and unless that route is worked by a friendly Power, incessant disputes and obstacles will be of daily occurrence.

All new mining districts are invariably peopled by a class with stroug filibustering propensities, and if there exists a powerful native ruler to be gained or forced, incessant attempts will be made to win or coerce him by both his neighbours, unless both can act amicably in their joint interests.

It would contribute greatly to the mutual profit of both if they could agree to place in the hands of six selected men of high attainment and character, three to be chosen by each nation, the power to define the laws relating to mining rights and the settlement of all claims as to boundaries of land locations. Long experience has proved in America the utter impossibility of obtaining justice by the judge and jury system in mining localities. As a result, those risking their money in working mines must take into account the certainty that they must include in their calculations the heavy losses they may have to eudure through the legal disputes into which they may be so easily forced by unscrupulous neighbours. I have had a long experience of such a state of things, and during the time I held the chairmanship of valuable mines in America, estimate the losses sustained by such failure of justice at over 300,000*l.* During the time I was chairman of the Richmond Co. I had occasion to consult the late Mr. Benjamin, Q.C., in reference to a claim of great moment, and he told me it was useless to expect justice in any local mining district. "You will only get that," he said, "at Washingtou."

As Portugal will best consult her interest in her great territories in South Africa by encouraging the investment of British capital, it is surely her wisest policy to meet Lord Salisbury's desire to treat her claims fairly in the same spirit of friendliness, and thus restore the old relationship between two nations who have beeu close allies for so long a period.—I am, &c.,

JOHN ELLIOTT, C.E.

Derwent Lodge, Uckfield,

REPORTS OF MEETINGS.

THE PAHANG-SEMILIANG, LIMITED.

THE RESOLUTIONS FOR THE PROPOSED AMALGAMATION CARRIED —ENCOURAGING STATEMENT FROM THE CHAIRMAN WITH RESPECT TO THE JOINT WORKING OF THE COMPANIES.

AN extraordinary general meeting of the above-named company was held at Winchester House, Old Broad Street, on Thursday, for the purpose of considering, and, if thought fit, passing the resolution following, viz. :—

"1. That it is expedient to effect an amalgamation of this company with the Pahang-Kabang, Limited. 2. That with a view thereto this company be wound-up voluntarily, and that the Hon. Arthur George Brand and Thomas Russel Kent, Esq., be, and they are hereby, appointed liquidators for the purposes of such winding-up. 3. That the draft agreement submitted to this meetiug expressed to be made between this company, of the first part, the said liquidators thereof, of the second part, and the Pahang-Kabang, Limited, of the third part, be, and is hereby, approved, and that the said liquidators be, and they are hereby authorised, pursuant to section 161 of the Companies Act, 1862, to enter into an agreement on behalf of this company in the terms of the said draft, and to carry the same into effect."

The Hon. A. G. Brand

presided.

The SECRETARY read the notice calling the meeting and the above resolution.

The CHAIRMAN : Gentlemen, I presume you have all read the circular which has been issued to the shareholders calling this meeting together. The board have thought it fit to present approximate accounts up to the latest date possible in order to show the shareholders the financial position of the company. These accounts have not been audited by Messrs. Welton, Jones and Co, because the annual accounts (which will be presented shortly) will have to be audited, aud the board consider that, under the circumstances, they were not justified iu going to any expense which was not absolutely necessary. When the capital was issued to the public a very large number of shares were allotted to parties who, in consequence of adverse circumstances in the City, unfortunately, the calls on these shares have not been met, and, although the board consider that a considerable proportion of them may eventually be paid, and periodical payments have already commenced, it necessarily places the company in a position of considerable financial embarrassment at the present. The board have consequently considered very closely the best meaus of economy, and they have come to the conclusion that

AN AMALGAMATION WITH THE PAHANG-KABANG IS THE BEST COURSE OUT OF THE DIFFICULTY.

At both the Kabang and the Semiliang Mines the necessary machinery is on the spot, but there is no necessity for an expensive tramway as in Kabang, for the river abuts on the property, and it is but fair to couclude that active stamping operations may now be commenced any day, whence the directors will be able to glean considerable information as to the value of the ore accumulated on the spot. Several very favourable samples have been extracted, but the directors, however, fear putting any trust in these samples until they have had au opportunity of testing the ore in bulk. Continually favourable reports have been received from the officials at the mines as to the quality of both the Maskelyne and Paterson lodes, from which I will read a few extracts :—

On May 29, Capt. J. B. Eddy wrote :—"This lode is composed of a regular course of tin stone, running through the centre, with green chlorite, kaolin and red oxide of iron. The lode altogether is from 5 to 7 ft. wide, and the whole of it is so mixed with tin ore that it would pay well to stamp, if we had sufficient heads of stamps on the place. which same place, or anywhere within 400 yds., affords all facilities for stamping machinery, with adequate scope for dressing floors. I verily believe this is a good property, and I feel certain that other lodes as good as the Maskelyne lode can yet be discovered ; anyhow the Maskelyne is a true lode."

On Juue 4, 1890, Capt. Eddy wrote :—"On the way up the western side of the mountain several old Chinese workings may be seen; these workings could be cleared out and restarted.

TINSTUFF OF VERY GOOD QUALITY CAN BE PRODUCED FROM ANY OF THESE ANCIENT WORKINGS,

and with very little labour could be trammed direct into a stamp on that side of the hill. Plenty of fair quality tinstone can be raised from different lodes on each side of the mouutain to supply two large stamping machines. Our coolies at the preseut time are engaged clearing on the surface of the Maskelyne lode, and they are strikiug some stuff that will give fully 60 per cent. of tin ore."

On Junc 11, 1890, Capt. Eddy wrote :—"If I were to send to England the samples I broke to-day out of the several old Chinese workings, they would be found to give a large percentage of tiu."

On June 27, 1890, Capt. Eddy wrote :—"We are finding some good stones of tin on Maskelyne lode, and work on the mine generally is progressiug."

In July, 1890, J. Andrewartha wrote :—"The Maskelyne lode is very large and strong, but uot very rich ; two veins of tin stuff are running through the lode about 4 ins. wide ; the veins are worth about *8 cwt. to the ton*."

On Aug. 12, 1890, R. R. Bruce wrote :—"Fraser and Maskelyne lodes are producing the best samples, and a new lode just discovered by Mr. Andrewartha promises well, and which we intend to name Paterson ; it is at the commencement of our property, about a quarter of a mile up the Semiliang Burn, but it is hardly time to say anything definite about it at present. Mr. Audrewartha reports favourably every day on Fraser's lode, and anyone can see about 70 *tons* of ore on the tramway from Maskelyne lode waiting for the stamps."

On Aug. 19, 1890, J. Andrewartha wrote :—"I can't say the Maskelyne lode is a rich lode.

IT IS A BIG LODE, BUT NOT RICH.

We are driving east and west on this lode. We are also driving a cross-cut to the east about 500 ft. of the present point of operation, hoping to meet with it. We have driven this cross-cut about 4 fms. I think we are near the lode. If it turns out to be the Maskelyne lode we shall have hundreds of fathoms of virgin ground for our future operations. Fraser's lode is about 15 fms. from the top of the mountain, driving west-south-west. We have commenced to drive a cross-cut, driving south-east, hoping to meet with the lode, aud with the effect of communicating with the tunnels, I visited those places to-day. I find the men are within sound of each other. When we communicate with Fraser's tunnel, we shall then be able to bring all the tin ore broken and taken out of Fraser's lode by the way of the new cross-cut, and tram it to the stamps by an inclined self-acting tram-road. Fraser's lode is looking better than it was a month ago. Paterson's lode : This lode was discovered on Aug. 4 ; it is looking very kindly and is producing some good stones of tin ore. I hope it will prove worthy of its name."

On Sept. 2, J. Andrewartha wrote :—"I am pleased to inform you the mine at present is looking better than when I last wrote. Fraser's lode is better than I have seen it since I have been out here. The cross-cut driven south is producing some tin ore. We hope by the end of this month we shall communicate with Fraser's tunnel, then we shall bring the tin ore out through the cross-cut, which will be about 800-ft. above the site of the stamps ; in the above cross-cut we have cut a small lode, producing some good tin ore."

Sept. 30.—"The east and west ends of Maskelyne's are cut out, and the lode is gradually becoming smaller ; it is not very good. Paterson's is looking very well. I assayed a sample of this lode to-day, it assayed 2 cwt. 3 qrs. 14 lbs. to the ton of tin ore. I think this is the best I have assayed from Paterson's. I shall start two new tunnels next week on the western side of the mountain above the stamps, the other, the eastern side between Fraser's and Paterson's lodes. The appearauce of the rock in sight is very kindly. I have been very busy prospecting ever since Capt. Eddy left, and I am pleased that my prospecting has not been in vain. I believe every one of us are doing our very best for the interest of the company."

In Sept., J. A. Bell, Esq., wrote :—"Maskelyne lode : East and west, this lode has pinched out. On the west end this is not surprising as it is close to the river Kenau. I am rather disappointed at its pinching out on the east, end but where it has been worked out that end is close to the surface of the ground, and a little further eastward the ground falls. Andrewartha has now put the men to sink on the lode to prove it in depth. There is already a tunnel driven on the tramway level to cross-cut the lode, and from the distance this tunnel is driven already it was only to be expected that the lode would have been met and cut through ; such, however, is not the case. I certainly could not see any signs that the lode had been cut through in this tunnel. The winze now being sunk on the lode will soon show us whether or not it continues in depth. Fraser's lode : I went up to look at this lode yesterday with Andrewartha. A cross-cut is being driven from the Prong side of the hill to cut the tunnel going east on Fraser's lode. Driving easterly on Fraser's lode near top of Semiliang Hill, we expect shortly 30 Chinese coolies, and they will be at once put to work to cross-cut and get under old workings on the various lodes, so as to reach the probably rich shoots of ore, on which the old workers have sunk. As soon as a lode is cut it will be driven on east and west, and should it be rich at the poiut where cross-cut, overhand stoping will also be started."

On Sept. 26, Mr. R. Bruce wrote:—"The mining operations are being well attended to, and in a fortnight or so we shall have an extra 40 men for the mines ; so that by the time the first 18 heads commence,

THEY WILL HAVE SEVERAL HUNDRED ADDITIONAL TONS OF ORE TO GO ON WITH."

On Oct. 29, Mr. Bruce wrote :—"Samples : We are delighted to hear that the samples from Maskelyne lode have turned out so well."

On Sept. 2, 1890, J. Andrewartha wrote :—"We have nearly 200 tons of ore ready for the stamps, viz. : 100, Maskelyne lode ; 60, Fraser's lode ; 20, Paterson's lode ; and about 10, cross-cut near Fraser's."

And on Nov. 21, 1890, Mr. Bruce wrote :—"In addition to the stuff we have obtained from Maskelyne's, Fraser's, and Paterson's, and which amounts to probably 150 tons, Mr. Andrewartha states that there is quite *1,000 tons ore* on the property which would pay to crush, but the first stuff that must naturally go through our mill will be from Maskelyne's, which is supposed to be the worst. It is very much in the way at present."

Since these reports were received, the board regret to say that the recent advices received from Capt. Christopher Williams, who has lately been put in charge of the mining operations, have not been favourable, and the previous reports of Capts. Eddy, Andrewartha, and Williams, as well as the report of Mr. Swinney, mentioned in the prospectus, and upon which iuformation the property was bought, vary iu so many and so important particulars that it is impossible for the directors at home to be able to come to any certainty of opinion upon the value of the property until a large quantity of the ore in bulk has been passed through the stamps. The directors, however, trust that the favourable view taken of the property by Dr. Philpots, Mr. J. A. Bell, and Mr. Cosmo Paterson, who have been on the spot, as well as Mr. Swan (the surveyor), of Singapore, may be realised. A further considerable difficulty which the directors have experienced has been the difficulty of controlling the expenditure and the staff, in a country so far distant and without any telegraphic connection or regular communication with the outside world. We have had no communication with the mines for between two and three months. The board have repeatedly and incessantly pressed upon their agents at Singapore

THE NECESSITY OF HOLDING TIGHT ON TO THE PURSE STRINGS AS FAR AS POSSIBLE ;

but it appears that the mining officials, although on each and every occasion great care has been taken in their selection, both in reference to character and health, yet when they find themselves out in the jungle, far away from any actual supervision, become lax in their habits and extravagant in their demands. None of the Cornishmen who have been sent out to the mines by this company can, I am sure, have any cause of complaint of their treatmeut by the directors either in point of pay or appliances, and the directors have further promised, as an incentive to their industry, that on the successful working of the company their position would also be bettered. It is with extreme regret that the directors have to state that in more than one instance they have had to find serious faults with their officials, and in the case of Capt. Eddy, they had to dis-

charge him for intemperance. Under these circumstances it may well be understood that the directors have had very great difficulties in obtaining any information which they could thoroughly rely upon, and they accordingly had recourse to the Pahang Corporation, who have previously gone through the same difficulties as ourselves, but who have now a most efficient manager in Mr. Neild, and the corporation have agreed to permit Mr. Neild to inspect and report on this property and upon its management. In order, however, to economise in all and every way, the board have considered it extremely desirable to amalgamate with the Kabang Co., on terms of equality. Notices have already been given to the Kabang shareholders calling them together for the same purpose. The resolution to carry this into effect is in your hands, and will be submitted in the ordinary way. The agents in Singapore have been informed that every workman who can be dispensed with is to be dismissed, and the least possible expenditure is to be incurred. It is with extreme regret that the board have no further information to offer the shareholders, but they believe, by the amalgamation now proposed, that

THE OPERATIONS OF THE COMPANY CAN BE BROUGHT TO A SUCCESSFUL ISSUE.

The board had had no communication with the mine, owing to the bad weather, for two or three months, but we have come to an opinion as to the value of the lode, and we think that it would be only a fair arrangement when the liquidation is carried out that the terms should be share for share. I should like Capt. Williams to make a few remarks on the mining operations of this company, and I shall be pleased to answer after them any questions that the shareholders would like to put. (Applause.)

Capt. WILLIAMS said, as far as he could see the geological formation of the mine of the Semiliang Co., as in other large companies in that country, was very similar to what was found in Cornwall. The time which they had been at work was very short, and they had, therefore, not made any great strides in the development of the property, as that was a work of great time in that country as it was in Cornwall. He had brought samples of ore from Semiliang which was as rich in every way as the best ore obtained from Cornwall. He had assayed that ore himself, and it had given 5 per cent. to 30 per cent. or 40 per cent. of tin. The country in which they were carrying on their operations was the largest producer of tin in the world. He thought that the shareholders ought to give their executive time, and a great deal of time would necessarily have to be spent before they could arrive at the best points for their operations. They had first to pass through the old native workings, and as they had now passed that point, they could start opening up the mine and getting out the tin. There was in all countries always a cessation between the outcrop and the deeper deposits, and that occurred also on their property. The native workers had exhausted the ore in the outcrops, and they, to obtain ore, would have to go beneath. He strongly advised the board to carry out a scheme of deep mining, as, judging from the geological formation of the ground and the character of the ore, which was similar to what was obtained in other tin countries,

HE THOUGHT THAT THEY MIGHT LOOK FOR VERY SATISFACTORY RESULTS.

Mr. KEITH said that, with regard to the enormous sum of 27,000*l.* due on calls he would like to know if every effort had been made to recover all or a part of that amount.

Mr. STACK: Are the accounts before the shareholders or the resolution for amalgamation?

The CHAIRMAN: The accounts are not submitted to this meeting, as they have not been audited.

WE THOUGHT IT FAIR TO GIVE THE SHAREHOLDERS ALL THE INFORMATION WHICH WE HAD IN OUR POSSESSION.

I should like to add, gentlemen, that Mr. Stack has not himself paid for his shares, and I do not think that much reliance can be placed upon what he says.

Mr. STACK: I applied for 500 shares, upon which I have paid my application and allotment money, about 100*l.*, which was not a small sum to be deposited.

The CHAIRMAN: I shall be glad, Mr. Stack, to hear any remarks, and to answer any questions which you might like to put upon the resolution before the meeting. The accounts are not before the meeting. I shall be pleased to give you any information you care for, although you have not paid for your shares, but I must ask you to keep to the point.

Mr. STACK, continuing, said he would confine himself to the resolution. He considered that the Pahang-Semiliang, which was brought out with a flourish of trumpets, had proved very disappointing to the shareholders. He obtained all his information regarding the company from what he believed was a thoroughly reliable source, and he thought that the expenses, of the management were a great deal too high considering what a little had been done. There were the travelling expenses, the directors had received fees, and there were the salaries and London expenses, all of which he thought were much too high, and simply outrageous expenditure, considering that the shareholders had not received one penny in return for the money which they had invested in the company. He had the utmost confidence in the board, and he thought that the property of the company was very rich in tin. He could not, therefore, see the force of an amalgamation with a company which possessed very little, if any, tin at all upon their property. He would not detain the meeting any longer, but he thought that the shareholders should consider his remarks.

Mr. HILL asked if the shareholders passed the resolution for the amalgamation of the two companies was it proposed to amalgamate the two boards, or were they to have separate boards and separate workmen. He did not exactly understand the terms of the amalgamation. Did the board mean to have separate auditors, and what effect would it have upon the expenses? Also with regard to the tin which was extracted, he would like to know how it would be arranged, whether they would take equal parts, or what other arrangement would be made.

A SHAREHOLDER: What is the present financial position of the Pahang-Kabang?

Mr. PONTIFEX said that he represented a large number of shares, and he proposed to give his vote for the amalgamation. The shareholders had heard from Mr. Stack that their company was very rich in tin, but very poor in money, and he thought that the argument which that gentleman had used against the amalgamation was a very strong one for it. The Kabang, it was true, had not found any rich deposits of tin, but they were there without doubt, and it was most probable, that they would find them eventually, although up to the present they had not come across them. They must not, however, look upon that property as being valueless. In respect to their own mine, they were sure of its value as they had proved the tin to be there, and it amounted to the fact that they had proved tin, and the Kabang had

MONEY,

and what was more suitable than that they should amalgamate. They had found tin on their mine, and what they would have to do now was to spend money upon it to properly develop it. The expenses of working there were enormous, but they could reduce those expenses by working together and combining operations, which would be to the benefit of both companies. He, therefore, proposed to use the votes which he held as trustee for the Corporation in favour of the amalgamation, and he recommended all the shareholders to follow his example.

The CHAIRMAN said that the directors had done all in their power to obtain the calls which had not been paid up. It was a matter that the shareholders could best leave in the hands of the board, and they would do everything in their power. They had given considerable attention to the matter and had been obliged to forfeit some thousands of shares, and they hoped that the remainder would be paid up. With regard to the other questions, Mr. Pontifex had taken the remarks out of his mouth. The board would remain the same as it was at that time, but the companies would be worked at less expense. The energies of the combined boards would be directed on one or two points in the properties which were considered most favourable, and a considerable reduction in the number of miners and officials would, in consequence, take place. The directors proposed the resolution to the shareholders on that occasion, because they believed it was to the interest of their own company, and would give both of the undertakings a better chance of success. (Hear, hear.) They had plenty of rich tin, but they were in the position that they had no money to work it, while the Kabang had a considerable sum of money on deposit. The amalgamation would put them partly in possession of that money, and enable them to work and develop the lodes on their property, and he believed that

A FAIR PROSPECT OF SUCCESS WOULD BE ASSURED.

It was not necessary to go into the London expenses on that occasion; the directors had, as the shareholders were aware, worked for some time for nothing. Practically, the board would remain exactly the same, and the expenses would be reduced by one-half. The agreement had been made out, but he would not trouble the shareholders to listen to it being read at that time, although if anyone would like to see it, they might do so at the offices. He concluded by moving the resolution as above, which was seconded by Mr. T. R. KENT, and

CARRIED UNANIMOUSLY.

A vote of thanks to the chairman closed the proceedings.

THE VENEZUELAN AUSTIN GOLD MINING CO., LIMITED.

A MINE, THE SHAREHOLDERS THINK, WORTHY OF A FURTHER TRIAL — DEBENTURES PREFERABLE TO RE-CONSTRUCTION — POLICY OF THE BOARD UNANIMOUSLY ADOPTED — A WORD WITH THE FOREIGN OFFICE.

THE fifth ordinary general meeting was held at Winchester House on Monday.

Mr. J. C. F. Lee

(chairman of the company) presided.

Mr. F. O. SMITHERS (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, I will at once proceed to move the adoption of the report and the accounts which accompany it, and in doing so shall take advantage of the opportunity to address to you a few words. It will be in your recollection that in Oct. last, at the pressing instance of many of our largest shareholders, we were asked to call a meeting to authorise the issue of debentures. I take that point first, because I notice our friends in the Press question the legality of the proposed issue. I do not know what is legal or illegal in England after the different decisions we have seen lately, but so far as we can judge of the legality of our position, I may tell you that, in order to conform with our power, and to act only under the will and mandate of the shareholders, we called the meeting in question, at which certain resolutions, which were within the knowledge of you all, were unanimously passed. We told you then that we preferred that method, as a board, to what we cannot help regarding as

THE VERY CLUMSY METHOD OF RE-CONSTRUCTION.

In America, which is a great mining country, I believe there are means less clumsy of raising capital when mines get short of it, and I find that there they do get short of capital just as we do here, and the plan then adopted is one known as "assessment." It would not be lawful here, and the only plan that is known to be lawful is that of dissolving the company, registering a new one, and performing various other functions with which you are perfectly familiar. We, as a board, went through that performance once before, and I see a friend here (who does not look at me in so friendly a way as he ought) who was a very severe litigant in the question. He claimed there was no power to extinguish shares, and that matter was settled in the Court of Appeal, but one man was able to give us such a serious amount of trouble that we were about two years in completing re-construction. If it should come to that I would personally rather that some man more able than myself should take the direction

and management of this company. Therefore we proposed the simpler plan of mortgaging the property. We did not propose it to outsiders. Some say the terms are excessively good, but if the shareholders take the debeutures (and I believe we have about 800) it is they who will benefit, whilst in any case the proportion they are called upon to take is not heavy in amount, whilst this method would leave the rest of their interests untouched and intact. Moreover, it would cost very little. The law proceedings would, I hope, be very cheap, and the time occupied short. (Hear, hear.) It is not important to raisc thc whole of the 10,000*l*. in one month or two. We shall probably get better news from day to day, and in that way we hopc by degrees that these debentures will be floated off. I hope the Press will cousider that I have now answered the main criticism as to our policy—that of the legality of an issue of debentures, and I hope we shall hear no more of that. (Hear, hear.) Now I will turn to

THE SITUATION OF THE COMPANY ITSELF.

I see several faces here that I have had the pleasure of seeing for several years—in fact, since the old Nacupai days—and I can appeal to them as to what were the expectations which were then entertained founded upon the reports of experts. I have never read a report; and I have never seen an expert who had some familiarity with the country, and who had been out there reportiug sometimes for others, and sometimes for ourselves, who did not agree in one thing—that the least we should get from the development of the Corina Mine was 1 oz. of gold to the ton of quartz milled. Well, I do not know whether any of you have made a calculation as to what that would have amounted to, but if you have taken the quantities crushed as mentioned in the report, you will find we should have made a profit of nearly 2*l*. a ton—quite enough to have paid a dividend on the preference and ordiuary shares. But like all the prophecies of man, which are founded upon abseuce of knowledge, this one, like the rest, has fallen through. I do not believe anybody in this room to-day is going to blame the board for that. (Hear, hear.) We, the board, are perhaps the largest investors collectively—certainly 10 of us, who at one time or another have been on the board, have held by far the largest interest proportionately in this company.

ALL DONE THAT DIRECTORS COULD DO.

The fact is, the mine was not so rich as it was predicted it would be. We went to considerable expeuse to test it. It was what was called a wet mine, and we had to put up expensive pumps before we could reach a reasonable depth, and every engineer, including Messrs. John Taylor and Sons' Mr. Giffard (a very able member of their staff), and Hamilton Smith, and many other gentlemen, predicted that our results would perhaps almost (I except Mr. Smith from this statement) produce a mine equal to El Callao. Many mining men said so, but the result is before you. We are not now dealing with prophecies but facts, and in the face of such facts, what shall we do? Is it your wish to liquidate, or will you have one more try? We have no other interests but those of the shareholders to serve.

A FEELESS BOARD.

We are not directors who take fees, but come under the category, popular in the City, of those who do not, because we felt the capital at our disposal did not warrant our taking them. We were always hoping the good times would come, and that with them perhaps the shareholders would remember us, but as a fact our fees are not eveu a debt upon the concern. (Cheers.) We have always passed a resolution absolutely relinquishing them, so that they are not, as in other cases, a charge upon the capital or assets of the company. (Hear, hear.) Therefore, gentlemen, I think I have said enough to put thc case very clearly before you. It is a case for you as it is a case for us, but it is more for you thau for us. If you prefer to liquidate and re-construct, you cau do that. If you prefer to take our advice and make auother venture to the extent of 10,000*l*. or 12,000*l*., all we cau say is, we will do our very best with that money. We have at this moment

A MOST DEVOTED STAFF.

I think, during the whole course of the time I have sat in this chair, we havc had no onc who has devoted himself more strictly and honourably to the interests of the shareholders than our mining superintendent, Capt. Moyle. He is an old Cornish miner, and absolutely does manual work himself. He has just removed a machine from one place to another, and done it mostly himself, with the absence of mechanics. We have cut expense so low that we are short of men. To go back to the reason we abandoned the Corina Concessions, which we felt to be a very serious and important step. The fact is, the more we developed it, the worse it got.

CORINA LODE BECOMES POOR.

The position of the Corina lode when we took charge of this property was that on its length about 600 ft. had been developed to a depth of 180 ft. only. Only two levels had been run, and from these dimensions—that is, a small cube of 600 ft. by 180 by 3—100,000 ozs. of gold were taken by the Americau company who preceded us. Now, that they abaudoned the mine because it was getting poor may be alleged with a certaiu amount of plausibility, but it is uot the fact. The heads of the levels then being worked, and there were two, were good, and the bottom of the mine was sound and showed gold, and at the time (we have the whole of the returns, which are still at Messrs. Baring Bros.) the largest yield they ever had was the month before they stopped. They stopped for reasons special to themselves, and not necessary to go into here. The mine was bought by the old Nacupai and Nouveau Monde Compauies. We have developed the Corina lode, and beyoud it into thc Austin No. 10, which adjoins it to the north, and the Austin No. 1 in the south, for a distance of 900 ft. and to a depth of 380 ft. It is from those dimensions that you have got the gold that figures iu these returns. But, unhappily, the further we go the worse the ground gets. It seems as though it were a fact that a great geological disturbance had taken place below the 180-ft. level. The quartz, instead of beiug pure and clear from country rock, is entirely mixed with it, and that is what brings down the grade, and Capt. Moyle says that he believes we shall continue to lose by prosecuting the mine at these levels, and that the only solution which gives hope might be (and that is problematical) to sink the main shaft another 300 ft., and then try again. To do that, gentlemen, would cost us 10,000*l*. at the very least — perhaps 15,000*l*.—and in the financial position of the company it is an operation we dare not undertake. We, therefore, think that that policy, which certainly ought to have been adopted by all our early superintendents, of exploring the adjacent concessions at the surface should now be tried. The board some time ago gave orders that that should be done, and already the element of hope has been thrown around the operations.

A TELEGRAM.

This is a telegram we received on Friday afternoon. We did not intend to publish it, because I really cannot help saying it looks very much as if it had been got up for this meeting, but, believe me, it has not. It was a great surprise to us all. It was sent in cypher, which no one understands but two of our own staff, and no one could interpret but ourselves. I believe the document to be perfectly genuine, and it has come, so far as you are coucerned, and so far as we are coucerned, at a very opportune moment.

"We have struck a new veiu of ore in Austin No. 2. Great facilities exist for working this lode cheaply. In order to open it up we shall require 800*l*.—CLAY."

Some time ago we ordered that this concession, which has an area of about 30 acres, should he cleared of the brushwood and the whole of the surface exposed and the ground searched, and this telegram is the result. "Clay" comes in cypher, so that we are quite sure about it, for, in all human probability, there is not a chance of it being other than thoroughly genuine and *bonâ-fide*. It does not amount to much, but it only shows that what we have stated in our report, that we have other properties worth trying, is correct, and that we ought not to throw up the sponge because of the failure of our earliest hopes. It may be that this in the future will prove a successful mining operation. Now, I saw the other day some neighbours of ours in similar trouble to ourselves. They were going to re-construct, and they spoke of samples. Now we have samples also. I did not like to bring them here, because I thought it would look too much like acting, but if any shareholder wishes to see them he can do so by calling at the office, and he will see one twice the size of my hat, which contains anything from ½ oz. up to 200 or 300 ozs. to the ton. Unfortunately, this only occurs in patches, but there is no doubt that such specimens in the levels have misled the earlier reporters, and when you come to work the mine in the mass the results are that you do not find them.

EXPENSES GREATLY REDUCED.

There is one feature of great encouragemeut, and that is we have been gradually driving down the cost of production. The first charges were about 4*l*., but we have reduced them to 33s. That is an absolutely reliable figure, but does not include admiuistration in London, or bullion tax, which we hope some day will be remitted, and some other taxes in the country—neither does it include transport of bullion, but the pure (if I may so term it) mauufacture of gold which, as I say, is now down to 33s. per ton. If it were anywhere else it ought to be down to 1*l*., but as a gentleman from the country informed me the other day, even cabbages there cost 5s. each, but I do not know that any remarks here will do any good, because the Venezuelan Goverumeut are not present to listen. Just fancy, however, in a soil that is fertile, with rain in abundance, and with every natural advantage, the necessaries of life have to be hauled up iuto the interior 150 miles! These prices would be reduced if the Government would only take the right course. Everything that is introduced to their country is taxed about 50 per cent., and the consequence is that there is

A GROUP OF ABLE AND ACTIVE MERCHANTS WHO MAKE FORTUNES

in the country, while we do not, and until the Government of Venezuela throw things open I do not see much ground for hoping that we shall reduce our charges below what you see stated here; but still, if you can obtain an ounce per ton, with a maximum cost of production of 2*l*., there would still be a very good profit for the company. We are authorised to issue these debentures, and we intend to try and make that issue, but if any shareholder can suggest a better plan we are quite willing to listen to it and see what we can do. I have only one other word to say and that is this—if this company is wound up I shall be a heavy loser.

HEAVY STAKE OF DIRECTORS.

Probably the directors, amongst them, will lose 40,000*l*., and that is sufficient to invest in any one operation on the part of a board where no fees are paid. Therefore, you must rely on yourselves. I think it better to tell you that frankly, because if it should happen that after we have appealed to you and given you the opportunity of taking up these debentures—we, in our own interest, should find it advisable to take them up, you must not complain if foreclosure follows.

PLAIN SPEAKING TO THE SHAREHOLDERS.

I daresay our friends the critics thought the thing illegal, perhaps, on that score, but if you do not find this money yourselves you must not complain of others who do, and who afterwards exact their legal rights, and you know what the legal rights of a mortgagee are. We have made the terms liberal, and they arc offered to the shareholders, who we trust will take them. Amongst 800 it comes to about 12*l*. each. Is that going to stop the enterprise? I hope when we make the appeal we shall have a liberal answer from every shareholder amongst us, and with that I will formally move the adoption of the report and accounts, and one of my colleagues is going to second it.

Mr. SECHIARI (director): I second the motion.

ALTERNATIVE SCHEME.

Mr. ARTHUR COOKE: I put a letter in the paper the other day suggesting an alternative scheme, which means the subscription of 3d. a share instead of 6d., by a voluntary assessment. (The shareholder here read the letter.)

The CHAIRMAN: I thought I said enough on the subject of reconstruction for you to have left the letter in the paper in which you wrote it. I have told you that re-construction is expensive, slow and tedious, and often leads to litigation, whilst debeutures leave the shareholders in possession of their property, and if they take them nobody is damaged. What objection can there be to them?

Mr. COOKE: My mode means 3d., whereas the other means 6d.

The CHAIRMAN: There are questions of policy higher than those of arithmetic. If the shareholders take the debentures what harm is

there in remaining possessors of the mine—taking your argument as sound. If every shareholder takes 10*l*. or 20*l*. of these debentures he is in the same position as he is in to-day—plus his debentures. Moreover, we could not collect the 3d. without a re-construction.

Mr. COOKE : Not by voluntary means?

The CHAIRMAN : That is a question. I should be glad to propose your election as chairman to carry it out, if you think you can do it. (Laughter.)

Mr. COOKE : I only want to benefit the shareholders generally.

The CHAIRMAN : Of that I am perfectly certain, but the question is—what is the best machinery for getting the money we want? How many shares, for example, have you?

Mr. COOKE : 700.

The CHAIRMAN : That would be 8*l*. 15s., aud suppose you take a 10*l*. debenture, what would be the difference substantially? You have your debentnre, and you still have your shares. (Hear, hear.)

Mr. COOKE : I should pay 3d. instead of 6d.

Mr. CONDER : It could not be done. You mean well—(to Mr. Cooke)—but your suggestion is perfecly impracticable. You cannot make a call, because the shares are fully paid, and there is no alternative between debentures and re-construction. (Hear, hear.) Is there any other part of the property (to the chairman) to which you have alluded where there is a good chance of successful work?

The CHAIRMAN : I have Mr. Gifford's report in my hand, which advocates work almost everywhere, but we soon found that if we diffused ourselves onr money would go, and the present results even would not have been achieved. The property is extensive, as you will see from this map, which I will hand round.

Mr. RUDALL : Why cannot you lay a tram down to Austin No. 9?

"AN OLD FRIEND."

The CHAIRMAN : Austin No. 9 is an old friend of mine. (Laughter.) You can lay a tram if you had the money to pay for it. It is about 6 miles, and would cost about 15,000*l*. You have 500 ft. of hill to dip into, and also a valley. We have had all that studied by good engineers. Put Nos. 7, 8 and 9 on the shelf for a time. We have a lode here to look after, and we want to raise 10,000*l*. to test it.

The report was unanimously adopted.

The CHAIRMAN : We are sorry to tell you that our valuable col league and friend, Mr. Ionides (who is the largest shareholder), has been obliged to resign his seat, owing to the pressure of engagements. We do not intend to add to the board, but I propose the re-election of Major-Genl. Ellis, who has been a director from the first.

Mr. BIGGS : I second the motion.

Carried unanimously.

Mr. BUCKLER proposed, and Mr. CONDER seconded, the re-election of the auditors, Messrs. Pixley and Co., at the remuneration of 25 guineas, and the CHAIRMAN complimented those gentlemen on the painstaking way in which they performed their duties.

The motion was carried.

ENGLISH *v.* VENEZUELAN GOVERNMENT.

Mr. JOHN SAMSON : The business of the meeting being now completed, I think it is our duty to pass a vote of thanks to the directors for their conduct of the company's business during the past year. (Cheers.) You observe they have taken no fees, and I am sure from what I know of Mr. Lee that he has given great attention to the business of the company, and, therefore, we are under special obligations to him, and also to his colleagues. (Cheers.) While speaking on the subject, I wish to urge a matter upon the board that has a direct bearing upon what Mr. Lee has said about the heavy cost of mining in Venezuela. We, who know Venezuela, know that much of that is caused by the difficulties which exist between that Government and Her Majesty's Government. We are

ALMOST AT WAR WITH VENEZUELA

at the present time, so much so that Venezuelan soldiers have been ordered to the frontier of Guayana, and people there have become alarmed. I have been working with the President of the Venezuelun Congress, who has been taking every step to bring the English Government and that of Venezuela to a point of conciliation. We have approached Lord Salisbury and the Colonial Office, and the last measure I took had the result that the Colonial Office and Lord Salisbury both refused to treat in any way with the Venezuelan Government. They have taken possession of a large portion of territory on the other side of the Essequibo river, and claim the remainder. The Venezuelan Government, owing to what they term "the usurpation of the English Government," say that they intend to put on differential duties against everything coming from England. I, therefore, trust that the various compauies will combine to put pressure upon the Foreign Office to bring about amicable relationships. (Cheers.)

Mr. CONDER, who seconded the motion, said : We are very much obliged to the last speaker for his remarks, which, I hope, will make an impression upon Mr. Lee and his co-directors. It may be owing to these disagreements that troubles have arisen about the duties. However, the board's action can be but very small in influencing the Government, but still something done in that direction might assist, and I have very much pleasure in seconding this motion with regard to the directors, because Mr. Lee has on many occasions been so lucid in his descriptions with regard to the property that he leaves nothing at all for anybody to make observations upon. (Cheers.) The information we receive is so full that I am much obliged to him and his co-directors for doing what they have done

ONE LAW FOR PORTUGAL, AND ANOTHER FOR VENEZUELA.

The CHAIRMAN, in returning thanks, said : I wish to make reference to what has been said about the action of the British Government. I am a Tory, and have been all my life, but I cannot agree, nor can any just man agree, with the treatment Venezuela has received at the hands of this Tory Government. (Hear, hear.) The late Minister of Foreign Affairs, Lord Granville, had absolutely arrived at a settlement. He is more *coulant*—more accommodating than the Foreign Minister we have to-day, but I think if Lord Salisbury could be indnced to look into this question himself, he would see the position of the Foreign Minister is not strictly logical—at least, that is my humble opinion. It seems to me that the Noble Marquis has been applying one principle to Portugal and another to Venezuela in treating questions which are in many respects analagous. The English claim to Venezuelan territory in Guayana is presumably founded upon the old code, which appeared to be accepted during the period of the Spanish Conquests, viz., that the Power which held the mouths of a great river also owned its watershed. Thus, in Guiana, Great Britain owns the mouths of the Essequibo River, obtained by conquest from the Dutch, and she founds her claim to territory which is administered by Venezuelan Government, and by its laws, and which pays taxes to that State, upon the claim of the middle ages, that the whole watershed of a great river is owned by the Power which controls its mouth. Now, this is precisely the contention of Portugal in South Africa. That power owns the mouths of the larger rivers flowing into the Indian Ocean, the Limpopo, the Zambesi, and others, and founds its claim to the territory to the westward, primarily upon the doctrine that the owner of the mouths of a great river controls and possesses its watershed. This principle we all know Lord Salisbury does not admit in his dealings with Portugal. I make these remarks with all respect to the Noble Marquis, our Foreign Minister, but I do not think that the Tory party, or any other party in England, can claim credit to itself for its treatment of Venezuela. This small Power has at all times, I am informed, been willing to submit the question to indepeudent arbitration, which offer our Foreign Office has persistently refused—at least, that is the latest information I possess upon the subject. The consequence is, that our relations with Venezuela have become very acute, and I am informed that the Venezuelan people feel very strongly upon the subject, and resent what they regard as unfair treatment by a great Power. My friend, Mr. Samson, has inmo way exaggerated the importance of this question to ourselves ; but, unfortunately, our proprietors are not composed of such a distinguished body as the shareholders of the British South African body, nor have we the iufluence to secure a full hearing of the situation, which these political relations of England and Venezuela have rendered so unfortuuate to our company. As I have above stated, the Government of Venezuela has imposed a tax upon everything coming from Great Britain, and as the bulk of supplies do come from that country in some form or other, the effect of these impositions has weighed very heavily on us, and upon every other mining company. I am quite willing to do what I can—to make one, if necessary, of a deputation to wait upon Lord Salisbury to show how seriously we have been injured by the state of things as above stated. I say that I will form one of a deputation, and do my part with other companies, or other interested parties, if they will join in the movement. (Cheers.)

THE VAN MINING CO., LIMITED.

THE COMPANY MAKES A FRESH START UNDER THE BEST AUSPICES—A GOOD WORKING BOARD SELECTED—CAPT. PAUL GIVES HIS VIEWS AS TO THE WORKING AND PROSPECTS OF THE MINE.

THE statutory or first general meeting of the company was held at the Offices, 97, Dashwood House, New Broad Street, yesterday, "to elect directors in the place of the subscribers to the memorandnm and articles of association, who retire in accordance with the provisions of the articles, to fix their remuneration, and to transact the ordinary business of the company."

Charles Clark, Esq.,

presided.

Mr. W. J. LAVINGTON read the notice of meeting.

NEW DIRECTORS TO BE APPOINTED.

The CHAIRMAN : Gentlemen, our articles contain the usual provision that the first general meeting of the members shall be held within four months of the date of registration, but we have felt it expedient to call you together at the earliest possible moment in order that those shareholders, who are to have the responsible conduct of the affairs of the company in the future, may be put into office, and may proceed at once to appoint a manager so as to resume the active developmeut of the mine. The company was registered on Feb. 21, and the seven subscribers to the memorandum and articles (whom, you may remember, were appointed at the last meeting) have acted as directors for the time being. We all resign our appointments into your hands to-day, and invite you now to proceed to appoint five directors. Hitherto, we have had seven, but the maximum number provided by the articles has been changed to five and the minimum to three. I think, perhaps, before we proceed to that it will be desirable to state that, in regard to the proposal to fix the remuneration of the directors for their past services, none of those gentlemen have any desire for any remuneration whatever. It is, however, only proper that those gentlemen who live in the country, and who have had to come to town to attend the meetings, should be reimbursed for their out-of-pocket expenses in travelling. That will be less than 20*l*., but as to remuneration proper, nothing of the kind is sought or will be taken by any member of the board. I, therefore, propose that the actual travelling expenses incurred by members in coming up from the country to attend board meetings in London be reimbursed them to the exteut of what they have spent. (Hear, hear.)

Mr. PETER WATSON : I second that. I understand that under the articles the directors are in office up to this meeting, and then the shareholders have to remunerate them. The directors, I understand, will accept no remuneration, but I quite think with the chairman that, as one of these gentlemen has come from Wales, and another from Southampton, their travelling expenses should be paid. (Hear, hear.)

The motion was carried unanimously.

SHARES ALLOTTED.

The CHAIRMAN : I ought to state that the number of shares allotted in the new company is 35,617. That is about 10,000 shares of the old company, but the directors have considered it amply sufficient to allot upon, and have very little doubt that the number

will be gradually increased by and by. We have now to proceed to the business of electing directors, and my first duty is to put before you the names of the subscribers to the memorandum and articles, with the exception of Mr. Kitching, who does not offer himself. I presume that the other gentlemen are prepared to serve, if elected, and the names, are my own (which happens to come first), Mr. John Edwards, Mr. Frederick Thomas Catling, Mr. Peter Watson, Mr. James T. Hamilton, and Mr. McIlquahan. It is open to any member here to suggest any other name, and we shall then have to vote by a show of hands, in the first instance, or a poll afterwards, for such names as are put before you. The secretary has received from Mr. Fairbrass (who is our largest shareholder and is in the room) the followiug letter, which I think ought to be read: "As the number of shares I hold in the new company is more than double what I held in the old company I think that, upon reflection, I ought to show an increased interest, and attend the meeting. I am of opinion that gentlemen should be elected as directors who have a large stake in the undertaking, and who have ample time at their disposal for fully considering and successfully conducting the affairs of the company. If fitting men are elected, and my holding qualifies me and recommends me, I am willing to take office. I was educated here (Canterbury), and at the University of Cambridge, and should carefully cousider all questions pertaining to the company that might come under review, and would do my utmost for the benefit of the shareholders whose interests are in a great measure my own." (Hear, hear.)

A Shareholder: How many shares does this gentleman hold?

Mr. Fairbrass: I am the candidate, and I hold 3,500 shares.

DIRECTORS PROPOSED.

Mr. Peter Watson: I think our first duty is to propose the election of the chairman. Mr. Clark has in the past devoted a great amount of time and attention to the company, and I hope that he will be made a director of the new one. I have much pleasure in proposing his election.

Mr. Catterson: I second the motion.

The Chairman: I think it will be better to have all the names before us, and then to take the vote upon them. (Hear, hear.)

Mr. Robertson: Experience has told us that the management of the mine in the past has not been all that could have been desired, whilst the money has gone very rapidly. I hope in these respects we shall have better service in the future, aud, as Mr. McIlquahan lives near the spot and uuderstands mining practically, and can visit the property, his accession to the board would, I think, be highly desirable. I therefore propose his electiou.

Mr. Bonnet: I second it.

A Shareholder: Mr. Peter Watson is a gentleman who has been practically acquainted with mining all his life, and who can render excellent service to such a compauy as the present. He has specially had great experience in connection with successful lead mines. I propose his election.

Mr. Catterson: I second the motion with great pleasure.

Mr. John Batters: I know a good deal about mining, and that

YOU CANNOT HAVE A BETTER CHAIRMAN THAN MR. CLARK,

but the person I have to propose as a director is very well known to our chairman not as a gainea pig, but as a hard working man. I propose Mr. Frederick James Catling, who was a member of the old board, and who in that capacity displayed an industry that we could well wish to sce imitated on other boards in the City of London. I know one case, that of a colliery, in which he said, "We will ouly take our fees from net profits," and that property has been a great success.

Mr. Peter Watson: I beg to propose Mr. Fred. T. Hamilton, who represents a large interest at Sonthampton. I might add that a very large number of the shareholders in this miue are my personal friends, aud are auxious that I should join the board.

Other gentlemen were then proposed, but the following, on a show of hands, were nominated directors:—The chairman, Mr. McIlquahan, Mr. Peter Watson, Mr. Catling, and Mr. Hamilton.

CAPT. PAUL'S REPORT ON THE MINE.

The Chairman: The provisional directors caused the notice to be inserted in the miuing newspapers, that they were open to receive applications from candidates for the post of manager, and in response to that they have received certain applications, which have been carefully discussed, but, of course, no decision was come to. I ought also to state that Capt. Williams did not offer himself as a candidate, and the newly-elected directors will have to proceed now to appoint their manager. We sent Capt. John Paul to visit the mine 10 days ago, and a report has been made by him for the board of a very exhaustive character, which is now before us. It consists of 14 foolscap pages, and though, perhaps, you may judge it will be too long to read to the meeting, you may like him to come into the room and either read it *in extenso*, summarise it, or deliver a short address embodyiug the main points of what he has put on paper. The wish was geuerally expressed that the report should be seut round to the shareholders *in extenso*, and that on this occasion Capt. Paul should merely give the shareholders, in a short address, the benefit of his views.

CAPT. PAUL CLEARLY DESCRIBES THE POSITION.

Capt. Paul: Gentlemen, the chief point of devclopment I consider to be the 120-fm. level east of Seaham shaft. The lode at the end there now is the full width of the level (about 6 ft. wide), and contains a very strong mixture of blende and also of lead ore. That end is, in fact, of very great promise, and it is quite probable that prosecution of work there will soon lay open richer ground. Seaham's winze opposite the shaft was sunk to the depth of 25 fms. The water was in it aud I could not examine it. I saw the stuff last broken from the bottom, and saw branches that have been passed through a few fathoms above the bottom of the winze. Those branches contain a little lead and some strong strings of blende. The south, or hanging wall, of the lode I was informed has been touched iu the bottom of this winze. Of course, that is a soft portion of the lode and does not contain any mineral. The process will now be to cross-cut the whole width of the lode at that point which

MAY ALSO DEVELOP FRESH ORE GROUND.

If it does not do so immediately opposite the bottom of the winze I should say it would in progressing eastward underneath the 120 level, of which I have spoken. Both of these points are underneath the Grit rock, at a considerable distance and away from the influence of what has caused the poverty of the lode from the 90 to the 120. To the west, the south or new lode was intersected by cross-cuts from the 135-fm. level after about 40 fms. of driving. In the first of these cross-cuts in No. 1 winze several branches of ore were intersected, and are to be seen now. Most of them are small, but at one point a very rich bunch of ore was cut. That, unfortunately, did not continue east or west of the cross-cuts to any length. It only did so a short distance of 4 fms. or 5 fms., and there is uot much to be seen left there, although there is something visible, especially in the western end, and a little in the bottom. From that point to the end of the cross-cut south about 9 fms. and over, small strings were met with, but upon the south side of the lode, or hanging wall, a very good branch of ore was intersected. The level has been driven about 40 fms. west upon that, and stopes have beeu commenced in the roof. They are not rich, though at some points they yield as much as 2 tons of lead ore per fm., but at others the value is small, and not more than 10 cwt. That is not rich ground to operate upon, but still it would a little more than pay the cost of extraction. To continue my remarks, on the 135-fm. level upon the same part of the lode a winze has been put down about 18 ft. The water was in at that point, and I could not examine it, but was informed by the agents who accompanied me through the mine that it weut down in very good ore, which is still to be seen in each end of the winze, although the centre portion of it was not so good. The sinking there, I have no doubt, from the character of the lode, and what was seen in the roof of the level, will

LAY OPEN ORE GROUND IN DEPTH.

I should now say that at the 150, underneath this, no test has been made of this new vein. I think it is of great importance that the cross-cut should be put out through the whole of that grouud, and it is very likely that good bunches of ore will be laid open therein.

PROBABLE IMMEDIATE RETURNS.

The returns from the mine cannot be large for some time. Not more than 35 tons of lead ore per month. That, of course, will be obtained from the stopes I have alluded to, and between the No. 1 and No. 2 winzes in the back of the 150 in the old lode. Three stopes have beeu worked about 2½ fms. or 3 fms. high, and the average value of the lode at that poiut will be about 1 ton per fm. You are all aware that there is

AN EXTENSIVE PLANT AND MACHINERY

upon these mines for the most part in excellent order. The pumping engine at Seaham shaft will require to be repaired, when great economies of coal will be effected. I think great quantities of coal might be saved if the necessary repairs are done, which will recoup the expense of those repairs within the first year. I have now indicated the points that can be developed immediately with fair prospects of opening out a good mine again. I weut all through the dressing floors, which are in good order, and capable of retuning 500 tons a month as they did in the good old days, if we could only find those quantities in the mine. It seems a great pity to see them idle, but there is no necessity for further outlay there. (Hear, hear.)

CAPT. PAUL QUESTIONED.

Mr. Hamilton: Have you any idea as to the quickening of the development of the mine?

Capt. Paul: That should be done by rock drills, for with them you can drive with twice the speed as compared with hand labour.

Mr. Lavington: What power have we at Edward's shaft and Seaham's for driving rock drills?

Capt. Paul: Power sufficient to run 10 drills at both places, that is, between them.

Mr. Robertson: Are you satisfied that the miue will pay a dividend? (Laughter.)

Capt. Paul: That will greatly depend on what the points alluded to will produce. It is easy enough to pay a dividend if you find the ore.

Mr. Lavington: There will be no need to expend any money on surface work except to repair the engine?

Capt. Paul: Not at all; and the whole of the remainder of your capital will be available for underground work.

A Shareholder: Would you drive the 150 east, or sink the Seaham shaft?

Capt. Paul: Seaham shaft must go down ultimately for the proper ventilation of the mine, and in order to raise the ore in the most economical way.

A Shareholder: What would be the cost of sinking?

Capt. Paul: It is in very hard grit stone, and the cost per fathom would be considerable. I was informed that the last fathom or two sunk cost 30*l.* per fm.

Mr. Lavington: Was it a proper thing to sink that shaft or put the wiuze down?

Capt. Paul: It was a proper test to make. You could thus prove it more quickly. The winze has only cost about 13*l.* per fm.

VOICE OF EXPERIENCE.

Mr. Peter Watson: I believe you have been acquainted with this mine for a number of years, in fact, from the commencemeut, and that you have been underground from time to time to see it on your own account, or on that of other people. The leading question is not to pay a dividend for the moment, as Mr. Robertson thinks, but to catch your hare before you cook him. (Laughter.) I have been connected with mining nearly all my life, and have seen wonderful changes, but here is a mine that is well stocked with machinery that has gone to the wall, largely, perhaps, from want of more vigorous prosecution. I want to know from Capt. Paul—looking at the strata, not at the lode alone, and the change that is likely to be brought about by a more vigorous prosecution in the future—is it likely that this mine may yet be made to make good, payable returns? Now, this mine has had a great deal of its richness taken from it, aud at the moment it is, comparatively speaking, poor, but the only way to make it rich again is to drive the levels, open the ore ground, and make cross-cuts to see if further discoveries cannot be made. At the 150 has therc been any cross-cutting through the lodc?

Capt. PAUL: West of Seaham shaft there has been, but that is 88 fms. from Seaham shaft, where I have been speaking of. The cross-cuts have beeu chiefly northwards, but I recommend other cross-cuts.

Mr. WATSON: What would be the quantity of blende?

Capt. PAUL: The quantity in the stopes is very small, but still what there was would be an addition to your other resources.

Mr. WATSON: The price of blende is more than double what it was and, therefore, good pockets of blende would very soon tell up. I think by a vigorous prosecution this mine may be yet brought into a satisfactory position.

Mr. ATKEY: What is to be the remuneration of directors?

Mr. LAVINGTON: 50*l*. each, and 75*l*. for the chairman.

IMPORTANT QUESTION AND REPLY.

Mr. MCILQUAHAN: Do I understand that the 35 tons would be extracted profitably?

Capt. PAUL: Certainly; and the non-paying ground would be left alone.

Mr. MCILQUAHAN: Have you calculated upon getting anything from the halvans?

Capt. PAUL: Those have been pretty largely dealt with, and I do not think there is much to be got out of them at present prices.

Mr. MCILQUAHAN: You propose to get your lead, and make a profit on it.

Capt. PAUL: That is my programme.

A POSSIBLE ERROR CORRECTED.

Mr. WATSON: The shareholders should not go away with the idea that these 35 tons are going to make a profit for them—they go towards the development of other portions of the mine, and, therefore lessen the amount of capital shareholders have actually to subscribe.

Mr. LAVINGTON: Capt. Paul remeinbers the time when the bunch of ore was cut in the adit level, and he tells me that the stuff that was brought up from the winze in the bottom of the 120 was of exactly the same character as that found on the top of the former rich shoot of ore which made the richness of the mine.

Captain PAUL: It is precisely the same lookiug stuff, blue rock, and the blende is also of the same character.

Mr. HAMILTON promised, as a member of the board, to direct his best energies to the successful development of the mine in the quickest time and at the smallest possible cost The board were not committed yet to any particular policy.

The chairman was cordially thanked for presiding.

YURUARI CO., LIMITED.

THE CASE OF THE COMMITTEE.

22, St. Mary Axe, E.C., Mar. 7, 1891.

Fellow Shareholders,—In consequence of the unsatisfactory accounts presented at the last meeting, and the attempt then made by the directors, which was for the time successful, to prevent any further investigation of them, a committee of independent shareholders was constituted, consisting of—

J. H. Aldridge, M.D.	11,250	shares.
F. H. Brunker	4,600	,,
V. Jagielski, M.D.	1,500	,,
P. A. Merino	8,802	,,
Walter Newman...	2,200	,,
A. Robottom	150	,,
J. B. H. Steward	40	,,
R. Walker...	1,500	,,

The committee having issued a circular to some of the large shareholders received such cordial support that it was determiued without further delay to serve the directors with a formal requisition to summon an extraordinary general meeting, at which the questions which have been raised could be properly disposed of. This requisition has accordiugly been presented, and we expect that the directors will summon the meeting within the 14 days allowed by the articles. The objects of the meeting will appear in the notice convening it, and as the directors will no doubt use their utmost endeavour to stifle enquiry, it is important that all shareholders should either attend personally or give the committee their proxies, for which purpose a form is enclosed herewith, which we shall be glad if you will sign aud return to us immediately on receipt, as it has to be lodged at the company's office 48 hours before the meeting. It will, we fully expect, be suggested that the movement has been instituted for interested motives. The committee trust that shareholders will not be misled by any intimation of this kind. The cost of London administration, as stated in the last published accounts, included many extravagant items which cannot be necessary, such as stationery, 291*l*.; telephones, 80*l*.; postages, 382*l*.; advertisements and papers, 511*l*.; incidental expenses, 625*l*.; salaries, 526*l*.; rent, 837*l*., and altogether exceeded 7,100*l*., which is equivalent to a dividend of more than 5 per cent. upon the paid-up capital. It is confidently expected that this expenditure can be reduced by three-fourths at least. The committee have ascertaiued that Mr. Watt is receiving his salary of 1,000*l*. and the other directors remuneration at the rate of 250*l*. each, although by the articles of association no payment is provided for after June 30 last. While this extravagauce has been going on the mine has been "starved" for want of funds, as reported by Capt. Pryor. The new directors proposed to be appointed are willing to leave their remuneration to be settled by the shareholders at the next ordinary meeting. Mr. Watt is also alleged to have advanced to the company 10,000*l*. at 10 per cent. interest, information as to which was extracted from him at the last meeting, although the transaction appears to have been carefully concealed on the face of the accounts. Further than this, the committee have ascertained since the last meeting the action adopted by the directors previously to the meeting with reference to the Eureka property. This property appears to have been excluded from the transfer made by the New Chile Co. to the Yuruari Co., when the latter took over the New Chile Co.'s assets and liabilities. The liquidator of the New Chile Co. sold it a few months back to a Mr. Allengame for 600*l*. and, although the directors had full opportunities previously to acquire it for this sum, they did not do so; but shortly afterwards they appear to have purchased it from Mr. Allengame for 100,000 shares of the company, equivalent to 10,000*l*. It is a curious circumstance that of those 100,000 shares no less than 40,000 have since been transferred to Mr. Watt. This alleged purchase was completed some time prior to the last meeting, and yet it was not referred to in the report or at the meeting. All that the committee ask for is a full and exhaustive enquiry, and they trust that under these circumstances the shareholders will not hesitate to give them support'—We are, your obedient servants, F. H. BRUNKER, P. A. MERINO, for the Committee of Shareholders.

DIRECTORS STATE THEIR CASE, AND ADVISE THE SHAREHOLDERS TO RESIST AN ALLEGED ATTEMPT TO RUIN THE COMPANY.

A CIRCULAR from the board to the shareholders, dated Mar. 16, reads thus:—The directors desire to return to the large number of shareholders, representing nearly one million of stock, their sincere thanks for having paid their calls within an unprecedentedly short period from the due date, in terms of circular sent to them, notwithstanding the steps taken by Messrs. Merino, Brunker and their friends to prevent these calls being paid. They beg to inform shareholders that these gentlemen having protested against the expenses in London, and a reduction of staff having taken place, their next step was to serve a writ upon the company, on behalf of "Mr. Brunker and all other shareholders," alleging that he received the call letter one or two days short of the legal period. Provided they had been successful on behalf of the whole body of shareholders, the result would have been that Mr. Pryor's drafts would have been returned dishonoured, and the company put into bankruptcy in Venezuela. As it is, the immediate response of the holders of more than three-fourths of the stock issued by the company has enabled the directors to arrange for the immediate repayment of all loaus, drafts and other outstanding liabilities. The directors therefore submit to shareholders that the policy of Messrs. Merino, Brunker and their friends seems to be, unless they can obtain possession of the company, to endeavour to effect its ruin. The judge, however, repelled their plea of illegality as regards the call made, and also that Mr. Brunker was entitled to represent other shareholders, but held that in his case he had not obtained the full legal notice. You will be surprised to learn that notwithstanding the opposition organised (we are informed by Mr. P. A. Merino, the vendors' agent to the original company) at the general meeting, and the overwhelming defeat they received, the chairman having declared the poll of 234,210 shares in favour of the directors, to 1,040 supporting Mr. Merino and his friends, the latter have, by correspondence, personal canvassing, and the circulation both verbally and by letter of gross misstatements, been continuing an agitation which, in the opinion of the directors, can only result, if continued, in the discredit and ruin of the company. After about three months of such work they have succeeded iu obtaining sufficient signatures to a requisition, in response to which this meeting is conveued. The directors think it right to inform shareholders that Mr. Merino acted as agent for the vendors, who obtained 425,000*l*. for these mines. He was also a director of the original Chile Co. when an extraordinary meeting was convened two days before a petition was on the file to wind up the company, which within about two years had spent 500,000*l*. capital, 75,000*l*. debentures, incurred debts to the extent of about 70,000*l*., besides litigation pending or threatened for over 300,000*l*. Mr. Merino, although then representing an iuterest of about 200,000 vendors' shares, declined to advance any money to the company, and was willing to allow the debenture-holders to take possession of the property by the liquidation of the company upon a judgment debt of about 140*l*. The present board, with one exception, was then appointed as a committee to endeavour to save the company, and several judgment debts were defrayed by the present chairman's cheque. The New Chile Co. subsequently found itself in difficulties owing to the debenture debt, interest, arrears of interest, and trade creditors, having exceeded by about 70,000*l*. the estimate presented to them, upon which the financial arrangements were made when the new company was formed. Of the 2s. 6d. per share called up in this company, about 1s. 6d. per share was required to pay off the debentures incurred by the board, of which Mr. Merino was a member. Mr. Merino has never subscribed for any fresh capital. The present board, who were all original shareholders, having paid 1*l*. per share to the original company, had accordingly to invest in the former and present companies about 40,000*l*. Mr. Merino and his friends base their opposition to the present board upon three counts, viz., au agreement eutered into to purchase the Eureka Concessions, the cost of management, and directors' fees. With regard to Eureka, about the end of 1888 the board offered the representative of the liquidator (he being in America) 3,000*l*. and 40,000 fully-paid shares for these concessions. This was declined, and 3,000*l*. and 320,000 fully-paid shares demanded. Since then the board have been continually in negotiation with the liquidator, and have frequently expressed their willingness to offer fully-paid shares for the concessions, but have been unable to come to terms. The concessions were then purchased by a syndicate, who state that they have expended about 1,500*l*. in cash, for which they received 100,000 Yuruari shares, 2s. paid, with a liability of 6d. per share. The call upon these shares has since been paid, and the directors are not surprised to learn from the syndicate that they are quite prepared to surrender those shares in return for their cash outlay. The directors have no hesitation in affirming that the contract for the purchase of Eureka, which entailed no cash expenditure, but brought into the coffers of the company a sum of 2,500*l*. in calls (besides the concessions free of charge), was a most advantageous arrangement. As soon as the directors learned that objection was taken to this agreement, although they had not exceeded their powers, they intimated to the opposition their willingness, as in the case of the formation of the Yuruari Co., to conveue a general meeting and submit the agreement for confirmation or otherwise, which offer was not accepted. With regard to management and directors' fees, these have never amounted to the sum charged by Mr. Merino and his friends, who drew their fees until the finances of the company were so exhausted that at the meeting already referred to the chairman intimated that there was not sufficient money to pay for the rent of a room at Cannon Street Hotel. A meeting of 1,000 shareholders was accordingly convened in the company's office. The present board have drawn nothing since the mill was shut down last year. The directors proposed in room of the present board are, with one exception, recent shareholders, whose investment in the company is trifling compared with that of the present board. Another important matter (which proved a serious difficulty during a former unfriendly *régime*

in Venezuela) consists in the fact that certain members of the present board have great influence with the highest authorities now ruling in Venezuela, including the Deputy for the Spanish Guianas to Congress, the Governor and Chief Mines Inspector of the district in which the mines are situate, who have recently rendered most valuable services to the company. The directors would point out that when there was a prospect of litigation between the original company and Mr. Merino, as representing the vendors, an arrangement was come to whereby the company waived all claims in consideration of the surrender of 30,000 shares (then comparatively worthless). This was owing to the attorney for both the company and the vendors having intimated that the mine for which Mr. Merino's friends had received the sum of 425,000*l.* was practically a dust-heap, and that the machinery was worthless. The late Mr. Nicholson repeatedly stated this in public and in private, and notwithstanding the statement of Mr. Merino that the mine is valuable, results have proved that while it is valuable at some places, poor drifts in the old shaft have been recently met with, when the produce from 1½ ozs. per ton in bulk has fallen to 5 dwts., thus necessitating the development operations now being carried on. The directors believe that the action of Mr. Merino, the vendors' agent, who received such an enormous sum for a mine regarding which their own attorney expressed such an opinion, is unexampled in joint stock company practice, and venture in conclusion to express the hope that no shareholder will fail to forward his proxy to the present board, and also, if convenient, attend the meeting on Thursday, the 26th inst., at two o'clock, at Cannon Street Hotel, so as to prevent the present company falling into the hands of Mr. Merino, who was one of those who brought the original company, in the space of two years, to the most disastrous condition, and then declined to advance a single farthing to save the property from passing into the hands of the debenture-holders. The directors by holding this meeting are desirous to get rid of the present agitation once and for all, as Mr. Pryor considers, from his last advices, dated Chilc, Feb. 20, that the prospects of the company are now exceedingly good. In that letter he states :—

"While awaiting your further remittance of 1,000*l.* I am proceeding to sink the Water shaft with all vigour possible. I have already sunk about 10 ft. since the 12th inst., when I finished draining and clearing the shaft. There is already a perceptible increase of quartz from the eastern end of the shaft. The bulk of the water is draining off to Cenicero through No. 5 level, which I have adapted to that purpose, leaving the shaft comparatively dry. The Cenicero shaft and lower levels are now slowly filling with water since the withdrawal of the pumps, but so slowly that I hope it will be months before I have to spend money on pumping except for water required for works. My future project is to place a machine-drill in bottom of Water shaft, and another in No. 9 level, west of Cenicero, which is now within 125 ft. west of the shaft. Between the two there are indications that a repetition of the former rich ground will be met with. By next mail I shall be able to send you mine report, showing progress for the month. Until I get the machine-drills at work the saving in fuel by suspending pumping in Cenicero will be one-half the total cost. A further remittance (despatched Mar. 2) of at least 1,000*l.* is, in my opinion, indispensable for sinking the Water shaft, and driving the level from Cenicero to connect therewith. I believe that I have nothing further to state, except that I am practising every economy.—J. Pryor."

F. R. Robin, Secretary.

AARONS REEFS, LIMITED.

DIRECTORS CONGRATULATE THE SHAREHOLDERS ON THE PROGRESS MADE.

In sending you a report of the work which has been done since the formation of the company, the directors feel they can congratulate the shareholders on the progress made, and the very satisfactory position and prospects at the present time. As soon as the necessary formalities requisite for the formation of the company, and the purchase of the property on this side had been complied with, your directors, acting in the general interest of the shareholders, before incurring expenses for purchasing machinery and its freight and carriage up to the mines, decided in the first place to take steps to open up and develop the property and test its value and its capabilities for keeping up a continuous output. With that view, instructions were sent out in Apl., the mouths of Feb. and Mar. having been absorbed in the preliminary operations above referred to. Work was commenced in the first instance by clearing along the outcrop of the lode at surface to ascertain its width and bearing, opening a road for means of communication, and the selection and clearing of suitable site for offices and buildings. The position of the lode being located, the outcrop being 10 to 12 ft. wide, a tunnel or level drift was started some distance below and near to the side of the Quebrada, or stream to drive towards the lode and prove it about 40 ft. from surface. At a distance of 76 ft. from the mouth of the tunnel, a lode was cut through about 3 ft. wide with regular defined walls and at the distance of 115 ft., the Champion lode traced on the surface was cut fully 12 ft. wide, driven upon for a short distance, and a winze carried down for about 14 ft. to prove its value. In this work only a limited number of men could be employed, it was however pushed on with all possible speed, the ground being timbered and properly secured wherever required. With the object of saving expense as much as possible, arrangements were made with the Victory Co. from whom the property was purchased, for Capt. Nicholls, their manager, occasionally to inspect the work and give such directions as might be needed, so as to save the company the cost of a superintendent until such time as more extensive operations might make the service of one to be necessary. The tests and trials which have been made from the lodes prove them to be composed of compact laminated quartz with occasional visible gold and assayed as follows :—No. 1 small lode, 12 dwts. 2 grs. ; No. 2 small lode, 10 dwts. ; No. 3 small lode, 8 dwts. 4 grs ; an average of 10 dwts. 2 grs. No. 1 from Champion lode, 15 dwts. 4 grs. ; No. 2 from Champion lode, 1 oz. 2 dwts. 3 grs. ; No. 3 from Champion lode, 1 oz. 1 dwt.—an average of 19 dwts. 10 grs. Less than 40 ft. from surface, these lodes, which have every facility for cheap working, are proved to be capable of being at once worked at a profit. It is intended to drive another level so as to intersect this lode 60 ft. deeper, and by communicating these two levels there will open up ample ground for working, and from a point lower down still a shaft must be sunk towards which point the lode dips rapidly. At the general meeting, which will shortly be held, the vacant seats at the board will, as stated in the prospectus, be filled up by the shareholders, and the board will be glad to have as soon as possible the names of any shareholders either proposed or willing to act, so that the names can be submitted simultaneously with the notice calling the meeting, and a form is therefore enclosed for that purpose. It is proposed, as soon as the ground is sufficiently opened up, to make a more practical test, which the directors feel from those already made cannot be otherwise than satisfactory. Please send in the enclosed form filled up, as soon as possible, so that the names proposed can be stated to the meeting.—F. G. Pym.

A form, which accompanied the foregoing circular, leaves the election of the new directors entirely in the hands of the shareholders. These directors will be elected in May, when it is believed a meeting will be called.

GYMPIE GREAT EASTERN GOLD MINING CO., LIMITED.

SHAREHOLDERS CONGRATULATED ON IMPROVED PROSPECTS.

Mar. 19.—In forwarding the mine manager's half-yearly report to Dec. 31, Mr. John Garland, the secretary, says : The No. 1 South Great Eastern reef, henceforth to be called the "Orient Reef," has been intersected, and the shareholders will be gratified to learn that it is opening up in a satisfactory manner, adding greatly to the value of the company's property. Capt. James remarks that, "On the whole, the prospects of your property will be equal to any on the field after a few months. There will be some years' work on the Orient reef if it turns out any way fair." Since the date of this report an improvement has taken place in the reef, the latest information the directors have received in regard to it being contained in a telegram from Gympie, dated Feb. 3, as follows :—"On further developments in the Eastern reef the stone is improving, and is now a well-defined reef showing fair gold." The board congratulate the shareholders upon the improved prospects of the mine, which they believe will have a successful future.

The Action against the British South Africa Company.—Col. Paiva d'Andrade has now, it is said, been joined as a plaintiff with M. Charles de Clamby and Baron Joas de Rezende in the impending action against the British South Africa Co., and claims damages for assault and false imprisoument. The total damages claimed amount to 200,000*l.*

REPORTS OF MEETINGS.

THE MYSORE GOLD MINING CO., LIMITED.

VALUABLE TESTIMONY TO THE INCREASED IMPORTANCE OF THE MINE IS BORNE BY THE CHAIRMAN, MR. JOHN TAYLOR, AND MR. W. H. ROWSE, AND THEIR STATEMENTS ARE CONFIRMED BY A BRILLIANT TELEGRAM FROM CAPT. GILBERT—THE LODES AT VARIOUS POINTS IMPROVE IN WIDTH AND VALUE—GOLDFIELDS PURCHASE CONFIRMED.

THE ordinary general meeting was held at the Cannon Street Hotel, on Thursday.

Sir Charles Tennant, Bart.
(chairman of the company), presided.

Mr. W. H. ROWSE (secretary) read the notice of meeting, and the report of the directors was taken as read.

CONCISE STATEMENT OF THE FACTS.

The CHAIRMAN, after apologising for the absence of his colleague, Lord Ribblesdale, who was detained on a Committee of the House of Lords, said: Gentlemen, I have the pleasure to move that "The report now presented, with the balauce-sheet and accounts to Dec. 31, 1890, be received and adopted;" and in doing this, gentlemen, I heartily congratulate you upon the successful results of the company's operations during the past year. The report is a record of satisfactory progress in every department, and will be as gratifying to you as it is to your board. That you may be able the more clearly to appreciate the growing prosperity of this great undertaking I will place before you the actual figures for the years 1889 and 1890:—Quartz stamped, 1889, 32,567 tons; 1890, 38,812 tons; increase, 6,245 tons. Gold obtained from same, 1889, 44,860 ozs.; 1890, 52,602 ozs.; increase, 7,742 ozs. Tailings treated, 1889, 13,227 tons; 1890, 18,535 tons; increase, 5,308 tons. Gold obtained from same, 1889, 4,374 ozs.; 1890, 5,579 ozs.; increase, 1,205 ozs. Total sales of gold, 1889, 49,749 ozs.; 1890, 59,082 ozs.; increase, 9,333 ozs. Total value of sales of gold, 1889, 193,535*l.*; 1890, 229,966*l.*; increase, 36,431*l.* Profit, 1889, 135,430*l.*; 1890, 155,799*l.*; increase, 20,369*l.* Dividends out of profits, 1889, 130,842*l.*; 1890, 142,153*l.*; increase, 11,311*l.* From the profit and loss account you will see that the sum of 5,000*l.* has been written off to the fund for covering unproductive expenditure, bringing that fund up to 13,000*l.*, in addition to 2,000*l.*, being the balance of preliminary expenses, and a further amount of 1,836*l.* for depreciation in machinery and plant. The capital expenditure during the year, including the increase in the value of the inventory of machinery, stores, &c., has been 56,493*l.* You will understand that in a growing industry of this character, in order to keep pace with the rapid developments which are going on, new machinery and plant must be provided. You will gather from Capt. Gilbert's report that the mines are in a most satisfactory condition.

SHAREHOLDERS CONGRATULATED.

The vigorous developments are highly creditable to him as well as to the other officers of the company. I do not propose to make any remarks upon the mining details, for that will be done by Mr. Taylor and Mr. Rowse. I cannot, however, refrain from congratulating the shareholders upon the valuable and important increase which has taken place in the reserves of quartz in the mine, that is, quartz opened out and measured, amounting to no less than 30,000 tons, of the estimated value of about 200,000*l.* I am pleased to be able to assure you that the outlook for the present year is a very encouraging one. We shall get the benefit in the course of three weeks from this time of 18 additional pans in the tailings department, and we hope that during the last three months of the year we may have 30 additional stamps at work; so that the returns of gold for the current year will, we trust, show a considerable improvement on those of 1890. You are aware that Mr. Rowse has recently returned from a visit to the mines. He has made a thorough inspection of the mines underground, having spent many days in doing so, as well as a complete investigation into the administration and general affairs of the company, and I feel sure that the interesting statement which he will make to you to-day will give you a very welcome and accurate view of the present position and prospects of your company. The prominent features of the year's operations have been the continued and increasing richness of the shoot at Rowse's, the valuable discovery at Tennant's, opening out in a few months close upon 100,000*l.* worth of gold, and the large increase in the reserves throughout the mine. Before formally moving the adoption of the report, I have the pleasure to read to you a telegram which we have just received from Capt. Gilbert, giving the latest news from the mines.

A MOST IMPORTANT TELEGRAM.

"700 north Rowse's shaft: Width of lode 3 ft.; assay of quartz 7 ozs. 8 dwts. (deepest level we have driven on the lode, and richest quartz we have yet come upon). New winze, 700, situate 100 ft. north of Rowse's shaft: Width of lode, 4 ft.; assay of quartz, 2 ozs. 17 dwts. 550 south of incline: Width of lode, 2 ft.; assay of quartz, 7 dwts. 450 north of Schaw's shaft: Width of lode, 1 ft.; assay of quartz, 7 dwts. 320 south of Schaw's shaft: Width of lode, 1 ft.; assay of quartz, 15 dwts. 360 north of Tennant's shaft: Width of lode, 2 ft.; assay of quartz, 5 dwts. 290 rise: Width of lode, 3 ft.; assay of quartz, 2 ozs. 180 north of Tennant's shaft: Width of lode, 4 ft.; assay of quartz, 12 dwts. Two rises 180 north: Width of lode, 4 ft.; assay of quartz, 1 oz. 4 dwts. New tailings start in three weeks. All going on most satisfactorily."
I now beg to move the adoption of the report. (Loud cheers.)

Capt. W. BELL MCTAGGART (vice-chairman): Gentlemen, I have great pleasure in seconding the adoption of the report which is now before you.

The CHAIRMAN: I will now ask Mr. John Taylor to address you, as usual, on the subject of the working and prospects of the mine. He may not do so to-day as fully as has been his habit, because Mr. Rowse is to follow with a somewhat detailed and lengthy statement of the entire position of the company's affairs at the Mysore Mine.

MR. JOHN TAYLOR EXPLAINS THE LATEST DEVELOPMENTS.

Mr. JOHN TAYLOR, who was received with cheers, said: Gentlemen, I have had the privilege of hearing from Mr. Rowse during the last week or two a great deal of most interesting information, much of which he will to-day impart to you, as far as time will permit, and, therefore, I propose to curtail very much the remarks I would otherwise have made so as to give him full opportunity of doing so. I propose merely to point out, on the large sections on the walls before you, the more important points, or a few of them, in the deepest parts of the mine.

THE LODE IN ROWSE'S SHAFT.

Rowse's shaft, which is indicated in one section, has been sunk during the year 247 ft., and is now down 780 ft. The lode has been productive for nearly the whole of that distance, and has varied in width from 1 ft. to 5 ft., and the quartz has assayed ½ oz. up to 2 ozs. I mentioned at the meeting we had a few weeks ago that the bottom of the shaft is at present in a band of trap-rock or dyke, which you have heard of, and which lies to the west of the Champion reef. This extends for a considerable distance through the goldfield. The lode showed no gold, and was not expected to do so until we had passed through this band. Capt. Gilbert now tells us that he is sinking as fast as he can, and he also tells us there is no reason to suppose that this trap-dyke will either affect the continuity of the lode or displace it. I have taken some trouble about this matter, and studied the best authorities on the subject. The existence, or occurrence, of these dykes is common. They are known very much in the goldfields of Australia, and you will find, if you refer to the books on the subject, that these dykes do not affect the lodes adversely, but quite the reverse. It is a well known fact in Australia that close to these trap-dykes the veins, so far from being impoverished, are improved. They produce more gold when cut close up to the dyke than they do when further away. We have a remarkable instance of that in this property, for the telegram speaks of rich quartz in the 700-ft. level, which is close to this dyke. The bottom level is also poor for the moment, but we now hear that it has passed through the dyke, and Capt. Gilbert hopes soon to find the lode beyond. The 700-ft. level has been driven south a little over 200 ft. (207 ft., to be exact), and the lode for the whole distance from the shaft has been nearly 5 ft. wide, but in some places has pinched to 2 ft., but is worth 1½ ozs. to the ton all the way. In the same way the 700-ft. level north has been driven rather more than 200 ft. in a lode about 3 ft. wide, varying from 1 to 3 ozs. per ton. It is continuing to open up valuable ground—a great and material improvement you will note upon the 620-ft. level above. The pay-shoot also extends further north. We have it further north in the 700 than in the 620, though how much further it will still go I cannot say.

BIG VALUES PUT UPON THE LODE.

The last report, dated Feb. 18, tells us that the lode was 2 ft. wide in the end, worth 6 ozs. 4 dwts. That was very good, but the telegram the chairman has read tells us it is now 3 ft., and worth 7 ozs. 8 dwts. (Cheers.) That is as good information as any I have been able to

give you in the whole history of this company. (Renewed cheers.) In the deepest level driven upon the lode in your mine the vein is the best. (Hear, hear.) Underneath the 700-ft. level north a winze has been put down at a point I am indicating on the map, which is not yet marked, but is reported to be 4 ft. wide, and worth 2 ozs. 17 dwts. The 620 has been driven 370 ft., the lode being 2 to 4 ft. wide, and worth 1 to 2 ozs. I am rather hoping that we may have an extension of the pay-shoots in that direction. The 620 level has been driven north 380 ft. The lode is from 1 to 4 ft. wide, and has yielded 1 oz., and in one instance up to nearly 6 ozs., so that you see we have a pay-shoot there practically something like 700 ft. in length. There is no doubt that this part of your mine has opened up extremely well during the year under consideration.

GLEN SHAFT.

1,000 ft. to the north of Rowse's you will see Glen shaft indicated on the diagram. Glen shaft was commenced with a view to develop the great piece of virgin ground lying between. Then we have to go 2,160 ft. to

TENNANT SHAFT,

and here we have had a most remarkable discovery of what is really a new and fresh mine, which is looking extremely well. Tennant shaft has been sunk in the year 72 ft., and is now down 360 ft. The lode has been regular and continuous, but it is further to the north of this shaft (the pay-shoot is all pitching to the north) that we have had our best ground. The 350 level has been driven 254 ft. We are not yet quite far enough to intersect or reach the pay-shoot we have had in the levels above, but a telegram mentions (and though a small it is a very important point) that the lode here is now 2 ft. wide, and contains 5 dwts. of gold to the ton, so that it shows we are beginning to get into productive rock. The level above (290) has been driven over 550 ft. in a good lode for about 200 ft., worth from ½ oz. to 2½ ozs. The 180-ft. level has been driven 720 ft., and for 400 ft. we have had a lode 3½ ft. wide, worth 1 oz. up to 2½ ozs. In the 180 we have recently met with disturbed ground, but the report of Feb. 18 speaks of good quartz having been met with, and Capt. Gilbert tells us he expects within a week or two to have something important to communicate. The telegram tells you that the lode is 4 ft. wide, and that he is getting 12 dwts. to the ton. One is not justified in hoping too much, but I certainly am hoping that we are coming to a fresh pay-shoot, which I trust may be also the beginning of something totally distinct from what we have yet found in the mine. (Cheers.) It is 1,700 ft. from Tennant's shaft to our northern boundary, of course totally unexplored, but there are old workings, respecting which Mr. Rowse will have something to say. Our superintendent, Capt. Gilbert, has a very high opinion indeed of this property. We know what is being done by the Champion Reef Co., which is close to the boundary on the other side, where a good discovery has been made, and we look with very great hope to the operations at this particular point.

A NEW SHAFT BEGUN.

In order to attack it, a shaft has been started, called "Gilbert shaft," and you will see it noticed in the report; it has only been just commenced. With regard to Capt. Gilbert, I told you at the meeting a year ago (Mar. 28) that I had the advantage of knowing him for a great number of years, during which he had served our firm faithfully and well, and I then said I had not the slightest doubt we should find in him a worthy successor of our superintendent, Capt. Plummer, who was then retiring.

CAPT. GILBERT'S MANAGEMENT.

We all know how much Capt. Plummer did for our company and our interests during a number of years. We have thanked him for it, and we thank him for it again, and I am sorry he is not here. Having returned from India (where it is warmer than it has been here lately), he went down to his home in Keswick on Saturday, and took a violent chill, and writes to say that he cannot face the journey back, or otherwise he would have beeu here to see you. We know what he has done, but I think the result of last year's operatious must have conveyed to you and all of us that we have in Capt. Gilbert, as I anticipated we would have, a most able representative in India, and one in whose hands our interests are perfectly safe. (Cheers.) I do not think, gentlemen, I need say more. You may be quite sure that the condition of our mines is thoroughly sound and healthy, and I think we may look forward without the slightest misgiving to a continuance of the prosperity we are now enjoying. (Cheers.)

MR. ROWSE DESCRIBES WHAT HE SAW.

Mr. ROWSE, who experienced a most gratifying reception, said: Having listened to the speeches of the chairman and Mr. Taylor, and having, as I hope, carefully read the full and detailed report of Capt. Gilbert, I think you will be prepared to confirm the opinion I expressed at the meeting held in this room on the 27th of last month—that you possess a property of great value, and that at no other period in its history has that value been equal to what it is today. Your directors have thought that you would desire to receive from me a fuller statement with regard to the mines than that which I gave at the last meeting, and so Mr. Taylor has been good enough to shorten his speech, in order that I may have an opportunity of doing this. I propose first to deal with the points now in operation at the various sections of the mines, and if the gentlemen who have a copy of the annual report iu their hands will refer to the general longitudinal sectiou of the property they will be better able to follow me. I begin with Schaw's at the southern end. The shaft there is down to the 450. Iu the course of its sinking the lode has occasionally yielded quartz up to 1 oz. per ton, but generally the assay has been less. Two levels are now being driven northwards, that is, back towards Plummer's: the 320 about 140 ft., producing in places quartz of good quality. The 450 north has been driven 120 ft., in a lode of much the same character. Recently, however, there are indications of an improvement; the lode has become 3 ft. wide, aud carryiug about 7 dwts. of gold. A rock-drill is now at work in this level, so that the ground in this direction will be rapidly tested, and will soon go back under McTaggart's shaft, which is 500 ft. further north, where in driving a shallow level at the 160 some good quartz was found, which, it is believed, may prove to be the top of another shoot, and that as the 450 comes under it some good discovery may be made. In order to prove the ground in the neighbourhood of Schaw's a cross-cut is being put out east from the 450 north, and it will probably be desirable also that a cross-cut should be put out west. From Schaw's northwards to Plummer's there is a distance of 1,800 ft., which virtually remains unproved. This will be effected by continuing the 450 north from Schaw's, and, if thought desirable, by driving south from Plummer's or Taylor's. This section of the property may be looked upon as quite in its infancy, and I have no do doubt that between it and Plummer's other shoots will be found.

DESCRIPTION OF THE WORKINGS AT THE MORE IMPORTANT PARTS OF THE MINE.

Although the ground already laid open at this section is of comparatively low yield, yet I shall show you presently that it may be worked at a profit. At Taylor's, Plummer's, and Rowse's sections the chief exploratory work done during the past year has been the sinking of Rowse's shaft, which has been deepened about 250 ft., and for nearly the whole of this distance in a rich lode. The 550 north has been driveu over 200 ft. until the unproductive channel of ground bounding this shoot was encountered. This level passed through a lode averaging 3 ft. in width, and producing 3 ozs. to the ton. The 620 has been driven north and south upon the shoot and upon the wide lode a distance altogether of 750 ft., and in quartz averaging 3 ft. wide, yielding from 2 to 3 ozs. per ton. The north end of this level has also reached the unproductive rock. The 700 has been driven north and south for about 300 ft., in a lode 3 ft. wide, and yielding 3 ozs. per ton; the last report giving the lode in that end as 3 ft. wide, worth 7 ozs. 8 dwts. per ton. This level has been a remarkably rich one for all the length yet driven upon it, and proves that this shoot, at the lowest point worked upon, is as rich, if not richer, than it has been in any of the levels above. You will observe from the map that there has been an uninterrupted run of quartz from the 236-ft. level to the 700-ft. level. (Cheers.) From this section the gold sold during the year has been got, with the exception of a small quantity from Tennant's. A glance at the map will give you some idea of the quantity of ground taken out, and from which all your riches have been drawn.

EXTRACTION AND VALUE.

It will be interesting to you to know that from the bottom of the 173-ft. level to the 700, a depth of a little over 500 ft. on the underlie of the lode, and extending in length for about 600 ft. on the run of the lode, there have been extracted 113,778 tons of quartz, yielding 164,172 ozs. of gold, of the value of 638,610*l.*, or about 6*l.* per ton of quartz, the bullion gold weighing 6½ tons. If you add to this extraction 65,000 tons, now estimated to be in reserve on this shoot, you get altogether 178,778 tons of quartz, of a total value of somewhere about *one million sterling*, as representing the value of this shoot of ore between the 173 and 700-ft. levels. The profits for the year have been 155,799*l.* For the past two years, at the rate of 75 per cent. upon the capital of the company, and equal to about *70 per cent. of the gross value of the gold obtained.* (Cheers.) The lode between the two levels referred to varied in size from 2 ft. to 6 ft., and has averaged 1½ ozs. to the ton. Some portions of the ore in reserve in the neighbourhood of Plummer's and Taylor's is, perhaps, rather under this average, but the quartz in the lower parts of the mine is of a much higher grade. Rowse's shaft, as you are aware, is now being sunk through a trap dyke, and is therefore for the present unproductive. You have heard what Mr. Taylor has said about this, and you know Capt. Gilbert's opinion. Personally, I have no doubt that the lode on the western side of the dyke will be found equally as productive as it is on the eastern side, where the quartz was evidently much enriched by coming into contact with it. It will be very satisfactory to you to know that, notwithstanding the high rate of extraction which has taken place from this section of the mine during the past year, the reserves here have been increased by 15,000 tons. (Cheers.)

GLEN SHAFT.

Glen shaft, which is 1,000 ft. north of Rowse's, is being sunk for the purpose of developing a shoot of quartz which is believed to exist both north and south of the shaft, and also for the purpose of the development in depth of the shoot which is now being worked upon at Rowse's. The shaft is 250 ft. deep, and is undoubtedly the finest one upou the property, being 14 ft. long by 6 ft. wide, fitted with skip or tram road, pitwork and other accessories. On it is being erected a 36-in. Cornish pumping engine, which will be ready for work almost immediately, and will be capable of dealing with any water which may be found here for many years to come. At the 250 a lode 4 ft. wide was intersected in the shaft; it carries well-defined walls, but does not contain much quartz. We were not surprised at this, for it will probably be within your knowledge that in the cross-cut, which was put out east at the 150, the lode found there showed that the dip of the quartz was at an angle of about 45 degs. *northwards*; you will see, therefore, that in order to cut this same run of quartz in the 250, a distance of from 80 to 100 ft. will probably have to be driven. This is a point to which we are looking with considerable interest, and if a good lode be found here the sinking of Glen shaft upon it will immediately follow. Extensive old workings exist both north and south of this shaft, and there can, I think, be little doubt that another shoot of ore will be opened up by it before very long. You will see by the section that there is a run of ground extending over 2,000 ft. north, yet unproved, between this shaft and Tennant's, from which great results may be looked for. Mr. Taylor has described to you the valuable discovery which was made at Tennant's early in October. Its importance and value with reference to the future of the company is very great.

IMPORTANCE OF TENNANT'S SHAFT.

My expectation is that this shoot will prove to be equally rich and valuable as that at Taylor's and Rowse's. Capt. Gilbert tells you in his report that from the date of the discovery up to the end of the year not less than 15,000 tons of quartz were laid open, the value of which in the mill is fully 1½ ozs. to the ton; add to this the value of the tailings, and you will see that in about four months not less thau 100,000*l.* worth of gold has been laid open.

(Cheers.) The shaft is now down somewhat below the 350 ; the lode for the whole distance has been well defined, although not very rich. The 180-ft. level north in which the discovery was first made has been driven about 500 ft. since the last meeting, about 400 ft. in a lode averaging 3½ ft. wide ; and worth from 1 to 2½ ozs. per ton. The lode in the present end is not so rich, being somewhat under an ounce, but there are indications which warrant Capt. Gilbert in expecting an early improvement, and he believes that we shall then have a rich lode extending up to our northern boundary. At surface there are extensive old workings still ahead of the end of this level extending almost up to the boundary, which, as you are aware, adjoins the Champion Reef Co. property. In the 290 north, the same rich shoot has been found and driven upon for about 150 ft.; the lode averaging 4 ft. wide, and assaying 1½ ozs.

ONE AMONGST SEVERAL IMPROVEMENTS.

Within the last few weeks the lode in the 360 north has much improved, Capt. Gilbert being of opinion that he has just touched the southern end of the shoot in that level. I have no doubt that since the end of the year the reserves in this mine have increased by over 10,000 tons. I am sure that I need say no more to satisfy you that your property has been immensely increased in value during the past few months by the discovery which has been made here. And if, as Capt. Gilbert expects, this shoot should extend up to the boundary it will make such an addition to the value of your property which will not be easy to estimate. 900 ft. north of Tennant's a new shaft, to be called Gilbert's, has just been commenced. It will be sunk perpendicularly to about 180 ft., where we expect to intersect the lode. This shaft, as you will understand, is being sunk for the purpose of developing the shoot, to which I have already referred, and which is dipping at an angle of about 45 degs. toward the north boundary. The energy which has been displayed in the development of your property during the past year has been most commendable. Capt. Gilbert reports that the ground extracted from the shafts, levels, and winzes amounted during the year to 1,047 fms., in addition to 1,923 fms. taken from the stopes, together 2,970 cubic fms., being 1,000 fms. in excess of last year. (Cheers.)

A GOOD IDEA OF THE WORK DONE.

To put it in a form which may be more easily comprehended, the ground excavated during the year is equal to that of a tunnel 7 ft. high, and 5 ft. wide, for over 3 miles in length. As you are aware, the rock is of great persistency and hardness. Without rock-drills this extraction would have been impossible ; nevertheless, you may take it as conclusive evidence that no effort has been spared by your superintendent and agents. Twenty rock-drills are now employed, and this number has been considerably increased by a recent shipment. With reference to the expenditure at the mines, I am glad to assure you that your superintendent is fully alive to the importance of exercising all the economy possible consistent with the proper and efficient development of your property. There are two particularly heavy items of cost, which it is impossible to reduce to any extent—those of explosives and fuel. Nevertheless, I am pleased to inform you that the cost of producing our gold has been largely reduced during the past three years, and that it has now been brought down to a figure which will enable the company to work profitably quartz of a yield as low as from 6 dwts. to 7 dwts. (Cheers.)

EXPENSES REDUCED SO THAT LOW GRADE ORE CAN BE PROFITABLY TREATED.

This, as you will see, gives a value even to the comparatively low grade ore such as we have passed through at Schaw's. The cost per oz. in 1888 was 2*l*. 6s. ; the cost per oz. in 1889 was 1*l*. 4s. 3d. ; the cost per oz. in 1890 (making allowance for the abnormally high rate of exchange) 1*l*. 2s. 5d. Mills, &c. : The mills and tailings machinery have been kept fully employed during the year, the results obtained from both being very satisfactory. By their combined operations, close upon 90 per cent. of the assay value of the gold and the quartz has been extracted. With regard to the mills, you will be glad to know that effective arrangements have been made which will, we believe, prevent the possibility of amalgam or gold being stolen. The mills are enclosed by a substantial wall 8 ft. high, and from thence to the roof by vertieal iron bars, iron screens being dropped down in front of the stamps so as to prevent any communication between the persons employed in the mills and those outside. The men engaged in attending to the plates are attired in closely-fitting garments, without pockets, so that they shall have no opportunity of secreting amalgam on their persons. An officer in uniform is stationed at the door of the mills, whose duty it is to watch the persons employed and carefully search everyone leaving the premises. I am glad to say that for many months past we have had no reason to suppose that amalgam has been stolen. At all events we have the satisfaction of knowing that all that is possible has been done to prevent it. The erection of the tailings plant has been a profitable enterprise. Last year 22,000*l*. worth of gold was extracted from less than half the aetual quantity of tailings produced by the mills. Within a few weeks 18 additional pans will be in operation, when an increase of from 400 ozs. to 500 ozs. per month may be looked for.

CAPACITY OF MACHINERY.

You are aware that an additional plant has been ordered, which, when erected, should give us from the tailings alone a monthly production of from 1,200 to 1,500 ozs. The 30 heads of stamps which are now in eourse of manufacture, and which will be shipped at the earliest possible moment, will bring the milling capacity up to at least 55,000 tons per annum. I am glad to be able to state that our reduction officer, Mr. Chaney, is most painstaking, efficient, and capable. The question of native labour is one of considerable importance to this company, as well as to the other companies on the field. The coolie is docile, amenable to order, and although not physically robust, is able to undertake a considerable amount of labour.

COOLIE ADAPTABILITY.

Seeing how comparatively recent their employment ou mining work has been, they have taken to it in a very satisfactory way, and I believe that before very long, if the natives be wisely handled, the companies will be able to dispense with a great proportion of the costly European labour which is now employed, substituting for it native labour, which necessarily must be under the superintendence of Englishmen, and so be the means of saving the companies a considerable expenditure. The artisans are clever workmen. For more than a year past our rock-drill fitting shop has been under the charge of one of these natives—of course, under the superintendence of the engineer, and he, in a most satisfactory way, keeps the rock-drills in perfect order, making in his own shop the spare parts necessary to supply breakages and wear and tear. This man is paid less than 1*l*. per week, as against over 7*l*. per week which was formerly paid to the Englishman. I have taken care to impress this matter very strongly upon our superintendent and also upon our chief engineer, and I have no doubt that considerable saving may be effected in the future in this direction. The plant and machinery now upon your property has become a very extensive one, and will yet have to be increased as your operations extend. The whole is of the best description, and is kept in good working order. At the head of this department is our chief engineer, Mr. Mudge, who is a man full of vigour and energy, and has a special capability for controlling the large number of hands under his care. The question of fuel had my special consideration whilst at the mines.

FUEL.

We have made very careful trials of firewood as against coal, and we have come to the conclusion that in every particular coal is a much cheaper and more effective fuel than wood. At present the bulk of our coals are sent from this country ; but you may be aware that coalfields are being discovered and opened up in India, and it appears probable that by and by it may answer our purpose best to use Indian coals. This being a heavy item in our expenditure, we have carefully considered means by which this may be brought down to its lowest possible limit. A short reference is made in the directors' report to a line of railway, which, on my recommendation, is being constructed on the mine ; it will, I hope be ready for traffic very shortly. It is laid down for the purpose of conveying the quartz which may be raised from Gilbert's, Tennant's, Glen, and Rowse's shafts to the mills. The ordinary means of transport have hitherto been bullock bandies, or carts ; a method which you can well understand is slow, wasteful, and expensive. It will also be employed in conveying coals and other materials from the stores to the various engines and shafts. This line of railway will, I hope, be the beginning of a system of railway lines, which will be constructed not only upon our mine, but upon the field generally, with communication to the main line.

THE "TENNANT" RAILWAY.

The railway has been named Tennant's, and the first locomotive "Lady Tennant." I also ventured to advise the board to erect new offices aud stores. The existing offices being most inadequate for the proper accommodation of the increasing staff which you are employing at the mines, I felt that it was most desirable that the offices should be concentrated and situated as far as possible in a central position ; thus giving better facilities for consultation between the heads of departments, and a better oversight of the general business of the mines. In connection with these offices, new stores are being built, with an office for the storekeeper, with a weigh-bridge attached, so tbat proper facilities may exist for a complete check upon the stores received and delivered. This expenditure will, I believe, well repay itself in a very short time.

SANITATION.

Many of our shareholders, especially those who are acquainted with the climatic conditions of India, feel considerable interest in the sanitation of the camp. They will be glad to be assured that this important question receives most diligent attention from the Mining Board, as well as from the various mining superintendents. At our own camp we have done a considerable amount of tree planting ; an inspector is employed, who has a staff of men under his charge, whose sole duty it is to attend to the sanitary arrangements of the camp, the Mining Board employing a general inspector who takes charge of the whole of the field. I am glad to say that during the late outbreak of cholera not a single case occurred in this company's camp. Our chief medical adviser, Dr. O'Donnell, is a man of strong will, great energy and skill, who spares no pains to keep the people in good health. (Cheers.) I believe I have now touched upon the chief points of interest in relation to your great property. True I have had to be somewhat brief, but I should like to say, in conclusion, that it has beeu a very great pleasure to me to have had the opportunity of visiting your property. My investigations during the several weeks I was upon the mines, confirmed me in the opinion that we have a most valuable and extensive property—more valuable and more extensive than, perbaps, most of you who are present this morning have any idea of. I am led to hope that my mission to the mine has been of some service to the company, I have come back in possession of information which will be of benefit to the board, and which will, I hope, assist them in the further conduct of the affairs of this great enterprise. I need not say, gentlemen, that I shall always be very glad indeedito give the benefit of any knowledge and information I possess to shareholders when they may do me the honour of calling upon me at the office of the company. (Loud applause.)

MR. ROWSE THANKED.

The CHAIRMAN : I am sure I shall be only interpreting the feeling of the meeting when I say we express to Mr. Rowse our grateful acknowledgments for the interesting information he has so admirably conveyed. (Cheers.) The paragraph in our report is very fully justified when we say that we look forward to great benefit being derived by this company from the visit of Mr. Rowse to the mines. It is very gratifying to us that we have in him one intelligent and capable of looking after our interests, and advising us generally with referenee to this great and growing property. I have great pleasure in thanking Mr. Rowse on my own behalf and yours for the very able statement he has made. (Loud cheers.) I shall now be glad to reply to any questions that generally may be put on the subject of the company's affairs.

THE LEASES.

Mr. WALTER JAMES : I would like to ask a question with reference to the leases. It was understood at the meeting before last that Lord Ribblesdale and Sir Charles Lawson had arranged the continuance of the leases, but paragraphs had appeared in the Madras papers within the last few months which tell a different story. In fact, they go so

far as to say that the Dewan had declined until the expiration of the present leases to grant renewals.

Mr. L. P. SWINBORNE: We pay quite enough royalty.

The CHAIRMAN: There has been a little hitch in the question of the prolongation of the leases—not as to the prolongation actually, but as to the conditions on which the prolongation is to be carried out. You know the original understanding was that the royalty was to remain the same for an additional 20 years. The Government has indicated some disposition to recede from that position, and to get from us a little additional royalty. The matter remains in abeyance at this moment, that is to say, we have no definite answer from the Government, but are still hopeful that they will abide by their original promise to us. We shall certainly do all we can to bring that about, and we are doing that, but matters of that sort are very slow, I am sorry to say, both in this country and in others, and more especially in India, and the shareholders must wait patiently, but of this they may be assured, that it is merely a question of whether the royalty shall be 5, 6, or 7 per cent. We are at present paying 5. It is a mere question of the addition (if any) that will be made by the Government to the royalty upon the gold extracted.

AN "UNHEARD" SPEECH.

Mr. FERGUSSON: I rise to congratulate the chairman, the directors and the shareholders, including myself, on the splendid report received, and on all we have this day heard from Mr. Taylor and Mr. Rowse regarding the present state and prospects of the Mysore Mine. In every respect it appears to me that the report is in the highest degree satisfactory. (Cheers.) The paragraphs, perhaps, which are the most satisfactory you will find on pages 7 and 9 regarding the reserves and the purchase of land. As regards the reserves, if you refer to page 7 you will find what the chairman has already alluded to, that we show 30,000 tons increase over the previous year, and as regards the purchase of land, I am sure we owe our very best thanks to our directors for having secured to us the block of land adjoining the western boundary of our property—(cheers)—the acquisition of which has undoubtedly strengtheued the position and prospects of our company.

A MISTAKE AND ITS CONSEQUENCES.

Indeed, it seems to me no exaggeration to say that if this block had not been secured the Mysore Co. would very probably have gradually expired in two and a half years. (Loud cries of "No, no," and laughter.) In this block I believe that we have either the long life or the early death of the Mysore Mine. (Cries of "Oh," and laughter.) The price paid for this block may appear high. (Uproar, and cries of "Sit down."

The CHAIRMAN: This matter applies more to the next meeting, though I do not wish to stop you if the shareholders desire that you should proceed.

Mr. FERGUSSON: It is referred to in the report. The price, I say, may appear high, but I may assume—(uproar and cries of "Time,")—we all have the utmost confidence in the chairman and our directors. (Yes, and cries of "Sit down.") Let us give our unanimous support to the directors. (Cheers.)

The CHAIRMAN: I was very unwilling to stop Mr. Fergusson, who is an old friend of mine, but his speech is one more relevant to the second meeting.

Mr. PROBYN: Can you tell us on what dates our dividends are likely to be paid next year?

The CHAIRMAN: We have hitherto paid dividends every four months. We shall perhaps again do the same—I hope in May, another dividend in Sept., and a final dividend as we have done before. I think that works very well, and I hope it will be satisfactory to the shareholders.

HALF-YEARLY MEETINGS.

Mr. F. W. SWINBORNE: How about half-yearly meetings?

The CHAIRMAN: We are rather adverse to holding them, because we give you all the information we can, and we cannot give you a balance-sheet every half-year. You are not, perhaps, aware that there is great expense and work attendant upon these meetings.

Mr. L. P. SWINBORNE: They were promised—I recollect it distinctly.

The CHAIRMAN: I do not know that there is any strong feeling on the subject, but we are very willing, if you will kindly make a suggestion, to take it into our careful consideration.

Mr. L. P. SWINBORNE: If we had kept to the half-yearly meetings we should have paid less to the Goldfields of Mysore the other day. (Cheers.)

The CHAIRMAN: Oh! No.

Mr. JAMES: One word in favour of half-yearly meetiugs. Generally speaking, after one of these healthy and wholesome and delightful family meetings have taken place, something occurs to disturb the harmony of the company. After the meeting last time a scare was got up that Capt. Plummer was all wrong in the reserves as he had measured them at the mines. We know that Capt. Plummer went out last autumn and re-measured them, and we have in the report the statement that the reserves are 30,000 tons more than we expected. Therefore, clearly, Capt. Plummer was right, but scores of shareholders became faint-hearted, and the price of the shares was damaged. Now, if half-yearly meetings are held, the cloud has scarcely time to gather before it is dispersed by the information afforded.

MALICIOUS RUMOURS.

The CHAIRMAN: Well, gentlemen, we will take this matter into consideration, but as to adverse rumours, we publish fortnightly reports, which are pretty explicit. A man must be faithless indeed who does not believe in the statements therein put before him. I have a letter from Glasgow, which has been sent to me, which states that reports are spread from London that the supplies of ore are rapidly falliug off and that the shares will be down 3*l*. or 4*l*. This is from London brokers. It is said "London brokers are writing to people in Glasgow urging that they should advise their clients to sell their shares, as there is certain to be a fall of 3*l*. or 4*l*.—(laughter)—owing to the falling off of the supplies." It is clear that there must be a very heavy "bear" account in London. I do not give an opinion on that point, and would not have mentioned it but for the remark made that people are apt to run away with stories that really have no foundation whatever in fact, and that people should really trust to the fortnightly reports, and not to rumours of a very vague character, circulated with a motive which I do not wish to specify or to characterise. I will now ask you to vote on the passing of the report and accounts. Carried unanimously.

Mr. BULL: What is the cost of treating the tailings per ton?

Mr. ROWSE: I do not know that I can quite say, but it is equal to about 25 per cent. of their value.

DIRECTORS RE-ELECTED.

Capt. MCTAGGART: I propose, "That the two retiring directors Sir Charles Tennant and Mr. Robert Henty, be, and they are hereby, re-elected directors of the company." I think that, having mentioned the names of these gentlemen, there is nothing more that I need say. Sir Charles Tennant has such claims upon your consideration, and Mr. Heuty also (who has been amongst us from the earliest period of the company's history) that I have no doubt his re-election will be unanimously carried.

Mr. PROBYN seconded the motion, which was carried unanimously.

The CHAIRMAN: I thank you very much for the kind way in which you have passed this resolution.

DIRECTORS' REMUNERATION INCREASED.

Mr. JOHN HARVEY: I rise to propose another resolution. The forecast of the future of the Mysore Mine, based upon the facts that we have heard to-day, is very brilliant, and such that we may fairly indulge in dreams of larger dividends in the years to come. These prosperous years may take care of themselves, but I should like to say one word with regard to the past history and present state of the mine in connection with the resolution I am about to propose. In the early history of this mine, when the finances of the company were not in such a good condition as they are now, and when 100*l*. was probably of more value than 1,000*l*. is to-day, our directors generously, for some years, gave up their remuneration *in toto*. They have not asked for more since, but, according to the articles of association, we have yearly to decide what amount is to be given them. During the past year they have distributed in dividends something like 150,000*l*. That sum is itself sufficient to have paid a decent percentage per annum from the commencement on the total capital of the company. This happy result has been brought about to a great extent by the care, foresight and ability of your board—(cheers)—and I think it would be only a graceful act on our part if we were to day, I hope without one dissentient voice, to vote for an increased sum over what they received last year. Therefore I beg to propose, "That the remuneration to the board for this year be at the rate of 2,000*l*., and that the directors be asked to accept this as a mark of the appreciation of the shareholders of the services they have rendered."

MANAGERS NOT FORGOTTEN.

Mr. ARCHIBALD J. SMYTH: I will second that motion with this addtion, that the 1,000*l*. now paid to the managing directors be increased to 1,250*l*. I think that is wise, for it is manifestly to our interests to have such men on the board, and such managers to conduct the company as those we possess. They should share in any increased emoluments, because they have after all really the most to do with the working of the company. (Cheers.)

The CHAIRMAN: The second matter to which you have alluded, namely, the remuneration of Messrs. John Taylor, our managers, is one that rests entirely with the directors, and not with the shareholders.

Mr. FERGUSSON: I second the proposal, that the remuneration of the directors be raised from 1,500*l*. to 2,000*l*. I was going to say a great deal as to what the directors and the chairman have done during the past year, but was not allowed to say more. (Laughter.) I showed my appreciation of what they have done by suggesting that their pay should be raised.

The motion was carried unanimously.

The CHAIRMAN: I do not know how to thank you sufficiently for the handsome manner in which you have acknowledged our services. I can only say it will be an incentive to further faithful service to you. I hope that when we next have the pleasure of addressing you I shall be able to lay before you a statement even more satisfactory and flattering than I have done to day.

Mr. F. W. P. SWINBORNE: Now, Mr. Chairman, perhaps you will see your way to half-yearly meetings. (Laughter.)

Mr. JAMES: I beg to propose "That, Messrs. Turquand, Youngs and Co. be re-elected auditors of the company for the present year, and that their remuneration be 50 guineas."

Mr. PROBYN seconded the motion, which was carried unanimously.

THANKS TO THE STAFF.

Genl. BERESFORD: I beg to propose, "That the best thanks of the meeting be given to Capt. Gilbert, the superintendent, and officers of the company for the zeal and energy they have displayed in the conduct of the mine during the past year." I will merely say that Capt. Gilbert was placed in a very difficult position. The brilliant success of Capt. Plummer made it hard for any man, however good he might be, to follow in his footsteps and do equally well.

JUSTICE TO CAPT. GILBERT.

Capt. Gilbert has done equally well. Your mine never looked so well as it does now. From my knowledge of the field—the officers of all the mines are doing their best to bring their concerns to as near an approach as possible to the Great Mysore property. Not only are a number of the mines showing brilliant results, but there are exceptional prospects that the Goldfields property will turn out well. We have had late advices to say that off the line of the Champion lode, entirely to the west of the Champion lode to a good distance, and south of that, there is a discovery being made, and if it turns out the success I believe it will, it will make the Goldfields property several times more valuable than it is at this moment.

Mr. L. P. SWINBORNE: I have much pleasure in seconding tha proposition.

Carried amidst loud cheers.

The CHAIRMAN: We are very pleased to hear from Genl. Beresford who was one of the original discoverers of the Mysore Goldfields, this expression of opinion, and therefore his statement carries with it considerable weight, whilst his information as to properties other

than the Champion lode is really both satisfactory and important, more especially as I see a great number present who are also shareholders in the Goldfields Co. We shall now come to the business of the confirmatory meeting.

EXTRAORDINARY MEETING.

The meeting was then made special to confirm the resolutions with reference to the Goldfields purchase, passed some days ago. They are as follows :—

1. "That this meeting hereby approves the purchase by this company from the Goldfields of Mysore, Limited, of the exclusive mining and other rights possessed by the selling company in and over a certain block of land comprising about 268 acres on the western boundary of this company's property, extending for the entire length of the sett, and for 1,500 ft. wide, for 25,000 fully-paid shares of this company, and that the directors be and they are hereby authorised and empowered to carry out and complete the said purchase accordingly." 2. "That the capital of this company be, and the same is hereby, increased to 225,000*l*. by the creation and issue of 25,000 ordinary shares of 1*l*. each."

The CHAIRMAN: I beg to move the resolution, which was so fully discussed at the last meeting. I will not detain you by going into details. I think the fact that at the lowest level we have come upon the best stuff is rather a strong argument in favour of the resolution.

Mr. BULL: When I called at the office, a few days ago, Mr. Rowse was kind enough to give me a piece of information which has a direct bearing on this subject, and that is that the dyke or trap in other mines you find further to the east, and that the rich lode has been actually found to the west of the trap-dyke. That has a bearing on the possibility of finding ore and the rich lode.

Capt. MCTAGGART: I beg to second the resolution, which I hope you will carry as unanimously as you did the resolution you have recently been good enough to pass.

The motion was carried unanimously.

The CHAIRMAN: That concludes the business, and I am extremely obliged to you for the patient manner in which you have listened to what we have had to say.

Mr. H. O. WHITE: I beg to propose a vote of thanks to the chairman.

Genl. BERESFORD: I second the motion.

Carried unanimously.

The CHAIRMAN: I have only again to thank you.

The proceedings then closed.

BRATSBERG COPPER CO., LIMITED.

THE CHAIRMAN EXPLAINS THE PRESENT POSITION OF THE COMPANY—SHAREHOLDERS INVITED TO SUBSCRIBE FOR DEBENTURES.

AN extraordinary general meeting of this company was held at the Guildhall Tavern, Gresham Street, E.C., on Monday, "to enable the directors to explain to the shareholders the present position of the company."

Mr. J. B. Ball

presided.

The CHAIRMAN: Gentlemen, the directors did not expect to have to call you together again before the time had arrived for holding the next annual general meeting. We have carried out the suggestion made at the last annual meeting by sending out a report for the three months ended on Dec. 31 last, which was sent out on Jan. 15. A little while after the last general meeting Mr. F. C. Barker, who had been connected with this company since the first re-construction, found that the state of his health imperatively demanded that he should not winter in this country, and as it was uncertain how long he might be obliged to be away, he resigned his seat at this board. We at once elected another gentleman to fill his place, but this gentleman has recently resigned, and we thereupon elected Mr. G. H. Rew, who is a large shareholder, and who is here to-day. We have asked you to meet us here to-day in order that we might put before you the present position of the company, and we thought it better to do this by meeting you face to face, where you could ask and we could answer questions, rather than by sending you a circular which might omit some information desired by you even after we had done our best to tell you all that we thought you would like to know concerning your property.

THE COMPANY TEMPORARILY IN WANT OF FUNDS.

The general position of the company is not very different to what it was on June 30, 1890, at which date our last accounts were made up, but we are temporarily in want of further funds. The present balances at the bankers are sufficient, however, to enable the directors to carry on the concern without difficulty for at least another month, and the ore raised would be sufficient to provide for all requirements, could the same be realised by being shipped to England. The navigation is now, however, closed by ice, and cannot be relied upon to be opened again until the middle of the month of May, and even after that date some time may elapse before a suitable vessel can be chartered. It would be very undesirable for the company to have to shut down the mines, as that would entail a considerable loss, and the only alternative, therefore, is for some money to be raised. Should the smelting operations be conducted successfully, after the erection of the roasting furnace, as the directors have every reason to believe they will be, there will be no need to ship any ore, except what will be required (in addition to what is already at Skien) to make up one more cargo. The refined copper can then be sent by the ordinary steamers running between Christiania and London, but it must be borne in mind that the smelting and the treatment of the ore by the electrolytic process requires about two months to carry out, and that, owing to the recent fire, the dressing machinery will probably not be in working order until May 1.

DIRECTORS SYMPATHISE WITH THE SHAREHOLDERS.

We desire to express our hearty sympathy with the shareholders in their long waiting for the favourable results, which have several times appeared to be on the point of realisation, but at the same time we wish to make it clear that the delays which have occurred have been due to no want of trouble taken or forethought exercised on our part. The difficulty, which has arisen in getting the smelting works into full operation, is due (as was explained in the circular of Jan. 15 last) to the impossibility of obtaining a sufficiently strong lining for the Manhés convertors to resist the great heat caused by the large percentage of sulphur in the ore. The method proposed to be adopted to overcome this difficulty (which has already proved efficacious on a small scale) is to submit the ore to a preliminary roasting process, which will drive off the excess of sulphur. The copper resulting from the matte made in the trial smelting, amounting to about 3 tons, has been sold by the smelting company at satisfactory prices, viz.: 1 ton at 62*l*. per ton, and 2 tons at 63*l*. per ton, being about 9*l*. to 10*l*. per ton above the price of G. M. B. copper or Chili bars, and a case containing 3 cwt. 12 lbs. of the mud, containing the silver and gold thrown down in the tanks, has just arrived, and will be at once sold, and a correct analysis of its contents obtained. Mr. Nelson, our assayer at the mines, estimates that the mud contains 617 ozs. of silver and 6 dwts. 4 grs. of gold to the ton. Messrs. Johnson and Matthey have stated our ore to be worth 620 ozs. of silver to the ton, but no gold. We had, however, a communication from Mr. Holman that he had of his own accord got the Government Inspector of Mines (Mr. Tellef Dahl) to analyse some of our ore. He makes out that there are 700 ozs. of silver and 5 ozs. of gold to the ton. I hope he may be right and Messrs. Johnson and Matthey wrong. I can only tell you the results of the analyses as we get them here. The method I have just referred to was suggested in the first instance to M. Manhés as far back as Dec., 1888, when he stated that it was unnecessary to roast ore of 20 per cent., and in May, 1889, after an analysis of our ore had been sent to him, his reply was as follows: —"Les minerais dont vous, m'avez donné l'analyse le 5 Avril dernier et qui tienneut. Cuivre 22 per cent., Fer 22 per cent., Soufre 24 vous produiront par simple fusion des mattes qui seront dans les meilleures conditions pour passer au Convertisseur." And it was only after repeated trials and experiments, conducted by Mr. Holman, and by the individual sent by M. Manhés to the mines for the purpose of putting our *employés* in the way of working the Manhés Bessemer process successfully, that Mr. Holman was obliged to come to the conclusion that M. Manhés had made a mistake, and that a roasting furnace would be necessary. Directly this conclusion was arrived at the directors proceeded to act upon it, and the roasting furnace is now at Strengen, and will, as soon as possible, be taken up to the mines; it would have been there already, had not the winter set in unusually early, and so stopped our steamer running more than a mouth earlier than usual.

THE BURNING OF THE DRESSING HOUSE.

The next thing which happened, and which could not have been foreseen by the directors, was that the dressing house was burnt down, as was reported to you at the time, and although this was insured, and we have received the insurance money, and the repairs are being pushed forward as rapidly as possible, a further delay will arise from this cause. Immediately that it became known to the directors that the ore in stock could not be converted into copper for some considerable time, they gave orders for as much ore as possible to be at once sent down to the shipping port of Skien, and urged their agent there to charter the necessary vessels as quickly as possible. The process of getting the ore down, however, is unavoidably a somewhat slow one, as it has first to be carried over a bad and hilly road for 10 miles to Bandagslid; it has then to be taken on board our steamer and carried down a string of lakes to Strengen; from Strengen to Ulefos, it has to be again carted for 13 miles, and then comes another steamer journey down the Nordsjo to Skien. Two cargoes were got down to Skein, shipped to England, and sold as follows:—Vidfarne, 245 tons, produced 2,404*l*. 2s. 7d.; Elizabeth Morton, about 220 tons, estimated to produce 2,000*l*., but owing to severe frosts setting in much earlier than usual, it was found impossible to get more than about half of a third cargo down, and this quantity is still in our warehouse at Skien. A circular has been sent from the mines to the principal creditors in Norway, explaining that, owing to the temporary stoppage of the smelting operations, and the impossibility of getting the ore shipped before the closing of navigation, the company will be obliged to depart from its ordinary rule of paying all obligations within 30 days, and asking for an extension of time for payment.

THE COMPANY'S CREDIT GOOD.

In consequence of the promptness with which the obligations of the company have been met hitherto, the directors believe that the credit of the company is excellent, and that no difficulty is likely to arise out of the issue of this circular; but they consider that it would be more satisfactory and would much strengthen the position of the company if the debts in Norway could be at once cleared off. The present necessity being only a temporary one, the directors, after careful consideration, have come to the conclusion that the best way of raising the money will be by an issue of debentures, bearing interest at the rate of 8 per cent. per annum, commencing on Mar. 31 next, payable half-yearly, the principal being repayable by three half-yearly drawings, to take place on Sept. 30, 1891, Mar. 31, 1892, and Sept. 30, 1892, at each of which drawings one-third of the debentures issued will be drawn for payment. A large shareholder, who has applied for some of the debentures, having suggested that the shortness of time which will intervene between the issue of the debentures and the first drawing might prove to be an obstacle to our getting the debentures taken up, as possible subscribers might be unwilling to place money out for so short a time as six months, we have decided to give each applicant the option of leaving his money for the whole period of 18 months if he so desires. The amount proposed to be raised is 6,000*l*., and the directors trust that this proposition will meet with a ready response from the shareholders, as the sum suggested amounts to only 5 per cent. upon the capital of the company, and, were all the shareholders to respond, would only involve their each subscribing for 1s. in the £ on their respective holdings. The debentures will constitute a charge, by way of

FLOATING SECURITY,

upon the whole of the company's assets, subject only to a mortgage over the company's mines in favour of the Norwegian Government, for securing the company's contribution of 100*l*. per half-year for 19½

years from 1888, towards the cost of the Ulefos Strengen Canal. In order to give all the sharcholders the opportunity of subscribing we have decided to issue them in bonds of 10*l*. each, and they will be payable, 10 per cent. on application, and the balance of 90 per cent. on allotment. I will conclude by reading the latest advices from the mines. You have, no doubt, seen the last published report (No. 165) that for the week ended Feb. 28, in which Mr. Holman refers to the abandonment of further work on Moberg. This is, no doubt, very disappointing, but you cannot have absolutc certainty in a matter of this kind.

LETTER FROM THE MANAGER.

The letter is dated Mar. 2, and says :—

"Funds : I note what you say in reference to this matter. We shall hurry up the erection of the calcincr by placing as many men on it as we possibly can. In fact, we purpose as soon as it can be done, without interfering with the erection of the dressing machinery and calciner, and when we have water sufficient, to make another trial of the Bessemer process with the new clay we have obtained, manipulating the convertors in the manner observed by Mr. Nelson whilst at Röros. You are aware that the burning of the dressing machinery hindered us a good deal in starting about the calciner, as it was absolutely necessary to get the jiggers ready as soon as possible, hence this had preference over every other thing, not only to further the work, and be ready for shipping the ores, if necessary, but also to be able to get rid of the stuff as brought out of the mine. Our collecting floor we are daily enlarging, and cannot go much further except by shambling, which means extra labour, an undesirable outlay, and the longer this goes the greater the expense. I think, however, that we shall find room so as not to get the mine blocked with stuff, and not be obliged to deposit it (the stuff) to any place where we cannot command it next summer from the tram-road. This winter has been remarkable for scarcity of water, and I may say that, under any circumstance could we have driven the convertors during Feb. month. As a rule March is the worse month for water supply, but the present outlook is in favour of an increased supply, although a few days' frost, such as is usual in Mar., would alter the position as to water materially, hence, until the season comes, we cannot rely on a regular supply. We shall, however, do our best to get everything ready and at work as soon as possible."

Then he says he is glad to hear that both the pipes and fittings have been sent away, and then he deals with the cost of the output. We pointed out to him that at one time, when a larger quantity of ore was being taken out of the mines, the cost was less per ton. He says :—

"The quantity, as you state, is one reason of the increase, another is the increased rate of pay for mining, which you are aware was risen now several months since about 10 per cent. In reference to cutting down expenses, we are doing all we can in this direction. The only thing I know of, and that would be very immaterial, is the expenditure we arc making in repairing the old and almost uninhabitable cottages, and this I cannot see how we can do without at present, as unless we can find house room we cannot expect to keep our workpeople, or induce other steady men to come and settle down, which is a very important matter. Another consideration in favour of our continuing this work until it is completed is the remunerative return which the house rent, deducted from the men's wages, make on the money laid out."

Then he comes to the Moberg Mine, and says :—

"MOBERG MINE.

"You will see by the report that we have stopped the work here. We have driven the adit level now about 83 metres from surface, and we have found no improvement in the lode from the starting point—in fact, the outlook of the lode was so different to what we had expected, that recently we drove in the footwall, thinking that possibly the main part of the lodc was there, but in this we were mistaken, as we have practically found nothing in that direction, although we have driven much beyond the point where we might reasonably expect to find any lode or vein. This result is unfortunate, as we had hoped to have found here some rich argentiferous ores, which our refining works can turn to such a good account. I cannot, however, recommend anything further to be done there, it appearing now that our only chance for producing silvery ores of any considerable quantity is in Mosnap Mine, which needs a good deal of money to re-open, *i.e.*, to do it anything like satisfactorily."

The CHAIRMAN : I will now read to you the latest mining report, and which has not yet been published.

LATEST MINING REPORT.

"Miniug report, No. 166, for week ending Mar. 7, 1891 :—Hoffnung Mine : No. 2 adit level is yielding fully ½ ton per fm., and the two rises in the back 1 ton per fm. No. 3 adit level is of about the same value as last reported. Owing to four miners having to do some blasting for the smelting company we have been obliged to delay starting the rise in the back of this level. No. 4 level is now worth ¾ ton per fm. Ball's shaft has just been started to sink below No. 4 level. We have commenced to sink through an arch of ground at Murchison's mid-level to facilitate stoping, and render it more easy to prove the lode in this direction, from where we frequently find stones of ore rich in silver. Johannes Mine : We have cut about 3 ft. into the Johannes lode at the intermediate cross-cut, but whilst thus far we find it much improved in character and general outlook from when last seen, namely, at the deep cross-cut it does not, however, yield ore to value, although good saving stuff. We expect by the end of the present week to have struck the hanging-wall, and we purpose then opening on its course east and west, when we hope to find something better. The level driving east on Howard lode is now yielding good saving stuff, while the rise in the back, which we have resumed, is producing fully 1 ton per fm. Surface work and remarks : We are making headway with the dressing machinery, but owing to some of the men recently engaged having left us permanently, and others for three days on military duty, we notice an effect on the progress.—J. D. HOLMAN."

I have only now to read you two reports from the smelting works, and you will then be in possession of all the facts to date :—

REPORTS FROM THE SMELTING WORKS.

'The Secretary Bratsberg Smelting and Refining Works, Limited, London.

"Report No. 80 for week ending Feb. 28, 1891.

"Dear Sir,—The excavation for the roaster foundation is now finished, and two men are engaged in making drains to carry off the water, whilst five others are employed in trimming and collecting suitable stone for the foundation, which will be proceeded with without delay, men being added as required. All the pieces of the roaster have been driven from Strengen, and the bulk is now on the works, there only remaining some few pieces to be fetched from the station at the end of the Vraavand, the steepness of the roads rendering it necessary to leave a portion of the load driven over the ice at that place. The man is still driving down clay with two horses at the rate of about 2 tons per day.—T. F. SMITH."

"Report No. 81 for week ending Mar. 7, 1891.

"All the pieces of the roaster are now on the works, but the weather has been very much against the building of the foundation for same, as owing to the high wiud and driving snow stone laying has been nearly impossible ; no sooner had the men cleared a placc for a stone than it was filled up again. The wind has now moderated and the weather is fine, so no doubt better progress will now be made. The work of stone cutting has gone on well, and a number of suitable stones have been driven to the site of the foundation. We have been making inquiries regarding iron ore for a flux, and have had several samples, one from Vraavand which contains traces of copper, but it is very silicious, and, therefore, does not appear to correspond with your representations of the formation down there ; meantime we have done the necessary to secure an iron lode one of our workmen told us about close by here, and as soon as possible after the documents are in order, we shall try to find the spot and clear the snow away, so as personally to inspect it, and if found valuable it will be a good thing for us lying as it does close against our road.—T. F. SMITH."

DISCUSSION.

Mr. MASSEY : What was the date of the fire ?

The CHAIRMAN : Some time in Dec.

Mr. MASSEY : I believe there is usually delay in dressing operations at the mine in winter ?

The CHAIRMAN : Yes, in Jan. and Feb.

Mr. MASSEY : What extra delay will there be in consequence of this fire ?

The CHAIRMAN : About two months.

A SHAREHOLDER : What is the total quantity of ore raised since June 30 last year ?

The CHAIRMAN : As nearly as possible 120 tons a month. About five times that quantity comes from the mine, but 120 tons represents the concentrated ore.

A SHAREHOLDER : What is the value of the ore which has accumulated over there ?

The CHAIRMAN : About 7,000*l*.

Mr. MASSEY : Then the debentures will not exceed the value of the ore at the mines.

The CHAIRMAN : No. It is possible we might be able to raise money in another way, but we did not wish the shareholders to say afterwards, supposing anything untoward happened, that we did not tell them the exact position. Some years ago the mine was short of money, and the manager took upon himself to raise money, and continued raising money until he got control of the mine, and the directors could do nothing. We did not want things to get into that position again. I have seen some of the principal shareholders already, and I have got

APPLICATIONS FOR OVER 1,000*l*.

of the debentures. I do not think, therefore, there will be any difficulty in placing them, but your directors thought it was only fair the matter should be put before the shareholders, and they should have an opportunity of taking them up. It is not easy to obtain an overdraft at one's bankers in the case of a mining company, or obtain loans except on security, and we thought that if we had to give security, it was better the shareholders should have it than outsiders. (Hear, hear.)

Mr. BELLINGHAM : Has Bratsberg ever made a profit during its existence ?

The CHAIRMAN : Yes ; when it first started it paid dividends for a year or two, but you remember we came into office consequent upon the debt to which I have alluded, and there was nothing to be done but re-construct the company. Since that re-construction we have never yet been able to get it into a position to pay dividends, but we have done everything that could be done.

A SHAREHOLDER : As you never have made a profit, before raising debentures it might be better to consider the advisability of winding up. (No, no.)

Mr. J. BERGTHEIL (director) : What benefit will you derive from winding up a company situated in Norway, in which thousands of pounds are invested, simply because we come to the shareholders, not because we cannot get the money, but because simply that they may know exactly how matters stand, and have the chance of subscribing for the debentures if they wish ? To wind up means merely to throw away all the money you have spent, and give somebody the opportunity of marching, and getting it for a very small sum indeed.

Mr. MASSEY asked for a statement as to the present financial position of the company.

FINANCIAL POSITION.

The CHAIRMAN : After sending on the money to pay the Feb. wages we have cash in bank 619*l*. ; we have got mining stores, and also stores belonging to the shop, amounting to 4,945*l*., as nearly as we can get at it. With regard to the ore, we have got altogether 7,262*l*. worth of copper ore. That is taken at the market price of the day, but taken at varying prices according to where it is. That accounts altogether on the asset side for 12,826*l*. On the other side, our liabilities, so far as we can get them—and I think they are rather over-estimated than under-estimated—are outside creditors, 2,946*l*. ; smelting company, 2,350*l*.—say 5,296*l*. We have also got some very fine machinery up at the mine.

Mr. MASSEY : Do you see any reason to modify the favourable views you had at the last meeting ?

The CHAIRMAN : No, I look at it as a temporary difficulty only.

Mr. WELCH : Is your confidence in the new smelting works still unabated ?

THE MANAGER'S CONFIDENCE.

The CHAIRMAN : I have no reason whatever to doubt when we get this roaster to work we shall be able to work the smelting works

satisfactorily. To show you that our manager has confidence in the miue, I may tell you he has applied for 200*l.* of these debentures.

Mr. ROBBINS could not reconcile that statement with what had happened. He could not disguise the fact that at the last meeting both the chairman and Mr. Holman were very confident about the Moberg Mine turning out satisfactorily, and yet he (the chairman) had stated to-day that the Moberg Mine was a failure.

The CHAIRMAN : I do not think I expressed a very strong opinion personally as to the Moberg Mine. Of course, Mr. Holman then had hopes of getting rich silver ore, but it was not part of the general mining operations upon which we based our calculations when we talked of going into the smelting operations.

A SHAREHOLDER thought that some change should be made in the mining manager or in the officials generally. They said they had confidence in the mine, but yet they had failed to produce results. The only conclusion that the shareholders could arrive at in that case was that the fault must rest with the management.

Mr. HODGKINSON (director) : I have listened carefully to all the remarks that have been made, and I think there is a great deal to be said on the part of the shareholders. There is no doubt that we have been able to produce this conductivity copper, which has been sold at a good price, but we have not produced enough of it, and we have met with difficulties in connection with the smelting works which we did not foresee. You have had explained to you how those difficulties took place, and that we expect to surmount them. It seems absolutely necessary we should roast our ores. There are companies, and there is a compauy in Norway which produced splendid results with this process of refining copper, and I have a friend in Norway (I do not wish to mention names), a manager of a mine and of great experience, whom I think I could induce to go up to the Bratsberg smelting works and put us straight. There is evidently some difficulty—some technical, chemical or electrical difficulty—that interferes with the success we desire, and if this gentleman could be induced to go up—he would not go for money but for friendship—he would put that thing right at once. I do not feel satisfied with what has been done, and I have suggested to the board that we should send a man who thoroughly understands it. If the smelting company cannot take all the ore we can give them to produce into conductivity copper, which takes five or six weeks, I think we might produce a regulus, and send it over. If we had done that before we should be in funds. Our assets are in the wrong place—they are in Norway when we wanted them here. There are always delays in starting new works, which cannot be foreseen.

Mr. BELLINGHAM thought the copper company was being made the tool of the smelting company.

The CHAIRMAN said that was not so. The smelting company was really started to help the copper company, because unless the ore was smelted on the spot the cost of bringing it to Swansea would eat up all the profit.

A SHAREHOLDER asked whether Mr. Hodgkinson had already suggested to the directors that his friend should go to the mine.

Mr. HODGKINSON said he had not brought it formally before the directors.

A HOSTILE MOTION.

Rev. Mr. O'BRIEN, who said he was a holder of 2,000 shares in the mining company, and about 500 in the smelting company, thought they ought to have had more notice of the object of this meeting. It was only on Saturday last that he got a letter telling him that the object of the meeting was to raise 6,000*l.* Surely the people who had the management of the company ought to have known at an earlier date that they were coming to a financial crisis. He would propose that this meeting elect a certain number of gentlemen to form a committee to enquire into the state of the company's affairs, and report to the shareholders—whether the directors had done all that was possible, and whether the mine was capable of yielding profits.

Mr. ROBBINS seconded the motion, and said he thought if the directors had such confidence in the undertaking they might show it by foregoing their fees until such time as the ordinary shareholders had received a dividend.

Mr. J. H. A. SMITH agreed with the previous speaker so far as his expression of dissatisfaction with the state of the company's affairs, but he did not think the directors should be asked to go without their fees. If they wanted directors they must pay for them. Personally he did not believe in amateur directors. It was very evident, however, that some faulty advice was being given somewhere, and it ought to be enquired into.

Mr. BERGTHEIL said the directors were not at all responsible for what had taken place. The fact was the cold weather had come one month sooner than it was anticipated. They could not say the smelting works were a failure, for they had not yet been completed. As regards what fell from his colleague, Mr. Hodgkinson, about sending another expert, he had no objection, but he thought it was only due to Mr. Holman that he should have a fair trial, which he has not had up to the present.

A SHAREHOLDER : What arrangement have you made with the smelting company for the treatment of your ores ?

THE ARRANGEMENT WITH THE SMELTING COMPANY.

The CHAIRMAN : The arrangement with the smelting company is this—The smelting company have to pay the copper company in the first place the price that the copper company would have obtained for their ore if they had sent it forward to Swansea in the usual way, and over and above that they are to hand over to the copper company a certain percentage of the profits made in smelting the ore. While I am on my legs perhaps I may reply briefly to one or two things which have been said. I also object to having the smelting works denominated a failure. They have not fairly got to work, yet the stuff they have turned out has been quite satisfactory, but we have had pointed out to us that we must put up a roasting furnace. That furnace, although parts of it are up, has not been able to be put into operation. The only thing for us to do is to get that furnace into operation, and if it is then a failure, we must adopt strong measures, but up to the present we have not given it a trial. While feeling the value of Mr. Hodgkinson's suggestion — I think it has come a little too soon. When he first made it, I said "Let Mr. Holman first have a chance with his roasting furnace. If it does not succeed, then let us send an expert there." He has not had a chance yet. The stuff he has sent over was produced by roasting a small quantity of ore. I do not profess to be a mining expert, but we had Mr. Holman over here in Dec., and went fully into the thing with him. He is confident when we have got this roasting furnace up we shall be able to treat the ore satisfactorily.

A SHAREHOLDER : When do you expect these smelting works will be complete?

The CHAIRMAN : That is a very difficult thing to say. Roughly speaking we might expect to be getting copper over here by the end June—that is supposing the dressing machinery will be ready by May 1, as I do not doubt it will be.

A SHAREHOLDER said it seemed to him these delays were occasioned by things over which the directors had no control. He suggested they should give them the limit of time named by the chairman, and then meet again to learn the result before taking any further steps. It was no use throwing good money after bad.

GOOD ADVICE.

Mr. BERGTHEIL : I have no doubt the honourable shareholder who holds a large number of shares feels annoyed as I do at not receiving any dividends. He now comes forward, however, and proposes that a committee of enquiry be appointed to investigate the affairs of this company. I have not the least objection to a committee of enquiry. It takes a lot of labour and responsibility off the shoulders of the directors, but is this the time for it? You are going to swop horses while you are crossing a stream. Do not misunderstand us. We have taken you into our confidence. We have also told you we may get the money without your assistance, but you now come forward and say this affair is all bad, the management is bad; it is all a failure, and you want to appoint a committee. What will be the result? Those who would have come forward with the money will back out. If you will simply wait until you have got over the drift, then by all means appoint as many committees as you like, but do not do it just now; this is not the time. (Hear, hear). You have got liabilities, and the parties at the mine know all about it and do not object to give us credit. We come to you and say, "We will subscribe ourselves to these debenture bonds," as we have already done, and we give you a chance of having a share of them, as we do not wish to go to the public and give the 8 per cent. If you do not want to subscribe you need not do so; we can get it outside.

Mr. MASSEY thought the suggestion as to giving Mr. Holmau another chance a good one. He did not think a committee should be appointed, but that they should wait uutil the general meeting in Oct. (Hear, hear.)

THE RESOLUTION WITHDRAWN.

Rev. Mr. O'BRIEN said he was quite willing to withdraw the proposal for the time being as the shareholders were iuclined to support that view. He wished everything to be as unanimous as possible. (Hear, hear).

The motion was then withdrawn.

Mr. J. H. A. SMITH proposed a vote of thanks to the chairman, which was carried.

The proceedings then closed.

THE SOUTH AFRICAN GOLD TRUST AND AGENCY CO.

NO DIVIDEND.

THE second annual general meeting of this company was held on Wednesday at Winchester House, Old Broad Street.

Mr. W. M. Farmer

presided.

Mr. WALTER F. ANDREWES (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

POETIC SPEAKING, BUT NO RESULTS.

The CHAIRMAN, in moving its adoption, said : Gentlemen, the report deals fully with the business, and I can but re-emphasise the opening paragraphs, which all who are cognisant of South African matters can understand, and, I fear, in many instances, can by painful experience endorse. But some happier shareholders may have only this link connecting them with our southern sphere of work, and to those I would say that this company (that lives best, and thrives most in the sunshine of prosperity) was formed principally as a founding company, to seek for and examine schemes, and, if good, present them to an appreciative public. Now, however good, sound and promising a scheme may be, it is useless if the public are not appreciative, or if the times are out of joint, and to this latter cause we have to lay the blame as to our inability to declare at this meeting any dividend. The inflation of stocks in 1889 and 1890 led to excessive speculation, resulting in a complete collapse, causing ruin to scores, the failure in South Africa of three of the South African banks, and the depreciation and disfavour here of everything South African. This, with some difficulties, and a most unfortunate further urging downhill by South American revolutions, has hampered the work of your compauy, and demoralised their field for action. It has been, in our opinion, useless to bring anything before the public that, however good, was likely to be unsuccessful. And, gentlemen, you must, in companies working on the lines of this Agency and Trust, accept a bad year with patience and good heart, and look forward to better results in the future. It has been the aim and policy of your directors, during the anxious periods I have dwelt upon, to carefully watch, nurse, and improve existing investments, to take part with other kindred institutions in any re-construction scheme that on enquiry proved to their judgment to be sound, and to pave the way to participate in the front rank in the riches of those territories in South Africa, under a sphere of influence of the Chartered Co., and the guiding spirit of the Hon. C. Rhodes, a man in whose track it is worth following. The chairman then procedeed to deal with the various items of the accounts. It would be seen, he said, that the capital had been increased by the issue of 87,811 new shares, and the premiums, when paid, 43,000*l.*, would be transferred to the reserve fund. The reserve fund was invested in De Beers shares, in which the directors had every confidence, both as an increasing divi dend paying concern as well as an investment, that would appreciate

considerably. Sundry debtors was an item of advances made on interest, and for obtaining options which were well secured. The open accounts were good, and would be paid as they matured. The expenses, as specified in the revenue expenses, 5,421*l.*, might seem large, but in carrying on such a business as theirs it was impossible to avoid a considerable expense. With the present depressed state of affairs, the directors had made arrangements whereby considerable reductions would be affected in the South African Agency. Having referred to the remarks of Mr. Hamilton, the chairman at the last annual meeting, he proceeded to state that he wished to in this connection refer to a matter concerning one of their companies brought out in 1889—the West Randt Estates and Land Co. It had transpired that the favourable views entertained by this company, based upon the reports of Mr. Struben, the discoverer of the Witwatersrandt Goldfields, and on which they placed the venture before the public,

HAD NOT BEEN JUSTIFIED BY EVENTS.

Gold was there, and in some instances the assay was very high ; yet the reef so well reported on by Mr. Struben had not, on being opened up, fulfilled expectations, and from the latest reports the property did not seem likely to pay, as far as gold mining was concerned, until the railway came nearer, or they discovered more profitable reefs. The directors of the West Randt Company approached this company, and while acknowledging the *bonâ fides* of the South African Co., and absolving it from any misrepresentations of facts, considered that some concession was due to their shareholders. This matter had received the very serious consideration of the board, and under all the circumstances an arrangement had provisionally been entered into by which a certain number of vendors' shares were to be returned to the West Randt Co., and an extension of time, under certain conditions, was to be granted for the payment of the balance of cash due on the purchase. This property consisted of 8,000 acres of freehold and leasehold land, and would, undoubtedly, from its position increase in value by the advent of railways. For a future successful source of income they had planted a vast number of gum trees, which it was computed would be worth in three to five years over 2*l.* each, and when the railway reached the Randt they might be able to work the low grade ore at a profit. The board hoped that the shareholders would endorse their action in this matter. The surrender of the vendors' shares would make no alteration in the figures of the accounts, as they were not valued. It would be seen from this that it was the policy of the board to watch over and support to the best of their ability companies with which the Trust had been or would be associated. In conclusion, the chairman said : The future of your company seems full of promise. The depression over all things will not last ; a brighter period in our money markets may as confidently be looked for as in our weather ; and in a glorious period of prosperity the depression of the present will be entirely forgotten. As I remarked, the report treats so fully on the various matters we are interested in that there is little left for a chairman to speak about. The present outlook of the Ore Reduction Co., referred to at our last meeting, is as bright as we could expect. The arrangements made with other kindred companies leave us in reasonable hope of very substantial profits in the near future, arising from the recognised and increasing value of the re-organised properties on the Deep Levels—all of which so far go to prove conclusively that the deeper you sink the richer the reefs are—and the holdings in Kleinfontein, May Deep, Village Main Reef, and others, we believe ere long will enable us to address you in a tone of congratulation instead of apology. Whilst the prospects before you in the Centre of Africa—interested as you are in the Mashonaland Agency, Limited, the holders of a portion of one of the original units—are, in the opinion of your directors, bright in the extreme, there is also an outside interest (oil, this time) that we trust will soon develop sufficiently as to warrant our asking your support in forming a company. The attention of the board is now being directed to a proposal that, if carried out, will prove of great advantage to the shareholders of the companies interested—tend to consolidate interests, lessen expenses, and insure permanent and regular returns. The negotiations are not sufficiently advanced for me to give particulars, or even to assert that the fusion of interests will actually take place.

FUTURE.

We have done our best in conserving the assets of the company. You will note your capital and reserve are intact, and fairly invested ; the prospects of your undertaking are brilliant (the fates not determinedly being against us) ; and under the adverse circumstances of 1890 we now congratulate you on the position of the Trust, but you must realise that when we call upon you for support in a new undertaking you should respond, and as partners in a good concern, endeavour to influence new business to your company. If we work together, directors and shareholders, success is assured, and with this I propose the adoption of the report.

Mr. P. Tarbutt seconded the motion.

Mr. Montgomery said that the charges appeared to him to be exceedingly heavy, and it was a most unsatisfactory thing that

THE DIRECTORS' FEES AMOUNTED TO JUST ABOUT THE SAME AS THE NET PROFIT FOR THE YEAR.

Mr. E. T. Shute asked the chairman to state the market value of the company's investments at the present time.

Mr. Webb approved of the action taken by the board in regard to the West Randt Co. He thought the board made a mistake last year in paying so large a dividend as they did—and now they dropped to none at all. They ought to have adopted a more conservative policy. (Hear, hear.)

Mr. Davies (one of the directors) stated that the reason why the board paid so large a dividend last year was because, by an unfortunate oversight, it was provided in the agreement with the founders that they should have their share of the net profits, whether the ordinary shareholders took theirs or not. The directors, therefore, at that time decided to give the shareholders their share at once.

IF IT WAS A MISTAKEN POLICY,

the board had only acted for the best.

After remarks from other Shareholders, the Chairman, in reply to various speakers, said that full details as to expenditure, &c., they were not disposed to give at public meetings, but the secretary would afford them to every shareholder at the office. As to the market value of the company's investment, it was a subject that had been gone carefully into, and considered by a committee of the board, and they were perfectly satisfied that the amount put down in the accounts, 125,758*l.*, was under the market value of the securities at that date when the valuation was made. And since then there has been a little improvement. The board would consider the question of half-yearly general meetings, and would either, he thought, adopt that suggestion or send out to the shareholders an interim report as to what had been done.

The resolution was then carried.

The other formal business having been transacted, the proceedings closed with the usual vote of thanks to the chairman for presiding.

WOODHOUSE AND RAWSON, LIMITED.

THE ELECTRIC FITTINGS OF A YACHT.

The electric lighting of H.S.H. the Prince of Monaco's yacht, Princess Alice, has been placed in the hands of Woodhouse and Rawson United, Limited, electrical and mechanical engineers, 88, Queen Victoria Street, E.C. The engine is of the single cylinder vertical type, running at from 200 to 250 revolutions per minute according to the E.M.F. required, with a steam pressure of 150 lbs., and is provided with an extended bed plate for receiving the dynamo, which is coupled direct to the engine, and gives, when running at 250 revolutions per minute, current for 100 16 c.p. lamps at an E.M.F. of 135 volts, this particular E.M.F. being provided to allow of charging the accumulators. The number of lamps installed throughout the yacht will be about 100, the fittings being of an elaborate description, and designed specially for this installation. The whole of the arrangements are not yet completed, but in all probability there will be provided a set of accumulators, a projector, and also a powerful submarine arc lamp for carrying on scientific observations at night.

AMERICAN BELLE MINES, LIMITED.

SNOWSTORMS RENDER WORK DIFFICULT.

Information sent to the shareholders states as follows :—

Cable.—A cable, dated Mar. 14, has been received from Mr. Crawford as follows :—"Impossible to estimate value ore mined for the month of Feb. Did not ship any on account of deep snow, great quantities of which have fallen. Present storage capacity limited. Directed continuance of developments. Have not received estimate of expenses for Feb. month. There is no means of communication with the mines. Great quantities of snow have fallen past five days."

The statutory meeting of shareholders will be held in accordance with the enclosed notice at 12 noon on Mar. 25 next.—B. McNeill, Secretary.

Holloway's Pills.—Important for the delicate. It is difficult to determine which is the more trying to the human constitution, the damp, cold days of autumn and winter, or the keen, dry, easterly winds of spring. Throughout the seasons good health may be maintained by occasional doses of Holloway's Pills, which purify the blood and act as wholesome stimulants to the skin, stomach, liver, bowels and kidneys. This celebrated medicine needs but a fair trial to convince the ailing and desponding that it will restore and cheer them without danger, pain, or inconvenience. No family should be without a supply of Holloway's Pills and Ointment, as by a timely recourse to them the first erring function may be reclaimed, suffering may be spared, and life saved.

THE VOGELSTRUIS GOLD MINING COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN that an EXTRAORDINARY GENERAL MEETING of the Vogelstruis Gold Mining Company, Limited, will be held at the Terminus Hotel, Cannon Street, in the City of London, on WEDNESDAY, the 25th day of MARCH, 1891, at 12 o'clock noon, when the subjoined Resolutions will be proposed.

Should the Resolutions be passed by the required majority, they will be submitted for confirmation as Special Resolutions to a second Extraordinary General Meeting, which will be subsequently convened.

Resolutions.

1. "That the capital of the Company be increased to £300,000 by the creation of 50,000 shares of £1 each."

2. "That the new shares be called Preference Shares, and that the holders thereof be entitled to be paid out of the profits of each year a preferential dividend for such year at the rate of 10 per cent."

3. "That the new shares be offered to the members in proportion to the existing shares held by them, such offer to be made in such manner as the board shall approve; and, subject thereto, such shares may be disposed of in such manner as the board think most beneficial to the Company."

The Transfer Books will be closed from the 17th to the 25th March, both days inclusive.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, THURSDAY EVENING.

A RETROSPECT WHICH EMBODIES A FEW HINTS FOR INVESTORS — AN ALL ROUND THE WORLD "PERSONALLY CONDUCTED" MINING TOUR — AUSTRALIAN BROKEN HILL CONSOLS—DESCRIPTION OF THE WEEK'S BUSINESS.

THE market for the most part, with the exception of the dealings in Australian Broken Hill Consols (referred to lower down), has been in a state of suspended animation. It is true that in a few other cases there have been some symptoms of life, and true also that generally there have not been wanting indications of big business in the sweet and near by-and-by, but the intervention of the Easter holidays, and the desire to promptly close the account, have been the twofold obstacle against which prices have beat themselves in vain.

The attendance on the market has, however, been exceptionally large, and brokers have not been destitute of a Micawberish feeling that something would turn up. Better prices are expected, and though hope may tell a flattering tale, yet the story, as the novelists say, seems really to be "founded on fact." There are many shares, which after the holidays ought to see greatly improved prices, and we have not been, and shall not be now, slow to indicate at least a few of them. We ask our readers to accompany us whilst we take them for a brief mining tour round the world—"personally conducted."

Now that the weather is moderating, and that the time of the singing of birds has come, there are sundry American mines that seem likely to advance to the front, including Flagstaff. Emma, Eberhardt, possibly Elmore, Dickens Custer, not to speak of those phenomenal properties, Yankee Girl, American Belle, and New Guston.

In regard to South African Mines, we again take up our parable and advise our readers to proceed with the greatest caution, and not in any case to buy shares without first obtaining all the information possible. The miserable tale told this week at De Kaap meeting, and the damaging report about Hill's Waterfall, are the lights that warn the investing public from a joint-stock shore, bestrewn with the wreck of many blighted hopes and the *débris* of many bogus companies.

In India we have, however, a veritable goldfield, and one that can be recommended from all points. Whether we regard the Indian gold mines from the point of efficient management; from the fact that they are in British territory, and subject to British rule; that the reefs are proved, and their paying value ascertained; that Indian labour is cheap and good; that no special difficulties present themselves in any direction, and that the cost of working is being gradually reduced, whilst more and more of the precious metal, by improved appliances, is being extracted from the quartz—whether, we say, the case of Indian mines is regarded from any of these standpoints, we are bound to own that here, if anywhere in the wide world, mining has a fair and legitimate chance, and, indeed, almost without discrimination, the shares can be recommended at present quotations. A great deal has lately been said about the mines of Bengal, for which there is an active market in Calcutta. We have given details respecting them already, and understand that steps are being taken to place some of them on the English market. They must, however, to be acceptable, come with something like the credentials of success, and we await to see the case they can present, and shall judge accordingly.

The mines of Central and Southern America are also looking well. Take those of Brazil. St. John del Rey has practically secured its capital. Its position in mining is not unlike that of the Manchester Ship Canal—the works have proceeded so far that the money must be found to finish them. We have before described St. John del Rey shares as the best lock-up on the Mining Market, and to that opinion we adhere. Don Pedro has given a good account of itself during this year, and of late the shares have risen considerably above par. This is a re-constructed company. So also is Frontino and Bolivia, the shares of which quite recently doubled in value almost in a few hours. We anticipate for this concern larger profits, bigger dividends and better prices. Antioquia should also come a little more to the front.

If we turn to Venezuela we shall find the mines still struggling with difficulties, but their most hopeful feature is the greatly diminished costs of working. Amongst the foremost we put Potosi, which has really good prospects, the nature of which we described a fortnight ago. Venezuelan Austin affairs were also dealt with in these columns only a week since, and need not be referred to now. Yuruari held a stormy meeting to-day, but in the end the board were triumphant. Certain shareholders growl and gnash their teeth at the management, but when they try conclusions with Mr. Watt in a meeting they are always discomfited. Though this may be marvellous in the eyes of some, it is a patent fact that cannot be blinked at. The news from El Callao has been better of late, and we anticipate for Callao Bis shares during the currency of the next few months a considerable advance in price. The new property appears to be turning out excellently.

Then in regard to hydraulic mines, the outlook for Colombiau, Orita (temporarily under a cloud), Gravel Gold, Loma, and Colon cannot be described as other than favourable, and we shall greatly rejoice if all these concerns justify the many good things that have been spoken in their name.

There are certain copper companies also that merit attention, and in this connection we place Libiola, the price of whose shares is ridiculously low in the face of the facts reported to the recent meeting. Intrinsically, they seem worth double the present quotations. The copper mines of Chili cannot be in a good way owing to the revolution, though as yet we have not heard that it has affected them. The production of the great Spanish and Portuguese companies knows no diminution. The general outlook for this department is decidedly encouraging. Bratsberg, it is also thought, will ultimately overcome its difficulties.

In Australia, the position of affairs is decidedly better. Day Dawn Block, Bonnie Dundee, Kangarilla, Day Dawn P.C., Gympie Great Eastern, and a few other concerns are beginning to work round into something like success, or have already done so. As for Australian Broken Hill Consols, a special paragraph lower down is devoted to this most notable concern.

Let us, last of all, "personally conduct" our readers to Cornwall, where the mines are struggling with heavy calls, sometimes alleviated by correspondingly heavy dividends. In fact, in some degree they appear to be emerging from the cloud which has enveloped them for many weeks past. Carn Brea paid a dividend this week of 30s. for the quarter, and is now the premier mine of the country—even the famous Dolcoath taking a back seat. Tincroft has also paid 10s. for a similar period. On the other hand, West Frances

asks its shareholders to pay up 5s., and Wheal Agar 7s. All the mines may be described as looking well, particularly Tincroft and Carn Brea, in their lowest levels.

We have thus briefly, and we know imperfectly, surveyed the mines of the world. The retrospect is by no means disagreeable. If we were to enter into minuter details it would be seen that through the painful stages of re-construction, the thorny path of preference shares, or the by-no-means sweet pastures of debenture issues, various mining companies are working out their financial salvation, but at the same time there is a good deal about them which justifies expectation and stimulates hope.

By the foregoing stages we come to what has been actually done during the three or four days which have constituted the business week.

It was in the early autumn of last year we began to call attention to Australian Broken Hill Consols shares, and had previously given to the reports from the mines all the space that was necessary for their reproduction *verbatim*. Later on we more than once spoke of the company when dealings in the shares became a notable feature on the Mining Market. This week they must have changed hands by thousands at advanciug prices until they reached 45s., at which time the general rumour was that they would go straightaway to 3*l*. Orders were received from all parts of the country, and were executed with the greatest speed. Unhappily, about this time big sellers appeared to take profits, and the shares relapsed, though it is thought that much higher prices than any yet seen will be obtained after the holidays. Indeed, but for the intervention of Easter, it is probable that the shares would have closed many points higher than they touched at the finish. On Saturday they had advanced to 35s., and the forenoon of Monday to 45s. There was an immediate recession to 33s. 9d., and after being much lower than that, the market to-night closes firm at 32s. 6d., with every prospect of going better in the latter part of next week when brokers settle themselves once more to business. The dealings since Wednesday morning have been ex the shilling dividend declared. There has been life in Day Dawn Block, Day Dawn P.C., Kangarilla, Gympie Great Eastern, Golden Crown, Bonnie Dundee, all of which have been better since Monday.

In the Indian section, there have been large dealings in Balaghats, which have advanced considerably, as week by week we have proclaimed they would do. Mysores have been 6¼, the highest price reached for some time, and Goldfields of Mysore have been over 2. Nundydroogs have also been firm, and Indian Consolidateds inquired for. Mr. Malcolm Low is back from India, and speaks with enthusiasm of what he saw. Is it too much to ask him to write a short account of his impressions, and send it to the shareholders of Ooregum, Indian Consolidated and Colar Central. or will this most trusted sphinx open his mouth at a meeting? The shares of Mysore Harnhalli, a sort of mongrel concern with which we advise our readers to have nothing to do, have been dealt in, but transactions have been confined to a little *coterie* operating for the market rise. As to the wretched state of the quartz, the reports of the manager only too truthfully proclaim it.

The Copper market has been firm, but does not call for special attention.

The news from Almada is more serious than was expected, and the shares fell upon it. American Belles were in demand after the meeting, and the declaration of a 6d. dividend, and the sister companies—Yankee Girl and New Guston—were also in demand for similar reasons, with the exception that in the two latter cases the dividends were far more substantial. These concerns have lately had to contend with a great deal of snow. De Lamar shares, the concern introduced a few weeks ago, have been quoted up to half a crown premium. We are informed that the shares were greatly over-applied for. St. John Del Reys have been in fair demand, but Palmarejos are down upon the report issued by the Mexican Central Railway Co. It is now stated that the mill will be ready and at work in May.

In the Kaffir market, its gold section is slightly better, but was not helped by De Kaap meeting or Hill's Waterfall report. Johannesburg Pioneers are seriously down. Vogelstruis shares rose upon the satisfactory meeting held yesterday, at which most unexpectedly encouraging letters were read from Mr. Struben. the director now on the spot. These shares seem good to buy. We know the management, and are persuaded that the company's funds will be properly expended and the mines thoroughly tested. In the Land department, the changes have been slight and mostly for the better, notably so in the case of Goldfields of South Africa and Explorings. Diamond descriptions have moved downwards, led along that too familiar way by De Beers.

Cornish shares have moved unevenly, but, in spite of the dividends declared by Carn Brea and Tincroft, prices have relaxed, and on the whole are lower than last week.

We have said enough to indicate that after the holidays the outlook on the Mining Market is peculiarly hopeful.

KAFFIRS.

The market for South African shares has been very quiet all the week, and few alterations have taken place. Crown Reefs have been the most favoured, and Pigg's Peak Preference have also advanced. Stanhope, Langlaagte, and Wemmer, however, are all down.

Business.—The rises are:—Pigg's Peak Preference, ⅛; Sheba, 1s.; Crown Reef, ⅜; Henry Nourse, 1/16; Kimberley Roodepoort, ¼; Vogelstruis, 1s. 6d.

The falls are:—Bankets, 6d.; Forbes Reef, 1s. 6d.; Langlaagte, 1/16; Langlaagte. Block B, 3/16; Luipaards Vlei, 1/16; May Consolidated, 6d.; Stanhope, ¼; and Wemmer, ⅛.

DIAMONDS.

With the exception of De Beers, which rose slightly, only to fall again however, there has not been much doing in this class, although the tone is firm.

Business.—The only changes to note are a fall in De Beers of 5/16; and in Burma Ruby of 1/16.

SOUTH AFRICAN LANDS.

There was a slight improvement in these shares at the commencement of the week, which, however, has not been wholly maintained, many of the dealers having gone out of town for the holidays. Exploring and British South Africa have attracted most attention.

Business :—The following have risen :—Bechuanaland, $\frac{1}{16}$; British South Africa, $\frac{3}{16}$; Exploring, $\frac{1}{2}$; Goldfields of South Africa, $\frac{1}{4}$; South African Gold Trust, $\frac{1}{16}$; Transvaal Gold, 1s. 6d.; Transvaal Lands, $\frac{1}{16}$.

The following have fallen :—New Grahamstown, 6d.; Ophir, 3d. Sutherland Reef, $\frac{1}{8}$.

INDIANS.

One of the features of this market has been the steady fall in Mysore Harnhalli, and although they can now be purchased for a few shillings each, we should not even at these prices recommend a purchase. Mysore Gold and Goldfields have been remarkably firm and have improved slightly. There is no doubt these shares are well worth buying at present prices.

Business : A rise has to be recorded in Goldfields of Mysore, $\frac{1}{8}$; Mysore, $\frac{3}{16}$; Nundydroog, $\frac{1}{8}$; Nine Reefs, 3d.; Ooregum, $\frac{1}{8}$; but a fall is shown in Mysore Reefs, 6d.; Mysore Wynaad, 3d. and South-east Mysore, Preferred, 3d.

AUSTRALIANS.

The feature of the week has been the heavy dealings that have taken place in Anstralian Broken Hill Consols, many thousands of shares changing hands daily, and prices varying every few minntes. Last Friday evening they closed at 22s., 24s., and after rapidly rising to 55s., they fell back to 30s., but close to-night slightly firmer at $1\frac{9}{16}$ to $1\frac{5}{8}$. Bonnie Dundee and Day Dawn Block have also improved, and an inquiry has sprung up for Gympie Great Eastern and Kangarilla.

British Broken Hills have been freely offered, and prices have, in consequence, considerably receded.

Business.—Those that have risen on the week are Australian, Broken Hills, 9s.; Bonnie Dundee, 1s. 3d.; Cumberland, 6d.; Day Dawn Block, 1s.; Etheridge, 3d.; Gympie Great Eastern, 1s.; New Queen, 3d.

Those down are British Broken Hills, $\frac{3}{8}$; and Mosman, 3d.

HOME MINES.

Those showing a fall are Carn Brea, 2; South Condurrow, $\frac{1}{2}$; South Frances, $\frac{1}{4}$; Tincroft, $1\frac{1}{2}$; West Kitty, $\frac{1}{4}$; Wheal Agar, 1; Wheal Grenville, $\frac{3}{4}$.

The rises are Drakewalls, 3d.; West Frances, $\frac{1}{2}$; and Wheal Kitty, $\frac{1}{8}$.

COPPER.

A somewhat brisk business has been done in this class, and prices have fluctuated considerably. Still on the whole an improvement has taken place, and the market closes firm for such shares as Libiola, Tinto, and Copiapo.

Business.—A rise has taken place in Libiola of $\frac{1}{4}$ and Rio Tinto $\frac{1}{4}$; whilst a fall is shown in Bratsberg of 3d. and Copiapo, $\frac{1}{4}$. Other prices remain stationary.

GENERAL FOREIGN SHARES.

A fairly good business has been done during the past few days and there is no doubt but for the intervention of the holidays prices would have advanced. Tolima A, Pahang Corporation, American Belle, and Yankee Girl all show an improvement, notwithstanding the fact that in the last two instances the shares are quoted xd. El Callao, Fortuna, Golden Gate, and Linares are lower, but many other shares have changed hands without causing an alteration in prices. Speaking generally, this market closes firm.

Business : The following have risen :—Amador, 1s.; American Belle, 1s.; Colorado, 3d.; Emma, 3d.; Flagstaff, 9d.; New Russell, 3d.; Pahang Corporation, $\frac{1}{16}$; St. John Del Rey, 6d.; Tolima, $\frac{1}{4}$; and Yankee Girl, 6d.

The following have fallen :—Barrett's, 3d.; Colon, 6d.; El Callao, $\frac{1}{8}$; Fortuna, $\frac{1}{4}$; Garfield, 6d.; Golden Feather Channel, 1s.; Golden Gate, $\frac{3}{16}$; Linares, $\frac{1}{2}$; Palmarcjo, 1s.; and United Mexican, 1s.

The following list shows the principal changes which have taken place :—

	Last Week.			This Week.

LATEST FROM THE MINES.

INDIAN MINES.

NUNDYDROOG.—Telegram : — "Cut lode 520 level north of Taylor's, 4 ft. wide, assaying 3 ozs."

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—Telegram from the managing director, dated Mar. 20 :—"$4\frac{3}{4}$ tons of ore, containing 38,675 ozs. of silver, raised during the fortnight. Seventh shipment consisting of $4\frac{3}{4}$ tons of ore, containing 38,675 ozs. of silver, will be shipped for London, per steamer leaving Adelaide on Apl. 1."

WENTWORTH PROPRIETARY.—The share certificates (fully paid) will be ready for delivery on and after Apl. 2, in exchange for letters of allotment and banker's receipts. A cablegram, dated Mar. 23, has been received from the local advisory board in Sidney : "Local advisory board visited mines, Golden Gate and Crinoline; veins looking splendid. Have already re-commenced work day and night stoping ore for shipment. Have shipped case samples, value 400*l*., per s.s. Ballaarat. Jackass have struck exceedingly rich ore."

MIDAS.—Cable from the mine : — "Yield 12 ozs. from three machines."

FOREIGN MINES.

CALLAO BIS.—The following cablegram has been received from the superintendent at the mines :—"560 tons; 660 ozs. gold; 162 gold amalgam ; Mar. 19 ; mine is looking well."

ELKHORN.—Cable information from Capt. Plummer:—"Bullion shipped for week ending Mar. 21 was $9,000."

PINOS ALTOS.—The directors have received telegraphic advice of the shipment of $32,000, representing the Feb. run at the mine ; also that the bullion out-turn for the week ended 14th inst. was $8,150.

The New Pierrefitte Mining Co., Limited, has sold 250 tons blende to Messrs. Dillwyn and Co., at 4*l.* 4s. per ton, F.O.B. Bordeaux.

Vishnu.—The manager cables under this day's date, Mar. 24 :—"The vein in the rise contains very rich ore, 12 ins. wide (which) has the appearance of being a good body of ore."

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

Paarl Central.—Crushings for last month, 850 ozs.'

Crown Reef.—The directors have declared a dividend of 25 per cent., payable to all shareholders on the register on Apl. 3.

New Jagersfontein.—Under instructions from the head office at Kimberley, the transfer books of this company will be closed from Mar. 31 to Apl. 7 inclusive.

London and South African Exploration.—The directors of this company have declared a dividend of 3s. per share, less income tax, for the quarter ending the 31st inst., payable on aud after that date.

North-Eastern Bultfontein.—The directors have advice by letter of a test-washing of top blueground, giving the following result :—"76 loads yielding 16 carats of diamonds ; estimated cost, about 3s. per load ; estimated to realise 5s. to 6s. per load."

Edwin Bray.—The mine manager reports for the week ending Feb. 21, as follows :—The mine is still keeping ahead of the ropeway, and there has been no difficulty in getting enough quartz for the mill, not counting our stock from No. 1 quarry. We always have more than one week's supply in advance of what we require daily. The ropeway is working well, and has brought down 968 buckets during the week, representing 242 tons of quartz. We have now 25 stamps continuously at work, and if it had not been for the heavy rain we had during the week, I do uot think one stoppage would have occurred.

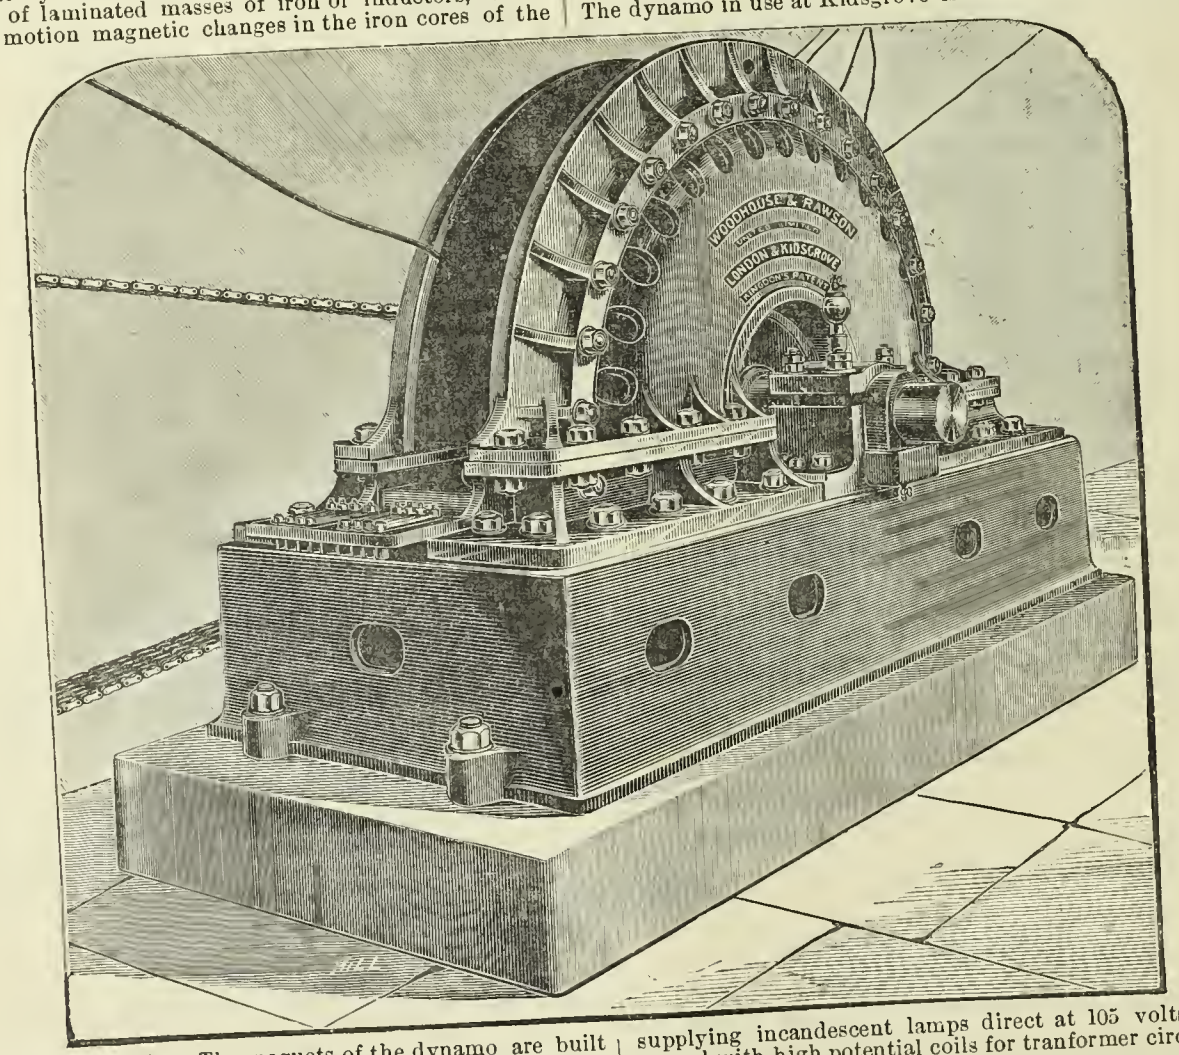
Pigg's Peak Estate (Feb. 16).—Letter from Mr. Murray :—Your favour of Jan. 8 and 15 came to hand by last mail. I wrote you last on Feb. 8. Mining : I have nothing new to report under this head ; we are sending a fair grade of ore to the battery ; occasionally we come upon rich leaders, but they do not hold out. The rich shoot of ore from which the 70 tons of ore was taken appears to have pinched out, as up to the present I have been unable to obtain more than a ton of the same. There is a possibility that it has pitched at a greater angle than it has on the surface, if so, I will strike it again this week as I am driving for it from the main cutting. Road : I have one white man and 14 natives repairing the trail from here to the Devil's Bridge, and have also let a contract from this point to Barberton. Report from Mr. Murray, week ending Feb. 14: Devil's reef, No. 1 cross-cut driving north-east, total length, 65 ft. ; no gold in panning, and ground harder. No. 2 cross-cut driving north-east drove for the week 9 ft. ; total length, 85 ft. ; several branches of white quartzite passing through the lode ; no gold in panning. Cutting in shaft, 14 ft. long and 14 ft. deep, and 5 ft. wide. Turning out good stuff at present, and all going to battery. No. 3 cutting under main shoot, 88 ft. long and 6 ft. deep ; taking dirt to mill. Cuttings in different parts of the week, besides what is named, amounting to 360 ft., and a depth of 3 ft., show no gold in panning. Peak : Cross-cut is in very hard rock, carrying a few colours ; contractor only makes 5 ft. a week, working night and day ; total length driven, 15 ft. Report from Mr. Murray for week ending Feb. 21 : Devil's reef : Shaft on top of the hill cutting sunk 14 ft. ; total depth, 28 ft. ; taking stuff to the battery ; rich leaders running through the ironstone belt. Cutting in roadway, 424 ft. north-east from main shoot, showing little gold in panning. No. 3 cutting still turning out oz. ore, all going to the battery. No. 1 drive north-east drove for the week 7 ft. ; total length, 72 ft. ; no gold in panning. No. 2 drive, north-east, drove for the week 4 ft. ; total length, 89 ft. ; the same as last report. Driving on top of the main shoot ; drove 9 ft. ; shows a little gold in panning. 100 ft. of cutting done in differeut parts. Fourteen men (kaffir) and one white man working on the Barberton trail ; remaining boys conveying sacks and loading waggons. Peak : Cross-cut has been advanced 6 ft. ; total, 21 ft. ; no improvement. Copy of letter from Mr. Murray, dated Feb. 23 :—Mining : Work is still being pushed on the Devil's reef ; during the week we cut two rich leaders of ore, 14 ft. distant from one another. On one we have sunk 28 ft., and on the other 6 ft., both still showing well. I am putting in a drive on top of the main shoot of ore to try and cut the rich leader the two first crushings were taken from. At a point 424 ft. north-east of the present workings, and close to the roadway, I have put in a cutting from which I am getting a 2 dwt. prospect. Peak : Cross-cut has been advanced 6 ft., still in hard rock. I will stop this week, when the 30 ft. is completed, unless a decided improvement is shown. Weather : The weather has not been very favourable the past week for transport, however, we are doing the best possible under the circumstances.

THE KINGDON PATENT INDUCTOR DYNAMO.

Our illustration represents a 70 unit alternating current dynamo, designed by Mr. J. A. Kingdon for central station work, and used by Messrs. Woodhouse and Rawson United, Limited, of 88, Queen Victoria Street, London, E.C., for lighting their engineering works at Kidsgrove, Staff. In this machine the coils correspond both to the armature coils and to the field magnet coils of an ordinary alternating current dynamo and fixed, while the revolving wheel carries a number of laminated masses of iron or inductors, which produce by their motion magnetic changes in the iron cores of the armature or secondary coils. The magnets of the dynamo are built up of a number of stamped iron plates of the shape shown in the diagram, and bolted between two stout circular cast iron frames divided horizontally along the centre line. The lower frames are bolted to a stout cast iron bed plate.

The inductor wheel is of exceptionally strong mechanical construction, and consists of 16 inductors, which are constructed of a number of soft iron plates, insulated from one another and bolted between two stout steel plates mouuted on a hub keyed on to the main driving shaft. Between the iuductors and steel plates are two brass rings which magnetically insulate the inductors from one another. In the diagram the poles marked N, S, N, S, N are field magnet, or primary poles, and are permanently magnetised with the polaritics indicated by the current from a small exciter. The intermediate poles have their polarities constantly changed as the inductor wheel rotates, and alternating currents are accordingly generated in the coils with which they are wound.

There are no brushes or rubbing contacts, all the coils being fixed. The dynamo in use at Kidsgrove is wound with one set of coils for supplying incandescent lamps direct at 105 volts ; another set is wound with high potential coils for tranformer circuits, while a third set is used for arc lamps.



Two machines of similar, though slightly different design, have been supplied by the company, and erected at the Woking Central Station. These are wound for 30 ampères at 2,000 volts, and are coupled direct to triple expansion engines, which were also manufactured by Messrs. Woodhouse and Rawson United, Limited, at Kidsgrove.

FOREIGN MINING INTELLIGENCE.

ANGLO-MEXICAN.—The superintendent reports for the week ending Jan. 24 :— East drift : 726-ft. level has been extended during the past week by hand drill 4 ft., making the total distance 513 ft. The face of this drift shows a small streak of ore of a good grade, but there are as yet no indications of a widening out of the vein. Surface drift above St. Herlinda tunnel has been advanced during the past week 3 ft., making the total distance 176 ft. Mr. Ham has no change of importance to report as regards the appearance of this drift. Face shows a well-defined streak of ore, the value of which, however, I am sorry to say, is not as high as it would appear. East drift, on the main vein, above St. Herlinda tunnel, has been extended during the past week by hand-drilling 3 ft., making the total distance 87 ft. We have been extracting ore from the stopes above the 814, 726, and 572-ft. levels. Mr. Ham does not report any change in the appearance of these stopes, and only repeats his favourable report made last week as regards the handsome appearance of the stopes above the 814-ft. level.

BALAGHAT-MYSORE (Mar. 4).—North engine shaft: In consequence of the water having been in the bottom of the mine for so long a time, it has caused the ground, especially in the hanging-wall, to become very insecure, and too dangerous to work under ; we have, therefore, been obliged to stop the sinking and put the men to thoroughly secure this ground ; this is being done as fast as possible, and in the course of a few days I hope to be able to again resume the sinking. The 500-ft. level north has only been advanced 6 ft. 6 ins., or 453 ft. from the shaft ; the quartz is at present small, and of a very low value. The No. 1 winze in the bottom of this level has been sunk 5 ft. 4 ins., or 47 ft. below the level ; the quartz has suddenly become much smaller, being now only about 1 ft. wide, and assays only 12 dwts. 21 grs. of gold per ton. I think the value and also the size of the quartz will shortly improve again. The stopes in the back of this level yield quartz of about 14 ins. wide, and assay 2 ozs. 4 dwts. 22 grs. of gold per ton. The 500-ft. level south has only been advanced 1 ft. 6 ins., or 91 ft. from the shaft ; the quartz is small, but assays about 2 ozs. per ton. The stopes in the back of this level produce quartz of about 8 ins. wide, and assays 6 ozs. 0 dwts. 20 grs. of gold per ton. I am pleased to say we are making very satisfactory progress with the securing of the ground in the 410-ft. level north, and hope to be able to resume working north of the breakdown in the course of a day or so. The No. 3 winze in the bottom of the 410-ft. level north is being cleared of the water, &c., which flowed into it in consequence of the breakdown referred to above blocking the level, and the sinking will again be resumed in a day or two. The stopes in the back of this level produce quartz of about 1 ft. wide, and assay on an average 1 oz. 5 dwts. 23 grs. of gold per ton. The machine winze in the bottom of the 330-ft. level north has only been sunk 5 ft. 6 ins., or 38 ft. 6 ins. below the level ; the quartz is about 4 ins. wide, and worth about 1 oz. of gold per ton. The stopes in the back of this level yield quartz of about 1 ft. wide, and assay on an average 5 ozs. 11 dwts. 12 grs. of gold per ton. The plat stopes in the back of the 330-ft. level produce quartz of about 9 ins. wide, and assay 3 ozs. 7 dwts. 22 grs. of gold per ton. The 270-ft. level south has been driven 3 ft. 6 ins., or 648 ft. from the shaft ; the ground continues unproductive. The stopes in the back of this level yield quartz of about 9 ins. wide, and assay 2 ozs. 14 dwts. 7 grs. of gold per ton. The stopes in the back of the 270-ft. level north produce quartz of about 1 ft. wide, and assay on an average 1 oz. 3 dwts. 8 grs. of gold per ton. Haines' shaft : We are making fairly satisfactory progress with the cutting of the necessary ground for cistern plat, &c. The ground about this place is very heavy, and becoming too dangerous to work under ; we have, therefore, decided to thoroughly secure it before going deeper ; this will, of course, be done as quickly as possible, that the sinking may again be resumed. Surface : The engineer is getting on very satisfactorily with the erection of the winding engine, boilers, &c., at Haines' shaft, but the carpenters are not progressing with the pit head work as fast as I could wish, the contractor having failed to supply the logs of wood required for the work ; these are, however, daily expected, when the work will be pushed with all speed. All other surface work is being proceeded with in the usual way.—J. PRYOR.

BRATSBERG.—Report for the week ending Mar. 14.—Hoffnung Mine : For the present No. 2 adit level is yielding but little ore, but the lode continues of an average size. No. 1 rise in the back is worth ¾ ton per fm., and No. 2 rise fully 1 ton per fm. At No. 3 adit level the lode is yielding about ¾ ton per fm., and showing favourable prospects. No. 4 level is now producing about ½ ton per fm. Ball's shaft sinking below No. 4 level is carrying a strong lode, but it does not produce ore to value, although yielding saving stuff. The sink at Murchison's mid-level is yielding ½ ton per fm. Johannes Mine : We have cut through the Johannes lode at the intermediate cross-cut, and are now engaged in driving on its course west. Thus far, I regret to say, the results have been very unsatisfactory, inasmuch as unless a speedy change takes place I do not think it advisable to do more at this point, but resume driving west on Howard lode, and intersect Johannes again at a point further west. The level driving east on Howard lode is yielding about ½ ton per fm. Surface work and remarks : The picking and sorting of the ores is being done as fast as brought out of the mine, and we have now three months' produce awaiting treatment by the jigging machinery. The erection of the dressing machinery is so far advanced that we are now engaged in fixing the jigging machines in position.—J. D. HOLMAN.

CALLAO BIS (Mar. 6.)—The directors have received advices from the mines as under :—Independiente : No. 3 cross-cut : At this point the soft course of ground is met with. A very good feature for the future prospects of this mine. Should the lode follow this course of soft ground, there is every encouragement to believe the lode will not run as flat as seen in the No. 2 level. I hope by the next mail to have intersected the lode at this point. No. 2 west level : Lode still poor. All other points satisfactory. Mill : Results satisfactory : about 300 ozs. of retorted gold on hand. The gold remittance for Feb. (696 ozs.) has realised 2,658*l*. 14. 10d.

CHAMPION REEF (Mar. 4.)—Fortnightly report.—Mysore section : Carmichael's shaft has been sunk 3 ft., total depth, 229 ft. 6 ins. The sinking is suspended for a time, and the men are now employed cutting hitches and ground for cistern. The cross-cut at the 225 ft. has been extended 6 ft. 6 ins. ; total length, 11 ft. 6 ins. The appearance of the rock in the end is favourable for a change, it has a strong tendency of dipping west. Ribblesdale's shaft : Sinking 3 ft. 3 ins. ; total depth, 222 ft. 3 ins. The rock is a little harder ; beyond this there is nothing new of importance to report. The work at this shaft has been retarded, owing to a scarcity of men to work the rock-drills. Garland's shaft has been sunk 6 ft. 6 ins. ; total depth, 210 ft. 2 ins. The ground is very favourable for sinking, and necessitates close timbering, which is kept down to within a convenient distance to bottom of shaft. Dalyell's shaft : Sinking 6 ft. 3 ins. : total depth, 214 ft. 9 ins. The lode continues very regular, but carries only a few inches of quartz. The 160 end north has been extended 11 ft. 6 ins. ; total length, 82 ft. 6 ins. The lode is about 2 ft. wide, carrying on the footwall from 9 ins. to 1 ft. of quartz, assaying 10 dwts. 10 grs. per ton. Surrounding rock mineralised the whole width of drift. Prospect shaft : The 320-ft. level has been advanced north 7 ft. 9 ins. The lode in the end is 3 ft. wide, composed of 1½ ft. of quartz on the footwall, the remainder being mixed with country rock. Assays from the whole width of lode give 2 dwts. 18 grs. per ton. The 290-ft. level south has been driven 4 ft. 9 ins. ; total distance from shaft, 129 ft. 6 ins. A small stringer of quartz is all that marks the course of the lode. Below this level, at the bottom of the winze, the cross-cut west has been extended 8 ft. 9 ins. : total 11 ft. 9 ins. Work suspended as nothing of importance has been met with. A small shaft north of Prospect shaft has been cleaned up to a depth of 100 ft. We have now only to cut through a run of old workings in order to make a good air passage from surface to the 320-ft. level. Surface work : At Mysore section, the buildings for bob-pit, engine beds, &c., at Garland's shaft are progressing favourably, and we shall be able to commence the erection of the engines in the course of a few days.—R. C. JONES.

COLOMBIAN HYDRAULIC (Feb. 18).—The following are the details of the operations during run No. 169 :—Run No. 169 : In order to lose no time on this occasion, it was decided only to clean up the fork sluice to Clarke's banks, so that another run might begin in the main sluice simultaneously with the clean-up at Clarke's banks. This second run shows a decided improvement on the first, for it was only 767 hours (as against 906 first run), and we cleaned-up from the fork sluice alone $4,892.70 (as against $4,000 first run.) We did not on this occasion disturb the main sluice ; therefore, it was the shortest clean-up ever made in Malpaso. The purchased gold, $1,597.10, added to the clean-up, produced a total of $6,489.80, or 1,298*l*. The costs for the same period were $8,428.0, which at present rate of exchange leaves a fair profit.—A. E. OAKES.

CUMBERLAND (Jan. 10).—Mine : The shaft contract is hanging on in a most annoying way ; very hard ground is being met with ; it will be finished, I believe and hope, by the 17th inst. We have then to put in a plat, clean the boilers, and overhaul the engine, so I calculate we shall start the No. 7 level about the 24th inst. We shall begin upon about 2 ft. of stone, rubbly, broken stuff, quartz, clay, and mullock. I sent about 50 lbs. of this "rubble" to the Georgetown assayer (the reef is about 2 ft. wide, and goes strong right across the shaft), and he has sent me the following result :—Clean stone—pure gold, 1 oz. 14 dwts., and 19 dwts. silver, per ton ; mullock—pure gold, 14 dwts. and 6 dwts. silver per ton. I also put an assay of the same stuff through, with a return of 18 dwts. ; my lot was mixed just as it comes from the reef.

— (Jan. 17).—Mine : The shaft was finished last night, and I am pleased to say the stone at the bottom improved considerably in the last few feet ; it is a pity we did not meet this body 50 ft. higher up, and under the circumstances the shaft should go on at once, but I presume the funds are not forthcoming. However, the stone may improve as we go north. A contract for putting in No. 7 level was let to-day —150 ft. at 29s. per ft. (very cheap) ; they start about the 26th inst., when the winding gear and boiler have been overhauled.

DAY DAWN P.C.—The mining manager reports for the fortnight ending Jan. 31 :—The output of quartz is 1,159 trucks ; sent to the Excelsior mill 1,224 tons. Your underlie shaft has been sunk a further depth of 16 ft. for the fortnight, making a total depth of 76 ft. below the No. 12 plat ; the formation is about 6 ft. wide, carrying no stone at present. The No. 12 level has been extended a further distance of 10 ft., making a total distance of 285 ft. from the underlie ; the formation has widened out to 12 ft., carrying 4 ft. of good quality stone on the footwall, and 1 ft. of medium quality stone on the hanging-wall, the remainder being a horse of mullock. The formation in the leading stope is 8 ft. wide, carrying 4 ft. of stone of good quality ; No. 2 and No. 3 stopes will average 5 ft. of stone of good quality ; the No. 1 stope 3 ft., fair quality stone. In the Nos. 1 and 2 stopes, going west from the No. 2 winze, the stone will average 3 ft. of fair quality. The number of trucks of quartz hauled from each level is as follows :—No. 12 level, 209 trucks ; No. 11 level, 717 trucks ; No. 10 level, 73 trucks ; from No. 2 shaft stope under No. 6 level, 30 trucks ; from No. 2 shaft stope over No. 6 level, 10 trucks ; from No. 2 shaft stope over No. 5 level, 120 trucks ; total, 1,159 trucks. No. 2 underlie shaft : The No. 5 east level has been extended a further distance of 25 ft., making a total distance of 255 ft. ; the formation is 6 ft. wide carrying no stone. No. 5 west level : The stope going west from the No. 1 winze is carrying 1 ft. of stone on the footwall of good quality. The No. 2 stope is carrying 6 ft. of stone of good quality. The winze in the cross-cut at the end of the No. 5 level west has been sunk a further distance of 5 ft., and holed through to the old stopes : total depth, 30 ft. We are now engaged in repairing the old quartz passes and laying a truck road on No. 6 level to connect with same, after which we will commence stoping. The reef is about 3 ft. wide and of fair quality. The small block of ground under the No. 6 level has been all beaten out. The No. 2 winze on the No. 4 west level has been sunk a further depth of 26 ft., making a total depth of 86 ft. There is still some very nice-looking stone over the back of this winze. Lease No. 1,280 : The No. 1 level has been extended 3 ft., making the total distance from shaft 108 ft. The formation has opened out to about 18 ins., but there is not the slightest vestige of quartz. At the No. 2 level we have driven 20 ft., making the total length of drive 48 ft. The formation here has been about 2 ft. wide for some considerable distance, carrying a few inches of stone of very inferior quality. The country through which we are driving is excellent working ground, and appears to be of a promising character for a reef. The late rains have caused a very heavy influx of water, in consequence of which we have to pump every day.

EMERALD (COLOMBIA).—The manager at the mines, writing on Feb. 1, says :—Our work for the past week has been lowering the part 80 metres beyond and 30 metres above the bridge. In some parts we have lowered almost 1 metre, and at the bridge ½ metre, where we now are at a depth of 9 metres. This week I have got a very good sample from one of the veins there, showing the head of a

small crystal, coloured green, and with the magnifying glass you can distinctly see the different *facades* of the same. Should we be able to follow on more in the direction of the Vulcan, where the rock is of a finer quality, and in consequence veins improve as well, I am sure that soon we should meet with Beryles. But no rain having fallen it is impossible with a number of 120 hands, occupied in the different parts of the canal, to follow on with widening, causing too much of *débris* daily for two empties of the pond. If we have no rainfalls we shall be soon reduced to only one empty, and fevers will again be more frequent, as they have commenced already. Another 50 hands I have kept on in the narrow part lowering, beginning again to work in steps towards the part above.

FLAGSTAFF (Mar. 26).—The report from the mine is to the following effect :—In consequence of a snow-slide at Alta—about a mile below Flagstaff Mine—by which two men were killed and several others injured, our manager and men were absent from the mine several days rendering assistance.

FRONTINO AND BOLIVIA.—The directors have received advices from the mines dated Jan. 23, 1891, and Feb. 7, 1891. Also a letter from Messrs. Restrepo, dated Jan. 12. The statement for the month of Jan. is as follows :—1,234 tons of ore produced 2,457 ozs. bar gold ; tributers' gold produced 625 ozs. bar gold ; total, 3,082 ozs. Also 3,060 lbs. of sulphurets containing 276 ozs. of bullion. Also five bars containing 1,162 ozs. of gold bullion, and 101 bars of copper bullion, weighing 2,146 lbs. Estimated value of the gold and sulphurets, 7,410*l.* 16s. 9d. ; estimated value of the gold and copper bullion, 4,321*l.* 12s. 6d. ; total, 11,732*l.* 9s. 6d. Cost at the mines, Medellin, and in London, including insurance and realisation charges of the gold and copper bullion, 4,463*l.* 7s. ; estimated excess of returns, 7,269*l.* 2s. 6d. From the report of Mr. Eustice, which follows, it will be seen that the cause of the exceptionally large returns for Jan. was one totally unexpected, and that in that mouth he melted down the disused amalgamating copper plates, and obtained therefrom gold bullion and auriferous copper valued at 4,321*l.* 12s. 9d. But for this special source of returns the value of the produce would have been 7,410*l.* 16s. 9d., and the expenses would have been 4,338*l.* 7s., showing a profit from the ordinary working of 3,072*l.* 9s. 9d. Mr. Eustice's half-yearly report has been received, and a copy will follow this circular.

GOLDFIELDS OF MYSORE (Mar. 4).—Fortnightly report : The mining operations for the fortnight ending Mar. 2 have consisted only of sinking south shaft below the 206 level. Sinking 6 ft. 9 ins. ; total depth from surface, 225 ft. 6 ins. From the date of last report the winze below the 206-ft. cross-cut has been stopped, owing to the influx of water, which has filled the winze. The work of sinking the shaft will be push on as much as possible, as it will no doubt drain the water from the winze as we get nearer the lode. Providing the lode we passed through near the shaft while driving the 206 cross-cut continues with the same underlie we shall probably intersect it in the shaft in a few feet more sinking.—R. C. JONES.

GYMPIE GREAT EASTERN (Feb. 5). — Fortnightly report : During the past fortnight the rise on the Orient reef has been extended 16 ft. ; total, 58 ft. from where we cut the reef. There is good improvement here for the last week, as there is about 18 ins. of crushing stuff showing fair gold. The cross-cut at the level has been extended 6 ft.; total, 389 ft. from shaft. The country is hard green stone. There are only two men working here, one on each shift. The north drive has beeu exteuded 8 ft.: total, 24 ft.; the reef here is broken up and unlocky. I have seen no gold in it. The south drive has been extended 8 ft.; total, 25 ft.; the reef is about 6 ins., country not favourable for gold. I shall start stoping here in another week. The 690-ft. level : The back stopes above this level north and south are all showing a little gold. The 634-ft. level : The leaders in the back stopes going north above this level are now all taken out. I have sent five of the copper plates to the Phœnix assay office for treatment. They returned 122 ozs. 19 dwts. 6 grs. of smelted gold. Everything about the mine, winding engine and battery is in good working order. There are 15 heads of stampers idle at preseut. There are 50 men employed, 43 on the mine and seven at the battery.—J. JAMES.

INDIAN CONSOLIDATED (Mar. 3).—Phœnix section : No. 1 level has been driveu 8 ft., and tramway level 9 ft. During the month of Feb. 575 tons of quartz were crushed, which yielded 73 ozs. of retorted gold.—J. FRY.

— (Mar. 4).—Colar section : No. 1 new shaft has been sunk 10 ft. 6 ins., making a total depth of 210 ft. 6 ins. The ground is fairly favourable for sinking, but the water gives us considerable trouble. I think we shall have to sink a good deal deeper in this shaft than at No. 2 shaft before we strike the lode. No. 2 new shaft, 210 ft. north, has been driven 10 ft. ; total, 105 ft. 6 ins. The present end is now quite dry, and it seems as if No. 1 new shaft is draining this section of ground. The 210 north-east cross-cut : As the north drive has never had quartz of any importance, we decided to cross-cut east and see if the main part of the lode lies in that direction. This cross-cut has been driven 10 ft., and is in fairly soft ground. The 210 ft. south has been driven 2 ft., making a total of 98 ft. 3 ius. from shaft. The drill was taken away from this poiut to cross-cut east. The 210 ft. south-east cross-cut has been driveu 18 ft. 3 ins., or a total of 30 ft. 3 ins. from the level. The end still shows quartz in stringers, worth from 2 to 3 dwts. For the last 15 ft. we have been more or less in quartz. We have put the coolies to open out by hand labour at the largest branch of quartz—north and south. This ore shows a little gold in the pan. The cross-cut will still be pushed ahead to test if we now have all the quartz. The 210-ft. south-west cross-cut : Driven 4 ft. ; total, 23 ft., and suspended. Main shaft : The 240-ft. north drive has been driven 16 ft. ; total, 108 ft. 6 ius. There is nothing to value in the present end ; we have only some small stringers of quartz. No. 5 shaft : 156 ft. north advanced 4 ft. 3 ins. ; total, 187 ft. ; no change to notice. The 156-ft. north-east cross-cut No. 2 has been driven 15 ft. 6 ins. ; total, 99 ft. The ground remains very hard. The 425-ft. winze south drift driven 4 ft.: total, 39 ft. We are now through the quartz, which, although from 5 to 6 ft. wide all along this drive, has been practically valueless. The 450 ft. back stope : We started to drift at this point, but after driving 3 ft. 6 ins., the quartz, which was poor, entirely cut out.—A. S. B. OAKLEY.

MONTE DEL ORO.—Mine agent's report for the fortnight ending Mar. 17.—Taylor's engine shaft : In the past fortnight the pitwork below the 244-ft. level was fixed, and it is now working very well. The sinking of the shaft has been resumed, but at present we are troubled with water, which has increased very considerably in consequence of the severe weather we are experiencing. Shaft No. 6 : The lode in the 244-ft. level north of this shaft is from 2½ ft. to 3 ft. wide, and it is composed principally of slate and flookan, with a stringer of quartz about 4 ins. in width. Two samples have been assayed, one yielding 1 dwt. 23 grs. of gold per ton and the other a trace. From the shaft this level is 437 ft., showing an advance of 20½ ft. in the two weeks. Good speed is made in driving the west cross-cut, which was exteuded 18 ft. in the fortnight, making its total length 201 ft. We are now in a fairly hard country rock, and at present the end is quite dry. The intermediate level north of winze No. 8 is 106 ft. loug, it having been advanced 18 ft. since the last report. The end is all in lode matter—principally a soft slate from which two samples were obtained, the first assaying *nil*, and the second 1 dwt. 7 grs. of gold per ton. In the 186-ft. level north the end is in a soft slate and flookan, the lode carrying no quartz. The two samples taken assayed respectively a trace of gold, and 1 dwt. 23 grs. per ton. The speed made in driving is satisfactory, seeing 19 ft. were driven in the fortnight, making the total length of the level 578½ ft. Low's engine shaft : The depth of this shaft is now 62½ ft., the amount sunk in the fortnight being 18½ ft. Considering the quantity of water to be contended with the rate of sinking is very good.

MOUNT ZEEHAN (Feb. 9).—The manager writes : Queen Extended section No. 5 : West 110 ft. cross-cut exteuded 6 ft. in hard slate formation ; all blasting ground ; total driven, 159 ft. North drive on course of lode : 7 ft. 6 ins. driven from the west cross-cut ; total, 26 ft. 6 ins. ; lode formation 3 ft. wide, with carbonate of iron, slate and clay pug. No. 1 air shaft, on course of No. 1 lode, has been sunk a further depth of 7 ft. ; total, 52 ft. Air shaft, No. 2 lode, has been sunk 4 ft. 6 ins. ; total, 24 ft. 6 ius. ; lode about 3 ft. wide, in hard slate formation. A vein of galena 6 ins. is crossing the shaft, yielding for the week 3 tons first-class ore. Moutaua section No. 9, west cross-cut : This has been driveu a further distance of 2 ft. ; total, 292 ft. ; the ground very hard for blasting, and black slate formation. Open cast stope : Here 13 ft. have been driven, and two sets of timber placed in positiou. In the north end the lode continues to yield about 12 tous per fm. ; although only 2 ft. wide, it is nearly solid ore. The lode iu the south end of stope is a little disturbed by a fault or slide, and at present would only yield about 1 tou per fm. ; ore raised for week here, 27 tons 18 cwt. first-class. Packed during week, 38 tons 15 cwt. Shipped from Hobart 24 tons 16 cwt. duriug the week. Britannia section No. 8 : North-west drive advanced 5 ft. ; spleudid black slate containing pyrites.

MYSORE (Mar. 4).—Mining operations for the month ending Feb. 28.—The progress made in the different bargaius during the month has been highly satisfactory, and the rock-drills continue to do very excellent service. The 780 north of Rowse's shaft has been driven 43 ft. 7 ins.; total distance, 93 ft. 4 ins.; we have uot yet intersected the lode, but the level is clear of the trap-dyke and the ground is easier for driving and more congenial for gold. The 700 north of Rowse's shaft has been driven 59 ft. 3 ins.; total distance, 305 ft.; the lode is 4 ft. wide and assaying 6 ozs. 10 dwts. 16 grs. This end is some 6 fms. in advauce of where the lode nipped out aud became unproductive iu the level above. The 550 north of iucline shaft has been driveu on the wide lode 3 ft. 4 ins. ; total distance, 7 ft. 8 ins.; the lode is 2 ft. wide, and assaying 1 oz. 5 dwts. 7 grs. The 466 cross-cut north-west of Rowse's shaft has been driven 37 ft. 4 ins.; total distance, 406 ft. 4 ins. The rock is mixed with carbonate of lime, and is very hard for driving. The 236 north of Rowse's shaft has been driven 6 ft. (on No. 3 fold) ; total distance, 34 ft.; the lode is 4 ft. wide, and assaying 2 dwts. 12 grs. Glen's shaft : The 250 north of shaft has been driveu 54 ft. 10 ins.; total distance, 96 ft. 10 ins. There are veins of quartz and carbonate of lime interspersed throughout the rock, but the ground appears to be in a very uusettled state. We purpose driviug this level a little further north and then cross-cut east, as probably the main part of the lode is standing in that direction. Schaw's shaft : The 450 north of shaft has been driven 52 ft. 6 ins. ; total distance, 175 ft. ; the lode is 2 ft. wide, and assaying 3 dwts. 2 grs. The 450 south of shaft has been driven 6 ft. ; total distance, 60 ft. ; the lode is 1 ft. wide, and assaying 3 dwts. The 320 north of shaft has been driven 8 ft. 9 ins. ; total distance, 146 ft. 6 ins. ; the lode is 9 ins. wide, and assaying 10 dwts. 10 grs. The 320 south of shaft has been driven 11 ft. 6 ins. ; total distance, 188 ft. 6 ins. ; the lode is small and unproductive. Tennant's shaft : The 360 north of shaft has been driven 31 ft. 5 ins. ; total distance, 280 ft. 5 ins. ; the lode is 2 ft. 6 ins. wide, assaying 3 dwts., and presenting a very promising appearance. These men during the month also drove a cross-cut east 26 ft. at this level. The 290 north of shaft has been driven 49 ft. ; total distance, 582 ft. ; the lode is small and disordered. This level is now in the same unproductive ground that we recently passed through in the level above. These men also cross-cut east 12 ft. 10 ins. to prove if the lode had been shifted in that direction. The 290 south of shaft has beeu driven 55 ft. ; total distance, 255 ft. 6 ins. ; the lode is small, but carries a well-defined wall, and yielding a little quartz, but not enough to value. The 180 north of shaft has beeu driven 67 ft. ; total distance, 754 ft. 6 ins. ; the lode is 2 ft. 6 ins. wide, assaying 15 dwts., and looking very kindly to improve. Stopes : The lode in the stope in the bottom of the 770 south of incline shaft is 4 ft. wide, and assaying 10 dwts. The lode in stope in back of the 700 south of incline shaft on wide lode is 4 ft. 6 ins. wide, and assaying 1 oz. 1 dwt. 3 grs. The lode in stope in back of the 700 south of Rowse's shaft is 3 ft. wide, and assaying 6 dwts. 12 grs. The lode in No. 1 stope in back of the 700 north of Rowse's shaft is 3 ft. wide, and assaying 3 ozs. 6 dwts. 3 grs. The lode in No. 2 stope in back of this level is 3 ft. wide, and estimated to be worth 2 ozs. The lode in No. 1 stope in back of the 620 south of Rowse's shaft is 3 ft. wide, and estimated to be worth 1 oz. The lode in No. 2 stope in back of this level south of shaft is 2 ft. 6 ins. wide, and assaying 1 oz. 12 dwts. 6 grs. The lode in No. 1 stope in back of the 620 north of shaft is 1 ft. 6 ins. wide, and assaying 3 ozs. 5 dwts. 8 grs. The lode in No. 2 stope in back of this level is 9 ins. wide, and estimated to be worth 1 oz. The lode in No. 3 stope in back of this level is 2 ft. wide, and estimated to be worth 2 ozs. The lode in stope in back of the 600 south of Rowse's shaft is 2 ft. wide, and assaying 2 ozs. 12 dwts. 6 grs. The lode in stope in back of the 550 north of Rowse's shaft is 4 ft. wide, and assaying 2 ozs. 2 dwts. The lode in stope in back of the 550 south of shaft is 4 ft. wide, and estimated to be worth 15 dwts. The lode in stope in bottom of the 550 north of incline shaft is 2 ft. wide, and assayiug 19 dwts. 14 grs. The lode in stope in bottom of the 466 north of Rowse's is 2 ft. wide, and assaying 1 oz.

19 dwts. 6 grs. The lode in stope in back of the 400 south of Plummer's is 3 ft. 6 ins. wide, and assaying 4 dwts. The lode in stope in back of the 400 north of Rowse's is 2 ft. wide, and assaying 2 ozs. 5 dwts. 18 grs. The lode in stope in back of the 400 south of Taylor's is 4 ft. wide, and assaying 5 dwts. The lode in stope in back of the 360 south of Plummer's is 2 ft. 6 ins. wide, and assaying 4 dwts. The lode in stope in back of the 296 north of Plummer's is 1 ft. 6 ins. wide, and assaying 10 dwts. The lode in stope in back of the 296 north of Rowse's is 3 ft. 6 ins. wide, and estimated to be worth 10 dwts. The lode in stope in back of the 296 south of Rowse's on the east lode is 2 ft. 6 ins. wide, and estimated to be worth 5 dwts. Rising: The rise in back of the 290 north of Tennaut's shaft has been put up 32 ft.; total distance, 70 ft.; the lode is 4 ft. wide, and assayiug 1 oz. 6 dwts. The rise in back of the 180 south of Tennant's has been put up 2 ft. 6 ins.; total distance, 57 ft. 6 ius.; the lode is 1 ft. 6 ins. wide, and assaying 3 dwts. 6 grs. The lode in No. 1 rise in back of the 180 north of shaft is 3 ft. 6 ins. wide, and assaying 1 oz. 5 dwts. 17 grs. The lode in No. 2 rise in back of this level is 4 ft. wide, and assaying 2 ozs. 6 dwts. The lode in No. 3 rise is 3 ft. wide, and assaying 1 oz. 4 dwts. Sinking: Rowse's shaft has been sunk 20 ft. below the 780-ft. level. This shaft is in the trap-dyke, and is, consequently, very hard and spare for sinking. These men were engaged in the early part of the month cutting plat at this level. The winze in bottom of the 320 south of Schaw's shaft has been sunk 7 ft. 9 ins.; total distance, 114 ft. 6 ins.; the lode is 6 ins. wide, and yielding occasional stones of quartz. We are expecting every day to communicate this winze to the 450, which will very much improve the ventilation. The new shaft north of Tennant's has been sunk 33 ft. 6 ins., and the ground strongly timbered. I anticipated making good speed in getting this shaft to the 180-ft. level. All surface operations are going on with their usual regularity.—J. GILBERT.

NEW DEVALA-MOYAR (Mar. 3).—We have driven the cross-cut north in the east end of the 116-ft. level 8 ft., and we now total 15 ft., and are in country rock. We are engaged cutting hutches for timber over the underhand stope in the 78 level, and as soon as this is finished shall resume stoping in the back of the 78 level. We have stopped for the clean up at the mill, and have taken advantage of this stoppage to overhaul the engine thoroughly. Quartz crushed in Feb. is 250 tons; particulars and yield will be forwarded by next mail.—R. B. JOHNSTON.

NEW HOOVER HILL (Mar. 10).—Provost shaft: Driving south at the 50-ft. level, we are cutting through a quantity of quartz, but it does not improve in quality; it still pans a few colours of gold. Sinking below this level, the quartz is spiit up into small streaks running in different directions, some panning gold, others being poor.

NEW VISO (Mar. 16).—At Santa Cristina the deep adit cross-cut proceeds uninterruptedly by a full set of men, aud the part of the lode recently cut through is very similar to that described in my last report. We have now cross-cut at this point 13½ metres in a compact lode, and judging from its size as seen in the open cutting from surface I calculate we have not much further to drive to get through it. We are getting out some good tin from the lode at a shallower level, and about 150 metres ahead. I intend, therefore, to resume the driving of the deep adit on the course of the lode immediately after the completion of the cross-cut now in hand. Within the last few days we have commenced working ou a quartz lode in quite a virgin state in the eastern part of Sau Antonio, which is yielding very good stones of tin. There is no other change to note in our underground work. During the past week the weather has been very uufavourable for all kinds of surface work. The rain has been so continuous and heavy that we could only carry on our tin washing two days for the week, and for the same reason no work of that kind is being done to-day. It is, therefore, doubtful whether or not we shall be able to get the parcel of tin ready by the end of this month, but I will do so if possible.—R. R. NANCARROW.

NUNDYDROOG (Mar. 4).—Report of work done for the month of Feb.:—The 450 north winze in bottom: Distance sunk 27 ft., by two Englishmen with a rock-drill; present depth of winze, 62 ft.; the lode is as strong as ever, 3 ft. in width, and assays 3 ozs. per ton. We shall commence to drive south to hole to the 520 from Taylor's in a few days. The 450 north stope in back No. 2: Stoped for the fortnight 4 ft. 6 ins., by 12 coolies; the lode is 2½ ft. wide, and assays 1½ ozs. per ton. The 450 north s tope in back uorth of rise: Ground stoped 10 fms. 3 ft., by three natives with a rock-drill; the quartz is of fair quality, assaying 1 oz. 3 dwts. per ton, while the lode is a fine one, 4 ft. in width. The 450 north stope in back south of rise: Ground stoped for the fortnight 4 fms., by three natives with a rock-drill; the lode is also very strong here, being 4 ft. in width, but the quality is not quite so good, the assay value being only 18 dwts. 12 grs. The 450 south winze in bottom: Suuk 39 ft. and stoped 3 fms., by one Englishman with a rock-drill; the lode is 3 ft. wide, and the assay value 1¾ ozs. per ton. The 370 north cross-cut west: Driven for the month 43 ft., by two Italians with a rock-drill; total leugtb, 63 ft. There is no change in the nature of the ground, but we have still a good deal of water issuing from the forebreast. The 370 south stope in bottom: Ground stoped 14 fms. 4 ft., by one Italian with a rock-drill; the lode looks very well here, being 4 ft. wide, and worth over 2 ozs. per ton. The 370 north stope in back: Ground stoped 8 ft. 4 ins. by 12 coolies; the lode is of good quality, being 2½ ft. in width, aud assaying 3 ozs. 6 dwts. 12 grs. per ton. The 300 north stope in back: Ground stoped 2 ft. 6 ins. for a fortnight by 12 coolies; the lode is small, not averaging more than 12 ins. in width, but the quartz is of good quality, nearly 2½ ozs. per ton. Taylor's shaft—North drive at 520: Driven 10 ft., and cross-cut east 20 ft., by three Italians with a rock-drill. Wc also sunk 2 ft. in the shaft, beside cutting ground for plat, &c. We hope to strike the lode during the month. North shaft—Cross-cut west: Driven 43 ft., by one Italian with a rock-drill; there is no change in the ground. Health: No fresh cases of cholera have occurred iu our camp, but the field is not yet free from it, and we have still great trouble with regard to labour. Some of the local coolies are beginning to return to work. Oue Englishman off duty; all the rest well and at work. Mill samples:—Rough quartz, 2 ozs. 13 dwts.; smalls, 2 ozs. 6 dwts. 6 grs.—F. W. GREY.

OOREGUM (Mar. 4).—Fortnightly report of mine agent:—I beg to hand you the following report for fortnight ending yesterday:—Wallroth's shaft has been sunk 6 ft. 3 ins.; total below 280-ft. level, 15 ft. 5 ins.; lode 2 ft. 6 ins. wide; value, 5 ozs. 1 dwt. 13 grs. per ton. The 280-ft. level north advanced 2 ft. 6 ins.; total, 622 ft. 6 ins.; lode 3 ft. wide, but still disordered; assay gave 4 dwts. 8 grs. per ton. No. 1 winze bottom same level sunk 3 ft. 6 ins.; total, 64 ft. 6 ins.; lode 2 ft. wide; value, 2 ozs. 5 dwts. 10 grs. per ton. No. 2 winze bottom 280-ft. level south sunk 5 ft.; total, 60 ft.; lode, 2 ft. wide; value, 5 ozs. 8 dwts. 21 grs. per tou. The 280-ft. level south advanced 13 ft. 6 ins.; total, 545 ft. 6 ins.; lode 1 ft. wide; value, 16 dwts. 12 grs. per ton. A rise has been commenced iu back of this level; 2 ft. risen; lode 2 ft. wide, assaying 1 oz. 15 dwts. 6 grs. per ton. The 215-ft. level north advanced 2 ft. 8 ins.; total, 69 ft. 1 in.; lode, 1 ft. 6 ius. wide, value, 6 ozs. 9 dwts. 18 grs. per ton. The 215-ft. level south advanced 6 ft. 10 ins.; total, 263 ft. 6 ins. The present end is up to the point where the lode was unproductive in the 280-ft. level where it continued poor for some distance. Low's shaft: The 350-ft. level north advanced 18 ft. 9 ins.; total, 77 ft. 6 ins.; from the appearance of the end we think we are close to the cross-course, and if so we shall drive north-east on its course until we pinch up the lode again, which was heaved in that direction in the upper levels. The 350-ft. level south advanced 23 ft. 4 ins.; total, 78 ft. 4 ins.; lode pinched. During this month we hope to reach the shoot of ore further south. The 270-ft. level south advanced 1 ft. 7 ins.; total, 243 ft. 3 ins.; no lode. Winze bottom 270-ft. level south sunk 4 ft. 2 ins.; total 27 ft. 8 ins.; lode, 2 ft. wide; value, 2 ozs. 17 grs. per ton. Probyn's shaft: Sunk 8 ft. 9 ins.; total below 450-ft. level, 33 ft. 9 ins.; lode, 1 ft. 6 ins. wide, assaying 2 ozs. 14 dwts. 10 grs. per ton. The 450-ft. level north advanced 1 ft. 9 ius.; total, 15 ft. 9 ins.; lode 3 ft. wide; value, 5 ozs. 8 dwts. 21 grs. per ton. The 450-ft. level south advanced 17 ft. 3 ins.; total, 84 ft. 3 ins.; lode 2 ft. 6 ins. wide; value, 5 ozs. 5 dwts. 9 grs. per ton. The 366-ft. level south advanced 4 ft. 4 ins.; total, 395 ft. 10 ins.; end in dyke. No. 2 winze in bottom this level sunk 3 ft. 3 ins.; total, 6 ft. 3 ins.; lode 2 ft. wide; value, 1 oz. 5 dwts. 10 grs. per ton. The 300-ft. level south advanced 14 ft. 10 ins.; total, 257 ft. 10 ins.; lode 1 ft. 6 ins. wide; value, 10 dwts. 21 grs. per ton. Stopes: Wallroth's shaft back 280-ft. level south cut 9 fms.; lode standing 2 ft. wide; value, 1 oz. 10 dwts. 17 grs. per ton. Bottom 215-ft. level south cut 5½ fms.; lode averages 1 ft. 6 ins. wide; average assay value, 3 ozs. 7 dwts. 2 grs. per ton. Back 215-ft. level south cut 5 fms.; average size and value of lode, 2 ft.; 2 ozs. 7 dwts. 21 grs. per ton. Low's shaft: Bottom 200-ft. level south cut 9½ fms.; lode standing 1 ft. 6 ins.; value, 1 oz. 1 dwt. 19 grs. per ton. Probyn's shaft: Bottom 366-ft. level north cut 2 fms.; lode, 4 ft. 6 ins.; value, 5 ozs. 8 dwts. 21 grs. Back 366 ft. cut 11½ fms.; lode, 3 ft. 3 ins. wide; average value. 2 ozs. 10 dwts. 6 grs. per ton. Bottom 300-ft. level south cut 3 fms.; lode, 3 ft. wide; value, 5 ozs. 9 dwts. 18 grs. per ton. Back 300-ft. level south cut 16 fms.; lode standing 5 ft. wide; value, 1 oz. 12 dwts. 16 grs. Bottom 230-ft. level south cut 4 fms.; lode, 4 ft. wide; value, 1 oz. 14 dwts. 20 grs. per ton. Back 230-ft. level south cut 4 fms.; lode, 5 ft. wide; value, 2 ozs. 10 dwts. 12 grs. Bottom 166 ft. south cut 4 fms.; lode, 2 ft. 6 ins. wide; value, 1 oz. 10 dwts. 21 grs. per ton. Back 166-ft. level cut 3 fms.; lode, 1 ft. 6 ins., assaying 2 ozs. 14 dwts. 10 grs. per ton. I reported in my last that most of the Moplahs had returned to work after the cholera; subsequent to their return some cases occurred amongst the local coolies, to which class it was confined for some days, but on Wednesday last it spread to the Moplah lines and threatened to be as serious as the former outbreak. There was, therefore, no alternative but to send them all away again to their country, which was done on the following day. This necessitates another delay of development work, as we have to put back the rock-drills in the stopes to keep the mill supplied. As there are no cases in the camp at present, and after certain sanitary work has been carried out, and we make sure that the camp is entirely free from epidemic, we shall send for the Moplahs to return. Surface work: The erection of the tailings machinery has been again delayed for the want of hands. We are, however, getting on with the tank for the storage of the necessary water.

OSCAR (Mar. 20).—The manager writes:—Hodgkinson's lode: The quartz in bottom of shaft is to-day 2 ft. in width, of a bluish-striped appearauce, containing a little iron pyrites, and assays 5¼ dwts. gold per ton. In the 200-ft. level north the quartz is mixed with slate and country rock; an average sample of lode stuff assayed 7 dwts. 4 grs. The same level going south is carrying a lode over 6 ft. width, chiefly quartz, of a white crystalline character, devoid of mineral. Assays give value as 1 dwt. 23 grs. gold per ton. There is a very promising-looking lode in bottom of winze sinking from 150 south. The quartz is highly mineralised, and during last few days has assayed 11 ozs. 7 dwts. 8 grs. gold per ton. Quartz taken from this working, as containing no mineral, assayed 3 dwts. 6 grs. The lode in cross-cut is without alteration, and assays following values:—White quartz, without mineral, 1 dwt. 15 grs. Striped blue quartz, with little pyrites, 6 dwts. 12 grs. Sample containing copper and iron pyrites, 3 ozs. 12 dwts. 7 grs.

PINOS ALTOS.—Under date 11th ult. the manager writes as follows:—The work done in the mine for the week ended 7th inst. was the following:—The drift to the west from the bottom of winze No. 2 east, below the 16th level, was run 5 ft. The 16th east drift was driven 5 ft. Assays:—Footwall side, $28.60; hanging-wall side, $41.32. The 17th east drift was run 8 ft. Assay:—Broken ground, $4.77. The 17th west drift was driven 4 ft. Assays:—$3.38 and $6.26. The main shaft was restarted, but not measured up. The last assays were:—Footwall side, $3.88; hanging-wall side, $2.75. Stoping was done in the stopes between the 11th and 16th levels on the west. The average number of pairs of men employed was 30. From Jan. 1 until the 6th inst. the tunnel was run 77¾ ft., making a total length of 3,293¼ ft. During a large part of last month only one side of the compressor was ruuning, so that the distance made was very good. For the last 30 or 40 ft. the face of the tunnel has been in solid quartz, and is making a large stream of water. The quartz is very hard, highly crystallised and full of pockets, makiug it very difficult to drill and blast. From the amount of water flowing I think we have done wisely in not trying to prospect the mine to the west, as I am now convinced tbat we should have cut water, aud probably been drowned out.

PORT PHILLIP (Feb. 14).—The cross-cuts east and west are now 188 ft. and 204 ft. respectively from the shaft; the former will be stopped to-day, and the party, with two men added, making eight, will be put iuto the shaft on Monday to commence sinkiug—two shifts of eight hours each per 24 hours. The west cross-cut will be continued until the diorite dyke is reached, which is now daily expected. In coutinuing the west cross-cut at No. 17 level the shaft will be kept clear, one shift to attend to this work, and if no develop-

ment is made after we shall endeavour to sink the shaft with three shifts for the whole 24 hours.

SOUTH-EAST MYSORE (Mar. 4).—Fortnightly report: During the fortnight ending Feb. 28 the following progress has been made:—The 500 level north cross-cut east: 19 ft. have been driven, making the total length of the cross-cut 30 ft. 6 ins.; at 26 ft. from the 500 level the lode was cut, showing about 2 ft. of good-looking quartz, giving a fair show of gold in the pan. We believe this to be the main lode which we had in the 295 level. We have started driving upon it and will soon be able to give you more definite information regarding it. The 500 level north cross-cut west has been advanced 6 ft. 6 ins. by hand labour; total distance from the drift, 10 ft. 6 ins. The 5.0 level south: This level has been extended 12 ft. for the fortnight, making a total of 79 ft. from the shaft. As it is evident that the shoots of ore are to the east of this level, a cross-cut east from the end of the drift has been started to intersect them.—H. P. HODGSON.

REPORTS OF MEETINGS.

CARN BREA.

DIVIDEND OF 30s. PER SHARE.

THE four-monthly meeting of adventurers in Carn Brea was held on the mine on Tuesday.

Mr. F. Harvey

presided.

The statement of accounts showed that the labour costs had been 11,430*l.*; merchants' bills, 6,301*l.*; dues, 964*l.*; other items making the debit up to 19,281*l.* 1s. 11d. Tin sold, 554 tons 6 cwt., 28,415*l.* 9s. 9d.; slime tin, 42*l.* 5s. 3d.; discounts, 152*l.* 13s. 7d.; total credits, 28,694*l.* 1s. 11d. Profit, 9,413*l.*; available balance, 17,337*l.* 10s. 1d.

Capt. WHITE, supplementing the report, congratulated them upon the favourable state of the accounts. That had not been procured without some difficulty, because they were hindered by the Christmas holidays, by the frost, and finally by the fearful snowstorm. Notwithstanding all these things their returns had increased 16¾ tons, though the price of tin was much lower than it was last time.

The CHAIRMAN commented upon the statement of accounts, and said they had not as yet had the new lease. They could not declare a 35s. dividend without reducing their balance, and the committee, therefore, recommended a 30s. dividend.

The accounts and report were adopted on the motion of the CHAIRMAN, seconded by Mr. W. H. WILLIAMS.

Mr. J. JOSE proposed, and Mr. E. G. HEARD seconded, a dividend of 30s. per share, which was carried.

THE CASTILLON (PYRENEES) MINING CO., LIMITED.

THE CHAIRMAN EXPLAINS THE PRESENT POSITION AND THE PROSPECTS OF THE COMPANY—A DIVIDEND OF 6D. PER SHARE.

THE fourth ordinary annual general meeting of this company was held at Winchester House, Old Broad Street, on Wednesday, Mar. 25.

J. C. Bolton, Esq.

(chairman of the company), presided.

Mr. J. R. COOMBS (secretary) read the notice convening the meeting, and the minutes of the previous meeting were read and confirmed.

THE UNCERTAINTY OF MINING.

The CHAIRMAN, in moving the adoption of the report and accounts, said: Ladies and gentlemen, before asking you to vote upon this resolution I desire to make a few remarks upon the affairs of the company during the past year. We may congratulate ourselves, I think, that we are, for the third time, dividend-paying, but, like yourselves, we, on this side of the table, are not so satisfied with the results as we hoped to have been. We fully expected when we met you last year that the deliveries from the properties would have enabled us to pay at least the same dividend as last year, and some of us hoped it would be a larger one. But mining is an uncertainty, and we have been experiencing the uncertainty of it in this company in three ways. First of all, the season was exceedingly late. The winter continued so long that we could not begin until quite the end of Mar. or the beginning of Apl. Then the quality of the ore decreased, and the effect of that was that while we had as much blende as before, and, in fact, rather more, we did not get so much lead as in the previous year by about 175 tons. Taking that at 8*l.* a ton it makes a very important item—no less a sum than 1,400*l.* Then at the end of the year, when we had hoped to have had a good amount of mineral on the floors ready, the snow came again before the end of November and broke up the season, so that the value of ore at the mine at the end of the year was only 192*l.*, against 1,059*l.* at the end of the previous year. These three causes—the lateness of the season, the reduced quantity of lead and the early closing in of winter—make altogether a reduction of 3,000*l.*, which would have left us in a much more prosperous condition than ever we had been in before. The percentages you notice are better, silver-lead being 17 ozs. and a fraction, against about 16½ ozs., and blende 45.42, against 43.99. The prices have also ruled higher, those obtained for lead averaging 9*l.* 14s. 11d., against 9*l.* 1s. 8d., and blende over 5*l.*, as against 4*l.* 3s. The prices for both lead and spelter are keeping good, lead being decidedly firmer during the last few days, and spelter still continuing over 23*l.* Then as regards the present year, beginning Jan. 1 last, as far as we can see we are entitled to say

THE OUTLOOK IS ENCOURAGING.

Our manager expects to be able to send to market from the levels now open as much mineral as he did last year, and the development work which has taken place during 1890 will enable new ores at Cigalère and Bentaillou to be opened about the middle of the year, which will add some few hundreds of tons more per month to the output. Therefore we have every reason to expect a very much better return for the present year than for 1889 or 1890. Capt. Edwards (your manager) is here, and will give you such information as you may desire as to the work at the mines.

CHANGE OF MANAGER.

You notice the change in the management. Mr. Bunney has received an appointment at a much higher salary than we could afford to pay him, and while we are sorry to lose him, we believe we have put as good a man in his place. The liquidation of the old company is all finished. The manager has obtained from the French Government a license to explore a blende mine in the Vallee d'Orle, adjoining our property. That is merely mentioned to you to-day, as it would take a considerable amount of money to open up the property satisfactorily. However, it appears to hold out a promise of a very large delivery of blende at no very great cost to work. We have also received, through Capt. Edwards, permission to work the copper on the properties. Many of you who are old shareholders will recollect that we only had permission to work lead and blende, and the consequence was, under the French system, they gave a license to other people to work for various metals. The people who were working for copper have now left the place for some little time, so application was made by Capt. Edwards for us, and during the last few days the license has been obtained.

THE ACCOUNTS.

As regards the accounts, the capital is the same as last year, but the amount of debentures is 3,090*l.*, as against 2,080*l.* The amount of creditors, 1,075*l.* 11s., is a little more than last year. On the other side all the items are about the same, subject to the writings off. The stock at the mine is a little more. You will notice there are no sundry debtors, because on account of the early closing of the mine all the accounts had been paid before the end of the year. The mine expenditure was 9,809*l.*, against 8,833*l.* for the previous year. That is one of the matters which we point out to you. There has been a going out which we did not expect. In consequence of the decrease in the value of the ore a larger quantity of ore had to be worked, causing a larger amount to be paid for wages. The repairs to machinery and tools run very much the same as last year. In the result we had 2,669*l.* 5s. 3d., after paying debenture interest and all charges of every kind, left at our disposal, and the directors recommend that shall be treated as follows:—Income tax at 6d. in the £ on 2,553*l.* 8s. 5d., 63*l.* 11s. 8d.; 10 per cent. written off preliminary expenses, 88*l.* 2s. 1d.; 10 per cent. written off mine development work, 1887-90, 213*l.* 1s. 6d.; dividend of 6d. per share, 1,787*l.* 2s.; and carry forward the balance (517*l.* 8s.) to 1891 account. I now beg to move "That the report and balance-sheet for the year ended Dec. 31, 1890, be received and adopted."

THE LARGEST SHAREHOLDER SATISFIED WITH THE POSITION OF THE COMPANY.

Mr. ROBERT WALTERS (director), in rising to second the adoption of the report, said: I dare say a few words from the largest shareholder and the largest debenture-holder in this company may not be amiss, and if I am betrayed for a moment or two into anything like egotism I feel confident that you will pardon me. I can very heartily congratulate the Castillon Co. on its present position, when I contrast it with that when I first joined this board about four and a half years ago. We may really, without mincing matters, say we were next door to bankruptcy. We had no means of paying the balance for the property, and there was not the remotest chance of anybody stepping forward to pay it but one party, and I came in and paid it. There are a great many shareholders who have joined this company since that time, and I wish them to understand exactly my position, and I wish them also fully to bear in mind that if I have appeared to look after my own interests, I have never forgotten the interests of the shareholders in this company. (Hear, hear.) You have heard from our chairman as to the work of the past year, and our work in future. You have not only Capt. Edward's report, but you have what is a very great deal better—Capt. Edwards himself. I think he will be able to give you very satisfactory answers to any questions you may ask him with respect to your property. There is one particular feature and that is the very friendly relationships that we hold with the French authorities, and the French Government, and the French villages, and considering a great deal of that is owing I know to the tact and judgment and good feeling, not only of Capt. Edwards but also of our cashier, Mr. Kingston. I have visited the mines now nearly every year since I joined the company, and last year my friend, Col. Fryer, and myself spent some time at the dressing floors and the mines, and can bear testimony to the truthfulness of the statements made by Capt. Edwards, and I am sure it would be very pleasing to him to receive any shareholder who may think fit to visit our little property. I do not think it is for directors to make promises, but I am very hopeful of the future of the Castillon Co.

CAPT. EDWARDS INTERROGATED.

Mr. BROOKE: I should like to ask Capt. Edwards what construction we are to put upon the statement in the report, which reads thus: "It will be of interest to the shareholders to learn that our manager, Capt. Edwards, has just obtained from the French Government a license to explore a bleude mine in the Vallée d'Orle, adjoining our property." The chairman has stated that you have made some explorations upon this particular property, and I should like to ask you what is the quantity and quality of the blende that you have found.

Capt. EDWARDS: The lode can be seen at surface. On the Castillon side it is not so rich as on the opposite hill. It is the finest blende lode that has come under my notice, and I estimate it will open out 25,000 tons.

Major MURDOCH asked whether it was not a fact that copper had never been successfully worked in that part of France.

Capt. EDWARDS: I do not know of any being worked.

Major MURDOCH: Have we not 40 miles of property there, and must we go out of our property?

Capt. EDWARDS: I think you would have to go more than 40 miles to find a lode equal to the Vallee d'Orle.

Major MURDOCH: You stated that the capital account of the company had remained unaltered, but I find the capital account is 1,000*l.* more this year than last year.

The CHAIRMAN: I mentioned the additional debentures.

Major MURDOCH: That is an increase of the capital account. What is the reason that the wages for dressing the ore amount to 1,357*l.* 14s. 6d. against only 869*l.* last year? Also, why the taxes, rent, general carriage, travelling, &c., at the mines amount to 570*l.* this year against 440*l.* last year?

The CHAIRMAN: With regard to the ore dressing wages, I cannot speak with absolute certainty, as a new book-keeper has taken the books this year, and the accounts were pushed forward so quickly,

that we are not certain that every item is charged to the proper account. But if you will take the total expenses at the mine, you will find they are not more than last year. We have also increased the salaries out there. The chairman then read out the different items required by Major Murdoch.

A HOSTILE MOTION.

Major MURDOCH then moved "That the accounts and report be received, but not adopted." He considered the accounts were unsatisfactory, and represented a new policy of the new board, which could only end in disaster. Last year they were led to expect an increased dividend to-day, but, as a matter of fact, it had been reduced. Next year he anticipated they would get no dividend at all, and hereafter they would have a re-construction. The chairman in his opening address last year directed particular attention to the fact that if the shareholders turned to one side of the balance-sheet they would find that the capital was 73,000*l.*, and if they turned to the other side they would find it was very considerably under that sum. The balance-sheet this year, however, showed an increase of 1,000*l.* in the capital account, and 1,000*l.* more had been received for the sale of ore, making 2,000*l.* in all, but on the other side they were so much worse off that they were unable to pay a dividend. There was no fault to find with Capt. Edwards nor the secretary. Everything had gone on satisfactorily at the mines, the money produced from the mines had gone on regularly, the output had increased regularly, but, singularly enough, this year they were worse off than last year. The explanation of this diminutiou of profit was given by the board as follows :—"The gross receipts are 1,068*l.* 17s. 5d. more than in 1889 (14,863*l.* 14s. 5d. against 13,794*l.* 17s.), and larger profits for 1889 were expected : but increased cost for labour and other charges have brought down the nett profits slightly below those of 1889." What was the use of getting more ore out of the mine if they had to pay more for the labour of getting it. Then the directors' fees had increased from 187*l.* to 480*l.*, and in future they would have to provide 550*l.*, which was too much for a small company like this. Last year Mr. MacIvor had urged the necessity of jealously guarding the expenses, but at the same time he said "we ought to pay the directors," and he proposed that the directors should receive 100*l.* a year each, and the chairman 150*l.* a year, hut about three weeks after that Mr. MacIvor was appointed a director. He (the speaker) thought there should be some change, and invited someone to second the amendment.

Mr. BIDDEN seconded the amendment.

GOOD COUNSEL.

Mr. BROOKE said he thought there were a great many important points brought out by the previous speaker, and he trusted the reflections which had been made as to the directors' fees would be answered. He quite sympathised with that gentleman in his remarks, and considered that five directors were too many for a company of this sort, and the fees were too high. He appealed, however, to the mover and seconder of this amendment to withdraw it. He did not think it would be carried, and, therefore, the wisest course was to adopt the report, and let the dividend be paid, but when it came to re-electing directors he would have something to say.

The amendment was then withdrawn.

THE CHAIRMAN'S REPLY.

The CHAIRMAN said he did not think Major Murdoch had had much experience of mining companies, or he would understand how the increase in expenses abroad was a thing which could not be avoided. If they had to work 12,000 tons of crude ore to get the metal instead of 10,000 tons it was only natural the expenditure would increase. During the past year they had had about 2,000 tons more crude ore to work to obtain the same results as the year before. Then they had to increase the salaries of two or three people at the mine which could not be helped, and they had also had to pay increased taxes, which also could not be helped. With regard to the remuneration of the directors, he did not think they were in any way overpaid. The amount of work which had to be done in matters of this kind required a very fair remuneration. The directors were in the habit of visiting the property and paying their expenses out of their fees, and Mr. MacIvor, who lived in Dublin, always paid his own expenses to London to attend the board meetings.

The motion was then put to the meeting, and carried.

The CHAIRMAN then moved the declaration of a dividend of 6d. per share.

Mr. COCKBURN (director) seconded the motion, which was carried.

THE RE-ELECTION OF DIRECTORS.

The CHAIRMAN then proposed that the election of Mr. MacIvor be confirmed.

Mr. WHITFIELD seconded the motion.

Mr. JAMES MACIVOR said before this resolution was put to the meeting he would like to reply to the remarks which had been made concerning him. He wished emphatically to say that Mr. MacIvor off the board and Mr. MacIvor on the board was the same Mr. MacIvor exactly. It may be he was premature in proposing the increase in the remuneration of the directors at the last meeting, but he would remind the shareholders that that suggestion did not come from Mr. MacIvor, but from the directors themselves. He (the speaker) became a director of this company, because he had the largest interest in the company of anyone, with the exception of the director who had spoken, and the company wanted money, and the directors were looking for a gentleman to fill the vacancy that had occurred. Mr. MacIvor then wrote to the board and said :—"If you cannot get a better man I am willing to help you, and if I do come on the board I would like to see how this company is managed, both in London and at the mines." That was the position, and if a better man could be got Mr. MacIvor was willing to go. He satisfied himself, however, before offering himself for re-election that this company was

MANAGED AS WELL AS ANY COMPANY IN THE CITY OF LONDON.

As regards the management at the mines, he could say that a company was never better served than this company was by Mr. Edwards and Mr. Kingston.

The motion was then put to the meetiug, and carried.

The CHAIRMAN then proposed the re-election of Col. E. J. Fryer.

Mr. WALTERS seconded the motion, which was carried.

The CHAIRMAN said the next business was his own re-election.

Mr. BROOKE said the shareholders generally were very sensitive, and properly so, about the expenses in London and the expenses of the board. This company was a very small one, and they did not want a big board to look after the business. They had got 2,500*l.* to divide, and they took an amount equal to one-sixth of the profits before the shareholders could get anything at all. He thought that, in view of the diminished dividend, and the evident necessity for more exhaustive exploration work at the mines, the retiring director be not re-elected, and he proposed a resolution to that effect.

Major MURDOCH seconded the motion.

The resolution was put to the meeting, and carried by a majority of three votes, the directors remaining neutral.

The auditors were then re-elected.

VOTES OF THANKS.

The CHAIRMAN moved a vote of thanks to Capt. Edwards and Capt. Bunney.

Major MURDOCH seconded the motion, which was carried unanimously.

Mr. WALTERS proposed a vote of thanks to the chairman for his services to the company during the time he had been in office.

Mr. COCKBURN seconded the motion, which was carried unanimously.

The CHAIRMAN replied, and the proceedings closed.

COMMERCIAL NOTES.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING MAR. 28.

African Cities Property Trust, Ordinary ...	3 per cent.
African Cities Property Trust, Founders' ...	3*l.* per share.
Aërated Bread	1s. 6d. per share.
Burton and Lincoln Breweries...	7 per cent.
China Shippers Mutual Steam	10s. 6d. per share.
Crescens, Robinson and Co.	10s. per share.
Colorado Mortgage	1s. 3d. per share.
Equitable Reversionary Interest	5 per cent.
Freehold Trust of Australia	5 per cent.
Highland Distilleries	6 per cent.
James McEwan and Co.	10 per cent.
John Moir and Son	7½ per cent.
Law Union Fire and Life	6s. 6d. per share.
London and North-West American Mortgage	9 per cent.
Lands Trust	6 per cent.
Lincoln Wagon and Engine	3 per cent.
Mortgage Co. of South Australia	6 per cent.
Ottoman Railway	8s. per share.
Rio de Janeiro City Improvements	22s. 6d. per share.
Railway Investment, Preferred	2 per cent.
Railway Investment, Deferred	14s. per cent.
Standard Bank of Australia	10 per cent.
Scottish Mortgage	7 per cent.
Southern Brazilian Rio Grande do Snl Railway	6 per cent.
Shelton Iron, Steel and Coal	7 per cent.
Waterlow and Sons, Ordinary	3 per cent.
Waterlow and Sons, Preferred	3 per cent.
Wellington and Manawatu Railway ...	3½ per cent.
Crown Reef Gold Mining Co.	25 per cent.
Colonial Bank of New Zealand	7 per cent.
Pillsbury-Washburn Flour Mills	8 per cent.
Chartered Bank of India	4½ per cent.
Trust and Investment of South Africa ...	10 per cent.
Bahia and San Francisco Railway	6¼ per cent.
Pearson and Knowles Coal	6 per cent.
Charles Baker and Co.	8 per cent.
Accident Insurance	5 per cent.
Leesh Tea...	7 per cent.
Arbroath and Forfar Railway...	6 per cent.
Telephone Co. of Egypt	6 per cent.
Mexican General Land	8 per cent.
Shanghai Waterworks	8 per cent.

PALMAREJO MINING CO., LIMITED.

THE quarterly report of the directors states :—"The supply of ore on hand and ready for extraction is so large that there is no necessity to expend capital on further development of the mines until the mill is running. The purely exploration work has therefore during the past quarter been confined to driving the Dios Padre tunnel in the direction of the pay chute on the Blanca lode. This tunnel had, up to the end of January, been advanced 1,576 ft., and at the date of the manager's last letter was beiug driven in highly mineralised ground. Independent of the large reserves not opeued up, shareholders may be reminded that the manager's estiuate, at the end of last year, of the amount of ore extracted or exposed ready for stoping and capable of being practically worked was 80,800 tons. Even if no further exploration work were undertaken, the mill would therefore be fully supplied for several years. The construction of the mill and reduction works at Zapoté is rapidly approaching completion." The manager writing on Feb. 20 says :—"My calculations are based ontending the work by June 1—one week sooner or later. The mill may, therefore, be expected to be ready for work in nine weeks' time, and the working agreement with the Mexican Mineral Railway Co., whereby this company undertakes to complete the erection of the reduction works during the construction of the railway and conduit, will have been fulfilled." With regard to the debenture issue the report states that the full sum of 75,000*l.* has been obtained. The concluding paragraph will, no doubt, be read with interest :—"The directors are of opinion, on the information before them, that the undertaking is now on the verge of that success which has been anticipated, aud for which they have worked to the best of their ability, and that the results of this first mill alone will place the company on a sound paying basis."

WE are given to understand that Mr. H. M. Naidley, the recently appointed liquidator of the United States Gold Placer Mine Co., died, after a short illness, on the 19th inst.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN and BIRMINGHAM BANK, LIMITED.

Investors in all classes of Stocks and Shares should read Mr. Thos. Thompson's Mining and Investment Circular, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

LESTER AND HOOK,

Option, Stock, and Mining Share Dealers,

2, COPTHALL CHAMBERS, E.C., and MINING EXCHANGE, 9, OLD BROAD STREET, E.C.

A GREAT ADVANTAGE TO RAILWAY OPERATORS.

Lester and Hook are prepared to deal in Home, Colonial, Foreign, and American Rails, for two months forward on deposit of 2 per cent., and guarantee to close at any time before the expiration of the account specified on the contract.

Lester and Hook advise immediate purchase of Louisville, Mexican Ordinary, Milwaukee, Brighton "A," and Canada Pacifics. The above Stocks are leading the Market, and a rapid advance in prices is fully anticipated.

Telegraphic Address: — "LONGEVOUS, LONDON."

MEMBERS OF THE MINING EXCHANGE.

BURRELL, BRADDOCK & CO.,

Stock and Share Brokers, Mining and Financial Agents,

STOCK EXCHANGE BUILDINGS,

90, QUEEN STREET, MELBOURNE,

Undertake Agencies for Investments in AUSTRALIA, and negoeiate the purchase of Mining Properties.

Personal inspection by a member of the firm of all properties under negociation, thus ensuring the safest guarantee of the *bonâ fides* of mines, &c.

REFERENCES.—MESSRS. BURRELL & COMPANY,

South African Office.

NATAL CHAMBERS, JOHANNESBURG.

General Managers in South Africa.

W. Y. CAMPBELL, F.G.S., and E. W. EVANS.

Bankers.—THE MANCHESTER AND LIVERPOOL DISTRICT BANKING COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business :—

The skilled investment in South Africau Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A Special Cable Code for Prompt and Economical Communication between the South African and London Offices.

Further information can be obtained at the Head Office of the Company.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

RECOMMENDATIONS FOR CURRENT ACCOUNT:—

INDIAN CONSOLIDATED,
MYSORE REEFS,
NINE REEFS,
MYSORE WEST,
MYSORE WYNAAD.
DEVALA MOYAR.

All recommendations this month have, up to the present, been correct, and large profits to our followers the result.

We make Mines a special study, and invite correspondence, whether business results or not. We can always give reliable information.

We open any number of all classes of Miuing Shares at close market price of the day on 10 per cent. deposit, and carry them over as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly, irrespective of account day. We sell shares at current prices for forward delivery at one, two, or three months on 15 per cent. deposit. Clients may rely on fair treatment at our hands. We are members of the Mining Exchange, and subject to the rules and regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

T. M. T.—No. 1, no information to be had. No. 2, not under the present management, we fear.

E. H.—We have a good opinion of Colorado under the present board.

Electricity.—We are sorry to say they are unsaleable. It is only a nominal value.

B. B. Stocks (Anerley).—Yes. A good opinion of them all.

A. Kent (Southend).—Realise, is our advice.

W. A. Jackson (Carnarvon).—The movement is more likely to be down than up. Sell.

Novice.—Good to hold.

B. S. (Walmer).—You are not on our list of subscribers. Will be pleased to do your business on receipt of subscription.
Starlight.—Over capitalised. Dividends rather out of the question.
K. P. C. (Liverpool).—The profit for the month is good. Advise you to hold your shares.
Boss.—They should be supported, especially at this moment.
B. J. Skinner (Leeds).—Buy 1, 4, and 5. Sell others.
Anglo-Saxon.—Yes, are expected to go much better, but we think you should take the certain profit shown.
Disappointed.—Sell for what they will fetch.
Frederick.—A safe investment and likely to pay dividends for some considerable time.
F. B. Golf.—The market is very limited. We advise you to accept offer.
Pensioner.—After the holidays we think you will get the price named.

Pressure, caused by the great length of the Yuruari meeting, compels us to hold over several interesting reports.

The Mining World.

LONDON: SATURDAY, MARCH 28, 1891.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

ARE WE FRIENDS OF CORNISH MINING?

WE have been charged by a western contemporary, more in the language of bitterness than of truth, with being unfriendly to Cornish mining. We cannot plead guilty to the soft impeachment. During the 20 years or more the MINING WORLD has existed our position in regard to Cornish mining has been clear. We expressed the view at the outset, and the two decades that have since elapsed have only tended to confirm it, that with mines worked on the cost-book principle the British public would have nothing to do. This has been the head and front of our offending. In the olden times when the prophets told the people the truth they were stoned—in the latter times they are reviled in newspaper columns. Is it for a moment to be supposed that we view with pleasure the vast sums of money that are going out of this country to work mines abroad which might at one and the same time give employment to our own people, and bring a fair return to investors? Would we not infinitely prefer that this money should be kept at home; but the truth of the matter is that, what with free imports of metals on the one hand, and the cost-book system and landlords' dues on the other, home mining is literally dying the death, and at the present rate (so far as the metallic branch of the industry is concerned) seems within measurable distance of almost total extinction. We can only regret that our appeals during the last 20 years to Cornish common sense have been of so little avail, and that the system on which its mines are worked has not been adjusted to the requirements of the times. We admit that by the re-construction plan a sort of mongrel cost-book system has been applied to foreign mines, but at the same time the public do not view it in that light, and the demands made upon the purses of shareholders are less heavy and less frequent than in the case of Cornish mines. Moreover, the very newspaper that has stigmatised our action in regard to cost-book mines in such a hasty and heedless manner, only the other day gave a list of the Cornish mines and their results, which distinctly showed that the dividends paid were greatly less in amount within the period dealt with than the calls demanded in that same time—thus justifying the standing observation in London that "more money goes into Cornish Mines than ever comes out of them." Of course, the public have not forgotten the object lesson which Dolcoath presented when the much canvassed "fine" was claimed for the renewal of the lease. We have reason to know that that single act, however much may be said in its favour from the standpoint of our present ridiculous land laws, had an effect upon the public mind, which the lapse of time has not removed, and probably will not remove. Over and over again have we written favourably of Cornish mines, and whenever we are able to put in a good word for them that good word has not been withheld, but we have been like those crying in the wilderness in the face of patent facts. It is hard to contend against facts, either singly or in the mass, and it is no use talking about what might be when the existing state of affairs tells its tale only too plainly. At the same time it is hard, very hard, for a paper like the MINING WORLD, that has the courage to tell the Cornish people the truth, and to point out to them the direction by which they can attract outside capital to their mines to be stigmatised by its western contemporary for so doing, and to be ranked amongst the enemies of Cornish mining, when it claims to be one of its truest friends. The surgeon who handles the knife is the best friend of the sufferer, even although he may cause him pain in the operation. It is the old story of Gil Blas and the Archbishop of Toledo. As long as Gil Blas praised the discourses which the Archbishop delivered he was fed and caressed, but when he pointed out certain imperfections of style and faults in elocution he was chased from the prelate's house with ignominy and with scorn. So it is in the present day; but our Cornish friends should remember, and take warning by the remembrance, the old adage that "Whom the gods would destroy they first blind."

THE MISERABLE TALE OF DE KAAP.

THE best friends of mining may well despair in the face of such a report as that which was presented this week by the committee appointed to inquire into the affairs of De Kaap Mines, Limited The allegations on the report were of a most serious character, and, if true, as Sir Edwin Galsworthy said, bring the guilty parties within the scope of the criminal law. We should hope that there never was before, and never will be again, such a board as that of which Mr. Cargill was the chairman. This gentleman fouud himself associated with Mr. Sampson Hill, of Hill's Waterfall notoriety, with Mr. Vanderbyn and Mr. Daniel King. One of their first acts was to iuvite Mr. Laurence Cloete (whose name is just now too familiar to the public), and Mr. Graumann, to join them. The shares were over-subscribed, and the board, having plenty of funds at disposal, appear to have addressed themselves to the not difficult task of seeing how most speedily they could get rid of them. We shall have nothing to say as to the statements in the prospectus, some of which (notably the quantity of ore in reserve) were described in the opinion taken from counsel as "intentionally misleading," but pass on to the allegations of the committee as to the disposal of the company's funds—not for the company's sole benefit, but for the financing of other companies. One of these was the Stock and Share Auction Co., and another the Development and Investment Co., both of which are in liquidation. Money was lent to these now defunct companies in large sums, apparently at a time when De Kaap itself was sorely in waut of it, and when the manager was writing to say that unless money was remitted disaster could not be prevented. There were entries and cross-entries, particularly about the time the books had to be made up for audit, of a bewildering character, but sufficient to enable the shareholders who read the committee's report to come to the conclusion that the Stock and Share Auction Co. and the Development Co. (the latter with its capital of 265*l.*, of which only 211*l.* was in arrear!) were being financed in large sums, at the expense of De Kaap, and without tangible, or, at all events, satisfactory security. Cheques were, in fact, passiug from De Kaap Co. at the very time the chairman of the committee described it to be "on the point of beggary." While the works were suffering from want of money that had been lent to these other companies, the directors were not forgetting themselves, but were drawing fees, as stated, at the rate of 12*l.* and more per meeting, and two of them appear to have received specific sums for reporting on the property, one of whom, though on the spot, never made a report at all, and the other of whom has not even yet started, though he is alleged still to retain the 50*l.* paid to him. It was a sad tale the committee had to tell, and the fulness with which they had told it appears to be the only redeeming feature of a concern that never seemed to have a chance. It is such scandals as these that give to mining the bad name it has in the public estimation, for unthinking persons are apt to confound honest and legitimate enterprise with such excrescences as De Kaap. We pray them to distinguish between the false and the true, and not condemn a whole industry, to which the world is deeply indebted, for the misdeeds which the De Kaap committee have now brought to light. As to the proposal to raise money by preference shares—we advise the shareholders to have nothing to do with it.

HILL'S WATERFALL—A DAMAGING REPORT.

THE disappointing results of the Oct. meeting of this company are not surprising in the face of Mr. Furlonge's report just published. The directors in London appear to have done all that men could with a property comparatively valueless, but which was reported upon up to the skies. They tested 800 tons of quartz, which gave only 20 ozs. The local directors appear to have at once resigned, and there was a Mr. Hoskins (is he any relation to the Hoskins of De Kaap fame?) who did not reply to the letters addressed to him, and is alleged to have declined to serve "because the fees were unequally divided." We should like to know what Sampson Hill thinks of a property that has been condemned by Capt. Pascoe and Capt. Thomas as having only low-grade ore, and now by Mr. Furlonge. In the most distinct terms he, at the Oct. meeting, said, "I believo the property to be as good as it was ever represented to be." But, in the face of such testimony as we have quoted, what need have the shareholders of further witnesses? Mr. Furlonge attaches little importance to the water supply, of which so much was made in the prospectus, and the timber therein valued at 40,000*l.* dwindles, under the critical eye of Mr. Furlonge, to about 2,800*l.* Mr. Furlonge's conclusion is that which must accord with the opinious of every sensible man—"I can give you no encouragement to prosecute further work in search of payable ore." He hopes that his report will set the minds of the directors at rest with regard to Hill's Waterfall as a gold mining venture. We should think it would. We greatly sympathise with the directors who have been connected with

this concern, and who have done their best to bring something out of next door to uothing ; but advise them now to abandon the hopeless attempt, and make the best return to the shareholders they can. It is seemingly not without reason that we have repeatedly warned the public against putting their money into South African ventures, of which they know little, and promoted by persons of whom they know less.

SOUTH AFRICAN TRUST AND FINANCE CO. AND VAN RYN SHAREHOLDERS.

It was an act of wisdom on the part of Van Ryn shareholders the day they decided to take the South African Trust and Finance Co. into their confidence. The first step taken by that energetic and well mauaged compauy was to institute enquiries through their South African representative at Johanuesberg. One of these, Mr. Campbell, was in England towards the close of the year, but left for South Africa on Dec. 31, and immediately placed himself in communication with the necessary parties on the spot. A new company is to be formed, domiciled in England, and having its head office in London, with a capital of 85,000*l*. The mortgagees, in lieu of their bonds for 35,000*l*., will be given 15,000*l*. in cash, 10,000*l*. in 6 per cent. debentures (maturing in five years), and 10,000*l*. in fully-paid shares of the new company. Fully paid-up shares for 10,000*l*. in the new company will be distributed *pro rata* to the existing shareholders in the old company. A working capital of 30,000*l*. will be supplied to the new company. 20,000*l*. in fully-paid shares will be given to the guarantors, who undertake an immediate cash payment of 45,000*l*., necessary to carry out this scheme in its entirety. We say it was an act of wisdom on the part of Van Ryn shareholders in taking the London and South African Trust and Finance Co. into their counsels for the simple reason that but for the action of the latter body the interest of the shareholders in this country would have been wholly sacrificed. As it is, through their intervention, 10,000 shares have been secured for the shareholders fully paid-up in the re-constructed company. The right has also been secured to existing shareholders to subscribe for 45,000 shares at par, by which funds will be provided (partly by them and partly by others) to continue the operations of the company. The service which a concern like the London and South Africau Trust and Finance Co. can be to the knotless thread of shareholders in a company struggling for its rights is well illustrated in this case, and the object lesson ought not to be lost upon other enterprises in a similar position.

YURUARI MEETING.

We need refer but briefly to the crowded meeting of this company which took place on Thursday, and which ended so triumphantly for Mr. Hugh Watt and his colleagues. The most practical suggestion thrown out was that which fell from Mr. Newton as to the desirability of strengthening the board — a course we recommended a week ago, and one the chairman is ready to agree to. The most business-like speeches were those of Mr. Thorne and Mr. MacIvor, who (for reasons given) urged their fellow shareholders not to allow the affairs of the company to pass into the hands of the proposed board, backed up by Mr. Merino, of whose former connection with the company the shareholders have by no means a too pleasant remembrance. The speech of Mr. Proffit (who is more to be congratulated upon his eloquence than his knowledge of the subject), which we produce *in extenso* demonstrated the weakness rather than the strength of the case of his friends. His attack upon this paper is beneath criticism, and moreover is not founded upon knowledge. It is perfectly true we recommended the shareholders to vote for the board and we did so for cogent reasons, which it was not in Mr. Proffit's brief to mention. As a matter of fact, the shareholders have taken our advice and not his, and in so doing have acted wisely. Mr. MacIvor very ably put it when he said the remaining funds of the company should be spent in development. Dividends are not made out of writs and injunctions, but out of mining work. The shareholders know this, and that is why they have preferred to retain the present board rather than replace them by gentlemen of the type Mr. Proffit extolled.

CARDIFF AND SWANSEA SMOKELESS STEAM COAL CO., LIMITED.

The object of the meeting, held a few days ago, of which we publish a full report in our present issue, was to dispose of the property in its entirety to Messrs. Cory Brothers at a price which will admit of a return of 25s. per share (probably somewhat more) to the proprietors. Experience has shown that, even under the ablest management, and except when the conditions are dominantly favourable, colliery properties cannot be managed so profitably by public companies as by private owners. The board of the Cardiff and Swansea Co. recognising this fact, and considering the exceptional difficulties connected with the management of this property for some years past, wisely determined to recommend their shareholders to close with an offer, which, under the circumstances, we cannot but regard as of an advantageous character. If the proprietors cast their eyes over the past records of the share lists, they will find that even in the most halcyon days of coal mining quotations never rose above 2*l*., whilst in 1887 they positively sank to 10s. ; so that the offer now made of 95,000*l*. for the property as it stands, which, after paying all prior charges, will give the ordinary shareholders at least 25s. a share, comes most opportunely. It is quite true that at the present moment prices of coal have somewhat improved, but Col. Mosley (who has stood by the company with rare determination, and with unfaltering courage) reminded the shareholders that these may not continue, and that, moreover, there is the inevitable labour question ahead, ready at any moment to disturb the most carefully laid plans of working, and the most reasonably considered calculations of prospective profits. In fact, Col. Mosley roundly stated that if these proposals were rejected there was no alternative but a voluntary liquidation, the result of which in most cases is a total loss of the shareholders' capital, and in this case must signify a return infinitely smaller than that which this offer has secured. The shareholders did wisely in accepting the advice of their directors in closing with this offer, and they may be congratulated upon having prepared the way for a substantial return upon their capital, which more than once in the history of the company seemed to be all but totally lost.

THE MOUNT MORGAN GOLD MINING CO.

The balance-sheet and manager's report presented to the shareholders at the meeting recently held at the Rockhampton Council Chambers, was in every respect worthy of this remarkable property. During the six months ended Nov. 30 last, 37,847 tons of mineral had been treated, yielding 11,325 ozs. of smelted gold. The amount distributed in dividends amongst the shareholders during the year 1890 reached the enormous sum of 700,000*l*., being 14s. on each 1*l*. share (17s. 6d. paid). All the stone which produced this result was taken from the open cuttings on the top of the mountain, the scarcity of timber preventing work in the deep ground. This difficulty, however, the manager was in hopes of overcoming during the current year, when he would be able to open out rich ground. The company has now been empowered to construct a railway from Kabra to the Mount.

CONVERSION AND REDEMPTION OF THE OTTOMAN DEFENCE 5 PER CENT. LOAN OF 1877.

Messrs. N. M. Rothschild and Sons are authorised to carry out the above conversion and redemption by the issue of 6,316,920*l*. Four per Cent. Bonds, secured by the Egyptian Tribute. For, every, 100*l*. of the 5 per cent. bonds the subscribers will be entitled to receive a like amount of 4 per cent. bonds and 7*l*. in cash, payable Apl. 10 next. The new bonds will be free from all Turkish taxes. All bonds of the 5 per cent. loan not present for conversion will be repayable at par with accrued interest on Apl. 10 next.

THE MONEY MARKET.

City, Thursday Evening.

The end of the quarter, and the approaching close of the financial year, together with the Stock Exchange Settlement have led to some pressure for money, and forced many to go to the Bank for seven day loans at 3½ per cent., the supply in the market being so short for the time. Discount was weaker, and an attempt to support rates failed, and the quotation declined to 2¼, ⅜ per cent. The bullion movements at the Bank have not been heavy, only resulting in a loss of a small amount on balance for the *Gazette* week. Owing to the easier discount, exchanges have not been so favourable, whilst the shipments from New York have not been large. This morning there was some demand for money to cover the holidays at 3 per cent., but with a better supply in the afternoon, the rate fell off again to about 2 to 2½ per cent., at which loans were offering. The Bank return shows, as expected, a decrease of 1,184,000*l*. in the reserve, the stock of bullion having fallen off 286,000*l*., while the note circulation increased 900,000*l*. The public deposits increased 803,000*l*., but there was practically no change in the private deposits, although the private securities show that the demand for accommodation at the Bank has been heavy, being close upon 2,000,000*l*. The proportion has fallen 3½, to 31¾ per cent. At the Bank 305,000*l*. in sovereigns were withdrawn, 300,000*l*. being on French account for Lisbon, in connection with the new loan of 1,000,000*l*. raised for Portugal on the Tobacco Monopoly, and 5,000*l*. for Brazil. Bar silver was unaltered at 44⅝d. per oz., while Rupee Paper was rather firmer.

The Stock Exchange has not witnessed much life this week, for practically business was limited to three days. Discussion upon recent sporting events had perforce to give way to the more important settlement from the commencement, and the account has since monopolised attention throughout, for there was nothing much else, and politics have sunk to a humdrum level. Consols have ruled weak, also Foreign bonds, and especially Argentine, owing to a rise in the gold premium. Paris and Berlin have been featureless, and the action of Portugal over Sofalaland is regarded seemingly in the light of a flash in the pan. Stock all round the markets continues scarce, and while the average rate of continuation for Internationals was 2. American Railroads were 3½, 4½, and the Home lines were either "even" or commanded substantial "backs." The latter consequently have advanced, and Great Eastern has shown activity, but Midland, British, Caledonian, and Sheffield "A" have also been conspicuous, for the traffics, though comparing against the coal strikes in 1890, have been excellent. In United States railways irregularity is noticeable, but present conditions are based upon Wall Street, and no serious fall has occurred. Milwaukee, Louisville, and Reading bonds on the contrary have appreciated since our last. Canadian lines show some steadiness, and

Mexican have recovered from their worst, but still the latter bear the marks of heavy selling for the Inter-Oceanic competition is to begin Apl. 1. Nitrates and Miscellaneous have shown activity, but each section fail to keep firm for any length of time. Allsopp's Brewery descriptions are again decidedly better.

As regards to-day nothing new presented itself, except that Consols advanced to about 96¾. Foreign bonds were lifeless; English Railways the same, only the latter appeared firm apart from Brighton "A," which was sold. American Railroads were irregular, but tolerably firm, especially for Milwaukee, Louisville, and Norfolk Preference. The latter company announce a dividend of 6 per cent. per annum. Sir John Lubhock's remarks against the creation of 1*l.* notes favourably impressed prices. Banks and Trusts have somewhat improved at the same time.

We learn officially that Mr. Henry Townshend, who had been connected with Allsopp's Brewery for a long period, has resigned his seat on the board of Samuel Allsopp and Sons, Limited, and that Mr. Henry R. Grenfell has accepted the chairmanship of this company. The rumour that the Hon. George Allsopp, M.P., and the Hon. A. P. Allsopp, M.P., are resigning their seats is without foundation.

Annexed are the final quotations to-day:—Consols Account, 96 11/16, 96 13/16 xd; Egyptian Preference, 94⅛, 94⅜; Egyptian Unified, 98 5/16, 98 7/16; French Four-and-Half per Cents., 104¼, 104 3/8; Hungarian, 92⅛, 92⅜; Italian, 93⅝, 93⅞; Mexican, 91, 91½; Peru Five per Cents, 10¼, 10⅜; Peru Six per Cents, 28¾, 29¼; Russian, 1873, 99¾, 100¼; Portuguese, 56⅝, 56⅞; Spanish, 77, 77⅛; Turkish, 1871, 99¼, 99¾; Turkish Defence, 102¾, 103¼; Caledonian Railway, 115¼, 115½ xd; Great Eastern, 96⅝, 96⅞; Great Western, 160, 160¼; Brighton "A," 154⅜, 154⅝; North Western, 175⅛, 175⅜; Metropolitan, 78, 79; Metropolitan District, 30, 30½; Midland, 150⅜, 150⅝; North British, 42¾, 43; North Eastern, 163, 163¼; South Eastern "A," 95, 95¼; Mexican Railway Ordinary, 40⅞, 41⅛; Nitrate Railways, 14⅜, 14⅝; Grand Trunk 8⅝, 8⅞; Grand Trunk First Preference, 57⅝, 57⅞; Grand Trunk Second, 37½, 37¾; Grand Trunk Third, 20½, 20¾; Canadian Pacific, 79, 79¼; Denver Preferred, 59⅜, 59⅝; Erie, 19⅛, 19⅜; Milwaukee, 57½, 57¾; Lake Shore, 112¼, 112¾; Louisville, 75¾, 76; Atlantic First, 31⅛, 31⅜; Ontario, 18, 18¼; Ohio, 17, 17½; Norfolk and Western, 54⅞, 55⅛; Reading, 15¼, 15½; Reading 5 per Cent. Bonds, 50½, 51½; Union Pacific, 45⅞, 46⅛; Wabash Preference, 18¼, 18¾; Ottoman Bank, 14¾, 14⅞; Anglo-Telegraph, 47⅛, 47¾ National Telephone, 4⅜, 4⅝; Hudson's Bay, 18¼, 18¾; Suez Canal, 97½, 98½; Guinness Brewery, Ordinary, 305, 308; Allsopp's Ordinary, 39, 41; Bryant and May, 13¾, 14.

CORRESPONDENCE.

[We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

THE ANGLO-SUMATRA TOBACCO CO., LIMITED.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—I should feel obliged by you allowing me to ask, through the columns of your journal, for information as to how this concern is going on.

Established over two years ago, so far only the statutory meeting has been held, and, as far as I can learn, no planting has yet been done; and I also fear that there are no funds in hand, although the prospectus led us to expect that 20,000*l.* would be retained to develop the property.

Perhaps the insertion of this letter may bring forth some expression of opinion, and lead to concerted action on the part of the shareholders.—I am, &c.,

A VICTIM.

INDIAN CONSOLIDATED GOLD CO.

SIR,—Would you permit me, through the medium of your next issue, to draw the attention of those of your readers who are interested in the Indian Consolidated Gold Mining Co. to the reference made to Schaw's shaft at the meeting of the Mysore Co. held last week.

Schaw's shaft is the most southern shaft on the Mysore property, and is not far from the Indian Consolidated boundary.

The Mysore Co. is now proving the ground in the neighbourhood of this shaft, and in the course of sinking the lode at times has yielded 1 oz. to the ton, and now assays 15 dwts. at the 320 level. The shaft is down 450 ft., and the sooner the two new shafts on Indian Consolidated property are the same distance down the better.

The references to Schaw's shaft should be looked on with a favourable light by the Indian Consolidated shareholders.—I am, &c.,

M. I. M. E.

Mar. 25, 1891.

MYSORE GOLD MINES.

SIR,—I am not a shareholder in this mine, and have, therefore, the less hesitation in sending you these few lines.

No man in his senses can have read the late report of the Mysore meeting, and borne in mind the high characters of the people connected with it, without feeling that, in all human probability, there is a brilliant future in store for it, to say nothing of the other mines in the Colar Field.

How very different from Argentinas and other similar rubbish that have been palmed off on the British public.

But the object of these few lines is this: I am glad to see that Glasgow has begun buying Mysores. I hope it will continue till several thousand shares have been bought in London, and that the Glasgow people will insist on delivery.

I do not believe the London dealers can do this to any extent, so that Glasgow has the ball at its own foot. It will not be the first time that Glasgow has made the London dealers "pay through the nose."—I am, &c.,

SCOTUS.

Moffat, Mar. 25, 1891.

"TWO MINES MUST SHORTLY HAVE A RISE."

SIR,—Emma and Dickens Custer are well-known mines. I will treat of the former this week—Emma—which has a reputation; and now is the time to buy the shares for a large rise. In a few weeks or days there are great probabilities of the shares trebling in value. Now, it is beyond any kind of doubt no call will be required to meet expenses. Through the improvement in the mine, through the winter ore has been sent to market sufficient for requirements, and a large quantity of first and second-class ore is now on the floors, waiting for the weather to break up, which is generally the beginning of May, when the company expects large returns. The mine has undergone quite a change this last 12 months; the ore bodies vastly improved both in richness and quantity. The drifts are now fully connected with the tunnel, which is very inexpensive to work. The ore can be tipped in the trams; the first-class ore sent to Salt Lake and sold; the second-class ore at once put through the concentrator at the mine. There is every probability of the returns being like that some years ago, when the shares went to 32*l.* each; the shares may run up by leaps and bounds any day. See remarks in the MINING WORLD, Nov. 15, p. 770:—"It is our belief that about Apl. these shares will see higher prices than they have for years past," which seems by their merits likely to come to pass. Those who have taken note of their remarks and forecasts have generally found them pretty correct. Remarks on Custer to follow.—I am, &c.,

OBSERVER.

AMERICAN BELLE MINES, LIMITED.

DIVIDEND.

THE proceeds of ore shipped in Dec. and Jan. months enable the directors to declare an interim dividend of 6d. per share, free of income-tax, payable on Apl. 15 next. Owing to the snow block the ores produced in Feb. and March have not been realised, but the proceeds will come into the revenue of next quarter. The transfer books will be closed from this date until Mar. 28.

YANKEE GIRL SILVER MINES, LIMITED.

A 2S. DIVIDEND.

THE directors beg to announce a further interim dividend of 2s. per share (or at the rate of 40 per cent. per annum), free of income tax, payable on Apl. 15, thus making, with the previous dividends and bonus of 5s. per share, a total of 7s. for the first nine months since the formation of the company. The transfer books of the company will be closed from this date until Mar. 28.—B. MCNEILL, Secretary.

THE NEW GUSTON CO., LIMITED.

DIVIDEND AND BONUS.

THE directors beg to announce an interim dividend for first quarter of the current year of 2s., and a bonus of 2s. per share, free of income-tax, payable on Apl. 15 next, being at the rate of 80 per cent. per annum. The transfer books of the company will be closed from this date until Mar. 28.—B. MCNEILL, Secretary.

THE MEXICAN MINERAL RAILWAY CO., LIMITED.

THE directors' report has been issued to the shareholders in anticipation of the meeting to be held on Apl. 2. This document states that the contract to perform the works of the Mineral Railway from Palmarejo to Zapoté, and the Conduit to Zapoté was adopted in Nov., 1888. In return for certain advantages, this company undertook to complete the works, and fixed a rate of 16s. per ton of ore for carriage and water power. The quantity transported is estimated to be about 80 tons per day for the first mill, giving a return, at the agred rate of 16s. per ton, equal to 19,200*l.* per annum, less working expenses. The Palmarejo Mining Co. is to have the use of the works for its own purposes at such rate, but this company retains the right to dispose of any surplus power. Active operations were commenced in the month of May, 1889, and have continued up to the present time; the work requiring great judgment as well as engineering skill. The difficulties of obtaining sufficient suitable labour and of transport have been those chiefly encountered. The company's engineer's estimates of the cost in Mexico of construction of both railway and conduit have not been exceeded, and it appears that the works will be completed within these estimates. An adverse fluctuation in exchange, owing to the abnormal rise in value of silver, will have cost the company about 11,000*l.*, and there is additional outlay on the providing and transport of engines, rolling stock and stores to complete the equipment of the whole undertaking for permanent use. The directors will at the meeting take consent from the shareholders to raise such a sum as may in their judgment be necessary (not exceeding 30,000*l.*) at such times and in such manner as they may think fit.

REMOVAL.—The Globe Mill Co. have removed from their offices, Blomfield House, to their new factory, Stratford Market, E.

WOODHOUSE AND RAWSON UNITED, LIMITED.—The offices will be closed from Thursday evening, Mar. 26, to 9.30 a.m. on Tuesday, Mar. 31.

HOLLOWAY'S PILLS.—With changing temperature the digestion becomes impaired, liver disordered, and mind despondent. The cause of these irregularities is easily removed by the use of Holloway's Ointment and Pills. They directly attack the source of the evil, remove all impurities from the circulation, restore the affected organs to their natural state, and correct all defective secretions. An easy means of restoring health and strength is supplied by Holloway's Pills and Ointment. These famous medicines are blood renovating remedies, whose influence reaches the great centres of the nervous system, purifies the circulation, induces a healthy state of the bodily powers, gives tone to the stomach and brain, producing a desire for food, and all the proper requirements for health and vigour.

REPORTS OF MEETINGS.

THE VOGELSTRUIS GOLD MINING CO., LIMITED.

UNEXPECTED LETTERS FROM THE MINE PUT THE SHAREHOLDERS AND DIRECTORS INTO GOOD SPIRITS, AND JUSTIFY THE BELIEF THAT VOGELSTRUIS WILL YET BE MADE A GREAT SUCCESS—PROPERTY 1¼ MILES IN EXTENT—PREFERENCE SHARES TO BE ISSUED IF REQUIRED.

An extraordinary general meeting was held at the Terminus Hotel, on Wednesday, when the subjoined resolutions were proposed :—

RESOLUTIONS.

1. "That the capital of the company be increased to 300,000*l.* by the creation of 50,000 shares of 1*l.* each." 2. "That the new shares be called preference shares, and that the holders thereof be entitled to be paid out of the profits of each year a preferential dividend for such year at the rate of 10 per cent." 3. "That the new shares be offered to the members in proportion to the existing shares held by them ; such offer to be made in such manner as the board shall approve ; and subject thereto, such shares may be disposed of in such manner as the board think most beneficial to the company."

Mr. C. Lewis Bennett (secretary) read the notice of meeting.

The Chairman : Gentlemen, the circular and the resolutions really explain the whole business we propose to put before you to-day. I am not going to detain you long, because in the remarks I make shareholders will recollect that at the last meeting the affairs of the company were very fully explained, and we then agreed to adjourn until Mar. to see what course should be followed with regard to the future of the undertakiug. The course decided upon was to approach the debenture-holders, with a view to their extending the time of the repayment of their debentures for a further three years from Sept. next, and, in passing, I must say that I have never had to deal, nor has any board of directors had to deal, with a more

GENEROUS BODY OF DEBENTURE-HOLDERS

than those who hold the debentures upon this property. (Cheers.) We laid the whole case before them, and they met us with only one answer—"Our desire is that this property shall be properly tested, which we do not think it has been up to the present time, because you have really only worked or prospected about half your property, and though you may have got into broken ground in the eastern part, we believe in the western ground there is still an amount of richness that will reward us for our patience and perseverance." With that object they assented to an extension of the time for three years, and they furthermore said that "we (the debenture-holders) are also the largest shareholders, and we will take our proportion in shares of the new capital." (Hear, hear, and cheers.) Now, I am able to say that that conduct deserves a great deal of thanks from this meeting and from every shareholder in the company. (Cheers.) Well, having arranged with all the debenture-holders, our next object was to call you together to pass the necessary resolutions to carry that out, and we issued this circular to you on the 16th of this month, but on the 17th (this went out on the Monday), on the Tuesday following, by the Cape Mail, we received a letter from our agents there, and Mr. Struben, one of our directors, who went out and is on the mine at the present moment, and that letter is such a surprise to the board that we think it will be equally a surprise to you, and a most agreeable one. (Cheers.) When I have read it you will know as much about the concern as we do ourselves, and the board intend to guard themselves, in reading this letter, by saying that it is not their opinion but the opinion of one of your directors now on the mine, and who, I may tell you, with his brother holds in shares and debentures about 40,000*l.* of your capital. Therefore, he is entitled to some sort of consideration, and we presume, from his previous character in this world, that he is not a man who is likely to tell you that which is deliberately false. Having said that, I think perhaps the best thing now for me to do will be to read that letter, when you can judge of the state of affairs, as well as we can ourselves. We decided not to send to you the cable as to the crushings until we received the result as referred to in this letter, and we were very surprised as well as pleased at what that result was. I should like also to mention that Mr. Lys is managing director of the Crown Reef Mining Co., and is a large shareholder with us. Therefore his opinion is entitled to weight.

A GRATIFYING LETTER.

The chairman then proceeded to read the letter as follows :—

Feb. 21.—We confirm our advices by last mail relative to a proposed test crushiug that Mr. Struben had determined upon, and have also to confirm our cable of 17th inst., sent with approval of Mr. Struben, as follows :—"Have examined the mine ; there is every encouragement, intend milling ore extracted during past for the purpose of test ; ore is good and will pay." From this you will have concluded that the result of our inspection was, at least, satisfactory for the future of the property ; we can now say that it is eminently satisfactory for the future, and we are more than ever convinced of the value of the property, so much so that we have taken upon ourselves the responsibility of proving that in your property you have one that, with reasonable management, is scarcely second to any on the Randt. This is saying a good deal, but we believe it can be proved to be correct, and with that view we have engaged a manager, for a term of three months, at a salary of 83*l.* 6s. 8d. He comes to us with very good testimonials and recommendations and 35 years' experience of gold mining. We have placed him in charge of the property, and he is confident that he can prove it to be a good one. We have undertaken, that if he proves to our satisfaction that the property is a payable one, that his engagement will be extended to 12 months from date, and we thoroughly believe that he will prove it a success. Now to the reasons that have induced us to this step. In the first place we visited the mine with the late manager who admitted that at No. 2 shaft in the borehole he had struck a lode of ore about 18 ins. wide, which he estimated would give 1½ ozs. It appeared to us that he did not really know what the value was. He was, however, of opinion that at No. 2 borehole (No. 4 shaft) we had something worth testing. Our visit on this occasion was a short one. On Saturday last we met Mr. Struben and Mr. Lys at the mine, and took the new manager over it to allow him an opportunity to form his opinion thereon.

UNDERGROUND INSPECTION.

We went underground at No. 2 shaft, and inspected first the south reef. The banket formation in this reef showed from 4 to 18 ins. in width, and gave a very rich prospect ; what we consider the milling ore of this reef would give an average width of about 3 ft., beautifully defined, having good solid foot and hanging walls. The drive on this reef runs about 150 ft., and gives about 60 ft. of backs. The main reef at this point we also examined ; it is a good body of ore ; samples were taken from foot and hanging leader, and gave encouraging prospects. Pengelly (an old miner on the property) is confident that this main reef is payable ; if it should prove so, we have a large body in sight. As to the payable nature of the south reef there can be no doubt, and in it we have sufficient ore opened up to keep our battery running at least two years. A portion of the drainage level has fallen in, but the water is still running, and stoping on the reefs can be commenced at once. We have now to report on No. 4 shaft, and borehole. The pump has been working since last Monday, and we hope to get underground to-morrow to inspect the south reef at this point. The pannings taken from the banket reef lying at the mouth of this shaft have been remarkable, and pannings from the sandstone casing have been equally good. A miner who had been working on this shaft assured us that the banket and casing of sandstone was about 2½ ft. wide, but this we have yet to verify, and from the evidence before us it would distinctly appear that the former management never looked for gold in anythiug but the banket reef, whereas the sandstone casing carries as much, if not more, gold than the reef itself. This sandstone, carrying ounces of gold to the ton, has simply been chucked away with the mullock as valueless, and in this lies the value of your property. About a dozen prospects of this sandstone were taken all over the heap, and in every instance very rich prospects were shown. From this point we purpose having our first test, and of the result we have absolutely no fear.

THE MILL.

The mill : We propose to start only 10 stamps for the purpose of test, and if the result is as we anticipate the whole battery will soon be running. On the subject of cost you need have no fear. We have approximately 500*l.* cash on hand, and anticipate that from the moment a start is made we will pay expenses with the 10 stamps only. It must be remembered, however, that we are not starting with a view of turning out a quantity of gold. In the first place, we desire to ascertain the value of the different ores treated carefully with the appliances at hand. Our manager understauds the position of the company in regard to finance, and the desire that we have to prove that our reefs are valuable. When that has been proven—and we are confident that it will be—then money will be forthcoming for the working of the property in such a manner as it deserves. We may also mention that when visiting the battery we had a look at the tailings, and a sample of the black sand taken from the stream runuing into Hamburg, and at a distance of about 120 yds. from the battery gave an assay value of 2 ozs. 12 dwts. 6 grs. per ton.

PLANS FOR TREATING THE ORE.

For the future treatment of the ore proper concentrating appliances will have to be provided, but, in the meantime, we have to demonstrate what can be saved with our present process, and we think that in our new manager we have the right man. Grant that we prove that you have a valuable property, the treatment of it is the next question for consideration. The misfortune has been in the past that you have had so extensive a property ; had it been smaller, there would not have been that scope for the pottering and waste that there has been here. This drainage level has been a great mistake from the beginning. Your money has been spent almost entirely on the main reef to the neglect of the south, which was the more worthy of attention. We do not wish, however, to convey the idea that money spent on the main reef was wasted, for given ample milling power and good facilities we believe it will pay, but one canuot but be struck with the fact in going through the mine that the south reef has been sadly neglected. There is ample ground in your Mynpacht for at least four companies, and we would suggest that your company be made a parent company, and that three blocks of 10 claims aud dip be sold to subsidiary companies on terms to be arranged later, when the value of the ground has been proven, the parent company retaining the balance of ground, viz., 11 claims and dip, for their own mining, and to provide the subsidiary companies with milling power. Our idea at present is that the parent company should retain the western portion of Mynpacht, aud provide a central mill (immediately north of the reef, foundations to be on red sandstone bar, accompanying the main reef series) of 100 or 150 heads of stamps. The consideration to be paid by the subsidiary compauies to be in cash or shares as the circumstances of the parent company may require ; we are hopetul, however, that you may not require cash as your reserve shares should ere long be valuable. We have to deal with the present ; the future, we venture to say, is full of hope, and trust you will approve of the action taken, and the effort we are making to prove the company a success. In reading this letter, kiudly understand that Mr. Struben is a party to it, and approves of all that has been written.

(Loud cheers.) I need not tell you, gentlemen, that we were very much surprised by the receipt of such a letter, especially after this circular had gone out, but we think it is well the circular did go out, and also, notwithstanding all that is said, we should pass the resolutions which will be laid before you a little later ; but our action upon receipt of that letter was to cable these gentlemen, telling them that we were calling an extraordinary general meeting, and asking that Mr. Struben and his brother would send their assent to the scheme. In two or three days following we received the messages that the secretary will now read.

CABLES TO AND FRO.

Mr. C. Lewis Bennett then read the telegraphic communication that has passed between the board and their representatives at the mine as follows :—

"Mar. 14 : Am anxious to have your report quickly *re* crushing. Bondholders at a meeting held it was decided to extend repayment three years ; conditional sharcholders raising 50,000*l.* 10 per cent. preference shares. Cable assent self and brother to Standard Bank. Extraordinary general meeting will be held Mar. 25."

To that we received the following reply, dated Mar. 17, received Mar. 18, from Johannesburg :—

"Have received your eable. Seheme is not approved. Adjourned extraordinary general meeting two months. Wait for my letter of Mar. 21 suggesting seheme. Milling test will take some time."

We replied to that on Mar. 19 :—

"Your letter, Feb. 21, explaining about mine we consider to be very satisfaetory, but expenditure and engagements must not exceed amount on hand. Have received your eable. When shall we receive crushing results?"

The CHAIRMAN : The object of that was to say we approved what they were doing, but they must not eommit the company to any further expense than the money they had in hand there, without the assent of the board. That was only precautionary. By the mail arriving yesterday we received another letter, whieh I think I will read, and you will then be in possession of all the information we ean afford you.

A CONFIRMATORY LETTER.

It is dated Feb. 28, and is as follows :—

Feb. 28.—We wrote you on 21st inst. (as per copies enelosed), and have since received your letters of 29th ult. Mine : In continuation of our advices by last mail we have to report progress made as follows during the week No. 4 shaft : The water has been got under, and on Sunday last Mr. Struben and Mr. Lace were able to get into the drive at the 80-ft. level. The eondition of the mine was such, however, owing to subsidenee of ground and abundanee of water, that little could be seen at that date. On Thursday we again visited the mine, and progress had been made in elearing drive, and stoping of ore for the purpose of milling test will be proceeded with immediately. It is our inteution to take out 100 tons to 200 tons of ore at this point, for the purpose of test, when mining at this point will be abaudoned, the shaft being only a prospecting one. So soon as a satisfactory quautity of ore has been obtained from No. 4 shaft (which will be mined with difficulty) it is our intention to supply the mill with ore from No. 2 shaft, and we are confident that our whole milling power of 25 stamps ean be kept ruuning with payable ore from this point only. We desire to place on record the result of pannings made by ourselves during the week, of ore taken by the manager in our presenee at No. 2 shaft. Sample No. 1, taken from footwall leader of south reef 60-ft. level, gave colour only. Sample No. 2, taken from hanging-wall leader of south reef 60-ft. level, gave 1 oz. to 2 ozs. prospect. Sample No. 3, taken from hanging-wall leader of main reef 60-ft. level, gave good 1 oz. prospect. Sample No. 4, pebble sandstone taken south of leader gave colour only. Pannings from the south reef banket gave exeellent prospects. From this it would appear that the hanging-wall south reef earries good gold, and the same applies to the main reef. From an examiuation with Mr. Struben of the winzes sunk on main reef, it would appear that almost in every instanee the hanging leader of the maiu reef has been neglected, winzes being sunk under the leader and leaving same in the roof or hanging-wall. Drainage level : We also examined and found that towards our eastern boundary, as might have been expected, a subsidenee of ground had taken plaee, partially blocking up tunnel. The water, however, continues to flow, and we trust it will serve for the drainage of the mine wheu we start operations at No. 2. The uill is being thoroughly overhauled ; the tables, beiug found defective, are being renewed ; 10 of the stamps should be ready in as many days, and no time will be lost in getting the balanee to work. About 300 tons of ore is lying at dump near the mill, whieh we purpose putting through the mill for the gold it eontains and by way of start. The mill requires considerably more overhauling than we anticipated, but in treating the ore we desire to treat it fairly, and venture the opinion that results will justify the little additioual expenditure incurred, or slight delay in startiug the mill.

That is telling you all we ean about the mine sinee we had the pleasure of meeting you last, and now it will devolve upou you to say what you think of the state of affairs. Before proceeding actually to the resolutions we should like to hear what any gentleman has to say, or to answer any questions that may be put to us. (Cheers.)

A SHAREHOLDER : Has there been any reply to your cablegram of the 19th?

The CHAIRMAN : Not yet. We know that the overland wires there at present are very defective, and an answer takes about three days to get through. We should not in ordinary eourse get an answer for about three days. (After a pause.) As you appear to be satisfied with the statement I have made, I will merely add that

WE DO NOT PROPOSE TO ADJOURN

this meeting for the two months asked for in the eablegram, because it is quite clear that fresh eapital will be required, according to their seheme as well as according to ours, aud, therefore, we should only be wasting valuable time by postponiug action now. We, therefore, propose to put these resolutions before you, but with one little bit of explanation.

A DOUBT DISPELLED.

These resolutions, as they are drawn, have raised a little doubt in the minds of one or two shareholders on a point which we propose to make quite clear by what I shall explain presently. A shareholder has asked whether these 50,000*l*., which it is proposed to raise for further development and expeuditure upon the mine, will by any manner of means fall, in whole or in part, into the hands of the debenture-holders. You must bear in mind that we eonsider practically one-half of our property has not been developed at all beyond the borehole and prospecting shaft put down. We have such a large property that our attentiou has been devoted to the east end, aud we stuck to that until eonvinced that the prospects were not such as to justify us in going further. Therefore these 50,000*l*. were to be raised for further developing the property. One shareholder has said, "Assuming you do not ear-mark this money, and you spend say 20,000*l*., do you not leave it so as to make it possible for the debenture-holders to take the balance, either to pay off their principal or in some sense to safeguard themselves?" Now, we felt sure from what we knew of the debenture-holders, and the way in which they had met the board, that nothing was further from their intentions than this, and although it had not been expressed, it was fully understood as betweeu us and them, that no such *arrière pensée* was in their mind at all ; that the money was to be *bonâ fide* devoted to developing the mine, and that if that development, for any reason, were to cease, and the debenture-holders were to take possession of the property, it could not go to them. Now, the shareholders, or their representatives, will have the absolute control of that 50,000*l*. That has been safeguarded by our solicitors by a proposed endorsement on the back of each debenture, by whieh "the registered holder of each debeuture agrees that, in ease not less than 50,000*l*. by preferenee shares be provided, the date of Sept. 1, 1894, shall be substituted for Sept. 1, 1890, as the date of payment, and also that in ease of an order being made, or an effective resolution being passed for winding up the eompauy, before the whole amount of such preference shares shall have been expunged or ealled up, then in this ease this debenture shall not eonstitute a eharge upon any money then already paid in respect of such issue, and not expended on the eompany's mines, or upon the amount then remaining uncalled or unpaid thereon ; and also that, in the like event, the amouut which may theu have been paid upon such shares, or shall have been paid in pursuance to ealls made by the directors or liquidators, shall be repaid out of any money, in respect of such shares which shall not have been expended, or be required for the payment of costs of wiuding up in priority of any sum payable hereunder." Solicitors we know make mistakes, but I think our friend, Mr. Crisp, makes fewer thau most people. (Cheers and laughter.) He has guarded the shareholders as well as he ean, and has only done what was just and right by the debenture-holders. I will now put the resolutions *en bloc*. If the preferenee shares are not all taken at the first issue, then we shall offer the balanee to those who have subscribed, aud in the event of any further balanee remaining, the board will issue them from time to time as may be desired.

Mr. MOLTENO : I seeond the motion.

Carried unanimously.

The CHAIRMAN : We are extremely obliged to you. We shall have to eall a formal meeting a month henee for the purpose of confirming these resolutious, and I have no doubt that, at those meetiugs, we may have some interesting letters to communieate to you, which will confirm all the uews we have heard.

SIR DONALD CURRIE OFFERS AN IMPORTANT SUGGESTION.

Sir DONALD CURRIE : If you can convert these preferenee shares into ordinary shares, that would be a valuable optiou. (Hear, hear.)

The CHAIRMAN : If that be the feeling of the meeting, I am sure the board will fall in with it.

Sir DONALD CURRIE : I think the option will assist you in the preferenee issue. (Hear, hear.)

Mr. CRISP : Of course it can be done at the next meeting.

Sir DONALD CURRIE : But it could only be done if shareholders judged at the same time it was necessary to create more shares. If it were not decided to issue more shares, would we have the right to elaim that the shares might be issued?

The CHAIRMAN : Of course the preferenee shares would be extinguished, and ordinary shares would take their plaee, but the capital would not be increased, or even touched. It would give the holders of prefereuce shares the power at soue future time, if we were paying say 30 per ceut., to exchange into ordinary shares their shares of 10 per eent., in which ease share for share would be given.

Sir DONALD CURRIE : I do not think there is any harm in putting that in.

The CHAIRMAN : I quite agree that it might be a valuable option in case good times eame.

Sir DONALD CURRIE : It might be more advantageous in regard to obtaining the money you require, beeause the company, if made suecessful at all, will be made so by the subscriptions whieh these preference shares are intended to secure. I would ouly add that having urged at the last meeting that shareholders should not have their interests destroyed by foreclosure, it was the duty of the debenture-holders to give every opportunity to the compauy to right itself, and that this meeting should be held (whieh has been held), aud henee I am very glad, personally, that the shareholders have agreed to adopt this plau, so that the property may be further tested. No doubt, Mr. Struben may be right about the delay, but we are safeguardiug the present eapital by the proposed issue.

SIR DONALD CURRIE'S ACTION ON BEHALF OF THE COMPANY.

He himself gave me suеh eneouragement that I became largely interested in the company, and subsequently, to save it, took a large amount of debentures—in fact, gave the guarantee for the wholly issue subscribed. (Cheers.) I cannot say that that is sufficient eneouragement to takea third step in the same direction, but I think, in the interests of Mr. Struben himself, we had better not adopt his plan, whieh means delay, but place in the hands of the board the funds for developing the property, whieh must in any ease be provided. It is not raising money by preferenee shares for the benefit of the debenture-holders, but for the development of the property. (Cheers.) I, personally, would not take auy advantage of that kiud, but will stake my chance with the rest on the developmeut of the property. (Cheers.)

MONEY ONLY WANTED BY INSTALMENTS.

The CHAIRMAN : I should like to explain to the shareholders that, of eourse, it is not intended to call up all this uew eapital at onee. It will only be called up from time to time, as it may be required for absolute expenditure at the mine. It is only takiug shares up, and paying on them by instalments as the money may be wanted. We have about 2,000*l*. in hand, besides our income eoming in from our freehold, and we shall only eall this 50,000*l*. up as it may be necessary to expend the money. (Hear, hear.)

Sir DONALD CURRIE : At the debenture-holders meeting, when 25,000*l*. preferenee issue was proposed, it was pointed out that that would be largely disposed of within three years, and practically would leave you with nothing by the end of that time. It was at my suggestion (which I take the responsibility of) that 50,000*l*. was named as the amount whieh I thought the directors could be safely entrusted with, and that they should have three years to employ it, the shareholders having control of its disbursement : and you, having seeured that, an adequate, and not limited, amount will be available for the purposes of the company. I suggested that if the interest payable only to the debenture-holders were somewhere about 4,000*l*. or 3,500*l*. yearly, there would be within three years an expenditure of 12,000*l*. or thereabout, which, with the 8,000*l*. required for the sinking of the west shaft (I believe this to be the best of them all), the whole 20,000*l*. or

25,000*l.* would be cleared away, which was not business-like. We should either thoroughly do the work by subscribing this 50,000*l.*, or let it alone. (Cheers.)

BOARD THANKED AND COMPLIMENTED.

I beg to propose a vote of thanks to the chairman for his conduct in the chair, and also to the directors. They have done their part. It is not the fault of the present board that money has been expended uselessly. We (shareholders) took over the property when the money was largely expended, and the 60,000*l.* that has been obtained from the debenture-holders has not all been spent on the mine, for one-third has gone in the purchase of the freehold property and some of it is left. Hence I am certain the directors have not uselessly expended the money. I should, therefore, like to acknowledge their efforts and their labours for the general good of the shareholders.

Mr. CHARLES J. PALMER: I second the motion, and assure the directors we value their services.

Carried unanimously.

The CHAIRMAN: We are most grateful to you for this vote of confidence.

THE YURUARI CO., LIMITED.

BOARD DISCOMFIT THEIR ENEMIES BY AN ENORMOUS MAJORITY—SHAREHOLDERS DECLINE TO THROW THEMSELVES INTO THE ARMS OF THE BRUNKER AND MERINO PARTY—"MINING WORLD" REVILED AND EXTOLLED.

THE directors of the company having received a requisition from Mr. P. A. Merino, and other shareholders, to convene an extraordinary general meeting for the purposes mentioned in the requisition, and being advised that most of the purposes contained in the requisition can only be attained in a legal way, by means of an alteration of the articles of association of the company, gave notice that pursuant to the said requisition, an extraordinary general meetiug would be held at Cannon Street Hotel, yesterday, for the purpose of eonsidering, and if thought fit, passing the subjoined resolutions.

RESOLUTIONS.

"That the articles of association of the company be altered by the insertiou therein, immediately after the article 79, of the following articles, namely:—(79a.) 'The company in general meeting may remove any director before the expiration of his period of office, and may appoint another qualified person in his stead. The person so appointed shall hold office during such time only as the director in whose place he is appointed would have held the same if he had not been removed. The managing director (if any) of the company shall be subject to the provisions of this article as to removal, and if he shall be removed from beiug a director, he shall *ipso facto* and immediately cease to be managing director.' (79b.) 'The company in general meeting may appoint such persons, being shareholders of the company, as the meeting may select, to act as a committee of investigation into the accounts of the company, and with such other powers and for such other purposes, as such geueral meeting may determine.'"

Mr. Hugh Watt, M.P.

(chairman of the company), presided.

The notice of meeting was read by Mr. SLADE.

The CHAIRMAN, who was received with cheers by his supporters and with counter cheers by the opposition, said: As this meeting is convened at the request of a number of large shareholders, I shall call upon one of those gentlemen to move the resolution in the notice.

Mr. ROBERT WALKER, J.P., in moving the resolntion, said: I am anxious to save time, and although it is not exactly in terms of the requisition sent in, still the directors have been acting under legal advice, and are bound to follow it in making such altcrations, as they may consider advisable. I consider the resolution is very desirable to pass, and hope the board will support it as a valuable addition to the articles as they now stand.

Mr. JAMES HENRY BRUNKER: I second the resolution.

Mr. SLADE here read the resolntion in full.

A SOLICITOR EXPLAINS HIS POSITION.

Mr. PROFFIT (solicitor): I gather that the chairman is not prepared to recommend the passing of this resolution, although perfectly neutral iu character. It is simply to put into the power of the shareholders to dismiss any director or directors in whom they have lost confidence, but that any director should venture to object to such a resolution passes my comprehension. First, I ought to say who I am because you will be led away on what is called a false scent. I happen, unfortunately for some of the shareholders, to be a solicitor. (Laughter.) Now, the two things that are brought up at shareholders' meetings for the purpose of drawing shareholders off the sceut are, first of all, the vendor or his agents, and next the wicked solicitor. (A VOICE: Very properly.) I do not say that that, in many cases, is not a proper objection to make. (Hear, hear.) I want you to apply your miuds as to whether this is a case in point. (Cries of "It is.") The vendor's agent was Mr. Merino. I, personally, know nothing of the old transactions with which Mr. Merino has been mixed up. (A VOICE: It is a pity.) Mr. Merino appears to have acted as agent, not for the vendor of this company, but to the preceding company, who formerly owned the compauy. Mr. Merino has certainly, in connection with large shareholders, put himself forward in bringing the matter about of which complaint is made by the shareholders. But he does not attempt to get any control of the company. (Hear, hear.) Mr. Merino very properly says, or, if I may properly use the term, like Cæsar's wife, "I must not be suspected;" and, notwithstanding the solicitations he has received, positively declines to accept the control, even if unanimously elected. What Mr. Merino can have to do with the present question I fail to see. As to myself, your chairman will dilate upon my wickedness in stirring up strife. (Hear, hear.) Now, my connection with this company is a very modern origin. (Laughter.) In Jan. last, in consequence of what was represented to me as to the unsatisfactory condition of the accounts and conduct of the directors at the last meeting, I was consulted by several shareholders, who happened to be personal friends of mine in Westminster, as to what should be done. I caused inquiries to be made into the accounts, which were jumped through at the last meeting, and satisfied myself that many items of expenditure were absolutely unjustifiable. But if you once pass accounts it is very difficult to re-open them. Let us now deal with the present. To my surprise I found your chairman was still drawing 1,000*l.* a year. Upon that I would like to read you the articles of association. You know how these articles are prepared, and I,

AS A SOLICITOR, MAY GIVE YOU A WRINKLE.

(Laughter.) The articles are prepared by the promoters' solicitor, who follows his instructions in their preparation. What was imposed upon you? A liability to keep a managing director until June 30, 1890, at the salary of 1,000*l.* a year—not a word after that. Your chairman has regularly drawn 83*l.* 6s. 8d. every month from July 1, which is without justification. He had no more right to put that money into his pocket than into mine. Not only that, but each of the other directors, whose remuneration was only fixed to the same date, knowing how well they were serving the interests of the shareholders, ventured to anticipate the resolution that would, no doubt, be passed at the end of the year. Each of them drew a cheque for 20*l.* a month for his salary. The whole remuneration was 250*l.* a year, but they say they have not drawn it all—I suppose not the odd 16s. 8d. (Laughter.) I have an old friend and client in Westminster—Mr. Potter—for whom

I ISSUED A WRIT,

in order to stop this payment of salaries and recover what was improperly paid. I did that at Mr. Potter's own wish, and had to make the company a defendant, because I could not make it plaintiff, or the action would be defective. At this time I knew nothing about Mr. Merino, Mr. Brunker, or your committee, but was acting for my own clients, and getting evidence ready, when my attention was called to a circular issued by the committee. I then found myself in connection with the committee—(laughter)—who were good enough to honour me with their confidence in future as well. Dates are important. The committee addressed a circular to large shareholders holding 500 and upwards—I think dated Feb. 5. In the meantime, the papers got wind of the transaction, and paragraphs appeared. The directors at once made a call, the uotice being dated Feb. 5. The shareholders to whom the letter was addressed met it so favourably, that they determined to call upon the directors to have an extraordinary meeting at which these matters could be discussed. The requisition was signed by shareholders holding over 120,000 shares, the limits of the articles being 100,000. The requisition was presented Mar. 5, and on Mar. 6 the company issued what was called

A "FORFEITURE NOTICE"

the date fixed for payment having been only on the 5th. Why did they take that step? They hoped that certain gentlemen who had signed the requisition would not pay the call. They would then say the requisition had not been signed by the requisite number, and they hoped further that other shareholders would not pay whose votes they could therefore decline to register. I was consulted by Mr. Brunker and his friends, and found that on the face of the document there was a gross illegality. Your articles provide that one month's notice at least shall be giveu. The circular and call notice were both dated Feb. 5. I have not found a single envelope that bears the post mark earlier than Feb. 6, aud most of them were posted Feb. 7—the latest date upon which the board could serve their notice being Feb. 3. I said to my clients, "It is a question for individual shareholders." Although the call is not legally made, I cannot see any objection to shareholders paying it who like to do so," because I felt if new directors were appointed they would require money to carry on the bnsiness, and if the call had not been made they would have had to do it, and simply go through the form of making the call again. It is a different matter when we consider that the object of the directors was to try and shut shareholders' mouths. I therefore, on behalf of Mr. Brunker,

ASKED THE COURT FOR AN INJUNCTION

to restrain them from attempting a forfeiture of shares. I was willing to let the matter rest but for the forfeiture. The Court has granted the injunction. It is said only to be granted for Mr. Brunker. That is so, and why? How could I tell when other shareholders had their notice? The fact that any notice posted on or after Feb. 4 was out of date is absolutely established. Therefore, gentlemen, you are all protected equally with Mr. Brunker by his action. ("Hear, hear.")

IT IS SAID.

It is said that I am throwing upon the company great expense—(cheers)—but there is a way out of that. One action is started by Mr. Potter, another by Mr. Brunker, but to both the company are defendants. When the resolution now before you is disposed of, I propose to ask your approval to make the company co-plaintiffs. That does not impose upon the company any expense, but it deprives the directors of using the company's funds in defending their own action. (Cheers.) I for the plaintiffs will prosecute it at the risk of the plaintiffs—the directors at their own risk. I hope you will be satisfied that the wicked solicitor has nothing to do with this business. (Laughter.) It may probably appear to you that the mere fact that the chairman as managing director has taken 1,000*l.* a year, and the other directors 250*l.*, is not sufficient justification for any attempt to put them out of their seats, and I quite agree. Shareholders can scarcely expect directors to act for nothing. (Cheers, and cries of "Or solicitors.") It is unreasonable. (Laughter.) But the next question is much more serious. You took over the assets of the New Chile Co., amongst them being a property which the chairman within the last three months described to a friend of mine as very valuable—

THE EUREKA CONCESSIONS.

The Eureka was not transferred with the rest of the assets—why? I do not know—but there may be an explanation. It was left with the old company in the hands of the liquidator, Mr. Sneath, of the firm of Price, Waterhouse aud Co., in Gresham Street. He wanted to get rid of it. It was a white elephant, for there were charges upon it. Negotiations were opened for its sale to this company into which the chairman entered, and he has dealt with it in a circular in which he alleges that the liquidator asked an enormous

price in cash and shares. That does not agree with Mr. Sneath's account of the transaction to me, but it is not material. It was the business of your chairman to get that property for yon at the lowest price, and he was entitled to keep Mr. Sneath at arm's length, and say it was not worth anything and so on, to get it as cheaply as possible. At last he broke off negotiations, but what was

THE NEXT THING THAT HAPPENED ?

A gentleman was introduced to Mr. Sneath by Mr. Watt's present solicitors, who was prepared to buy the property, and offered 500*l.* for it. Ultimately 600*l.* was accepted ! The liquidator then, and his assistants, thought it a monstrous thing. They were acting for the shareholders of the old Chile Co., who, for the most part, are shareholders in this. They felt that this property ought to be transferred with the rest, and communicated with the company, asking them if they would be prepared to increase their offer. Not a word. I have seen the letter Mr. Sneath wrote to Mr. Watt, personally saying he had entered into a conditional contract for 600*l.* for the sale of the property to Mr. Allingham, and that it was not too late for him (Mr. Watt) to buy it, and that he was prepared to sell it at any increased price upon that offer. The company was actually served with a summons which was heard before the Chief Clerk, and even up to then they had power to buy the property, but Mr. Watt did not come forward. So far he was right if Mr. Allingham were his nominee, and acting for the company, but what is the next thing to happen ? As late as Aug. last an agreement dated Nov. 14, 1890, is made between Mr. Allingham and the company, reciting the previous agreement of Sept. 15—that is, within a month of the first purchase of the mine, what do you think was given for the property ? 100,000 shares, 2s. paid, equivalent to the then value at the price of 10,000*l.* sterling. ("Oh !") It is open to anybody to say Mr. Watt was mistaken in Sept. and thought better of it in Nov. He might have had a telegram from Mr. Pryor, but you will want to know what became of these shares. Mr. Allingham is managing clerk to a solicitor, and did not know whether the mine was in Venezuela or the United States of Colombia—somewhere in South or Central America. Do you think he bought this property out of his own pocket ? (No.) I have found out, and I must say your chairman has been perfectly candid, and has not disguised the transaction — (cheers) — I say, I have found out what became of the 100,000 shares. 40,000 have been transferred to Mr. Watt himself. A good deal has been said in circulars about the last meeting. But I should like to read yon what the secretary and Mr. Watt have both sworn to—that the proxies were 10 in favour of the poll and 2,342 against it, leaving any one to infer that he had practically carried his resolutions unanimously. Is that an honest interpretation of what took place ?

Mr. Steward : It is a deliberate lie. (Cries of "Order," and "Turn him out.")

EUREKA SHARES.

Mr. Proffit : Mr. Watt seems to have a wonderful belief in his own mode of viewing things. Would you be surprised to hear that he and his co-directors say they had the confidence of three-fourths of the shareholders ? He swore it, and of the people who signed the requisition, two-thirds at least bought their shares within the last few months, as he believes, largely to enable them to sign it. How and where could we get at the shareholders ? From the filed lists in Dec. last. We have no power otherwise. I felt I should like to be at the meeting, but was not a shareholder. (Laughter.) I bought 500 shares to attend this meeting. Was I wrong ? (No.) That formed a sort of cover for the statement that people were buying shares to sign the requisition. Then the circular speaks of those that were fishing for evidence, but gentlemen who have the control of your money also have convenient clerks, like solicitors. There is Mr. Wright, against whom I have nothing to say. On Feb. 4 he made out a notice of this call to Mr. Brunker, and there is an affidavit by the messenger of the office, that he remembered posting it on Feb. 4, but Mr. Brunker did not get the notice till Feb. 7 or 8, and the document itself is dated Feb. 5. Is it usual to pre-date circulars ? I will tell you where the other 60,000 shares went. Mr. Wright is the owner of 10,000. Mr. Nicolls, the messenger, whom I have not a word to say against personally, is the owner of another 10,000, and Mr. Bakes, or Bates, who happens to be Mr. Watt's shorthand clerk, 10,000. Mr. Moore, who is clerk to the accountant of the company, has another 10,000, and Mr. Walker (not our friend here) has also some—a very suggestive name that of Walker. (Laughter.) I want to call attention to the circular of Mar. 16. I should have thought the directors would have accepted the requisitiou. Nothing of the sort. It was a requisition to turn out directors then and there. Mr. Watt says the concession was purchased by a syndicate. I asked you to draw your own conclusions, as to who the syndicate was, and he states that they expended upon them 1,500*l.* in cash. Mr. Allingham, when he purchased from the old liquidator, undertook to pay the company the money expended on the property. He said, "I must have a sum in hand, and you must free me from all liabilities." The directors were asked by the liquidators what they estimated the amount of that expenditure to be. Was the answer 500*l.* ? You see the importance of this. If you have to spend 500*l.* you can afford to give less purchase-money. Mr. Sneath, when he transferred the property, had to be satisfied that the buyer could carry out his bargain, and he wanted a receipt. Was it a receipt for 500*l.* ?—no ; for 200*l.*—that is, the directors had given up to their nominee 300*l.* What was the excuse ? That it had been an unfortunate liquidation. The purchase-money ought by this to have been increased. The circular says "They received 100,000 shares with a liability of 6d., and the directors are not surprised to learn from the syndicate they are quite prepared to return those shares for the cash outlay," and I am not surprised either. They affirm "that the contract for purchase, which involves 2,500*l.* payment of calls on these shares is a good thing." Have you considered what that means ? If you make a gift of 2s. a share on 100,000, it is a good thing, because you get 6d. (Laughter.) I never heard a more absurd argument. It would be easy if the company could legally do it, but still shares at 6d. are now quoted nominally at 9d. to 1s. 3d. "The directors learn that objection was taken to this purchase although they have not exceeded their powers." It is really a question whether they have not committed a breach of trust.

REMONSTRANCE FROM THE CHAIRMAN.

I have made diligent enquiry, and this is the letter written to me personally by the chairman, who wished to see me, but I have no wish to see him, and preferred to communicate with him through a solicitor :—"Your course is the most extraordinary I have met with in my experience. You first of all sign a requisition for a general meeting, and while that is pending you serve a writ on the company and myself presumably. There is not a contract the directors have entered into which they are not prepared to submit to a general body of shareholders for confirmation, or otherwise, although the directors have acted within the powers conferred upon them by the articles of association." Do you think that is a fair statement ? ("Yes" and "No.") If you take my advice, you will not wish to repudiate this arrangement.

MORE LAW.

In the second action I have started for Mr. Brunker, I am proceeding against Mr. Watt and the board for the value of the shares. They have taken them at a half-crown, they have paid 6d., and are liable for 2s. The 10,000*l.* which Mr. Watt and other persons connected with them in the syndicate will have to pay will be a convenient way of settling this so-called loan of 10,000*l.* at 10 per cent. In the requisition we have had to name the directors we wished to appoint, because notice must be given. Dr. Aldridge is the owner of over 11,000 shares; Mr. Brunker, 4,000 ; Mr. Walker. 1.500 ; and Mr. Newman has the same number. These four gentlemen have no wish to thrust themselves upon you. I have the assent of every one of you that they will take part in electing any other members that may be suggested provided that they are not members of the present board, and not those who participated in this division of 100,000 shares. I think that ought to satisfy you that this is not a case of wrecking the company, or one in which there is a desire to get the loaves and the fishes, but an honest and an earnest effort to retrieve it from inevitable ruin, towards which it is drifting at present. (Cheers.) I do not wish to make a personal question of this, but can I do otherwise ? The resolution is, that the articles shall be amended by allowing the shareholders to "chuck" out the directors. (Hear, hear). Then directors, like craven curs who feel the whip—(order)—run away, and will not allow you to pass the resolution. Perhaps they are right. Why should they wish to keep in office ? They cannot receive more fees until they are voted, and there must be something they want to cloak up. You have had remarks in various papers. I notice in the Mining World

A VERY ABLE ARTICLE INDEED,

but it ended, for reasons given, by asking the shareholders to vote for the board. Shareholders invariably do so owing to a naturally conservative feeling to stick to the men they have entrusted to their powers, and very proper that feeling is until better men are found. But the Mining World has received during the year ending June 30, 1890, for papers supplied sums, I think amounting to about 200*l.* I have no doubt the chairman will tell you that that paper gives very full reports of our meetings—(hear, hear)—and that that is the most convenient way of sending information to the shareholders. But shareholders are better to be without that information than to have it at that cost. It is to save all such expense in the future that we wish you to pass this resolution. I have dealt with nearly all the matters I need trouble you with, and if I have been verbose, you must pardon me. (Cheers.) I hope you will help me by supporting the policy of the committee, and signing the notice before you leave the room of which I have had the forms prepared. It will give you power to call the meeting, whether the directors do so or not, We have a bundle of 30 proxies which came in too late. I, therefore, hope that in future proxies will be sent at once, and particularly that you will avoid the *fiasco* of the last meeting. The directors have done all they can to make it impracticable for you to attend by calling the meeting for this inconvenient day. (Hear, hear.) I will read the requisition (reads requisition). The directors have given notice that if you wish to pass a special resolution, it can only be done by a three-fourths majority, and they will vote upon the 100,000 shares against you, which were allotted in the manner I have described. (Cheers.)

FAIR PLAY TO ALL.

The Chairman : Notwithstanding the request of the last eloquent speaker that the discussion should close, I feel bound to occupy your time somewhat while I address to you a reply to the statements and charges he has recklessly thrown out against me and the members of the board.

Mr. Steward : Will you produce any requisition for a poll on the part of myself or those who seconded me. I handed in no requisition. One was commenced and torn up.

The Chairman : You handed it in—Mr. Robin received from you a written paper, with the words, "I demand a poll."

Mr. Steward : There were never 10 signatures.

The Chairman : If you look at the minutes, you will see my statement is correct.

A Shareholder : This is purely a personal matter, unworthy of attention.

REPLY OF THE BOARD.

The Chairman : I shall come at once to the statements of Mr. Proffit, and it is only fair that, as he has made serious accusations against the board, I should receive from this meeting the patient hearing that he has received, whilst I refute them. I ought first to describe to you Mr. Proffit's connection with this company, that of his partner, and that also of Mr. Burke. Mr. Burke is an accountant ; Mr. Proffit and Mr. Scott are two solicitors in partnership. (Laughter.) Mr. Scott called upon me before the general meeting, and desired to examine the books. Was any book kept from him ? (Uproar.) As you listened to Mr. Proffit, you should listen to me. Mr. Scott expressed himself as having seen what he wanted, and one statement made by Mr. Proffit proves he received more than he was entitled to, inasmuch as he speaks of the details of a newspaper account for goods supplied. Mr. Scott differed from me, inasmuch as I alleged that he supported the board at that meeting. He says no doubt it is an unfortunate circumstance for him that after his examination of the books, and after the general meeting, he proposed the re-election of Genl

Barwell. (No.) It is in the minutes. These men (indicating the solicitors) have they come into the company for the purpose of your good, you suppose, or whose good? (Cheers and laughter.) Mr. Scott joined the company a year ago, but his partner, Mr. Proffit, joined the company quite recently, and his first act was to send in Mr. Brunker's requisition. His next act was to serve a writ for Mr. Potter, who, I am told, is a clerk to an accountant. (Laughter.) You can see Mr. Proffit joins the company

WHEN HE THINKS THERE IS A ROW, AND A PROSPECT OF BUSINESS.

(Loud cheers.) He serves two writs—not a bad commencement for a solicitor. (Laughter.) He continues the litigation, and with regard to the meeting, he tells you it was dated the 18th, and this is the 26th. I fail to see how he can complain of our holding the meeting to-day, or that the notice was insufficient. As to the day being inconvenient—why, the room is crowded. (Cheers.) Mr. Justice North said, "Mr. Bruuker may claim to be here for relief for himself, but he cannot claim that relief for the holders of one million shares, who have paid their call—it is absurd." He sought to declare the call illegal, but Mr. Justice North said there was nothing illegal about it. The judge held that the day you received the notice, and the day the call should be paid, should be excluded from the month. That has never been understood by any other company I am aware of, and we had to bow to the decision and serve Mr. Brunker with a fresh notice. This meeting is perfectly legal. I have no wish to say anything against Mr. Proffit, who is a solicitor, belonging to a respectable firm, but I have mentioued how he came into the company. The letter he read as addressed to him by me was written with the desire to avoid litigation, and those who were early shareholders in this concern will know that it was

NEARLY RUINED BY LITIGATION.

When we came into the company—that is, at the time that Mr. Merino left it—it was deluged with writs. There was a sheriff's officer in the offices when we took possession. We sought for the books, but they had been removed. The late Mr. Gray and I ran after them, and only obtained them in fragmentary form from the waste-paper merchant, to whom they had been sold. We have never been guilty of such conduct as that, but I want to pass on to other matters.

MORE ABOUT EUREKA.

In Nov., 1888, we offered Mr. Sneath by letter to his solicitor not 3,000*l.* but 6,000*l.* in cash for Eureka concessious. That was declined. We then offered 3,000*l.* in cash and 40,000*l.* fully-paid shares. That was declined. Why? Because a mistake was made on their side in calling the 40,000 shares stock, which meant 320,000 shares besides the cash. Mr. Sneath was then in America, and Mr. Waterhouse said he did not feel justified in accepting the offer. I say nothing against Mr. Sneath, because I know that a liquidator has no power to accept shares (I have since learnt that) in payment of a property. I believe he went to the Court, and Court declined to sanctiou the sale of the property for shares. I think I did (although not the liquidator) as much as Mr. Sneath to smooth thiugs. My desire was to gain for the shareholders the utmost possible advantage from the liquidation. That was why I offered 40,000 shares, 2s. paid and 6d. liability. Up to April, 1890, we were in negotiation with Mr. Sneath, who said, "Why can the company not see their way to take over the concession at a price." No such price as 600*l.* or 1,200*l.* was ever made or entertained. (Cheers.) Then I come to the period when the concessions were advertised. When advertised, I learnt that people with whom we had enormous litigation, great expense and endless trouble, which nearly ruiued the company, were after these concessions, and I say here that everythiug I have doue for the company has been

DONE OPENLY AND STRAIGHTFORWARDLY.

(Cheers.) I refused to let Mr. Proffit examine the books because of the letter he wrote, and because of the litigation he was bringing against the company. I said a private shareholder has certain rights, but if that private shareholder is wanting to get information for actions he is bringing against the company, I, for one, will not permit him to take such an advantage of his position. (Loud cheers.) Does he mean to tell me that he, as a solicitor, did not know when he attempted in that insidious way to get information, calculated in the opinion of the directors to injure the company, that he was not entitled to it? Solicitors of eminence in the city have come representing clients, and what have they said? "Have you any objection to disclose the books of the compauy?" I have said, "None whatever." I disclosed to solicitors representing clients the books of the company, the minute books, and even matters relating to the whole Eureka transaction. And what is that transaction? Mr. Proffit has told his version, but it was not 600*l.* that was given for the property, but 600*l.* plus the liability of the company, plus an examination of the property, and plus the legal costs, which Venezuelan people who are here well know are enormous. In round numbers the expenses were 1,500*l.*, and then there was the call upon the shares. The board kuow perfectly well my connection with the transaction. I wrote a loug letter to them about it, and it had been brought before me a month previously. We were then owing the bankers under our personal note of hand 2,000*l.* There were other loans and bills coming forward from Mr. Pryor which had to be met, and which were met, although Mr. Merino and his friends said we were starving the mine. There is no foundation for that, but we gave our note of hand so that there should be no delay in remittances. Why? Because there was 6d. due, and there is a clause in the articles of association which absolutely pledges us from mortgaging any security of the company. (Cheers.) That clause was drawn by Mr. Justice Romer, who, I think, will be accepted as an authority, and backed by Mr. Buckley; and one of the gentlemen present, who is a great friend of the opposition, was actually one of those who at the meeting urged that the directors had no power to borrow money.

WHAT THE CHAIRMAN HAS DONE.

We had nonc. Talking of my loans to the company, I have been its stalking-horse from first to last, and these are the thanks I get. Solictors may laugh—it is their interest. (Cheers.) They arc paid for laughing and for the proceedings they carry on, but where does the advantage come in to you? (Hear, hear.) I may tell you they are pursuing a mirage of the desert. They do not know what they are talking about. If they had not taken proceedings they would have seen the entries in my letter book fully explaining all these transactions. These opponents of ours were trying to get the property on the spot, and if you refer to my letter of Aug. 28, you will see I there said to the directors—You are short of money, but if you want the property for these shares with 6d. liability, which will bring in 3,000*l.*, you can have it, and if you do not you have only to say so." (Cheers.) The statements of Mr. Proffit are not worth the breath that uttered them. (Cheers.)

A SHAREHOLDER: Why did you not tell us this at the last meeting?

The CHAIRMAN: Were you there?

A SHAREHOLDER: I was.

The CHAIRMAN: Then why did you not ask me? (Loud cheers.) At the last meeting the shares had not been issued.

Mr. Proffit here rose to interrupt the speaker.

FACTS *v.* ALLEGATIONS.

The CHAIRMAN: I think Mr. Proffit has occupied a fair amount of your time, and now I am giving you the facts, which you can contrast with his assertions and allegations. Let them make their insinuations as they may, there is not a shred or atom of foundation to any one of them. Gentlemen, there are nearly 20 solicitors in this room to-day. I am told that they are here for clients. I have shown those who have applied every book, and do you think they would be silent if these allegations had any foundation? Mr. Merino looks at me.

Mr. MERINO: I will tell you what I think about you. (Laughter.)

A VOICE: We think very little of you. (Laughter.)

The CHAIRMAN (resuming): These transactions have been perfectly in order. If Mr. Merino, who has never advanced a 6d. to the company, is anxious for an investment, he can have these shares at the price we gave for them. Notwithstanding that the committee have been canvassing for four months, and although the directors never heard of their proceedings uutil Feb. 5, the proxies we (the directors) have obtained represent a total of 414,000 shares. (Loud cheers.) We have proxies late for 50,000 shares, and we have received from them 315,000 shares, but they have not the common honesty to eliminate from their list the proxies that people have witharawn from them who have fouud out their misstatements. (Cries of "Shame.") Of these withdrawals we can trace 20,000 shares. These four would-be directors——

Mr. THORNE: They are not directors yet, and I do not think they will be.

RELATIVE STRENGTH.

The CHAIRMAN: We have received support from 850 shareholders, and they have received support from 540, but we have every reason to believe the number has beeu reduced to 500. Their total following is not more than 250,000 shares, or at the most 300,000 shares against our 414,000 net. This meeting is an absolute mockery, because they would require infinitely more shares than they have. They have sent in a requisition which every solicitor (I have shown it to eight), says is the most unprofessional and absurd document they have ever seen. What did we do with it? We weut to our solicitors. He said it was impossible to accept it, as it was contrary to the articles, for directors are only appointed at the annual meeting. I said, what can be done, because I wanted to bring this to a head. I took the opinion of a well kuown counsel.

Mr. PROFFIT: Name.

The CHAIRMAN: Certainly I will give the name, Mr. Bramley Davis. He found after great research that according to a decision of Mr. Justice Cotton, in the event of a requisition being handed in by the desired number of shareholders, it was the duty of directors to endeavour in any way in their power to meet that requisitiou. The only way of doing so was to call this meeting and these resolutions, have been drafted by Mr. Bramley Davis. He said, "You must have the meeting to alter the articles; you must have that confirmed, you must have another meeting to appoint the four directors named, and that means three meetings." That, again, means a few hundred pounds out of the coffers of the company, which we are anxious to save. That is a nice beginning for professed economists. The great point, and it seems to me the gravamen of the charge of these gentlemen (because the Eureka is disposed of)——

Several VOICES: "No," and cries of "Yes."

OFFER TO SHOW EVERYTHING.

The CHAIRMAN: I have told you I have financed the syndicate. I have nothing to conceal, and will show you everythiug. A great deal has been said about the expense of this company, but I will show to the satisfaction of any impartial man, that no shareholder has ever contributed one 6d. towards the London outlay. How is that? As far as I have had time to go into it to-day, the present directors have paid in calls about 13,000*l.*, and the London expenses, including everythiug, have not been more than 9,000*l.*, so that you are 4,000*l.* to the good with regard to money. (Laughter.) The arrangements which expired in Mar. last, were for three years, and were made by the request of shareholders who wanted a larger office, and, of course, we had to engage a corresponding staff. At the end of that time the returns were about 3,000, or 4,000 oz., the London expenses were small, and those abroad were between 80,000*l.* and 90,000*l.* a year. We pay about one-third now of what we paid then. We have reduced our clerical and accouutancy staff to 700*l.*, and that is reduced still further by 460*l.* we received for transfer fees last ycar, so that the expenses are a *bagatelle*. My agreement with the New Chile Co. was for three years, one of which had expired when the company was re-constructed owing to the decision of the Courts as to the issue of shares at a discount. Before that took place, the shareholders having refused to subscribe more capital, another director and myself paid 15,000*l.* to the company for 60,000 shares.

BIG HOLDING OF DIRECTORS.

In other words, the present board have placed 22,000*l.* in hard cash in this concern in one transaction. (Loud cheers.) Two years of my engagement have to run. It was optional to me to sell my shares when they were 10s. or 12s. and retire with a profit of 30,000*l.*, and I could also have had my claim for damages for two

years' agreement unexpired. I have preferred to stand by the company. (Cheers.) The solicitors advise that we could not take over the whole of the property, and that opinion was confirmed by Mr. Justice Romer, who advised that part of the property could be handed over, but not the whole, the latter being Austin No. 9 and Eureka, which were left to the old company. At the expiry of the two years my colleagues were good enough to ask me to renew my engagement, which I declined ; and my present footing with the company is this, that I remain at six months' notice on either side. (Cheers.) My colleagues are gentlemen who have invested a very large sum in this company, and if it came to grief they would be losers of about 20,000*l*. Gentlemen who have shown such confidence in the enterprise, and still believe in it, should meet a better reception from some of the shareholders than they have done from a section to-day. (Cheers.) They have not drawn their fees, and neither have I since the mill was shut down on Dec. 12.

PROPER DIRECTORS.

Suggestions have been made as to the strengthening of the board, and I say we wish to get two gentlemen who have known the whole history of the company, who were original shareholders, who have a big stake in it, and who have paid 1*l*. to the first company, 5s. to the second, and 2s. 6d. to the present one. Those are the sort of men you require, and not persons who buy shares to attend the meeting. (Loud cheers.) It is in consonance with human nature that men will work hard for a concern when they have such an interest in it as I have described. I have paid 22s. 6d. for my old shares, and some of them now stand me at 30s. each. I have paid in calls about 9,000*l*. If you would like to have directors who have no stake in the company, or directors like Mr. Merino, who has turned a deaf ear to every appeal to fresh capital that has been made, the choice must be left to you. I do not see that Mr. Merino has any cause for complaint. He represented 200,000*l*. when the company was in fearful difficulties, after having expended a quarter of a million in two years, whereas we have only expended, after paying off the debentures of Mr. Merino and his friends, 1s. a share in two and a-halfyears, or 50,000*l*. (Cheers.)

COUNTRY SHAREHOLDERS WANT INFORMATION.

With regard to the payment to papers, I would say that at the meeting in 1889 there was a great request from country shareholders unable to attend the meetings, that the best newspaper reports available should be sent to them, and that was done, but we cannot get publishers to supply their papers for nothing. It is extremely difficult to please all parties. We have nearly 4,800 shareholders, and it is all very well for gentlemen present who have heard these proceedings to say that money should not be spent in sending the report of the proceedings to those who have been unable to be here. But the latter class takes a very different view of the matter, and think they are entitled to all the information the board can give them. (Cheers.) It is said they see the financial papers, but the vast bulk of them write to say that they do not, and what are directors to do. We have had at least 50 letters from shareholders within the past two days, asking that a full report of this meeting should be sent to them. (Hear, hear.) Last week I answered a thousand letters, at least on the business of the company, which a shareholder at the last meeting said could be conducted by a clerk and a secretary! (Laughter.) We must save our money, but save it judiciously, and do the utmost we can to make the company a success. (Loud cheers.)

MR. MERINO IS BLUNT.

Mr. MERINO: Representations have been made in the circular of the board about me which are utterly untrue. I do not wish to use rough language, but I will prove that they are a tissue of lies.

A VOICE : ("Order!") Moderate your language.

Mr. MERINO : I challenge the board to prove what they have said about me. The chairman is in the habit of saying whatever suits his purpose. ("Oh!") and laughter.)

Mr. ALDRIDGE : For a long time I supported the board, but have ceased now to do so, because of their contradictory statements. His argument about our never having paid London expenses would not do credit to a pupil in the School Board. I call Mr. Watt "the champion dissembler" of all London. (Laughter.) Although my name is down as a director, I do not care a snap of the finger for the office, but I want four fair, honest men to conduct the company.

A SUGGESTION.

Mr. JOHN NEWTON : I represent 150*l*., and must say I cannot understand the syndicate business, and I agree with the last speaker as to the contradictory statements that have emanated from the company. I believe the chairman will do much to bring peace to this company if he adds two new directors in whom we can all have confidence. If we do not, it will be a case of the two shells, and the lawyers will have the oysters. I believe this to be one of the most valuable properties in the world, but you must make it respectable by adding fresh directors. (Laughter.)

The CHAIRMAN : If Mr. Newton will show me what can be done it will be a most valuable suggestion. I have already indicated as much in my speech, only I have said they must be directors with substantial holdings.

PROPOSED DIRECTORS OBJECTED TO.

Mr. THORNE : I regret that this meeting has been so greatly interrupted and in so coarse and brutal a manner. Such meetings as these ought not to be turned into bear gardens, and coarse language should be avoided. I have not the pleasure of knowing the board, and the only time I have met Mr. Watt has been when I have differed from him. I object very strongly to the names of those who are put forward as directors. Mr. Brunker is engaged in litigation with the company, and I am glad Mr. Merino is not nominated. I believe those gentlemen were connected with the original company and the promoters of this company, to whom a large amount was paid, and in a short time a large amount was dissipated by mis-management, not to call it by a stronger word. Dr. Aldridge I do not know, but Mr. Walker is a director of several other companies by which I have lost money, and the directors of which do not fail to draw fees. I object strongly to these gentlemen being directors. (Cheers.)

Mr. WALKER : I have no wish to be a director of this company. I have been a director of other successful companies, and am still chairman of a concern that will be one of the most successful of the Indian companies, and by which I venture to think Mr. Thorne in the long run will not lose, but gain money. (Cheers.)

A SHAREHOLDER : Were the proxies charged to the company?

The CHAIRMAN : Certainly not.

VIEWS OF AN IMPARTIAL MIND.

Mr. MCIVOR : In a vigorous speech said : I have not associated myself with either party in this quarrel, but came here quite unprejudiced, but think it right now to give you the impression I have arrived at. (Hear, hear.) There is not a shareholder in this company that feels more vexed with the board than I do about the London expenses, but let us look at the matter as men of business. Do we want to get a return out of this mine or do we not? ("We do.") Are we to put in the place of these gentlemen, who understand the management and who have the thing in hand, men who know next to nothing? Are we to put in their places, when our last 6d. is at stake, names such as those that have been suggested? (Loud cries of "No.") It would be suicidal to do it. Mr. Watt may have made mistakes in petty matters, but they are at the end of their tether, and what ought we to do with our last 6d.? Ought we not to develop our property, and are we going to turn out men who are not drawing their fees, and who, yielding to the pressure of shareholders, have reduced the London expenses, and are doing their utmost to retrieve the past? Are we to put in Dr. Aldridge, whom we never heard of before? ("No.") Are we to put in Mr. Merino, who broke down in the old Chile Co.—("No")—and are we to put in Mr. Walker, whom I have read of in the leading mining paper in the City of London—I refer to the MINING WORLD—as the most respectable of them all, and the most business-like man, and whom I happen to know as a shareholder in another company. (Uproar, in which further observations were lost.) I must say that my vote will be cast for the board. (Cheers.)

IT IS TRUE.

Mr. PULLBROOK : It all comes to this, "it is very dangerous to swop horses in crossing a stream." (Cheers.)

RESULT.

The CHAIRMAN : The directors have decided to oppose the resolution as calculated to disturb the arrangements of the company, and to necessitate four meetings, which can only be held at considerable expense. I now put the motion—those in favour—those against—the resolution is lost by a large majority. (About 40 hands were said to be raised for it.)

The result was received with prolonged applause.

Mr. THORNE : I propose a vote of thanks to the chairman, who has shown great patience in conducting this meeting and in rebutting the charges made against him.

The motion was carried by acclamation.

Three cheers were called for Mr. Hugh Watt, and given with great heartiness, which were followed by groans and hisses for Mr. Proffit.

THE PAHANG-KABANG, LIMITED.

THE RESOLUTIONS PASSED.

AN extraordinary general meeting of the above-named company was held at Winchester House, Old Broad Street, E.C., on Thursday, for the purpose of considering, and, if thought fit, passing the resolution following, viz. :—

1. "That it is expedient to effect an amalgamation of this company with the Pahang-Semiliang, Limited." 2. "That the capital of this company be increased to 394,760*l*. by the creation of 194,760 new shares of 1*l*. each, and that for the purpose of effecting the purchase of the undertaking of the Pahang-Semiliang, Limited, by this company 169,150 shares (being part of such new shares) be issued as fully paid up, and that one of such fully paid up shares be allotted to each member of the Pahang-Semiliang, Limited, in respect of each fully paid up share therein held by him, and that 25,610 shares (being the residue of such new shares) be issued with 2s. 6d. credited as paid up thereon respectively, and that one of such last-mentioned shares be allotted to each member of the Pahang-Semiliang, Limited, in respect of each share therein held by him on which 2s. 6d. is credited as paid up thereon." 3. "That the draft agreement submitted to this meeting, and expressed to be made between the Pahang Semiliang, Limited, of the first part, the Honourable Arthur George Brand and Thomas Russel Kent, Esq., the liquidators thereof, of the second part, and this company of the third part, be and is hereby approved, and that the directors be, and they are hereby, authorised to enter into an agreement in the terms of the said draft, and to carry the same into effect.

The Hon. A. G. Brand

presided.

The CHAIRMAN said that the shareholders had, no doubt, all read the circular which had been sent round stating the reasons for the proposed amalgamation. They had had several very satisfactory reports from their mining captain, Capt. Penrose, since the formation of the company, but the rich deposits which he had discovered had turned out to be only pockets, and to gain any satisfactory results it would be necessary to go in for deep mining to a large extent, and in a country like Pahang that would be a very expensive operation. As the shareholders were aware, in anticipation of rich results an expensive tramway had been partly constructed, but that would not be proceeded with at present, but more time given to exploration. The board had been deceived with respect to their mining captain, as he had not informed them upon the discovery that the rich deposit had merely turned out to be a pocket, and they did not consider that he had done his duty by the company. He was sure that the course recommended was the best for the interests of the shareholders, and it was not improbable that their company might, like the Pahang Corporation, come upon a lode which would repay them for their trouble and expense. He concluded by moving the above resolutions. A somewhat lengthy discussion followed, and, in reply to several questions,

The CHAIRMAN stated that the reason the board proposed the amalgamation was because they thought it best for the interests of the shareholders.

THEY HAD ALL LOST MONEY IN THE COMPANY,

aud they wished to do all they could to improve the position of the company. He could not agree in any way to liquidation. In the first place, the balance was so small that the shareholders would only get a very small amount each, and secondly, that the Pahang Corporation would take one-fourth of that balance, holding as they did 50,000 shares. The expenses in Londou, and at Singapore, and at the mine, would be contracted as much as possible, and the board expenses, even if the directors took their fees, which they had not done for some time, would be reduced by one-half.

Capt. WILLIAMS having spoken hopefully of the prospects of the mine, and stated that he had assayed a piece of ore which had given 50 per cent. of tin, and

Mr. PONTIFEX, on behalf of the Pahang Corporation, stated that it was his intention of voting for the amalgamation.

The CHAIRMAN put the resolutions to the meeting, which were unanimously passed.

KNYSNA CONCESSION GOLD MINES.

RESOLUTIONS CONFIRMED.

A SPECIAL MEETING was held on Monday at the Offices, 6, Queen Street Place.

Mr. Grierson

presided.

The SECRETARY (Mr. W. F. Garland) read the notice convening the meeting and the scheme of re-construction.

The CHAIRMAN then formally moved the confirmation of the following resolutions passed at an extraordinary general meeting on Mar. 5:—"That the Knysna Concession Gold Mining Co., Limited, be wound up voluntarily under the provisions of the Companies Acts, 1862 and 1867." "That pursuant to section 161 of the Companies Act, 1862, the liquidators be, and they are hereby, authorised to sell and transfer (subject to due provision being made for dissentient shareholders, if any) all the property and assets of the company to a new company upon the terms of the scheme of re-construction now submitted to the meeting and identified by the signature of the chairman, and to enter into all necessary agreements for that purpose."

Genl. LLOYD seconded the motion, which was carried.

The CHAIRMAN then moved the appointment of Mr. W. F. Garland as liquidator.

This having been agreed to, the meeting closed.

LUIPAARD'S VLEI ESTATE AND GOLD MINING CO., LIMITED.

A MEETING TO REDUCE EXPENDITURE AND TO INCREASE THE SHARE CAPITAL.

A MEETING of the shareholders was held on Tuesday at Winchester House.

Mr. J. J. Hamilton

(chairman of the company) presided.

AN AMALGAMATION.

The CHAIRMAN remarked that the resolutions which would be submitted had been drafted in accordance with the suggestions of prominent shareholders with a view to reducing expenditure. The object of the board in asking for powers to increase the share capital of the company to 350,000*l*. by the creation of 100,000 new shares of 1*l*. each, was to enable the board to effect an amalgamation of the company with the three subsidiary companies now working the Luipaard's Vlei Mynpacht, viz., the Battery Reef Gold Mining Co., Limited; the West Battery Reef Gold Mining Co., Limited; and the Mynpacht (Luipaard's Vlei) Gold Mining Co., Limited; and this met with the approval of Mr. C. J. Rhodes and Mr. C. D. Rudd, directors of the parent company, the Goldfields of South Africa. The three companies they recognised should all have a voice in the management of the company, and directors from those companies would be asked to join the board. Wheu they had come to some decision on the first proposals, he would submit to them a proposal for the investment of 20,000*l*. in the Goldfields of South Africa.

The SOLICITOR here read the draft of the agreements which it was proposed the various companies should enter into, and said the liabilities of the subsidiary companies to the Luipaard's Vlei Co. were West Battery Reef, 2,403*l*.; Battery Reef, 13,000*l*.; Mynpacht, 2,700*l*.; what the outstanding liabilities of the companies were he could not quite say.

RESOLUTIONS.

The CHAIRMAN then formally proposed the resolutions as follows:—1. "That the capital of this company be increased to the sum of 350,000*l*. by the creation of 100,000 new shares of 1*l*. each." 2. "That article 73 (which authorised the payment to the directors of not less than 1,200*l*. per annum) be cancelled." 3. "That the following article be substituted for article 73, namely:—As remuneration for their services the directors shall be paid out of the fuuds of the company 500*l*. per annum, which shall be divided among them in such proportion and manner as they shall from time to time determine. Whenever for any year the dividend on the ordinary shares of the company shall exceed 5 per cent., the further sum of 50*l*. shall be paid to each director for every complete 1 per cent. of such excess, but so that no director shall receive more than 200*l*. in any oue year."

The SOLICITOR, replying to further questions, said the shares they were under the agreement to allot to each company were Battery Reef, 30,000*l*., West Battery Reef, 28,000*l*., and the Myupacht, 35,000*l*.

Mr. T. RUDD: I beg to second the motion.

The CHAIRMAN: We shall have about 50,000*l*. working capital. The three directors they proposed to add to the board were Mr. Leigh Hoskyns, Mr. Carson, and Mr. Cecil Quentin. The licences, after going down for some time, were now again advancing.

The resolutions were put one by one and carried.

The CHAIRMAN submitted to the meeting a suggestion that 20,000*l*. should be entrusted to the managing directors of the Goldfields of South Africa (Mr. C. J. Rhodes and Mr. C. D. Rudd) for investment in Mashonaland, and said they would be guided by the views that had been expressed, which, he understood, were adverse to the extension of the company's present ramifications.

WEST BATTERY REEF COMPANY.

AMALGAMATION WITH LUIPAARD'S VLEI UNDER FAVOURABLE TERMS.

A SPECIAL MEETING was held at No. 8, Old Jewry, on Tuesday.

Mr. E. J. Carson

(chairman of the company) presided.

The notice stated it was for the purpose of passing, either with or without modification, the following extraordinary resolutions:—1. "That it is expedient to sell the undertaking, including the assets of this company, to the Luipaard's Vlei Estate and Gold Mining Co., Limited." 2. "That the conditional agreement for the sale of the undertaking, including the assets of this company, dated Mar. 5, 1891, and expressed to be made between this company of the one part, and the Luipaard's Vlei Estate and Gold Mining Co. of the other part, be and the same is hereby approved, and that the directors be and they are hereby authorised to carry the same into effect."

The CHAIRMAN moved the adoption of the resolutions, and said that under the agreement the whole of their property and assets were to be taken over by the Luipaard's Vlei, and in return they were to receive one fully paid Luipaard's Vlei share for every two shares held in the West Battery Reef. The Luipaard's Vlei undertook at the same time to

CANCEL THE WHOLE 40,000 SHARES

they held in the West Battery Reef. The arrangement was fairly equitable. Since the meeting in Dec., the results of the crushings for the months of Jan. and Feb. had been received, and in each case he was sorry to say the yield of gold had not been as satisfactory as from the reports they were led to expect, and it was clear that the yield from the mine would not suffice at the present time to cover the necessary monthly costs. The directors greatly regretted that the working capital had proved insufficient for developing the property into a paying concern.

DIFFICULTIES HAVE LED TO THE EXISTING POSITION.

A variety of serious difficulties had brought about the position in which they found themselves placed, the most important being the drought of last year, causing a ruinous increase in expenditure upon transport and provision, and the extreme fineness of the gold in the upper portion of the reef, which had been one of the causes of the low yield of gold. The funds of the company being exhausted, it was necessary to raise more capital. The managing directors of the Gold Fields of South Africa were the original owners of the Luipaard's Vlei property, and it was at their instigation that the present scheme had been brought forward. The directors felt that short of placing the company in liquidation, there was no other course open.

IN THE WAKE OF SUCCESS.

The success attending everything the Goldfields of South Africa set its hands to justified the expectation that the Luipaard's Vlei Co. would expand into a large and successful business, out of which the West Battery shareholders would, he trust, reap substantial benefit.

The SOLICITOR explained the details of the agreement, one of which provided for the chairman joining the board of the Luipaard's Vlei.

"FOOLISH AND IMPRUDENT."

A SHAREHOLDER said that the proposal did not seem very liberal. Their directors had either been misled or deceived into buying the property, or had been very foolish and imprudent.

Mr. KING pointed out that the Luipaard's Vlei Co. was at any rate in a better position than the West Battery Reef.

Mr. EILDEN thought the Luipaard's Vlei should have been willing to give them share for share; it was a most unfair proposal.

The CHAIRMAN remarked that the directors had done their very best and worked hard for the company.

Mr. C. SMITH said they would be making a mistake if they did not take what he considered the very fair and generous offer.

Genl. BRUCE secouded the resolutions, which were carried.

The vote of thanks to the chairman and directors, which closed the meeting, was moved by Mr. H. E. M. DAVIES.

TINCROFT MINE.

DIVIDEND OF 10s. PER SHARE.

A SIXTEEN-WEEKS' MEETING of the adventurers in Tincroft was held on the mine on Tuesday,

Mr. F. Harvey

presided.

The accounts showed that the labour costs had been 8,439*l*. 9s. 6d.; merchants' bills, 4,837*l*. 10s. 8d.; three new boilers and outfits for 70-in. engine, 750*l*.; other items making the total debits up to 15,030*l*. 17s. 8d. Copper ores sold, 125 tons 2 cwt., for 456*l*. 6s.; arsenic, 59 tons 19 cwt., for 452*l*. 18s. 6d.; tin, 319 tons 8 cwt., for 16,044*l*. 9s. 11d.; discounts, 142*l*. 1s. 4d.; extra carriage, 25*l*. 16s. 9d.; total credits, 17,121*l*. 12s. 6d.; profit, 2,090*l*. 14s. 10d.; shareholders' balance, 5,655*l*. 11s. 9d.

SATISFACTORY STATEMENTS.

The CHAIRMAN said the tin sales this time were greater than last by 20 tons, but owing to the drop in the price of tin, which was equal to 3*l*. 15s. 9d. per ton during the quarter, a difference had been made in the credits of about 1,100*l*. They hoped it would advance, but at present the market seemed very dull. The dues were credited at the rate of one-fortieth on tin and arsenic. The good arrangement they had made with the lords provided that when the average price of black tin was bclow 55*l*. per ton dues should be paid at the rate of one-fortieth, and that when the price was above that sum the rate should be one-twenty-sixth. He wished that arrangement prevailed in some of the other mines. With regard to the profit, they should

remember that the three new boilers and other things had been provided for by laying aside part of the profits, and that they had been paid for out of revenue, so that the profit on the working, not reckoning these extraordinary charges, was 1,000*l.* more. They had also spent a lot of money on new slime floors. The profit would only admit of a dividend of 7s. 6d., but looking at the facts he had stated, the committee thought they would be justified in recommending one of 10s. a share. (Applause.) He proposed that the accounts be passed.

Mr. J. R. Bramwell, seconding, observed that owing to the low price of tin, although they had sold 20 tons more than last time, they had received 100*l.* less, while their extraordinary expenditure was 1,300*l.* or 1,400*l.*

Mr. W. H. Williams proposed that a dividend of 10s. per share be declared.

This was seconded by Mr. J. Jose, and carried.

WHEAL AGAR.

CALL OF 7s. PER SHARE.

A meeting of the shareholders in Wheal Agar was held on Tuesday at the Offices of the company, 2, Drapers' Gardens.

Mr. Cornelius Bawden

presided.

The Chairman said the tin returns, from circumstances over which they had no control—the severe frost and the recent snowstorm—showed a large decrease, and the balance against them at the present was 2,104*l.* 15s. 7d., and that would have to be met by a call.

In answer to questions,

Capt. Carter said that during January they were hindered on surface works for a couple of weeks, and during the late storm three weeks.

Mr. Hamilton remarked that that would not account for the whole of the deficiency, and inquired whether the price for tin had been so good since they had agreed to sell by ticketing.

The Chairman said the price had not been so good.

Mr. Strauss said that he had sent an inspector of his own to visit the mine, who had reported in favour of driving towards East Pool, and he would like Capt. Carter's opinion upon that point.

Capt. Carter said they were driving towards East Pool, though they devoted most of their attention to sinking the shaft by means of boring machines.

Mr. Strauss was of opinion that it would be better to husband their power for driving rather than sinking, and asked how much per fathom was paid.

Capt. Carter : From 6*l.* to 10*l.* 10s.

Mr. Strauss asked whether it would not be better to give a four months' contract instead of two.

Capt. Carter did not think that would assist them. If the men were paid more per fathom he did not think they would work any harder, and he would not dare to show his face in London.

Mr. Strauss said if the mine were developed a little more energetically it would meet the views of the sharebolders. (Hear, hear.)

Mr. Hamilton said not one of them had ever grumbled, because the men were getting good wages. They wanted to see work done, and if it were done in one month instead of three they would be glad to see it.

Mr. Strauss moved, and Mr. Marshall Lennox seconded, a call of 7s. per share, which the Chairman said would produce exactly 2,100*l.*

The call was agreed to, and a vote of thanks to the chairman, proposed by Mr. Marshall Lennox, and seconded by Mr. Strauss, was carried.

CONVERSION AND REDEMPTION OF THE OTTOMAN DEFENCE FIVE PER CENT. LOAN OF 1887.

All Bonds of the above Loan not presented for conversion will be repayable at par with accrued interest on April 10, 1891, and will cease to bear interest from that date.

Issue of £6,316,920 Four per Cent. Bonds, Secured by the Egyptian Tribute.

His Highness the Khedive of Egypt has, by an engagement entered into by him on March 20, 1891, undertaken to pay to Messrs. N. M. Rothschild and Sons the annual sum of £280,622 18s. 4d. for the service of this loan. This engagement will continue until the whole of the loan has been redeemed, and the annuity is, under the instructions of His Imperial Majesty the Sultan of Turkey, secured on the Egyptian Tribute.

His Imperial Majesty the Sultan of Turkey, having by an Iradé, dated March 2, 1891, authorised the above loan, His Excellency Agop Pacha, Minister of Finance of the Ottoman Empire, has, on behalf of the Imperial Ottoman Government, contracted with Messrs. N. M. Rothschild and Sons, of London, Messrs. de Rothschild Brothers, of Paris, and the Imperial Ottoman Bank, to carry out the above operations.

Applications for the new bonds *in exchange for bonds of the Ottoman Defence 5 per Cent. Loan*, will be received until Tuesday, March 31, 1891, inclusive.

The conversion will be effected as follows : For every £100 of the 5 per cent bonds, subscribers will be entitled to receive a like amount of 4 per cent bonds and 7*l.* in cash payable on April 10th next ; holders converting will retain the coupon due April 10, 1891, from which date interest will commence on the new bonds.

Application must be made on the form annexed to the prospectus, and accompanied by a deposit of £5 per cent. in money, or an approximate amount in convertible bonds, unless subscribers prefer to deposit all their bonds when making application : the whole of the bonds furnished with all coupons subsequent to April 10, 1892, must be delivered as soon as the scrip is ready to be given in exchange, and the failure to deliver them in due course will render the deposit on application liable to forfeiture.

Bonds presented for conversion must be listed on forms which can be obtained on application.

The new 4 per cent. bonds, as regards both principal and interest, will be free from all Turkish taxes, and will be issued to bearer in sums of £20, £100, £500, and £1,000, with coupons payable half-yearly on April 10 and October 10, in London, in pounds sterling, and in Paris and Constantinople at the exchange of the day ; interest will commence from April 10, 1891, and the first coupon will be payable on October 10, 1891.

An accumulative Sinking Fund will reimburse these Bonds at par in 60 years, by yearly drawiugs to take place in London in September of each year, and repayment will be made on October 10 following the drawing. The first drawing will take place in September, 1891. The Government reserves the right to increase the Sinking Fund after April 10, 1902.

Coupons not presented within six years, and drawn bonds within 15 years, from the time they become payable, will be forfeited.

REPORTS OF MEETINGS.

THE AMERICAN BELLE MINES, LIMITED.

A PROMISING PROPERTY—DIVIDEND OF 6D. PER SHARE (15 PER CENT.) FOR THE FIRST TWO MONTHS' OPERATIONS—WORKING CAPITAL INTACT—SNOW INTERFERES WITH THE WORK, BUT UNDERGROUND DEVELOPMENTS PROGRESSING SATISFACTORILY—STOCK EXCHANGE QUOTATION OBTAINED.

THE statutory ordinary general meeting of the American Belle Mines, Limited, was held at Winchester House, Old Broad Street, E.C., on Wednesday.

Mr. Thomas Phillpotts

presided.

Mr. BEDFORD MCNEILL (secretary) read the notice convening the meeting.

The CHAIRMAN: Gentlemen, this being only a statutory meeting, held within four months of the date of registration of the company, in compliance with the provisions in the Act of Parliament, we have neither a report nor any statement of accounts to submit to you, but we gladly take this opportunity of giving you all the information we can respecting this property, trusting that it may be both interesting and satisfactory. This company was registered on Nov. 29, and the allotment concluded on Dec. 8, 1890. The applications for shares far exceeded the number we had at our disposal, but we made as equitable an allotment as possible, and found that the number of shareholders on the register was upwards of 1,400. Our solicitors and their legal correspondent in America examined the title to the property, and on Jan. 21 last, having reported to us that "everything was in order," the first instalment of the purchase money was made, and on Feb. 28 the purchase was completed. The property consists of eight mining claims, of which the American Belle comprises four, the Silver Bell three, and the Hudson one. The geological formation of these properties is identical in character with that of the neighbouring and well known Yankee Girl and the New Guston Mines, the country rock consisting of grey trachyte, which is traversed by a dyke of porphyry carrying the shoots of ore. The Silverton railway passes through our properties, and our ores, which are smelting ores, are readily loaded into the railway trucks and forwarded to Silverton or to Denver, where they are sampled at the public sampling works, and sold on the assay certificates to the various smelters. Taking possession of this property as we did in the middle of winter, we could not expect to make much progress in any surface work which might he found necessary, but the underground developments were continued and favourable progress made, Fortunately, the weather during the months of Dec. and Jan. last was very fine, and we were able to ship ore during those months, but in Feb. very severe weather set in and has continued ever since. I have before me cuttings from various local newspapers which give graphic accounts of the abnormally severe weather which prevailed in that district; these some of you may presently like to peruse. I shall not weary you by reading them all, but with your permission I will give you one extract from the *Ouray Plaindealer* newspaper of Feb. 19, which reads as follows:—

"While floods are deluging the east, we are having the heaviest snowstorm that has visited the San Juan for many years. It started in about a week ago, and during the last 48 hours it has been putting in its heaviest downfall. Monday and Tuesday it was a mixture of rain and snow, but Wednesday it was snow in earnest, and it came thicker and faster all day and all night. By Thursday morning from 15 to 18 ins. of new snow covered the ground, and snowslides were too numerous to mention. Even below town snowslides came down and blocked tho out-going train. Communication is cut off with Irontown and Red Mountain, Mount Sneffles and all points in the mountains. The city water works pipe that was carried away by a snowslide was repaired yesterday, and the water turned on last night. Reports of accidents are flying around like snow birds. It will take several days to dig through the snowslides and open the thoroughfare."

On the 19th inst. we received a letter from Mr. Crawford, dated Mar. 10, in which he states:—

"On account of the deep snow we are hindered very much in getting all the reports from the mines. The roads are all blocked, and the telegraph wires in many places down. I am, however, in receipt of a letter, dated the 1st inst., which states that the mines are looking very well indeed. On the American Belle they are sinking a shaft another 100 ft., and in less than 30 days we hope to encounter the ore body 100 ft. below the present workings and to meet with a great improvement in the value of the ore. On the Hudson Mine we are sinking a shaft and continuing to drift in the ore bodies. The latest reports from thence are that the mine is looking very well, and that they are getting a good grade of ore. In the Silver Bell we have large ore bodies at our lower workings of very good grade. Every spare space underground is filled up with ore, as our storage capacity there is not very large, our work being confined at present to developing. Taking the mines altogether they never looked better or more promising than at the present time. Unfortunately, we have had one of the severest snowstorms ever known in the mountains; it continued for 11 days without stopping. However, I do not look upon this as likely to delay us for any length of time as the season is getting pretty well advanced, and the roads will shortly be open, and when once open we shall soon be able to ship all accumulations of ore now in the mines, and be in a position to keep up the output during the summer."

Mr. Mitchell, our superintendent at the mines, wrote us a letter, dated Mar. 1, which we only received on Monday, the 23rd inst. He says:—

"We have been working full force on the Silver Bell during the month of Feb., and have over 20 car loads of ore in the ore-house ready for shipment directly the railway is open. The storm that we have had has allowed us to get the ore bodies in good shape for a large shipment so soon as the blockade is raised."

He also reports of the favourable progress that has been made in the American Belle and the Hudson claims. When we call to mind the unusually severe winter we have recently experienced in England—remembering that only a fortnight ago the trains on the Great Western Railway between Taunton and Exeter were blocked by the heavy snowstorms for 36 hours, and telegraphic and postal communication with Devon and Cornwall retarded for several days, we can readily understand that in Colorado, at an elevation of 10,000 ft., these climatic disturbances were on a scale of greater magnitude, and that they were accompanied by avalanches destructive to life and property, and causing the cessation for a time of all traffic and communication. If, therefore, we are not able to show you as favourable a result of the first few months' operations at the mines as we anticipated, you must not feel discouraged, for remember the underground developments have been continuous, and the ore is broken and stored in the mine ready for shipment as soon as the railroad is open for traffic. We arranged with the vendors that we were to have all the produce of the mines from Dec. 1 last, and, before the bad weather had set in we had shipped, and have since sold, the output for the months of Dec. and Jan. last. The net profit realised therefrom was 10,000*l*., our working capital of 50,000*l*. remaining practically intact. Instead of waiting for the realisation of the ore won during the month of Feb.—thus completing the first quarter of the year—we have thought it better, in the interests of the shareholders, to deal at once with the profit of the first two months, and not to wait until the yield in Feb. could be shipped, sold, and the proceeds remitted to this country. We have, therefore, declared an interim dividend of 6d. per share, payable, free of income-tax, on the 15th April, which is at the rate of 15 per cent. per annum on the capital of the company. The dividend warrants will be posted in due course, and this arrangement will, we hope, meet your approval. In conclusion, gentlemen, I have much pleasure in being able to inform you that we yesterday afternoon received an intimation that the committee of the Stock Exchange had granted a quotation of our shares in their Official List.

FOREMOST AMONG THE RED MOUNTAIN MINES.

Mr. CROWTHER, who was received with applause, said: Gentlemen, Mr. Phillpotts has dealt very fully with the state of affairs as it exists to-day, and you must bear in mind that his remarks upon the future are limited; but I may tell you that I have had letters from Mr. Crawford, and he looks forward to the future of these three properties, which are owned by the American Belle Mines, Limited, as one of very great promise indeed. He expects that they will take the premier place amongst the Red Mountain Mines; and that he has more than reasonable grounds for his views is evident to anybody who is acquainted with the size of the ore bodies and the nature of their product as they exist in these mines. Mr. Crawford looks forward with confidence by the month of Sept. to having all these three mines in full work. The results, so far, have been obtained from the Silver Bell. The Silver Bell is likely to produce very much upon a parity with the Guston and the Yankee Girl; but in addition to that, there are the large ore bodies in the American Belle, which, at the present time, are not available, because the smelting arrangements have not yet been perfected, and that is an operation which takes some time. The work is, however, going forward, and in the course of May we expect that the first steps will be taken towards the erection of

A NEW AND LARGE SMELTER AT DURANGO.

Durango is within 60 miles of these mines, and is very favourably situated, both as regards climatic conditions and fuel, and the supply of the necessary ores which are required for fluxing purposes in the smelter. When that smelter is erected, it is to smelt some 300 tons of ore per day. It will be largely supplied from the American Belle Mine—that is to say, from the National Belle property, belonging to the American Belle Mines, Limited. There we have a very fine smelting ore indeed—rich in copper, and a very favourable ore for fluxing purposes; and we

fully expect that we shall be in a position by that time to turn out, from the National Belle Mine alone, from 100 tons to 200 tons per day. (Cheers.) And when I tell you that the saving in freight—which will be, of course, additional profit to us—between shipping the ore and smelting it at Durango, and shipping it and smelting it at Denver, will amount to something like $6 a ton, or 24s., upon the product of that mine in itself, you will see that it means a very large profit. Therefore we look forward with confidence during the course of this summer to perfecting our arrangements, so that by next fall we shall have these mines in full working order; and then, and not until then, will you begin to reap the full benefit of your ownership.

A MINIMUM RETURN OF 25 PER CENT.

I have had many conversations with Mr. Crawford upon the subject, and he looks forward to a return of from 25 to 30 per cent. as a *minimum* from these properties upon our capital; and it may go, provided developments are as encouraging as they promise at the present time, to a considerably higher figure. So that you have no occasion to be fidgety with regard to your holdings in this company, and think that because you are receiving a dividend of 6d. at the present time—which, as I said before, is obtained only out of the ore at the Silver Bell Mine—that you are at your *maximum* earnings. You are nowhere near them, in my opinion, and you may look forward with encouragement to very much more prosperous days than you are having at the present time. (Cheers.) In the course of a couple of months, and perhaps less, the weather will be favourable for us, and we shall be able to continue the developments and get everything into shape for very large shipments as soon as our smelter is ready to receive the ores. In the meantime we shall go on sending the higher grade ores to Denver, and from these you will draw your dividends during the early portion of this year; afterwards you will get the benefit of the smelting at Durango, which will make a very material difference to your profits. (Cheers.)

HALF-YEARLY MEETINGS.

Mr. PIKE: Do you propose to hold half-yearly meetings?

The CHAIRMAN: That has not been considered necessary.

Mr. PIKE: I think in the present day half-yearly meetings are almost general in a large mining company where the returns are considerable, and I am sure the shareholders would be glad to hear what you are doing. I do not think information can be properly conveyed to them otherwise than in general meeting. (Hear, hear.)

The CHAIRMAN: That is a question upon which we should like to hear the opinion of the shareholders.

Mr. SIKES: I think half-yearly meetings are a very great expense to a company, and I am inclined to the opinion that in our case they are not necessary. I, for one, should not vote for them.

A SHAREHOLDER: Is it not intended to send out circulars as usual?

The CHAIRMAN: Certainly.

The SHAREHOLDER: Then the shareholders will receive the information without the necessity of holding a meeting. May we take it that the information will be as much as we could get at a public meeting, and will cost less?

The CHAIRMAN: Yes; certainly.

A SHAREHOLDER: I have come all the way from Aberdeen, and it would not suit my convenience to come up here every six months.

The CHAIRMAN: I will put the question if you like, Mr. Pike.

Mr. PIKE: It is not necessary; I merely made the suggestion.

A SHAREHOLDER: Are the preseut workings deep or shallow? They seem by the plans on the wall to be near the surface.

DEEPEST SHAFT 300 FT.

The CHAIRMAN: The deepest shaft at the National Belle is about 300 ft. It is comparatively shallow at the preseut time. There is a great deal of virgin ground.

A SHAREHOLDER: I beg to propose a vote of thanks to our chairman, for he has been most explicit in the information he has given us, and has been very ready and willing to answer our questions. I think he deserves our hearty thanks for the way in which he has presided to-day. (Cheers.)

The motion was seconded and carried.

The CHAIRMAN: I beg to thank you, gentlemen, on my own behalf as well as on that of my colleagues, and can assure you that we shall endeavour always to forward your interests to the best of our ability.

The meeting then separated.

DE KAAP MINES, LIMITED.

COMMITTEE PRESENT A DOLEFUL REPORT—SERIOUS ALLEGATIONS AS TO MISUSE OF COMPANY'S FUNDS—MR. CLOETE AND THE FINANCE COMMITTEE—A NEW BOARD ELECTED—SCHEME TO TEST THE MINE.

A MEETING was held at Winchester House on Monday.

ABORTIVE ATTEMPT TO LIMIT THE PRESS ATTENDANCE.

Before the meeting commenced there was an attempt to exclude the representatives of certain papers (the MINING WORLD, amongst others), which evoked indiguant protests from the shareholders. Thereupon all the representatives of the Press were admitted, Mr. TURNER stating that the board wished this to be done "so far as accommodation permitted." This statement was received with hilarity by a body of shareholders by no means predisposed to mirth.

A TALE OF WOE.

When the meeting commenced Mr. Laurence Cloete was found iu the chair, but at once vacated it for

Mr. W. F. TURNER, who proceeded at once to read certain portions of the committee's report. He said: Pursuant to the amendment carried on Feb. 10, the committee have investigated the books, accounts, and documents relating to the formation and management of the company, and beg to report as follows:—First, as to the constitution of the company. It was incorporated Jan. 30, 1889, with a capital of 150,000*l*. On the same day a meeting of the signatories was held, and directors appointed, namely:—Messrs. Cargill, King, Rogers, Vanderbyl, and Sampson Hill, Messrs. Graumann and Laurence Cloete being appointed to join the board immediately after allotment. Mr. Rogers never took his seat. He was Mayor of Kimberley. On Jan. 31 the first board was held, when Messrs. Cargill, Vanderbyl, and King were present with the solicitor, and this resolution was passed:—"That the prospectus having been read and passed and compared with the reports and documents, the same be issued to the public." The prospectus was advertised for two or three days. 80,000 shares were offered for subscription; 50,000*l*. was cash, payable to the vendor, and 20,000*l*. was the working capital. On Feb. 6 applications were submitted for 143,000 shares, and shares were allotted—the agreement adopting the preliminary contract beiug sealed. The next board was held on Feb. 8, when it was resolved: "That Messrs. Cloete and Graumann be invited to take their seats as directors." At the same meeting 70,000 shares were allotted to the vendor; Mr. Burgess was appointed secretary, and the offices of the company fixed at Drapers' Gardens. Thus the company was launched. Then as to the prospectus. The committee have made a careful examination and compared it with the engineer's reports, &c. First, as to the quantity of ore available—the prospectus under the head "development" states that there are 100,000 tons of ore available, aud under the head "broadside," Mr. Verey, one of the engineers, is made to state that he estimates the reserves at 80,000 tons.

A SERIOUS "MISTAKE."

Now these 100,000 tons and 80.000 tons, according to the engineer's reports, refer to the *same body of ore*, whereas the prospectus *treats them as distinct*. The second point is as to the value of Kirk's reef. The prospectus states that the "preseut value" is 3 ozs. 19 dwts. 14 grs. per ton, which would lead anyone to suppose that that was the ascertained present average value, whereas Mr. Walton's report on which the statement is based says "the present *assay value* is 3 ozs. 19 dwts. 14 grs., but this must not be taken as the average, as it is in evidently rich ore above the average." The directors suppressed these most important words of qualification, which they must have seen, as the words cannot possibly be separated from the figures in the same sentence. The shareholders know that no ore has yet been found in Kirk's reef really worth crushing. As to the estimated result, the directors bring it to 66,000*l*. profit por annum. (Laughter.) They also greatly underestimate the working expenses at 1*l*. per ton, whereas the engineer's estimate was 1*l*. 10s. per tou, and no mine has been worked on the De Kaap goldfield at so low a cost as 30s. a ton. Our lawyers, Messrs. Cheston and Sons, have obtained the opiniou of eminent counsel, who say "the most material statements seem to me to be those relating to the quantities of ore exposed and the assay value of Kirk's reef. Upon the whole I think that the reference to 100,000 and 80,000 tons is misleading, and iutended so to be, and is not justifiable, and if a shareholder read the prospectus in the way suggested a *prima facie* case can be made out. The statement as to the value of the quartz is intentionally misloading." Your committee are advised that action can be taken against the original vendors, directors, and promoters—(cheers)—by individual shareholders, but not by the company. The promoters were the Gold Trust and Investment Company, Limited, and Messrs. Michael Abrahams and Co. were solicitors to that company, and also to this. In considering the London management—the offices were at 8, Draper's Gardens, which were also those of Mr. Cloete and the Development Company. Mr. Burgess (secretary) of the De Kaap Co. was also secretary of other of Mr. Cloete's companies. Immediately on his appointment to the board (Feb. 8)

MR. CLOETE BECAME PRACTICALLY MANAGING DIRECTOR,

although no formal appointment was made. It had been resolved that all cheques should be signed by two directors, and countersigned by the secretary, and on May 9 Messrs. Daniel King, Vanderbyl, and Cloete were appointed a finance committee. (Laughter.)

SERIOUS ALLEGATION.

It appears that from the outset the company's affairs were managed not solely in its own interest, but largely in those of other concerns. Before proceeding to give cases in point, your committee, while censuring the sacrifice of the company's interest and misuse of its funds, for which Mr. Cloete may have been largely responsible, desire to say that in their judgmeut every member of the original board was no less responsible, by reason of gross neglect of their most simple and obvious duties. Under the articles the directors might invest the funds of the company not required for immediate use in such securities as they deem fit—tolerable securities, of course. On Mar. 6 a loan of 1,000*l*. was made to the Neebe, London and Transvaal Syndicate, without security. (Oh.) It was for one month at 6 per cent., and was repaid in a fortnight. The committee refer to that as being a first example of a class of transactions, which has been the chief cause of this investigation being made. The Stock and Sharo Auction Co. (now in liquidation) also figures largely, and of this concern the directors were Mr. Cargill (one of your board) and

MR. KENNETH FARRINGTON BELLAIRS.

The paid-up capital of that concern was 12,000*l*.—6,000*l*. being in arrear. (Laughter.) On Apl. 8, 10 weeks after this company was formed, a cheque for 4,000*l*. was drawn on the National Provincial Bank,

IN FAVOUR OF THE STOCK AND SHARE AUCTION CO.,

on deposit, signed by Messrs. Cloete and Vanderbyl, and countersigned by the secretary, endorsed by Bellairs, and duly paid. No voucher has been produced for that payment, and the committee are informed that the amount was placed not to the credit of De Kaap Co., but to that of Mr. Cloete. For this transaction there exists no authority in the minute book or elsewhere, nor was anything received in the nature of security. On Oct. 31 the Stock and Share Auction Co. are credited with two sums of 250*l*. each, which were placed on deposit at the National Bank. That amount was the only satisfactory deposit ever made in the history of this company. On Dec. 20 and 30, 1889, two sums of 500*l*. each are credited to the Stock and Share Auction Co. "as cash per Development and Investment Co." If the 4,000*l*. had been placed to the De Kaap Co.'s credit there would not have been a reason why these sums should have been received back through the Development and Investment Co. Then it was necessary to prepare the books for audit. Entries were made crediting the Stock and Share Co. with 400*l*. as a repayment to the Development

Co. of a remittance which they had made to South Africa. That appears to have been the case, because the manager has had the money. There were various sums amounting to 1,630*l.*, which had been repaid by the Development Co., and transferred, by Mr. Cloete's direction, from the credit of that company to the credit of the Stock and Share Auction Co. (*vide* the book keeper's statement)—thus reducing the Stock and Share Auction Co.'s balance to 470*l.* The committee have had no means of independently verifying that balance, inasmuch as the

STOCK AND SHARE AUCTION CO. DECLINE

to furnish any account whatever, and they are in liquidation, and a very hole and corner liquidation it is. The committee point out that whilst the payment of 4,000*l.* may have been known only to the two directors who signed the cheque on Apl. 8, it should have come before every member of the board at their meeting on May 9. Mr. Cargill was chairman of both companies, and counsel gives this opinion, "the 1,630*l.* ought not to have been credited to the Stock and Share Auction Co. as having been paid. It was unauthorised and improper, and any directors who knew of the fact are liable to make good any loss arising from the transaction." The Development Co. was Mr. Cloete's own creation, and he and his friends held nearly all the shares. The paid-up capital was 265*l.*—221*l.* being in arrear. (Laughter.) A curious cheque was sent to the Natal Bank,

"PAY YOURSELVES OR ORDER 500*l.*"

The counterfoil is marked "Yourselves 500*l.*" The cheque was duly paid and charged in the company's books to the Development Co.'s deposit account. The committee are informed that this cheque was handed into the Natal Bank in re-payment of a remittance which they cabled to South Africa on behalf of another gold mining company—in other words the money was drawn and used by Mr. Cloete, or under his instructions—we do not know how. There is no authority for this payment on the minute books of the board or finance committee. On Mar. 27, 1890, the following resolution was passed:—"That the sum of 3,000*l.* be paid to the National Bank on deposit for the Development and Investment Co., at seven days' call, 6 per cent. interest, with, as collateral security, 38,000 fully-paid shares in the Gray's Gold Mines, Limited, to be placed in the name of Mr. Burgess, the secretary." Those present at this meeting were Mr. Cloete and Mr. Vanderbyl. The minutes of the board on Apl. 22 (present those two gentlemen and Mr. Cargill) state—"Read and approved minutes of the Finance Committee 27th." Cheques were drawn in pursuance of this for 3,000*l.* On Mar. 1, 1890, the company's account at the Natal Bank (all cheques paid) would have been overdrawn by 295*l.*; Mar. 19 by 285*l.*; Mar. 27, 568*l.*; and Mar. 28, 151*l.* So far from the company having money to place on deposit,

IT WAS ON THE POINT OF BEGGARY.

The balance at the National Bank all this time never exceeded 150*l.* and De Kaap Co. was practically penniless. On Mar. 4, three weeks before the call became due, the company had actually to hypothecate that call to secure an advance of 1,000*l.*, and yet, when that call was coming in, we were supposed to be placing money on deposit.

THE WHOLE THING WAS A MISERABLE SHAM.

(Hear, hear.) It appears from letters from the manager that he was in most urgent need of funds. On Mar. 1 he says: "You will see that even if I get 750*l.* from you this month I shall be 500*l.* in debt, and neither my credit nor yours is good for 500*l.*"

PITIABLE CONDITION OF THE MANAGER.

On Mar. 6:—"I should be considerably worse than penniless but for a gross blunder on the part of the company's agents in Barberton." On Mar. 28:—"Remit immediately if disaster is to be prevented." According to the books, at this very time 2,500*l.* was on deposit with the Stock and Share Auction Co. When the books were being prepared for audit late in 1890, the 1,630*l.* before referred to was transferred from the credit of the Development Co. to the Stock and Share Auction Co.—the transfer being made to the debit of the Development Co. of 1,000*l.*, which had been previously charged to machinery and plant account. Since Sept., 1890, various sums have been received from or through the Development Co., and Mr. Cloete, of 2,000*l.*, leaving a balance now due of 2,589*l.* from somebody. In July, 1890, a company was formed, called "The International Agency and Investment Trust," which practically acquired all the assets of the Development Co. The latter company passed a resolution to wind up, and the shares in the Gray's Gold Mine, as a security, are worthless. It appears to the committee that the payments to the Development Co. were not *bona fide* deposits. Counsel's opinion is "that the payments to the Development Co. were unauthorised and improper, and every director is liable to make good any loss the company has sustained by reason of the transactions. I think the 1,630*l.* paid by the Development Co. should be credited to the account of that company, and not to the Stock and Share Auction Co." As regards the 10 stamp battery of the Graskop Mill and Mining Co.—Mr. Cloete was chairman of that company. 250*l.* was to be paid on account, and 1,000*l.* when the battery had been inspected and approved by the manager. No cheque was drawn for the agreed deposit, but a cheque for 1,000*l.* was drawn on Mar. 14, "Pay general account or bearer."

A MYSTERIOUS CHEQUE.

Nobody appears to have known what that 1,000*l.* was for. It was charged to "machinery and plant account," but transferred by Mr. Cloete's direction to the Development and Investment Co. The Graskop Co. never received this sum, but it was paid to the National Bank to the credit of Mr. Cloete's private account with that bank. (Cries of "Oh.") The opinion of counsel is that Cloete is personally liable, and also probably the directors. Next, as to the electrical plant—I will not go into that, as there are important legal questions involved. It was originally ordered for the Graskop Co., and it was a natural thing when they did not require it to put it on the shoulders of De Kaap Co.; 1,009*l.* was its cost, and all the details are in the report. Parties were in treaty with the Government of the Transvaal for the whole of the electric lighting of that territory, and I do not know whether this weighed with the Graskop Co. in "planting" this plant on the company. (Laughter.) As long ago as Feb., 1890, Mr. Ogle (who was consulting engineer both to this company and Graskop) urged the need of purchasing waggons and rails—a transaction that seems to have taken place in perfect order, but when the time came for payment there was no money available—the end of it being that Messrs. Dick and Kerr presented a petition to wind up the company, which the committee have since settled on advantageous terms, seeing that the company had no defence.

WELL PAID DIRECTORS—12*l.* 10*s.* A MEETING.

As to the original board, Mr. Cargill applied and paid for 200 shares; Daniel King, 100; Mr. Vanderbyl, 100; and Mr. William Hayward Rogers, 100; Mr. Sampson Hill in the same way, and Mr. Cloete, by transfer from Fanny Chamberlain, 100 shares. (Loud laughter, and cries of "Where is Fanny?") Mr. Graumann had 15,248 shares, and Mr. King, Mr. Cargill and Mr. Vanderbyl still hold their original shares. Mr. Cargill resigned Sept. 29, 1890. He attended 27 meetings for which he received 382*l.*, or 12*l.* 10*s.* a meeting. (Cries of "Oh.") Mr. Daniel King resigned in July, 1890, and attended 22 meetings, receiving in fees 204*l.* Mr. Vanderbyl resigned in Oct., 1890, attended 27 meetings, and received 324*l.* Mr. Sampson Hill attended 25 meetings, and received 319*l.* Mr. Graumann has not resigned, but has attended 17 meetings, and received 174*l.* He has not attended any meeting since Feb., 1890. The board voted him a sum of 50*l.* on account of travelling expenses on his visit to Africa, but he has not made any report or communication whatever to them.

JUSTICE TO MR. CLOETE.

Mr. Cloete has attended 45 board meetings, and four finance meetings, receiving 461*l.*, and with all his faults, when the history of this company is written, it will be said that he did not run away, but that everybody else did. Mr. King attended three, and Mr. Vanderbyl four finance meetings.

MR. SAMPSON HILL AND HIS 50*l.*

In Oct., 1890, Mr. Sampson Hill was about to proceed to the Transvaal, and received 37*l.* 10*s.* on account of fees, and 50*l.* on account of a special fee of 100*l.* for inspecting the property. He was actually going out on his own business. (Oh.) Mr. Hill did not visit the Transvaal, nor has he returned the 50*l.*, although he has been repeatedly requested so to do. Until about the end of last year the meetings were attended by only two directors, but afterwards Mr. Hosking and Mr. Dixon were added to the board. On Feb. 6 the company's cash balance was reduced to 96*l.*, but there were plenty of outstanding liabilities. After drawing the fees the board were almost without funds to pay the petitioning creditor, or to remit the Feb. expenditure—in fact, the company was dependent upon the complaisance of Mr. Cloete to keep the mine at work, and it was not until after the Feb. 16 meeting that 200*l.* was cabled to the manager, and later on 150*l.*—remittances made possible because Mr. Cloete paid in 200*l.* Your committee, therefore, strongly condemn the conduct of the directors in drawing fees under the circumstances existing on Jan. 31. The report and accounts submitted were substantially correct, but the cash balance was not. 1,700*l.* is outstanding in calls—the principal debtor being Fanny Chamberlain for 510*l.* 10*s.*

WHERE IS FANNY?

Several VOICES: Where is Fanny?

THE LOCAL BOARD.

The CHAIRMAN: She cannot be found. (A VOICE: We thought not.) The local board and the manager got to loggerheads, and the London board abolished them at the end of the first year—their services were *nil*, but they received 225*l.* The bookkeeper out there went on the drink, and incurred liabilities, which the company had to pay, of 151*l.* His name was Piggott. (Great laughter.) It must be recorded, in justice to the manager, that he was frequently placed in great difficulty, and the extracts from his letters and telegrams which I have read prove that it is a pitiable story down to Dec., 1890. (Hear, hear.) The company's expenditure on cables, and extra commission for remitting by cable instead of mail must have been something enormous. During all this time several thousand pounds were lying with the Stock and Share Auction Co. and with the Development Co. No estimate of working expenses appears to have been furnished by the manager for some time, and then he was told to reduce it to 750*l.* a month, and later to 350*l.* We have not been able to remit anything for Mar., and have only 200*l.* at the bank. The manager confirmed the statements of Mr. Walton, but omitted to state that there was no road over which to convey the machinery that he allowed the board to order. A waggon road was ultimately made at a cost of more than 1,000*l.*, but was not completed till the end of 1889. The manager took out an assay plant, but the board did not send out an assayer till 10 months after the company was formed. No assays reached London until early in June, 1890, and the assayer has left, being uncertain I suppose about the receipt of his salary. Much correspondence of a controversial kind has passed—the board and the manager mutually upraiding each other. The manager does not appear to have furnished reports with sufficient fulness or regularity, and, in fact, the manager and board have never worked harmoniously. As to the condition of the property, the committee find from the manager's reports and assays, which have come regularly since July, 1890, until a few weeks ago, that the work done has been almost confined to Kirk's reef, the result being that in large portions of the property has scarcely been touched at all. Mr. Powter reports "there are sufficiently good indications to warrant further development work being carried on at greater depth, in order to find a more uniform and solid lode. Your committee have had the advantage of conferring with Mr. Ogle, the company's engineer, and have come to the conclusion that, having regard to the undeveloped condition of the greater portion of the property, and the amount of money already embarked in various directions in the general equipment of the mine, it is desirable that funds should be raised for the purpose of further proving and developing the property.

RECOMMENDATIONS.

The recommendations of the committee of investigation are as follows:—(1) That the report and accounts to Sept. 30, 1890, be not adopted. (2) That the board of directors be re-constituted, and that Mr. Graumann, the vendor, be removed by extraordinary resolution. (3) That the re-constituted board take such action as they may be advised to obtain payment of all monies due to the company. (4) That preference shares to the amount of 20,000*l.* be created, bearing a

cumulative dividend of 25 per cent. per annum, and having a preference as to capital as well as dividends. (5) That 10,000 preference shares be offered to the existing shareholders as soon as the necessary resolutions authorising the creation of the new capital have been passed. (6) That the accounts continue to be made up annually to Sept. 30, but that half-yearly meetings of the shareholders be held in future. Every facility has been given to the committee by the directors and secretary in the discharge of their duties. Most of the recommendations are so obviously common sense that there can be no difference of opinion, though on certain points there may be. I move, "That this meeting do approve the report of the committee of shareholders presented this day, and do authorise and direct the board to institute legal proceedings, in the name of the company, against the directors or other persons liable for the recovery of damages in respect to losses incurred by the company through the negligence and improper action of the directors mentioned in the reports." (Cheers.)

Mr. HIBBERT: I second the motion.

COMMITTEE COMPLIMENTED.

Mr. W. H. THOMPSON: The report is both thorough and admirable. (Cheers.) But one point has not been mentioned, and I should like to hear from the chairman whether the title has been looked into and the property legally conveyed to the company.

The CHAIRMAN: That has not been looked into by the committee, inasmuch as the title is evidently perfectly in order. The transfer was effected through the Bank of Africa and duly reported to the board at an early stage, and we have been in peaceable possession ever since. Mr. Cloete desires me to say that this report has not been submitted to him. The committee considered that question and thought it inexpedient, but every statement of fact and figure is based upon indisputable evidence.

A SHAREHOLDER: What is the reason you only offer 10,000 preference shares instead of 20,000?

Mr. GRAY: Can we not recover from those who were responsible for the misstatements in the prospectus?

Sir EDWIN GALSWORTHY: In the first place the shareholders should express their thanks to the committee for the great labour and trouble they must have taken before they could produce this document. Next, we should have been glad to have had a copy of it prior to the meeting, but probably there were reasons why it could not be furnished.

THE CHAIRMAN AT THE LAST MEETING ASSUMED A JAUNTY AIR,

but I then said, and in the face of what has been laid before us to-day, I repeat—there is matter enough in the history of this company for a three-volume novel. (Hear, hear, and laughter.) One recommendation is that the directors should be empowered to take proceedings, and I do not think that any shareholder will hesitate to give them that power, and I might go further, because, as far as I can see, there is serious matter to consider, and I begin to think that the Rae Mine is nothiug to it. If, then, the committee should think that proceedings of a criminal character should be taken against the directors or secretary, in the interests of public morality, they ought to be taken.

AN INOPPORTUNE SMILE.

The company seems to have been in terrible straits even at the time when a cheque from the funds passed into Mr. Cloete's private account. Mr. Cloete smiles at that, and I do not know what he will not smile at. (Loud cheers.) It seems to have been in straits when they drew their directors' fees, and it could not get into any better condition until they found the mysterious "Fanny." When they find Fanny Chamberlain I hope they will get that 500*l*. out of her. Ought we to drop the property altogether? The chairman, whom I have never seen, thinks not, and his conclusion appears to be wise. The terms of the issue are heavy, but the answer to that is that you must get the money. I hope you will get it, but I shall not take any of the preference shares myself. (Oh.) I may, perhaps, but I do not think so. The practical point is this—we shall reject the report of the board, and, I hope, pass these resolutions.

Mr. MANSELL: Has any approach been made to the committee for the repayment of the funds misapplied by the directors?

Mr. SKIPWORTH: There was an item of 350*l*. paid to someone in the last account, and the secretary professed not to know (or did not know) about it. Did the committee find out anything?

The CHAIRMAN: There is in the company's letter book a receipt for 350*l*. to the Stock and Share Auction Co., drawn by the bookkeeper, and signed by Mr. Burgess. The bookkeeper, who I believe to be a perfectly honest man, said he was told to prepare a receipt in these terms, Mr. Burgess was requested to sign it, and there is the end of his information. One of the directors has seen the books of the Stock and Share Auction Co., and I think there is some transfer from one account to another, but nothing to show that De Kaap Co. ever received 350*l*. If Mr. Gray had been present at the openiug of the meeting he would have heard our opinion of the statements of the prospectus. The committee have not been approached with a view to settlement, as Mr. Mansell asks. The report was not sent out—first, because it was inadvisable, and next, because the company had no funds. I note his remark as to proceedings of a criminal nature. 10,000 preference shares ouly are to be issued, because we think that will be sufficient to prove the property. As to subscribiug for them—the committee promise nothing.

The resolution was carried unanimously.

ELECTION OF DIRECTORS.

The CHAIRMAN said the next business was the election of directors, and Mr. A. S. H. Cooper and Mr. H. H. Thompson had expressed their desire to serve. (Later on these gentlemen withdrew their nomination.) The whole board now retires. Mr. Cloete was an original director, and Mr. Muir, Mr. Hosking, and Mr. Dixon were appointed by the board, but only hold office until this meeting. I have also consented to act until to-day, but was only appointed at the last meeting.

Mr. RAIT proposed "That, inasmuch as the directors, other than Mr. Turner, retired at the meeting, of which the preseut is an adjournment, the company hereby authorises and directs the said board to appoint Messrs. Haldenstein, Hibbert, Davison and Thompson to be elected directors with Mr. Turner." Mr. Turner and the committee have done important service, and there are two ways of showiug our appreciation of that service—the one being to appoint them directors, and the other to afford them material support in the scheme they have sketched out. Most mining properties pass through a re-construction, and this is no exception. I was told I was safe if I took shares in any company to work the Big Buffalo reef, but instead of going up they have gone down, and I hold 1,500 of them. I intend to give the directors my material support. (Cheers.)

IT IS TRUE.

Unless the 10,000*l*. be subscribed the property will go into liquidation, and I, for one, tell you frankly that if it does I shall have my eye upon it, and, with those who are willing to aid me, put capital into it "on the ground floor basis." We will get rid in that way of all the shareholders who will not support us. With a moderate amount of co-operation and confidence in the new directors we ought to succeed.

Mr. HALDENSTEIN: I suggest Mr. Rait should join us and give us intellectual as well as material aid.

A WORD FOR THE OLD BOARD.

Mr. DIXON (director): I joined the board in Dec., and hear the report to-day for the first time. I have never seen the committee, with the exception of the chairman. On Feb. 2, 14 days before the last meeting, Mr. Haldenstein had 100 shares transferred to him. Up to that time he was not a shareholder. There must have been

SOMEONE BEHIND HIM

to induce him to become a shareholder in a concern like this. Mr. Davison on Feb. 2 also had shares put in to his name. What induced him to join the company? There must have been someone behind him too, and Mr. Turner also on Feb. 9 was not a shareholder, but gets 100 shares transferred to him, and who is behind him? Mr. Hibbert alone was an original shareholder. Who are behind these gentlemen, forcing them on to

THE CAPTURE OF THE COMPANY?

Mr. Rait, who knows more about the company than he tells now, moves that these gentlemen be appointed directors, and he says he has seen Mr. Turner on the matter, and that Mr. Davison is secretary of some Tasmanian railway.

Mr. DAVISON: I am not.

Mr. DIXON: You were, but it is now in liquidation. (Laughter.) Then why did Mr. Haldenstein take 100 shares?

Mr. HALDENSTEIN: I do not want to join the board.

Mr. DIXON: If you want to capture this company you must capture it properly. Why does not Mr. Rait go on the board himself? If Mr. Rait wants to have the company, I am delighted, but I do not want to be swept on one side for Mr. Davison or Mr. Haldenstein. Why should not *bonâ fide* shareholders take the company?

A GENEROUS DIRECTOR.

I only joined it on Dec. 4. My fees have been 35*l*. for attending 18 board meetings, and I should be happy to return them if you think them too much. Nothing is said as to the remuneration of the new directors, which remains at 1,500*l*. a year.

A VOICE: We can trust them.

Mr. DIXON: Yes, trust them to draw their 1,500*l*. a year. (Loud laughter.) I move "That the resolution as to the election of directors be put as stated in the notice of meeting."

A SHAREHOLDER: How long previously to becoming a director did you take your shares, Mr. Dixon?

Mr. DIXON: A month or two.

AN OLD DIRECTOR SURPRISED.

Mr. HOSKING: I was surprised at the castigation I received from the committee, which is diametrically opposite to the attitude assumed towards me at the last meeting. I am surprised also at the conduct of Mr. Rait, because it was through our investigations that matters were brought to a head. I have received 40*l*. or 50*l*. in fees, and have worked for them. I urged the board to proceed to the recovery of the money due by Mr. Cloete, but was out-voted by the rest of the board with the exception of Mr. Dixon.

Mr. RAIT: I have come to the conclusion that in the interests of the company it is necessary to have a clean sweep.

Mr. HOSKING: I trust you are not going to put us on the same level as Mr. Cloete. Mr. Rait censures us in a way which is most improper. I second Mr. Dixon's amendment.

Mr. KEARTON: It would be very improper to have a mixed board of old and new members.

The CHAIRMAN stated the reasons which led him, as an accountant, first to take an interest in the company, with which he would only remain connected until it could see day-light. No member of the board wished to remain who was acting with him, and as for serving with Mr. Hosking and Mr. Dixon he declined to do so, and thought the members of the committee would do the same. He had his own particular reasons, only one of which he would mention, which was, that

THEY WERE FRIENDS OF MR. SAMPSON HILL,

and introduced by him to the company.

A VOICE: That is quite enough.

Mr. RAIT declined to go on the board, but Mr. THOMPSON said that, if elected, he would serve.

Sir EDWIN GALSWORTHY urged the chairman and his friends to serve with Mr. Hosking and Mr. Dixon, but the CHAIRMAN said it was impossible to accept the proposed combination.

HILL'S WATERFALL.

A SHAREHOLDER: There was a company called Hill's Waterfall, in which Mr. Hosking and Mr. Dixon were very prominent as friends of Mr. Sampson Hill. (Hear, hear.)

Mr. HOSKING said he was as opposed to the old board of that company then as he was to this one to-day.

BUSINESS.

An amendment to elect Mr. J. H. Hosking, Mr. C. Dixon, Mr. Thompson, and Mr. Cooper directors was put to the meeting and lost, scarcely any hands being raised in its favour.

A poll was demanded, but subsequently withdrawn.

The original resolution by Mr. Rait was seconded by Mr. PENNGASKELL, and carried, Mr. Dixon alone dissenting.

The same gentleman proposed and seconded—"That this meeting confirms the appointment of Mr. W. F. Turner as a director of the company, and hereby appoints Messrs. Turner, Haldenstein, Hibbert, Davison and Thompson to be directors of the company in lieu of the retiring directors."

The motion was carried—Mr. Dixon alone dissenting.

Mr. HALDESTEIN said he objected to Mr. Hosking being a director, because he was a nominee of Mr. Sampson Hill.

Mr. WHITLARK (Lockwood, Whitlark and Co.), as representing 10,000 shares, thought the meeting had acted very unfairly to Messrs. Dixon and Hosking, and at a later stage those gentlemen were thanked for their past services, Sir E. GALSWORTHY stating there was no manner of reflection to be cast upon them.

Mr. Laurie was re-elected auditor at a remuneration of 20 guineas; and the fees of the directors were left to the decision of the shareholders at the next annual meeting.

A cordial vote of thanks to the chairman and committee, proposed by Sir E. GALSWORTHY, and carried unanimously, terminated a protracted meeting.

THE CARDIFF AND SWANSEA SMOKELESS STEAM COAL CO., LIMITED.

SHAREHOLDERS DECIDE TO SELL THE PROPERTY TO MESSRS. CORY BROTHERS FOR £95,000—THEY WILL RECEIVE A PROBABLE RETURN OF 25s. A SHARE—THE MESSRS. CORY ARE THANKED FOR THEIR OFFER, AND THE DIRECTORS FOR THEIR UNFAILING ENERGY AND COURAGE.

AN extraordinary general meeting was held at the Cannon Street Hotel, Cannon Street Station, London, E.C., on Wednesday, Mar. 18, for the purpose of considering, and, if thought fit, passing the following resolutions :—

(1.) "That the company be wound up voluntarily uuder the provisions of the Companies Acts, 1862 and 1867." (2.) "That Paget Peploe Mosley, of 27, St. James' Square, Pall Mall, in the County of Middlesex, chairman of the company, and William Thomas, of Bryn-Awel, Aberdare, in the County of Glamorgan, mining engineer, be, and they are hereby, appointed liquidators for the purpose of such winding-up." (3.) "That an agreement dated Mar. 3, 1891, and made between the Cardiff and Swansea Smokeless Steam Coal Co., Limited, of the one part, and Cory Brothers and Co., Limited, of the other part, be approved and confirmed, and that the said Paget Peploe Mosley and William Thomas be authorised to carry the same into effect, and to do all acts necessary for that purpose." The meeting, it was stated, would also be invited to consider the remuneration to be paid to the liquidators for their services, and, if thought desirable, to pass a resolution fixing the amount of such remuneration.

Col. P. P. Mosley

(chairman of the company) presided.

Mr. WALTER CURTIS (secretary) read the notice of meeting.

OBJECT OF THE MEETING.

The CHAIRMAN said : Before formally moving the resolutions contaiued in the notice, I must ask the permission of the meeting to say a few words in reference to the object for which we have been summoned togcther. At the general meeting in June last a resolution was brought forward, urging the board to obtain a modification of the company's agreement with Messrs. Cory Brothers and Co., but the motion was not pressed, owing to a statement by the chairman, that the board were already taking steps in that direction. At the beginning of June, previous to the general meeting last year, those negotiations were initiated, and they were continued by the board, though several times interrupted by difficulties which arose, until they culminated in the arrangements which you are to-day asked to consider. At first they took the form of a proposition for an annual payment or dividend on the capital of the company, but, as you will have seen by the circular, this was subsequently found to be legally impracticable, and, therefore, although the board had some difficulty in altering the basis of the negotiations, they finally assumed the form of treating for the purchase of the collieries and other property of the company outright. The board did not state in their circular that the collieries and property of the company had been valued on their behalf, because it did not occur to them that anyone would suppose that they had neglected such an obvious duty, but as since the issue of the circular, it has been suggested in the local press that such was the case, and that the board were afraid to publish the figures, I may as well state that the company's property was accurately examiued and estimated for the board both previous to and during the progress of these negotiations, and that the valuation of the mining engineer, acting for Messrs. Cory Brothers, was subsequent to those made for the board, and is very far below the offer which is now before the shareholders.

ADVANTAGES OF THE AGREEMENT TO SHAREHOLDERS.

The board expected that every business man would recognise the fact that if the arrangement were not confirmed by the shareholders. and the property had to be subsequently put up at auction, the publication of figures and particulars of valuations, even in a private circular, would be a most unwise proceeding ; and seeing that the circular has not remained a private one, but immediately after its issue appeared in the public Press, it is perhaps as well that the board did not insert in it any such figures or particulars. The value of anything is what it will realise in the market, and on the day that these negotiations were practically concluded, the price of the shares was 22s. 6d. It has been suggested that the consequence of these negotiations has been to depreciate the price of the shares, but I should like the shareholders to know that for several years past the price of the shares of this company never exceeded 2*l*., and in one year—1887—they receded as low as 10s. This I have ascertained from the transfer-book of shares bought and sold.

CHAIRMAN'S OPINION OF THE OFFER.

Therefore, I cannot but think that the present offer of 95,000*l*. is a liberal one, as it is estimated that the price now offered will, after payment of all expenses of liquidation, realise 10 per cent. in excess of the present market value of the company's shares. The proprietors should further consider, and judge by past experience, the probabilities of the present prices of coal not being kept up for any length of time —indeed, by some persons competent to give a valuable opinion, a fall has already set in ; and, also, they should also consider the general outlook of the labour question, and the difficulties which may arise on this head—all these points were carefully considered by the board during these negotiations, and no doubt the proprietors have given them due weight also. If these proposals are rejected, it is in the opinion of the board quite impossible to carry on the collieries, and there remains nothing for the board to recommend as an alternative but the voluntary liquidation of the company as stated in their circular, and in that event, it is most improbable that a result in any degree approaching that of the present offer could be obtained.

DECISION LEFT WHOLLY TO THE SHAREHOLDERS.

The board do not, as was stated in one of the local papers, seek to thrust these proposals on the shareholders. Having given them, in their circular, the fullest information which, under the circumstances, they were justified in doing, they asked every shareholder to give them his views and to judge for himself, and so far, the result of the circular as it stands has been that the proposals have received the support of 21,686 shares out of the 30,571 of which the company is composed. I have endeavoured in the remarks I have addressed to you to amplify the information contained in the circular, and to give you, as far as I can, all the details referring to the matters which we are here to consider, and I hope I have made myself clear to those present.

IMPRACTICABLE PROPOSAL.

I have been requested by a shareholder, who is unable to be present here to-day, to bring before the meeting a suggestion, that instead of adopting the resolution that the shareholders should accept the offer of 95,000*l*. for the collieries and property of the company, they should voluntarily agree to an assessment per share sufficient to pay off the present mortgage, and to put the collieries in a proper state of development. For this purpose, an assessment of 2*l*. 10s. to 3*l*. per share would be requisite, and that from every individual shareholder. The suggestion only reached me yesterday, and as it did not come in the form of a resolution, handed in in time for circulation among the shareholders, I am unable to put it to the meeting in that form. But having been requested to mention it to the meeting, I now do so informally, though it is quite impracticable in the face of the 21,050 shares, who are in favour of the present arrangement.

THE LIQUIDATION.

I will not detain you longer, but before I sit down I should like you clearly to understand that if this resolution is passed, and if Mr. William Thomas and myself are appointed liquidators in order to carry it out, we have only consented to take upon ourselves that office, because it was suggested to us that from our intimate knowledge of the affairs of the company, we could bring them to a termination more inexpensively, and more expeditiously than possibly others could who did not possess that knowledge ; and we will only undertake it at the desire of the general body of shareholders. I will now ask the company's solicitor to give the heads of the agreement to the meeting, and I will then move the resolutions as given above. (Cheers.)

THE AGREEMENT EXPLAINED.

The SOLICITOR here read the heads of the agreement, and said : The agreement contains a long preamble, which it is not necessary to read. Coming to its operative part, the 1st clause provides for the sale of the cottages, collierics, docks, mines and premises of the company, which are set out in the schedule, and which really comprise the properties mortgaged to Messrs. Cory Brothers. It also provides for the sale to them of the horses and stores, and the benefit of the agreements and contracts entered into by this company. The 2nd clause provides for the contingency of Messrs. Cory taking up a lease of the lower measures at Church. There have been negotiations between the board and the landlords as to taking them up, and it gives Messrs. Cory the right to take the benefit of those agreements. The 3rd clause provides practically for the acceptance of the company's title by Messrs. Cory Brothers, which will save a good deal of expense. The 4th clause contains a number of ordinary provisions in these cases as to the manner in which the objections are to be met to title in case of need. No. 5 deals with

THE CONSIDERATION, WHICH IS STATED TO BE 95,000*l*.,

to be paid in the manner appearing by the subsequent clauses. The following clause (6) provides that Messrs. Cory shall be entitled to deduct from their purchase-money 51,064*l*. 4s. 11d. in full satisfaction of all monies owing from this company to them under their securities, agreements, and otherwise. Clause 7 provides for the payment, within a month of the confirmation of this agreement, by Messrs. Cory, as a part of the purchase, 10,000*l*. by way of deposit. Clause 8 provides that upon payment of 10,000*l*. they are entitled to enter into possession and enjoyment of the collieries as a going concern. Clause 9 deals with the question of carrying on the business, and says that it shall be deemed to have been carried on from Jan. 1 last, on behalf of Messrs. Cory. If there has been a loss or profit, the one will have to be sustained or the other received as the case may be. Clause 10 provides for the ultimate settlement of the purchase in six months from the confirmation of the agreement, when the balance, which is 33,935*l*. odd, is to be paid to the liquidators. There is a saving clause (11) which provides for the contingency of the thing falling through, either through the shareholders not confirming the agreement, or of the liquidators not being able to obtain the necessary licenses from the landlords.

CONTINGENCIES.

The company is then to return to the Messrs. Cory the 10,000*l*. or such part of it as may have been paid on deposit, and if they should not be able actually to pay it back, the part of the money withheld

is to form an addition to the mortgage debt charged upon the company's property. Clause 12 provides for the preparation of the conveyance at the expense of Messrs. Cory in the usual way, and fixes the time for its delivery. Clause 13 provides for the release of, as between the parties, of mutual claims, and the indemnity of the company against the liability under the lease, and so on. Clause 14 provides that in case of Messrs. Cory Brothers, through their neglect, fail to carry out the agreement, then the selling company are to be at liberty to re-sell the property, and if it be put up to auction the Messrs. Cory Brothers are to make good any loss that may be sustained. By clause 15 the selling company undertake to use their utmost efforts to obtain the license from the landlords by July 31, and if they cannot get it by that time, then the agreement is to be determined within a week. Clause 16 provides that in case the Cardiff Co. do not before Apl. 30 either voluntarily wind up by the appointment of liquidators, and also pass a resolution confirming this agreement, the agreement is to be absolutely void. Clause 17 (the last) provides that in case, under the contingencies mentioned, the agreement should be determined after Messrs. Cory have taken possession, that they immediately shall give back to the Cardiff Co. possession of the property.

The CHAIRMAN: The heads of the agreement having now been laid before you, I beg to move the first resolution as above.

Mr. LEWIS APPLETON: I have pleasure in seconding that resolution, and think I may say this in support of it—that on no occasion on which I have attended a meeting of this company, or indeed a meeting of any company with which I have been associated, have I ever felt such extreme reluctance to speak, or ever felt the unexampled difficulty and embarrassment in which we are placed to-day, so much as I now do, which almost makes me refrain from intruding my opiuions upou the shareholders in this company. Now, I say that the position is one of unexampled difficulty and embarrassment, because every shareholder who has given the least attention to the affairs of the company, or who has followed its history during the sad years of its ruinous course from 1875 to 1890—a period of 15 years—a history of what I call disaster after disaster, but must feel (I do not know whether I shall carry my friend, Mr. Bland, with me in all that I am going to say—I say if he has any feeling at all——

MR. BLAND IS SENSITIVE.

Mr. BLAND: He has a good deal of feeling. (Laughter.)

Mr. APPLETON: I say he must, if he has any feeling at all, have one of great sympathy all round. He must have sympathy for the vendors and representative agents of the company, Cory Brothers and Co., of Cardiff. He must have sympathy for the directors who have struggled so manfully in the face of such tremendous disasters that we have had to meet. He must have sympathy for every shareholder of this company, whose losses for 17 or 18 years have been very heavy indeed. I exclude myself, because my holding is so small that it is hardly worth speaking about, but I have always stood here for those who are unable to come. The more I consider our position both past and present, the more I feel bound to acknowledge that the attitude and action taken up by Cory Brothers and Co., of Cardiff, the vendors and agents of this company, at the present moment is

A VERY GENEROUS AND A VERY JUST ONE.

In fact, I will go so far as to say that I think it commands our most grateful acknowledgment and appreciation. I feel also further towards the directors, especially to the gallant colonel in the chair, and my friend, Mr. Thomas, the manager, that sympathy should be extended, for I know they have done their best—their level best—and to them we are deeply indebted.

JUSTICE TO COL. MOSLEY AND MR. THOMAS.

They have shown, in my opinion, great skill, great pluck, and great perseverance in endeavouring to secure what I believe all will acknowledge they have endeavoured to do—the very best arrangement possible for each individual shareholder in this company. But, here, the question will naturally arise—who is responsible for the unfortunate position in which we are placed, or what is the cause of our misfortune?

Mr. BLAND: Misrepresentation, of course.

MR. APPLETON RECANTS.

Mr. APPLETON: Of course, Mr. Bland, it is very easy to be wise after the event. It is very easy, and I have found it so in my connection with this company in the past, and I acknowledge it frankly, to stand here and criticise and condemn the actiou of others, when we perhaps would not have been able to do the correct thing ourselves, but of one thing I am certain, that while some shareholders may be inclined to throw a certain amount of censure and blame upon Cory Brothers, in my opinion they are saddling the wrong horse in doing so, for I hold a contrary opiniou. I believe Cory Brothers and Co. are entirely free from censure or blame in consequence of our unfortunate position, because they not only have done their level best to sell the coal, and get the best possible price for it, but they have made tremendous sacrifices, equivalent to a sum of 151,000*l.* sterling—for really shares are sterling value, especially when they go to a premium.

MR. APPLETON HAS "HOWLED."

I say they have done that in consequence, I believe, of the howls (and I have been one of those who have howled the loudest) of disappointed and discontented shareholders—disappointed because no dividends have been paid, and discontented because of seeing the price of the shares, as the chairmau has told us, at 10s., or in other words, 9*l.* 10s. discount. I say Cory Brothers, in my opinion, are not responsible for the disasters and misfortunes of this company, and I will tell you why. The properties that Cory Brothers brought into this coucern were the valuable ones of Pentre and Church, and those valuable properties have, during a period of 17 years, yielded in profit the gross sum of 85,904*l.* 4s. 8d., equivalent, over a period of 17 years, to more than 5,000*l.* a year profit, so that if it had not been for the other colliery, that they were not responsible for, we should have been in a blooming condition year after year, and not in the one we occupy to-day. I have given a good reason why I think

CORY BROTHERS ARE NOT TO BLAME.

The *bête noir*, and the great cause of our misfortunes, and of all our disasters, is that black hole of Calcutta—the black hole of Resolven, and those who are responsible for our misfortunes are the men—I do not know but what they are dead and gone who saddled that property upon this company. Sir, never was such a magnificent offer made as was so graudly made by Frank Yeo, or Cory, Yeo and Co., in 1875, when they offered, seriously, and without reserve, to re-purchase Resolven Colliery for the sum of 202,608*l.*, which included the 165,000*l.* they received for the colliery, less concessions, and the amount they received from the 50,000*l.* of debentures, or a portion of them, and outlay for buildings and plant. In 1875, I say, they offered to give us, in cash and shares and debentures, 202,608*l.* We have not the pleasure of seeing our friend Col. Shakespear here, because he, if not chairman at that time, was rather an influential man at the board when that proposal was made. If he had been here I would have asked him what was the reason that proposal was not accepted by the company. I know Col. Mosley was a member of the board, but he was not then in the position of Col. Shakespear.

The CHAIRMAN: I was not a member of the board.

Mr. APPLETON: You stood, sir, like the boy on the burning deck—(laughter)—for I do not want to find fault with you; but in 1878 that offer was practically renewed. I am only just emphasising this point, because I want the shareholders to understand the real cause of our disasters and misfortunes. I hold in my hand a letter from Mr. Frank Yeo, which he addressed to the board, renewing the proposition he made in 1875. I am not going to inflict that letter on the meeting, but why was not that proposition also accepted in 1878? Col. Mosley will be able to explain if necessary, and I hope he will not think it necessary, why he felt it needful at the subsequent meeting of this company to make this declaration, that the board, after considering the proposal in all its bearings, did not think they were justified in accepting it. So you see we are in the position I have referred to, that we once had a magnificent offer, which has been rejected, and ever since 1878 the company has gone from one disaster to another. We all know

WHAT RESOLVEN HAS COST THIS COMPANY.

I have never met with such a ruinous business before. Resolven has cost this company 165,000*l.* for purchase in shares and cash, but less concessions, 51,690*l.* It has cost the company 98,696*l.* for sinkings, for plant, for machinery, for buildings and so forth, and we have actually sustained a total loss, during the 17 years of working this miserable business, of 21,512*l.* I do not know whether I might make a point of addition, and say nearly 171,398*l.* has that property cost this company from first to last. It is not my intention nor my desire to stir again these stormy waters of what I would call a forgotten past. I do not wish to go any further into them, because it can do no earthly good.

MR. APPLETON TEMPTED FROM PROSE TO POETRY.

Our position to-day is with the present, as Longfellow says, though I know this is not the place for poetry. (Hear, hear.) "Let the dead past bury its dead, and let us act to-day—act in the living present." I have come here, therefore, and as I have risen to second this resolution, in the first place, to offer my small meed of praise to Cory Brothers for so gallantly coming to the rescue, and offering to give us a sum of 95,000*l.* sterling in order to rescue this company out of the "Slough of Despond" in which it has been floundering for so many years; but especially, in the second place, have I come here to offer to our chairman and to his gallant henchman, Mr. Thomas (who, I think, has had more to do with this satisfactory arrangement than any other man),

MY WARMEST CONGRATULATIONS

upon having brought to a successful issue most difficult and prolonged negotiations, which will result in each shareholder receiviug, instead of a miserable 10s. or 15s., a sum equivalent to 25s. a share, and I, for one, as an individual member of this company, will be only too thankful to receive it, and to gratefully acknowledge the services of those who have secured it for the shareholders. (Cheers.)

AN ENDORSEMENT.

Mr. J. H. MACE: Do you endorse that statement, Mr. Chairman, that the amount to be returned will be 25s. a share?

The CHAIRMAN: We have been endeavouring to figure the amount out as closely as we can, and I think we need have no hesitation in saying that we estimate that every shareholder will receive 25s. per share, when all expenses connected with the liquidation have been met.

Mr. JENNINGS: With regard to the payment of dividends which Messrs. Cory Brothers were prepared to guarantee, may I ask what was its amount?

The CHAIRMAN: No figure was arrived at. The negotiations were in an incomplete state when it was pointed out, most fortunately, by our solicitor that the mode of settling the question was legally impossible.

LEGAL LIGHTS DIFFER.

Mr. JENNINGS: That is the point I should like to speak on. I have practised at the Chancery Bar, and am therefore entitled to give a legal opinion, and I differ entirely from your solicitor. Was counsel's opinion taken?

The SOLICITOR: I did not think it necessary to ask counsel's opinion about it. It is just this, that the proposition made was that they should purchase this property, and pay for it by instalments, representing so much per cent. on the capital of the company, and I have had no hesitatiou whatever in advising the directors that if they distributed that moncy amongst the shareholders they would be distributing dividends out of capital.

Mr. JENNINGS: I think if the agreement had been carried out successfully that Cory Brothers might have had the colliery for 25 years, and guaranteed a dividend in the meanwhile, in which case it would not have been a payment out of capital. It would have been a dividend of 3 per cent.

The CHAIRMAN: I can answer that in one minute. We never arrived at any figure, but the figure we might possibly have arrived at does not represent in any degree the amount we shall receive under this agreement, and it was not as good an offer as the one we present to you to-day.

Mr. JENNINGS: I assume the dividend would be 3 per cent.

The CHAIRMAN: We never, I repeat, arrived at any figure what-

ever; but independent of the illegality of the course mentioned it would not have been of such beuefit to the shareholders as what we are able to submit to-day.

Mr. JENNINGS: I quite accept your opinion, but I do not concur in the legal opinion you have had.

Mr. BLAND: Why was the last offer by Mr. Yeo not accepted?

The CHAIRMAN: It was a totally different offer from the one submitted in the first instance. Mr. Yeo's letter was read at the general meeting, freely commented on by everybody, and it was universally agreed by the shareholders (not by the board) that the offer was an undesirable one to accept.

Mr. BLAND: Only about 15 or 20 of the shareholders were here.

The CHAIRMAN: That is not the fault of the directors, as the notices are sent to everyone, but those who were here held that opinion. The letter of Mr. Yeo was read at the meeting and published in the report. I have a copy of it here with the remarks that were made upon it. Explanations were given to the meeting, and tho whole of the proceedings were sent to the shareholders. (Hear, hear.)

Mr. BLAND: I am very glad you have that copy of the report here, but is your memory sufficiently clear as to whether our friend Mr. Appleton made any objection to that "magnificent offer" at that particular meeting? (Laughter.)

Mr. APPLETON: I was not present—I was a long way from here.

Mr. BLAND: Because you (to Mr. Appleton) have

SUNG IN A VERY DIFFERENT KEY

at other meetings from what you have to-day. (Laughter.) I strongly supported your committee, which I believe did good, and it is with regret that I cannot follow you to-day, because it is rather unusual to find you speaking in such laudatory terms of people whose conduct you have stigmatised at former meetings. I cannot congratulate you upon what you have said to-day, and that enormous white elephant, Resolven, I cannot stomach. In the original prospectus, I believe, it was estimated that something like 30,000*l.* or 40,000*l.* expended upon it would put it in a position equal to Pentre and Church.

Mr. APPLETON: I gave you all the figures.

Mr. BLAND: Tell me again. (Laughter.)

Mr. APPLETON: Resolven cost 95,000*l.* for sinking. 21,000*l.* has been the cost of working, and then, if you like, you may add the original cost of 165,000*l.*, less concessions, which will bring up the total to 171,398*l.*

RESOLUTION CARRIED.

The CHAIRMAN: I will now put the resolution to the meeting, which has been proposed and seconded. I declare it to be carried, and it is supported by proxies representing nearly 22,000 shares.

Mr. BIRD (director): I have pleasure in proposing the resolution (No. 2 above), which I am sure will meet with the approval of all the shareholders present. The object we have in view is to try and get this matter through at the least possible expense, so that we shall have the more money to divide. I may say that the object is to realise as much as possible for the shareholders, but we cannot say exactly what it will be. As Mr. Appleton has said, Col. Mosley has for many years been associated with this company. Mr. Thomas has been acquainted with it from the first, and we could not have two gentlemen better qualified to liquidate it.

Col. CUNNINGHAM seconded the motion, which was put to the meeting, and carried unanimously.

The CHAIRMAN proposed the third resolution (as above), which Mr. THOMAS THOMAS seconded, and it was carried unanimously.

REMUNERATION OF LIQUIDATORS.

Mr. BIRD: I take upon myself the duty of calling attention to the last clause in the notice of meeting, which the chairman himself could not introduce. It is the question of remuneration. We cannot expect the chairman and Mr. Thomas to give all the time that is necessary to the winding up of this business without some remuneration, and it has occurred to me that if you were to give them an honorarium of 200 guineas each for their work, not reckoning any expenses they may be put to, that would be a fair remuneration. It is our desire that the shareholders should express their opinion. We have been from the first desirous that the shareholders should be consulted. We have nothing to gain ourselves, and in coming to these decisions we are certain they are the best that can be come to by the company. I will propose the resolutiou formally, "That the remuneration of the liquidators be the sum of 200 guineas each, exclusive of out of pocket expenses."

Mr. INCE: I second the motion with pleasure. I think it is wise to fix the remuneration beforehand. Their services must necessarily extend over some time, and they will have a great deal of trouble to get consents from the landlords, to perfect the title, and to carry on the business, and it is far better to know the exact sum we have to pay than to leave it in the form of a percentage. I think, consideriug the work these gentlemen will have to perform, the remuneration Mr. Bird has suggested is both just and reasonable.

The motion was put and carried unanimously.

THE CHAIRMAN AND MR. THOMAS THANKED.

Mr. MACE: I rise to propose a vote of thanks to the chairman and to Mr. Thomas for their past and for what we believe will be their future services.

Mr. PRIDEAUX: I have great pleasure in seconding the motion.

Carried by acclamation.

The CHAIRMAN: I am exceedingly obliged to you for this vote of thanks, and in the liquidation I hope to give the same consideration to your affairs as I have done during the many years I have acted as chairman, and Mr. Thomas and I will do our utmost to give you the greatest possible return on your shares. We shall have to have a confirmatory meeting within four weeks from now, but shall not require the attendance of shareholders living at a distance, though we hope to have your proxies in order that the resolutions may be confirmed with the support they have received to-day. Of that meeting due notice will be given, and I hope that at least eight of the shareholders can make it convenient to be present, as that is required by the Companies Acts in order to form a legal quorum.

P. AND W. MACLELLAN, LIMITED, CLUTHA WORKS, GLASGOW.

A SATISFACTORY FIRST YEAR'S BUSINESS, AND ENCOURAGING PROSPECTS FOR 1891—"SMALLER PROFITS AND QUICK RETURNS."

THE ordinary general meeting of this company was held at 8, Great Winchester Street, London, on Wednesday, Mar. 25, 1891, to receive the directors' report and the balance-sheet of the company for the year ending Dec. 31, 1890; to declare a dividend; to elect directors and auditors; and to transact the general business of the company.

Mr. G. Maclellan Blair

(chairman of the company) presided.

The SECRETARY (Mr. James Cook) read the notice calling the meeting, and the report of the directors and statement of accounts presented were taken as read.

The CHAIRMAN said: Gentlemen, before moving the adoption of the report and balance-sheet, I should like to express the pleasure we experience in meeting you here to-day on the occasion of this our first annual general meeting. I am sure that you must all feel gratified at the result of the company's first year's business. (Hear, hear.) You will see from the report (of which I presume you have all received a copy) that after payment of expenses, which are necessarily larger in the first yoar than we hope they will be in subsequent years, and making due allowance for bad and doubtful debts, we have

THE LARGE AVAILABLE BALANCE OF 50,512*l.* 13s. 10d.

(Cheers.) You will observe that we have considered it desirable, out of this profit, to put a liberal sum to reserve to enable us to avail ourselves of any improvements in machinery, and to meet changes in tho requirements of the trade which are constantly occurring. The works have been fully maintained, and the cost of repairs has been written off revenue. The past year has not been without its drawbacks. The condition of labour and the continued advance in the oost of fuel cannot but tell upon the results, notwithstanding the strict economies exercised. I may here state that in these times of keen competition we are obliged to increase the volume of our business, and to be satisfied with

SMALLER PROFITS AND QUICK RETURNS,

and I am glad to be able to inform you that our sales during last year were over 10 per cent. greater than in the previous year under the old firm. (Cheers.) I hope that this may continue. (Hear, hear.) We have no reason to complain at least as to the first quarter of 1891, and I trust, now that financial matters here are apparently brighter, that we may look forward to better times. I take this opportunity to thank my co-directors for the support that they have given to me, and also the managers and the heads of departments, as without the cordial co-operation of all, it would not have been possible to have obtained such a result as has been my pleasure to put before you to-day. (Cheers.) I now beg to move that the directors' report and the balance-sheet of the company for the year ending Dec. 31, 1890, be and is hereby received and adopted.

Mr. GRAHAM H. THOMSON seconded the motion.

The CHAIRMAN invited discussion, and said that he would be pleased to answer any questions which the shareholders would like to ask.

Mr. NELSON said that he had no wish to offer any adverse criticisms on the report and balance-sheet laid before them. It was very satisfactory, and was as satisfactory to the shareholders as it was to the directors. He was perfectly aware that in a business of such a kind as theirs there was a great deal which, in the interests of the shareholders, ought not to be laid before the public. The accounts of a manufacturing concern, or a commercial concern, must of necessity be of a somewhat limited description as far as the details were concerned, but he thought that the board might have given them some kind of a profit and loss account. They had a balance-sheet before them, but nothing in the shape of a profit and loss account. He could see no reason why the gross profits of a concern like theirs, and the particulars concerning them, should not be given with the accounts. The balance-sheet had no doubt been made up in accordance with the articles of association, but too much reticence in any public company was not a good plan, and he thought that if it were not for the interests involved the more that could be shown to the public and the shareholders the better, and although he would not suggest anything that might be prejudical to the interests of those involved, he would suggest that somewhat more of information should be given in the way of details in a profit and loss account. That was not his unconfirmed opinion, as he had the views of others who agreed that there was very little information for the shareholders in the balance-sheet.

There being no further questions asked,

The CHAIRMAN, in reply, said that the board had kept to the articles of association in drawing up the balance-sheet, but a profit and loss account had been made up, and was on the table if any shareholder would like to look at it.

The motion was then put to the meeting, and unanimously agreed to.

The CHAIRMAN said the next resolution was the

DIVIDEND

resolution, and he had to move: "That the following dividend, payable on and after Mar. 26 inst., be declared, viz.:—(1.) That a dividend be declared on the preference shares at the rate of 6*l.* per cent. per annum, less income tax to Dec. 31 last (payable on and after Mar. 26 inst.), making, with the interim dividend paid in Aug., 1890, a dividend of 6*l.* per cent. for the whole year. (2.) That a dividend be declared on the ordinary shares of 6*l.* per cent., less income tax, for the year 1890. (3.) That a surplus dividend of 2*l.* per cent., less income tax, be declared on the preference and ordinary shares for the year 1890, making the total dividend for the year on both classes of shares 8*l.* per cent. per annum, leaving a balance to be carried forward of 5,735*l.* 19s. 2d."

The CHAIRMAN: I may remark, gentlemen, that if the dividend on the preference shares had been calculated at 6 per cent. from dates of calls it would equal only 1*l.* 5s. for the first six months. The dividend thus actually paid

EQUALS 9¾ PER CENT. FOR THE YEAR.

(Applause.)

Mr. GLOVER said that he had very great pleasure in seconding the resolution, and he thought also he might say that he had the pleasure of being the largest shareholder in the company. He considered that the result was a very favourable one, and he was very glad that the directors had adopted the wise policy of adding a large amount to reserve fund. (Hear, hear.) It was very essential in an important business like theirs that they should possess a strong reserve fund.

The motion was carried.

The CHAIRMAN then proposed the re-election of Mr. Grahame H. Thomson (deputy chairman), who retired under the articles of association, as a director of the company.

Mr. WHITE seconded ; the motion was carried.

The CHAIRMAN then proposed the re-election of the other retiring director, Mr. W. Turner MacLellan.

Mr. JAMES MCMILLAN seconded ; the motion was carried.

The CHAIRMAN said that the next business rested with the shareholders—it was the re-appointment of the auditors.

Mr. NELSON had much pleasure in moving, "That Messrs. Turquand, Youngs and Co., and Messrs. Moors, Carson and Watson (chartered accountants) be re-elected joint auditors of the company, and that their remuneration be 105*l.* for the year."

Mr. GEORGE ALLAN seconded, and, as one of the longest connected with the firm of P. and W. Maclellan, he added that he had always had the greatest measure of satisfaction in all his business transactions with the firm. (Hear, hear.) It was highly creditable, he thought, on their first meeting to find such a good result presented to the shareholders, but it was just what they who were present last year thought would be the case. He knew the care, and prudence, and ceaseless energy of the firm, and he believed that the fact that the old hands constituted the board was a guarantee of success. (Hear, hear.)

The resolution was passed.

Mr. G. H. THOMSON said that before that meeting separated, he wished to be allowed to return thanks for the renewed confidence that the shareholders had shown in him that day in re-electing him to a seat upon the board. He assured them that as the interests of the company had in the past occupied the whole of his time and attention, he would in the future continue to devote all the ability that he possessed to promoting the interests of the company. (Cheers.)

Mr. W. TURNER MACLELLAN also returned thanks for his re-election. He wished, he said, to endorse the remarks of his colleague, Mr. Thomson, and to assure the meeting that he (the speaker) would always do the best he could both for himself and the shareholders. (Cheers.)

Mr. WRIGHT begged to propose a vote of

THANKS

to the chairman for his able conduct in the chair that day, and also to the board of directors for their excellent management of the company's affairs, which had produced the satisfactory result presented. He fully endorsed the remarks that fell from Mr. Nelson as to the encouraging results of the past year's working, and at the same time he must say that he quite agreed with the remarks of Mr. Nelson as to a profit and loss account, and hoped that the directors would keep them in view.

Mr. NORTON seconded the motion, and expressed the hope that equally satisfactory results would be achieved in the future.

The motion was carried.

PROMPTITUDE IN PAYING DIVIDENDS.

The CHAIRMAN briefly returned thanks, and stated that the dividend warrants were ready and could be taken by the shareholders as they left the room, although they were not payable till to-morrow (Thursday).

A SHAREHOLDER : We ought to pay you a day's interest. (Laughter.)

The proceedings then terminated, and the dividend warrants were distributed amongst the shareholders present, the CHAIRMAN stating that the warrants of absent shareholders would be posted that evening.

MYNPACHT (LUIPAARD'S VLEI) GOLD MINING CO., LIMITED.

AMALGAMATION — 28,000 SHARES TO BE ALLOTTED OF LUIPAARD'S VLEI.

A SPECIAL MEETING was held at No. 8, Old Jewry, on Tuesday, for the purpose of passing, either with or without modification, the following extraordinary resolutions :—

1. "That it is expedient to sell the undertaking, including the assets of this company, to the Luipaard's Vlei Estate and Gold Mining Co., Limited." 2. "That the couditional agreement for the sale of the undertaking, including the assets of this company, dated Mar. 5, 1891, and expressed to be made between this company of the one part, and the Luipaard's Vlei Estate and Gold Mining Co., of the other part, be and the same is hereby approved, and that the directors be and they are hereby authorised to carry the same into effect."

Mr. Cecil Quentin

presided.

THE BEST TERMS MADE.

The CHAIRMAN said an agreement embodying the terms of amalgamation had been conditionally entered into. The directors had made the best terms they could in the interests of the shareholders, and should the above resolutions be passed, the effect would be that, on a distribution in a winding up of this company, the shareholders would receive approximately one fully paid 1*l.* share of the Luipaard's Vlei Estate and Gold Mining Co., for every 2*l.* paid by them in cash on the shares they hold in this company, and would further be relieved of their present liability of 5s. per share. It was proposed that the Luipaard's Vlei Estate and Gold Mining Co. should increase their nominal capital, and take over the entire undertaking of this company, including assets and liabilities. They had been borrowing from the parent company to keep their work going. Personally the directors had no great feeling in the matter, and desired to do what the majority of the shareholders wished. He moved the adoption of the above resolutions.

Mr. A. O. JULIUS read the agreement, from which it appeared that the Luipaard's Vlei Estate and Gold Co. would allot them 28,000 shares, this being three fully-paid shares for every eight in the Mynpacht, and pay all expenses of winding up. The chairman would join the board.

In reply to a shareholder,

Mr. JULIUS said that practically they had done nothing since their last meeting.

The CHAIRMAN remarked that since the previous meeting they had gone on sinking their shaft, which they might get at at any time, but what it would turn out they did not know.

The extraordinary resolutions having been adopted, the meeting closed.

BATTERY REEF GOLD MINING CO., LIMITED.

£5,000 NEEDED TO MAKE THE MINE SUCCESSFUL—DEBTS, £16,000.

A SPECIAL MEETING was held at 8, Old Jewry, on Thursday, for the purpose of passing the following resolutions :—

"1. That it is expedient to sell the undertaking, including the assets of this company, to the Luipaard's Vlei Estate and Gold Mining Co." "2. That the conditional agreement for the sale of the undertaking, including the assets of this company, expressed to be made between this company of the one part, and the Luipaard's Vlei Estate and Gold Mining Co. of the other part, be and the same is hereby approved."

Mr. H. E. M. Davies

(chairman of the company) presided.

The CHAIRMAN reminded his hearers that at the annual meeting of the company he remarked that to make the mine payable they required money ; they were then considerably in debt, and their indebtedness had been growing until they owed 16,000*l.* They had received a letter from Mr. Boucher stating that his confidence in the mine was unshaken, but to put it in a payable condition he required 5,000*l.*, and this money the Luipaard's Vlei Co. would not advance.

AMALGAMATION.

Accordingly, an agreement had been conditionally entered into to amalgamate with it. The Luipaard's Vlei agreed to cancel their debt and their 75,000 shares, to pay the cost of liquidation, and to give two fully paid-up Luipaard's Vlei shares for every one held in the Battery Reef. The board regarded the scheme as a favourable one for the company having regard to its liabilities. In the terms of the agreement, one of their directors, Mr. Leigh Hoskyns, had been nominated to represent their interests on the board of the Luipaard's Vlei. The agreement was the very best they could do for the shareholders. He moved the adoption of the resolutions.

Mr. LEIGH HOSKYNS having seconded, the resolutions were passed.

A PREDICTION.

The CHAIRMAN said it was his belief that within 12 months they would see Luipaard's Vlei shares at par.

Mr. KING moved a vote of thanks to the directors, who, he believed, had done the best they could for the shareholders.

This was agreed to, and the meeting ended.

WE are informed that the Companhia de Mocambique, in conjunction with Mr. Charles de Lamby and Baron Joas de Rezende, acting under the advice of Sir Henry James, have served the British South-Africa Company with a writ in the Queen's Bench Division to establish their rights, and for damages, and for an injunction. We look forward with considerable interest to the development of this action, which we are assured will be pressed to an issue.

EXTRACT FROM CIRCULAR ISSUED BY

GEORGE GREGORY & CO.,

STOCK AND SHARE DEALERS

4, TOKENHOUSE BUILDINGS, LOTHBURY, BANK OF ENGLAND, LONDON, E.C.

MARCH 23rd, 1891.

Bankers: The London and South-Western Bank, Limited.

Telegraphic Address:—"GRAMMARIAN," LONDON."

DEAR SIR,—On carrying-over day at the end of February, being 24th ult., appeared our usual general Circular upon stocks and shares. It obtained a wide circulation amongst our established *clientèle* and the general public through the medium of the financial Press of the then current week. Copies of it remain in print at the disposal of parties desiring it for purposes of comparison or otherwise.

THE MONEY MARKET

Has been in a plethoric and rather inanimate condition during the intervening period. Week by week loans have become more easy of negotiation at rates generally in favour of borrowers.

The Bank returns have been in all respects favourable to general stability of credit, and may be best summarised by the statement that the total reserve in bullion and notes is now £500,000 greater than a month ago, the minimum rate of 3 per cent. remaining unaltered.

New York has recently been a liberal remitter of gold to Europe. Saturday's steamers left with £375,000; more reported to follow.

If even it be not intended for this centre, it will have the effect of preventing any drain from it, and thus preserving current easy terms for Stock Exchange and trade accommodation.

The last remnant of distrust in regard to Argentine affairs appears to have been removed by the conversion of the business of Messrs. Murrieta into limited liability company form.

THE STOCK MARKETS

Have experienced various changes upward and downward, but never to any violent extent. The loss at any one period has generally been fully regained on the next movement. Nevertheless, general calculations as to the future of the Home Market have suffered disturbance through the occurrence and effects of the late storms, and recommendations upon merits now, therefore, assume a more specific form.

New business has been retarded through such occurrences, the near approach of Easter, and the somewhat uuusual shortness of the fortnightly accounts, which on the last three occasions have run only 14, 14, and 13 days respectively.

There are now sanguine hopes expressed that in another week we shall see signs of that general boom for some time past so confidently predicted.

HOME RAILWAYS.

The more striking features of the month worthy of notice are:—

The announcement of the Scotch dividends and the decline in quotations for these stocks, Caledonian being about 2 lower, and North British 5½ and 7 lower on the Preferred and Deferred respectively.

Sheffield "A" is ½ lower, while the passing of the Company's Bill for giving the line access to the metropolis should prove favourable to it as also to East London, to which such a measure assures a much brighter prospect.

Midland is lower by 4 points, notwithstanding that its increased traffic for the portion of the half-year elapsed is double that of any other Home line.

Brighton "A" is ¼ up, and the Ordinary and Preferred 4 and 1 higher respectively.

Dover "A" is 1 point higher, and

Great Eastern exceptionally 2½ higher, which is well warranted by its prospects and increased traffics.

Great Western has suffered most severely through the ravages of the recent storm, the decrease in one week being about £13,000; and, in addition to loss of traffic, it is impossible to say to what extent the permanent way has suffered, which, to an operator, forms a serious consideration.

We recommend, therefore, to be bought on current merits, and in anticipation of good holiday traffics,

MIDLAND,
EAST LONDON,

NORTH BRITISH PREFERRED AND DEFERRED.

AMERICAN RAILROADS

Have at frequent short intervals made efforts in an upward direction, but any advance has proved to be little beyond ephemeral. This is the more enigmatical as trade and traffics are alike encouraging to speculators for the rise.

The latest disheartening influence to the New York bull party has been the export of gold and the threatened interference of the Washington Government with the free course of bullion movements as dictated by international causes aud requirements.

Gould and his party are, meanwhile, proceeding noiselessly with certain reorganisations likely to favourably affect the entire market.

Our present recommendations for the rise are

ILLINOIS CENTRAL,
UNION PACIFIC,
NORTHERN PACIFIC,
SOUTHERN PACIFIC,
NORFOLK PREFS.,
LAKE SHORE,
LOUISVILLES.

CANADIAN PACIFICS continue their onward course, with weekly and aggregate traffics far excelling in increase that of any similar security. At the present price of about 79 they pay nearly 6½ per cent., and now that the elections are over, and the political horizon clear and favourable, we unhesitatingly advise purchase of the shares, whether for speculation or investment. The efforts of the enterprising president will, it is expected, shortly give the Company direct access to New York, as well as at different advantageous points in British North America.

GRAND TRUNK OF CANADA.

The Company's stocks have, as we predicted, rather repelled than attracted buyers, with the result of a serious fall, ranging from about 2½ on the Third Preference to 5 on the Firsts. At this decline, coupled with the Parliamentary settlement, we think repurchases perfectly safe in all the issues from the Ordinary upward.

MEXICAN RAILWAY (VERA CRUZ)

Are 2½ lower on the various issues in the month elapsed. According to the rule, in a strict observation of this puzzling security the next move should be an upward one, but the declaration of the weekly traffic return has now become a factor of greater importance than was formerly the case.

FOREIGN STOCKS

Are assuming an appearance of renewed steadiness, from the financial developments previously referred to, and amongst those which appear safe are

ARGENTINE RAILWAY LOAN, 1881,
ARGENTINE NORTH CENTRAL RAILWAY EXTENSION,
URUGUAY UNIFIED.

MINING AND MISCELLANEOUS SECURITIES.

We recommend purchase of

CALLAO BIS,
OCEANAS,
SILATI RIVER,
NORTHERN TRANSVAAL LANDS,

Upon every stock which we recommend we have carefully compiled "Reasons Why," and our aim is to afford such information in its entirety to all inquirers.

We continue to direct constant attention to every class of investment or speculative business, including Options, which are becoming a favourite medium.

Cover in protection of client's operations may be deposited either in the form of cash or any marketable security.

The fullest information chcerfully and promptly given in response to all inquiries.

GEORGE GREGORY AND CO.

P.S.—Write for our work entitled "Hints to Speculators" (136 pages), giving a mass of information, and teeming with reliable, honest, and straightforward advice; it also contains the highest and lowest prices of all Stocks, together with Dividends paid for the past 10 years. ISSUE OF £100,000 FIVE PER CENT. MORTGAGE DEBENTURE BONDS IN 1,000 BONDS OF £100 EACH.

Bearing interest payable half-yearly on January 1 and July 1; aud issue also of

£220,000 ORDINARY SHARE CAPITAL IN 22,000 ORDINARY SHARES OF £10 EACH.

Payable as follows:—

Debentures.	Shares.
£10 per cent. on Application.	£1 per Share on Application.
£20 per cent. on Allotment.	£1 per Share on Allotment.
£35 per cent. on June 1, 1891.	£4 per Share on June 1, 1891.
£35 per cent. on July 1, 1891.	£4 per Share on July 1, 1891.

The Debentures are secured by a Trust Deed, and are a first charge on the whole undertaking and property of the Company—valued, as per annexed valuation of Mr. Forster Brown, at £307,460. The Debentures will be registered, and will be redeemed on or before January 1, 1910, by annual or other drawings, at the price of £105 for each £100 Bond. Interest will be paid half-yearly on January 1 and July 1, at the Company's bankers. Interest will accrue from the respective dates of payment of the instalments. The articles of association provide that until all the debenture bonds are redeemed, all surplus profits beyond 10 per cent. upon the ordinary share capital must be applied in the redemption of the debenture bonds.

This Company is formed for the purpose of purchasing from the present owners—some of whom will retain a large interest in the Company—the Albion Colliery, which is situate in the Taff Valley, 2 miles north of Pontypridd, 15 miles from the ports of Cardiff and Penarth, and 19¼ miles from Barry and Newport Docks.

The colliery comprises seven leasehold properties, covering a total mineral area of 1,153 acres of the lower or steam coal measures. The leases have unexpired terms of 53 years. The seams of coal contained in the properties are all well-known steam coal veins of the Rhondda and Aberdare Valleys. The coal is one of the best steam coals raised in South Wales, aud commands the highest market price.

Among the principal consumers of the Company's coal are the following:—The Admiralty, the P. and O. Steam Navigation Company, Compagnie Générale Trans-Atlantique, Messageries Maritimes de France, Indian Railways, Messrs. John Pirie and Company, Messrs. Worms, Josse and Company, and Messrs. Blandy Bros.

The colliery, which was opened in 1887, is in perfect working order, and provided with all necessary machinery of the most modern type.

The output of large and small coal raised and sold for the year 1890 was 368,025 tons. The output for the year 1891 is expected to be considerably in excess of that of 1890.

Mr. T. Forster Brown values the colliery and plant at £307,460. A detailed report and valuation of the colliery has been prepared by Mr. Forster Brown, and such report can be inspected at the offices of the Company, but a summary of that report, also prepared hy Mr. Forster Brown, is annexed.

The profits for the nine months, viz., from March 31, when the Company will become entitled to profits to Decemher 31, 1891, having regard to contracts already entered into, are estimated by the vendors to exceed £40,000.

Assuming the future average annual profits, as estimated by Mr. Forster Brown in his report, to be a sum of not less than £45,000 per annum upon an annual output of 360,000 tons large coal the Company would be in a position to pay an average annual dividend at the rate of 16 per cent. upon the ordinary share capital now offered for subscription, after providing for payment of interest upon the debenture bonds. A provision has, however, heen inserted in the articles of association, which requires the Company to devote all profits, after payment of a dividend at the rate of 10 per cent. per annum upon the ordinary shares, to the redemption of the debentures. It is estimated by the vendors that there will be, as the result of nine months' workings, a sum of about £20,000 available in January, 1892, for the redemption of debentures, at £105 for each £100 bond.

The Company will enter into possession and take over the management of the colliery on May 1, and the purchase will he completed on July 8. The Company will be entitled to the profits of the colliery from March 31, and from that date the vendors will receive interest upon the purchase-money at the rate of 5 per cent. per annum.

Mr. Matthew Cope, who has consented to act as chairman and managing director of the Company for a period of five years, and Mr. P. A. Vyvyan-Robinson, who will he a director, both of whom are also vendors, have been associated with the colliery from its commencement. The Company will retaiu the whole of the staff associated with the colliery, which will he transferred as a going concern to the new Company, who will have the henefit of all existing trade contracts. No contracts or arrangements have been entered into which restrict the Company in any way in the employment of agents for the sale of their coal. The directors propose to retain the serviees of Messrs. Alfred Cheney and Eggar, who have acted as the London agents for the Albion Colliery from its commencement.

The vend rs, who are the promoters of the Company, have fixed the price of the colliery and works at £310,000. The vendors will defray all the expenses of registering, advertising and forming the Company, including brokerage, commission, and the legal charges and expenses for vesting the property in the Company.

The vendors and the directors subscribe a large portion of the debenture bonds and ordinary share capital.

Subscribers to the debenture honds who have their bonds drawn for payment in January, 1892, will not merely have had a secure 5 per ecnt. investment, but as they will then receive a premium of £5 per hond, the investment of hondholders whose honds are then drawn for payment will show them a return exceeding 10 per cent. per annum. Subscribers whose honds are drawn for payment at the end of the second year, viz., in January, 1893, will, in the same way, get a return exceeding 7½ per cent. per annum.

A contract has been entered into, dated March 24, 1891, between Ebenezer Lewis, Matthew Cope, Henry Lewis and Philip Augustus Vyvyan-Robinson of the one part, and Samuel John Eggar of the other part, as agent for, and on behalf of the Albion Steam Coal Company, Limited, providing for the sale of the Albion Colliery.

Numerous trade and other contracts have been made. Applicants for debentures and shares will he deemed to have had notice of all such contracts, and to waive the insertion in this prospectus of the dates and names of the parties thereto, and to accept the ahove statement as sufficient compliance with section 38 of the "Companies Act, 1867."

Applications in the form accompanying this prospectus, together with a deposit of 10 per cent. in the case of dehentures, and £1 per share in the case of ordinary shares, must be forwarded to the Company's hankers.

Should a less amount of debentures or ordinary shares be allotted than is applied for, the surplus paid on application will he appropriated towards the amount due on allotmcnt.

A copy of the memorandum and articles of association of the Company, copies of the contract under which the vendors have agreed to sell the Albion Colliery, also the dehenture and trust deed which will be entered into for the purpose of securing the dehenture-holders, and the reports and valuations of Mr. Forster Brown can be inspected at the offices of the solicitors of the Company.

Prospectuses and forms of application may he obtained at the Company's bankers in London, Cardiff, or at their branches; of the solicitors or hrokers of the Company; and at the offices of the Company in Cardiff and London.

London, April 3, 1891.

Summary Report of T. Forster Brown, Esq., Mining and Civil Engineer, Cardiff.

Guildhall Chamhers, Cardiff, February 13, 1891.

I have inspected the Alhion Steam Coal Colliery undertaking, situate hetween Navigation and Pontypridd, in the Taff Valley.

The property is leasehold, and comprises about 1,153 acres of minerals held for terms averaging 60 years from 1884, upon usual conditions.

The minerals comprise the Aherdare 4 ft. seam, 6 ft. 6 ins. in thickness, the 6 ft. 9 ft., 5 ft., and all the other steam coal measures of the district.

I estimate the workable coal resources in the 4 ft. and most cheaply worked seams alone at 16,000,000 tons.

This will admit of an output from the best steam coal seams of 360,000 tons of large coal per annum for 35 years.

The quality of the coal is of the hest description for steam navigation.

The colliery is quite new, the working of coal having commenced in the year 1887.

The works comprise two walled shafts 19 ft. in diameter. The depth to the 4-ft. seam is 546 yds. The colliery is fitted with winding plant, hoilers, stacks, screens, workshops, storchouses, ventilating machinery, and railway sidings.

The output for 1890 was: Of large coal, 296,617 tons; and of small coal 71,408 tons.

The roof of the 4-ft. seam is a very good one, and this seam otherwise exists under exceptionally favourable conditions, both as to thickness and quality, and the coal field generally is very free from disturhances.

The underground operations have been well designed, and the cost of working compares favourably with the hest steam coal collieries, and the area of the coal field may, in the future, probably be increased hy the acquisition of leases of adjoining mineral areas unlet.

I value the whole undertakiug as it stands, inclusive of stocks, stores, pitwood, horses, and an interest in 500 railway waggons, but exclusive of debts due to or owing by the present proprietors, as on February 10, 1891, at £307,460.

I am further of opinion that at the ahove-named value a purchaser may calculate upon obtaining on the average of years a return of 10 per cent. per annum upon his capital, besides being enahled to set apart a sufficient sum annually as a sinking fund for the redemption of the purchase-money, and also to cover the cost of additions, extensions, and improvements which will, from time to time, he required for improving and maintaining the undertaking.

T. FORSTER BROWN.

The Subscription Lists will be OPENED on Monday, the 6th, at 10 o'clock, and CLOSED on Wednesday, the 8th, at 4 o'clock, for Town and Country.

The results show (see cables received from Mr. Edwards) that with the mill with only 20 stamps working full time—the net profit at the Mines—after deducting working expenses—was at the rate of £72,000 per annum, or 18 per cent. on the capital of the Company.

THE SILVER KING MINING COMPANY, LIMITED

(DOE'S GARFIELD-OCCIDENTAL AND ORIENTAL GROUPS),

CALICO DISTRICT, CALIFORNIA, U.S.A.

INCORPORATED UNDER THE COMPANIES ACTS.

CAPITAL, £400,000, IN 400,000 SHARES OF £1 EACH,

ABRIDGED PROSPECTUS.

THIS Company is formed for the purpose of acquiring the important Silver Mines known as Doe's Garfield-Occidental and Oriental Groups, Calico District, San Bernardino County, California.

The property consists of 35 mines and mining claims, comprising an area of about 500 acres, together with a mill site of 160 acres, on which is a 20-stamp mill in full operation and working condition.

The mines have been reported on for intending purchasers by Mr. W. S. Edwards, M.E., late of Tuscon, Arizona, in respect of whose experience, integrity, and ability the directors have received most satisfactory assurances.

These reports can be seen at the offices of the solicitors to the Company, and copies can be had upon application. The directors refer intending subscribers to such reports, which show the following facts:—

The output of the mines commenced in 1883, and a 15-stamp mill was erected in 1886. Up to October, 1889, 35,479 tons of ore yielded 909,680 ozs. of refined silver bullion, of the gross value of 181,936*l.*, or on an average 60,623*l.* yearly.

The average cost was $8.00 per ton, including all dead work. Twenty stamps are now working, and from 1,500 to 2,000 tons of ore per month are being milled.

The system of mining is simple and economical, and fuel is easily obtainable. Water ample for all purposes is to hand. The climate is good, and labour plentiful at an average of $3.00 per man per day.

The gross value of the ore now in sight, and blocked out as determined by actual measurement, is 373,000 tons, of an assay value of 6,323,000 ozs. of bullion—equivalent to material for working the proposed 80 stamps constantly for 4½ years.

The directors are in receipt of a series of telegrams from the manager, Mr. Edwards, confirming every statement made as to the property, and giving the monthly figures of the output, which are eminently satisfactory, and show the mines to be working at a handsome profit.

Mr. Edwards will continue in the management of the mines on terms most advantageous to the Company.

There are two adjoining mining claims, the title to which is in dispute, and is the subject of litigation, which is being conducted at the expense of the vendor, and to which the Company is not, and will not be, a party, but all benefits to the vendor derived from such action will accrue to the Company.

The price to be paid for the property has been fixed by the vendor at £350,000, payable as to £30,000 in cash, £133,333 in fully paid-up shares of the Company, and the balance of £186,667 either in cash or in fully paid-up shares, at the option of the directors, thus leaving £50,000 available for working capital, which Mr. Edwards considers ample for all developments. All expenses attending the formation of the Company and the issue of its capital, up to and including the first allotment of shares, will be borne by the vendor.

The contract of sale and a supplemental contract made between John S. Doe, the owner and vendor, of the one part, and the Company of the other part, bears date February 23, 1891. There are also various agreements with *employés* and others, and contracts connected with the business usual in the case of going concerns, which are too numerous to specify. There is also an agreement between the vendor and Messrs. Skinner and Co., concerning the present issue of capital, and providing for the expenses attending the same, and for guaranteeing the subscription of a part of such issue contained in letters dated January 30 and February 2, 1891, from the vendor to Messrs. Skinner and Co., and from Messrs. Skinner and Co. to the vendor respectively, and in a supplemental agreement dated February 23, 1891, between the same parties. There are also further agreements entered into by Messrs. Skinner and Co. with third parties for guaranteeing the subscription of a part of the capital offered, to which the Company is not a party. Applicants for shares will be deemed to have notice of such contracts and agreements, and to have waived the insertion herein of the dates thereof and the names of the parties thereto, or any further or other compliance with section 38 of "The Companies Act, 1867," than is contained therein.

Sir Samuel Canning, one of the directors, has for some time past advised respecting the property and its development, and will on the completion of the purchase receive remuneration from the vendor for his professional services, and he has in consequence not voted as a director in respect of the contract for sale.

Full copies of the reports, of the contract for sale, and of the memorandum and articles of association, can be inspected by any intending subscriber at the offices of the solicitors of the Company. The reports above-mentioned are of considerable length, and the particulars respecting the property based upon, and the extracts from such reports are given in this prospectus for convenience only, and subscriptions will be received only upon the footing that they are made in reliance upon the full reports.

Application will be made in due course for a Stock Exchange settlement and quotation.

Application for shares must be made upon the form enclosed with the prospectus, accompanied by a deposit of 1s. per share. In case no allotment is made the deposit will be returned without any deduction, and where a less amount is allotted than applied for the balance of the deposit will be credited towards the payment due on allotment.

Prospectuses and forms of application can be obtained at the bankers, brokers, and solicitors of the Company.

STOCK EXCHANGE SETTLING DAYS.

Settling days on the Stock Exchange are as follows :—

STOCKS AND SHARES.

Continuation days.	Ticket days.	Pay days.
Wednesday, Apl. 8.	Thursday, Apl. 9.	Friday, Apl. 10.
Saturday, Apl. 25.	Monday, Apl. 27.	Tuesday, Apl. 28.

Telegraphic Address—

QUINLAND—LONDON.

MINING MARKET.

City, Friday Evening.

CHEAP SHARES — HINTS TO BUYERS — AUSTRALIAN BROKEN HILLS—GOOD OUTLOOK FOR AMERICAN MINES AND NOTABLY FLAGSTAFF AND EMMA — SPECIAL FEATURES OF THE WEEK—HOME SHARES BETTER—SATISFACTORY OUTLOOK FOR BUSINESS.

On Monday brokers were shivering by the seaside, and on Tuesday it occurred to them that they might as well shiver in Old Broad Street and do a little business to console themselves for their sufferings. Here they were soon joined by other shiverers, to wit, the Stock Exchange members, whose eager enquiries seemed to concentrate themselves on Australian Broken Hills. "Will they go higher?" "Will they go lower?" Opinion generally affirmed that higher prices would rule, and more than one broker left the market with the mysterious words, "whatever you do, do not be caught a bear"—just as the melodramatic villain leaves the stage muttering something about the time that will come, but no matter. For once the right tip had been given, and Australian Broken Hills, with one or two exceptions, began steadily to ascend. They were 2 in the early morning of Wednesday, went back again during the day, and were over that price on Thursday, but only to-day did the ball attain its full upward velocity, when for a short time the shares were at $2\frac{5}{8}$—the highest price reached, but closed somewhat lower. Rumour assigns the remarkable activity of these shares to a market rig, but it must be owned, if this be so, it is uncommonly well supported by bold backers, and also, in justice it should be added, by some not inconsiderable facts. Take, for example, the shipments of silver for the present year as announced amongst our "latest telegrams" for Jan. (3 tons) 23,000 ozs.; Feb. (9 tons) 38,997 ozs., and Mar. ($8\frac{3}{4}$ tons) 70,675 ozs. These are big facts, and "bears" eager for the fray recoil from them, and think discretion the better part of valour. There was a rumour that a portion of the property had been sold for a fabulous sum to a subsidiary company, but it has not been substantiated. It is generally thought that the company has found in its sett a portion of the genuine Broken Hill lode. Shareholders are advised not to part with their holding, and probably that advice may be right, but the sounder policy in these cases seems to be to sell and take profits. Still, as Mr. Thiers used to say "the future is to the wisest."

Next in importance come the dealings in Montana shares, which had a slight rise on the meeting, but fell immediately afterwards. The statement of Mr. Bayliss was received with satisfaction and applause by a crowded meeting. The possibility of big discoveries in this mine are so great that we cannot but think buyers of shares wiser than sellers.

Palmarejos have been inquired for, and have risen 2s. owing to the near completion of the railway, the conduit, and the mill. It would be appalling if, after all the expenditure that has been gone to, it should be found hereafter that the mines are unworthy of it, and that either in quantity or quality the ores were deficient.

Emma shares have also been in good demand, and have improved in price to the extent of 3d. A correspondent holds us to our views expressed in November last, and on more than one occasion since, that in the spring and summer Emma shares would see a substantial rise. From that opinion we do not go back in the least degree. It is our belief that not only for Emma but for other American shares also there is reserved an advance of prices not dreamt of in the philosophy of some who write upon the subject, and whose ignorance is rather made manifest than their knowledge. The last report from Emma is very encouraging. The manager says—"I consider the showing much the best we have ever had, but will not this time be too sanguine." Herein he is right, and we applaud his caution. One of our grounds of confidence in the future of this mine is that the shares are held so largely in Salt Lake City itself, and particularly by the gentleman (Judge Bennett) who signs the last report. The snow ought soon now to clear itself away, when communication with Salt Lake will be resumed together with surface operations.

Flagstaff shares should not be neglected, and there has been a rise in them this week. The unbelieving are railing against this concern, and sundry scribblers are "imagining a vain thing," but the prices of these shares will disconcert them in the by no means (to them) sweet by and by—particularly if they happen to be "bears," as is probably the case.

Golden Gate shares are also coming strongly to the front, and are beginning to justify the remarks Mr. Wallace has made respecting them.

There has also been a special demand for Day Dawn Block shares which are once more becoming a favourite investment. Time was when these shares were sold at a very big premium, and recent developments justify the renewed attention they are now receiving.

Having thus dealt with the special features of the week, it only remains to summarise the events of minor importance.

In the African gold market Pigg's Peak have fallen seriously on the adverse report of the manager, who reports that his previous prognostications have been based on error. We congratulate the Sheba Co. on its crushing of 618 ozs. from 1,000 tons. The result is not brilliant, but a first crushing rarely or ever is. The market let the shares drop on this announcement, but they look one of the best and soundest purchases in the Kaffir section. We know that the management is capable and respectable—points upon which our information regarding many other South African concerns is by no means so complete. Generally speaking, gold shares are down owing to the absence of business rather than the pressure of sales. De Beers continue to justify our prognostications of a fall almost week by week, and New Jagersfontein is joined to them in a sort of tumble-down matrimony—in fact, these two concerns like "John Anderson my Jo" and Mrs. Anderson are going down the hill "thegither."

In the Land section there has only been a downward movement led off as usual by Oceana, followed by its extremely unpromising offspring Silati. When Mr. Conybeare advanced his geological theories at the recent meeting in the face of Mr. Alford's since confirmed report, we preferred to pin our faith to the latter rather than the former, and advised our readers to cut their loss in the concern, and the later facts have all gone to show that the forecast was right.

In the Australian market, apart from Australian Broken Hills and Day Dawn Blocks already referred to, there has been some business in British Broken Hill and Kangarillas, which are up; but Bonnie Dundee has lost a fractional part of last week's rise.

The Copper market received a stimulus on the announcement of the 18s. dividend declared by Rio Tinto, whereas it had only expected one of 11s. or 12s. The shares advanced $\frac{3}{8}$; Mason and Barrys, which of late we have considered decidedly too low, advanced $\frac{1}{8}$. Tharsis, however, were weaker.

The Indian market has not been eventful. So far only the Ooregum crushing is announced. It is better than last month, being 1,302 tons yielding 3,004 ozs. as compared with 1,197 tons, producing 2,913 ozs. The preference shares were firmer this afternoon, but the ordinarys were weaker. In fact, Indian shares all round have been flabby.

In the General Foreign Market, apart from the rise in Flagstaff and Emma shares already noticed, there has been firmness shown by Callao Bis, Orita, and Tolima, but Yankee Girl and New Gustons are lower. The fall in the latter is entirely due to what we hold to be the mistaken action of certain shareholders who are seeking to disturb the present management which has done so much for the company.

In Home Mines attempts are being made to raise unduly the shares of the Atlas Tin Co., but it would be just as well for the public to await further developments before making an investment. Generally speaking, the record of Cornish mines is much better than it has been for some time past. Almost week by week these shares have been on the down grade, but now we are happy to notice a turn—if only a slight turn—in the tide. Carn Breas have led off with a rise of $1\frac{1}{4}$, and have been followed by Killifreths, South Condurrow (whose forthcoming meeting will be held on the mine) South Frances, Tincroft, and Wheal Agar. On the other hand, Cook's Kitchen and Phœnix are lower. The Redruth Mining Exchange showed, at the recent meeting, a credit balance of 162*l*., out of which a dividend of 20 per cent. was declared, absorbing 95*l*. The capital of this concern must be, as one of Dickens' characters would say, "prodigious."

We anticipate that next week the volume of business will show a material improvement upon that which has past, and which is by no means unsatisfactory considering that it has been interrupted by the fag end of the Easter holidays.

African Lands.

The market for these shares appears to have been quite neglected, and close prices are hard to obtain. Goldfields and South African Gold Trust have both receded.

Business.—Those down are British South African Chartered, $\frac{1}{16}$; Gold Fields of South Africa, $\frac{3}{16}$; Horo Concessions, $\frac{1}{16}$; New Grahamstown, 6d.; Oceana, $\frac{1}{4}$; Silati River, 1s. 6d.; South African Gold Trust, $\frac{1}{8}$; Transvaal Gold Exploration, 6d.; and Zontpansberg, 1s. No rise to record.

Kaffirs.

Business has been somewhat dull in this department, and Pigg's Peak are again down on the week. The same remark applies to Sheba, Langlaagte, Henry Nonrse, and a few others, but there is in no instance a serious fall. Jubilees have risen, and with the exception of Royal there is no other change to note

Business:—The following have fallen: Pigg's Peak Ordinary, $\frac{3}{16}$; Ditto Preference, $\frac{3}{8}$; Sheba, 3s. 6d.; Forbes Reef, 6d.; Geldenhuis, $\frac{1}{16}$; Henry Nourse, $\frac{1}{16}$; Johannesburg Waterworks, $\frac{1}{16}$; Jumpers, $\frac{1}{16}$; Langlaagte, $\frac{3}{16}$; Ditto Block B, $\frac{1}{16}$; Lnipaards Vlei, $\frac{1}{16}$; Main Reef, 1s.; May Consolidated, 6d.; Nabob, $\frac{1}{16}$; Salisbury, 6d.; Vogelstrnis, $\frac{1}{16}$; Witwatersrandt Knights, $\frac{1}{16}$; and Wolhuters, $\frac{1}{16}$.

The only rises are in Great Gold Zone of 6d.; Jubilee, $\frac{1}{8}$; and Royal, $\frac{1}{16}$.

Diamonds.

There has been but very little doing, and on De Beers being pressed for sale the price gave way. There are very few other changes.

Business.—Those showing a decline are De Beers of $\frac{1}{4}$; Gordon, 6d.; New Jagersfontein, $\frac{1}{8}$; and Burma Ruby, $\frac{1}{16}$; whilst others remain without alteration.

Making-up Prices. Mar. 23rd, 1891.	Diamond Shares.	To-night's Prices.
20/6	Bultfontein Consolidated ...	20/6 — 21/
$15\frac{7}{8}$	De Beers Consolidated ...	$15\frac{5}{16}$ — $15\frac{7}{16}$
—	Gordon	4/ — 5/
$5\frac{7}{16}$	Griqualand West	$5\frac{3}{8}$ — $5\frac{5}{8}$
$6\frac{1}{8}$	New Jagersfontein	6 — $16\frac{1}{4}$
$\frac{7}{8}$	North-Eastern Bultfontein ...	$\frac{7}{8}$ — $1\frac{1}{8}$
—	United Jagersfontein ...	$\frac{3}{8}$ —
$\frac{7}{8}$	Burma Ruby Mines	$\frac{1}{16}$ — $\frac{3}{16}$ pm.

Indians.

There has been but very little doing in this section, and prices have not altered materially. Nine Reefs have been offered, and at one time changed hands at 3s. 9d., but close 4s., 4s. 6d. Champions and Ooregum Ordinary are slightly lower, but Ooregum Preference have risen 2s. 6d.

Business.—Those closing lower on the week are Champion Reef, $\frac{1}{16}$; Glenrock, 3d.; Goldfields of Mysore, 1s.; Mysore Reefs, 3d.; Nine Reefs, 9d.; and Ooregum Ordinary, $\frac{1}{8}$, whilst the rises are, Balaghat of 3d.; Mysore West, 3d.; and Ooregum Preference, $\frac{1}{8}$.

Australian.

Australian Broken Hill shares left off last week $1\frac{9}{16}$, $1\frac{5}{8}$, and after changing almost every few minntes reached at one time to-day $2\frac{5}{8}$. They, however, only remained at this figure a few seconds, then went down to $2\frac{3}{16}$, $\frac{6}{16}$, and close $2\frac{1}{4}$, $2\frac{3}{8}$. Day Dawn Block and Etheridge have been enquired for; while Bonnie Dundee shares have been offered and closed lower.

Business.—A rise is recorded in Australian Broken Hills of $\frac{3}{4}$ British Broken Hill, $\frac{3}{8}$; and Kangarilla, $\frac{1}{16}$. A fall is shown in Bonnie Dnndee, 9d.; Cumberland, 1s.; Day Dawn Block, 3d.; and Mount Shamrock, 3d.

Copper.

There has been more life in copper shares than for some time past, and on the announcement of 18s. dividend in Rio Tinto the shares went up. Mason and Barry have also improved on some good buying. Tharsis are slightly lower, but otherwise the re are very few changes, and the market closes firm.

Business.—An improvement is shown in Bratsberg of 3d.; Mason and Barry, $\frac{5}{8}$; Namaqua, $\frac{1}{8}$; Rio Tinto, $\frac{3}{8}$; whilst the only fall is in Tharsis of $\frac{1}{4}$.

General Foreign Shares.

A fairly brisk business has been transacted in several of this class, notably among which have been Emma, Flagstaff, Callao Bis, Colorado, Elmore, Loma, New Guston, Palmarejo, New Russell, St. Augustine, Tetnan, Yankee Girl and Yuruari. In the case of Emma, Flagstaff, Elmore, Callao Bis, Palmarejo, and St. Augustine, a slight rise has taken place, and it would not take much buying now to put several shares in this section considerably higher.

Bnsiness:—Those up are the following: Barretts, 3d.; Callao Bis, 3d.; El Callao, $\frac{1}{8}$; Elmore, 3d.; Emma, 3d.; Flagstaff, 6d.; Lisbon Berlyn, 6d.; New California, 6d.; Orita, 1s.; Palmarejo, 2s.; Plumas Eureka, $\frac{1}{16}$; St. Angustine, 3d.; and Tolima, $\frac{1}{4}$.

Those down are Frontino and Bolivia of 1s.; Jay Hawk, 3d.; New Guston, $\frac{3}{16}$; Pestarena, 3d.; and Yankee Girl, 1s.

The following list shows the principal changes which have taken place:—

	Last Week.			This Week.

LATEST FROM THE MINES.

Indian Mines.

Ooregum.—A telegram, dated Apl. 3, gives last month's return of gold as follows: "1,302 tons of quartz produced 3,004 ozs. of gold."

Colonial Mines.

Brilliant.—A cablegram, dated Mar. 31, reports the result of 16 days crushing up to Mar. 26:—1,540 tons, yielding 2,581 ozs. of gold, value 9,000*l*. A dividend of 2s. per share was declared, making 4s. for the month.

Broken Hill Proprietary.—The company give notice that the nsual monthly dividend of 2s. per share, amounting to 96,000*l*., for the month of Apl., has been declared on the 960,000 shares, and will be paid on Apl. 15. The yield for the week cnding Thursday, Mar. 26, was 5,378 tons of ore treated, yielding 807 tons of lead, containing 177,474 ozs. of silver, and the surplus on hand amounts to 99,837 ozs. silver. A cablegram has been received by the London office of the company, dated Mar. 29, stating that the directors have returned from visiting the mine, and report that everything looks in splendid condition.

Day Dawn Block and Wyndham.—Cablegram from the general manager at Charters Towers gives the result of the crushing for the fortnight cnding 30th ult.:—"390 tons crushed; yield of gold, 980 ozs.; approximate value, 3,390*l*. Fortnight's expenses, 870*l*. (average yield per ton, 2 ozs. 10 dwts.")

Day Dawn P.C.—A cablegram from the manager at Charters Towers gives the result of this company's crushing for the fortnight ending Mar. 28, viz.:—"1,050 tons, 846 ozs.; 846 ozs. shipped per s.s. Jelunga." (Estimated value, 2,876*l*.)

Mill's Day Dawn United.—Fortnight's return, 890 tons crushed, 796 ozs. of gold, 2,750*l*. approximate value.

Mount Albion.—A telegram from the manager at the mines shows work done during four weeks ending Mar. 21: "288 tons ore raised, containing 7,600 ozs. silver; 351 tons ore smelted, containing 10,000 ozs. silver, producing 46 tons silver-lead bullion, containing 8,500 ozs. silver. Shipped per Dorunda, 120 tons silver-lead bullion, containing 26,000 ozs. silver; 7 tons silver ore, containing 1,000 ozs. silver. Owing to an accident to the depositing floors, waterjacket furnace stopped 12 days. Everything now is in first rate order. Produced last week 30 tons silver-lead bullion."

Mount Leyshon.—A cablegram, dated Mar. 31, has been received from the manager at Charters Towers, giving the fortnightly crushing:—"810 tons crushed, 295 ozs. gold; 20 stamps mill ran 288 hours; cstimated value, 630*l*."

Mount Morgan.—Messrs. Laughland, Mackay and Baker have received the following telegram from the Mount Morgan Gold Mining Co., Limited, Queensland:—"We pay 37,500*l*. to day, being dividend of 9d. per share (free of dividend tax) for the month of March."

Mount Zeehan.—A cablegram from the local committee, dated Mar. 26, states: "40 tons of first-class ore have been shipped from Hobart to London per s.s. Hubbuck and Bungaree."

New Queen.—Cablegrams from the mine.—Charters Towers, Mar. 26: "We have shipped 285 ozs. (result of crushing to Mar. 14) Dorunda (sailed Mar. 24)." Charters Towers, Mar. 28: "260 tons (yielding) 310 ozs. (gold)."

Victory (Charters Towers).—A cablegram announces the crushing of 620 tons for 808 ozs. gold, value 2,800*l*. This is from the old workings. The manager reports having opened out on a big formation, 315 ft. from the surfacc, calcnlated to be the Brilliant reef.

Foreign Mines.

Castillon (Pyrenees).—The secretary has posted dividend warrants for 6d. per share, or $2\frac{1}{2}$ per ccnt. on the capital, in payment of the dividend declared at the annual meeting on Wednesday last, the 25th ult., *i.e.*, for the year 1890.

Elkhorn.—Cable information from Capt. Plummer:—"Bullion shipped for week ending Mar. 28 was $9,200 (nine thousand two hundred dollars)."

Jay Hawk.—The directors have received the following telegram from their manager:—"During the week have driven in upon the vein 56 ft.; the lode contains a small quantity of rich ore."

New Gold Hill.—62 27-100 ozs. gold sold to the United States Mint at Charlotte, North Carolina, realised $1,135.15, equal to, at 4s. per dollar, 227*l*.

New Russell.—The company have received advice by cable that ore assaying $30 per ton is now being treated at their mines by the Gold Ores Reduction Co.'s process.

Ouro Preto.—The company has sold, through Messrs. Johnson, Matthey and Co., the gold obtained in the month of Jan., which realised 5,062*l*. 4s. 7d.

Pinos Altos.—The out-turn for the week cnded 21st nlt. was $10,000.

Rio Tinto.—The directors have resolved that at the general meeting to be held on Apl. 17, they will, subject to final audit, and after writing off the amount of drawn bonds and sundry depreciations, in all 115,942*l*., to debit of revenue account, recommend a final dividend on the shares of the company of 18s. per share, making, with the interim dividend paid in Nov., $16\frac{1}{2}$ per cent. for the year, free of income-tax, carrying forward 157,755*l*. to the new account.

Zaruma.—The produce for the month of Jan. has been sold, and realised 450*l*. 12s. 10d. net.

Home Mines.

Great Laxey has declared a dividend of 10s. a share, which, considering all things, is extremely satisfactory. The condition of the mine, judging from the report of the agents, is equally so.

Ticketing for Tin Ores.

A tin ticketing took place at Redruth on Wednesday last, when 221 tons were offered, with the following results:—

Value of Ores Sold from Each Mine.

	Tons.	Cwts.	Per ton. £	s.	d.	Value. £	s.	d.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

Luipaard's Vlei.—Licenses for the month of Feb., 280*l*.

Witwatersrandt (Knight's).—The London agency advise the receipt, ex Garth Castle s.s. from Cape, of 177 ozs. gold.

Geldenhuis Main Reef.—This company crushed in Mar. 800 tons, producing 410 ozs. of retorted gold.

George Goch Amalgamated.—The company advises the receipt, ex Garth Castle s.s. from Cape, of 222 ozs. gold.

Jumpers.—Cablegram from Johannesburg, Apl. 2:—"Obtained 2,771 ozs. gold during Mar."

Ferreira.—Cablegram from Johannesburg, Apl. 2:—"Crushings for Mar.:—4,092 tons south reef, 470 tons main reef, yielding 4,124 ozs."

Kimberley Diamond.—This company has telegraphic advice announcing trial washings of 342 loads yielding 64 carats, making, with previous trials, 140 carats for 685 loads washed.

Forbes Reef.—A cable from the manager states:—"We have struck the hanging-wall of Art Union Extension Reef; will furnish you with full details as soon as possible." This refers to the low level drive, which was expected to reach the reef at end of Mar.

Edwin Bray.—A cable from the managing directors at Barberton states that during the month of Mar. 500 tons of quartz were crushed, yielding 238 ozs. of gold. Also that an accident has happened to the ropeway.

Simmer and Jack.—Cablegrams:—"Have declared a dividend of 10 per cent., payable May 31 to shareholders registered to April 20." "Obtained 3,218 ozs. gold during month of Mar." Transfer books closed from April 20 to May 31, both days inclusive.

Oriental and Sheba Valley.—Cable:—"The mill, running 16 days, has crushed 2,170 tons, yielding 820 ozs. gold. The 50-stamp battery has been shut down for repairs." The directors think that the stoppage of the 50 stamps will only be for a short time.

Spitzkop.—The directors have just received from Mr. D. H. Bayldon, the new manager, a remittance of 112 ozs. of gold which has realised 432*l*. 10s. 10d. A cable message advises that a second hydraulic has been completed and put to work. The 10-stamp mill in course of erection is in a forward state.

Virginia (Transvaal).—The directors, feeling that no time should be lost in getting the Von Brandis Mine into working order, have desired Capt. Richards to suspend all work on the Virginia property for the present. The agent says: "The mine is looking very promising, I consider, especially at the 80-ft. level south—the deepest point."

Sheba.—A cablegram at 12.30 p.m. this day, which is their first and only intimation of the crushing, states:—"1,000 tons 618 ozs.; this clean up is small owing to have (having) amalgamated copper plates, measuring 900 (sq.) ft." By this they understand that the gold has been used in amalgamating the plates of the whole mill of 60 stamps, and is equivalent to a result of not less than 1 oz. to the ton.

Victory Hill.—The heavy rains of late have given us much bother with water in the winzes, greatly bewildering our work. Winze No. 3 is down 80 ft., so I propose about the middle of the month to cut out the station and test the lode a few feet north, and this will satisfy me concerning permanency and value to adit at the same time. I trust, before the end of the month, to see the lode in the adit, as it is important now that we are driving in the mineral belt to be in quartz.

Barrett.—The mine manager reports for Feb.:—Total output, 240 ozs. Battery working 20 days only, being short of ore on account of bad state of roads, &c.; also for two days all hands were put on at alluvial washing while water was plentiful. Mill produced 146 ozs.; alluvial, 94 ozs. Among the latter is one very fine piece of solid gold, nearly 50 ozs. in weight, and two of about 14 ozs. each, these being somewhat mixed with quartz. Mine and alluvial both promise well for Mar.

Stanley (Sheba United).—From the manager Mar. 14.—I have just returned from an examination of the mine. We are now hoisting ore that shows considerable iron and copper; the latter usually indicates a good grade ore. We shall start shipping ore to the stamp mill next Tuesday or Wednesday. We shall re-start sinking the shaft on Monday or Tuesday next, and continue it with two shifts. The crevice we are working is in the east 300-ft. level, and of very good width, from 2 ft. to 5 ft.

Cerro de Pasco.—The following advices have been received from the mine manager, dated Mar. 2:—500-ft. level drive, middle reef: We commenced work again in this drive on the 10th, and it has been driven 15 ft., making total distance 429 ft. Average width of reef about 5 ft. Quartz extracted 30 tons; making total 60 tons since we commenced work (working 17 days, day shift only). Main shaft on block adjoining bullion ground has been sunk 41 ft., making total depth 81 ft. Ten wall plates and 25 sheets of corrugated iron have been put in to secure east side of shaft, which was unsafe.

Akankoo.—Advices received up to Mar. 9:—The shaft was unwatered, and driving at the 100-ft. level extended to 91 ft. Winze A down 35 ft., and following week winze B was to be commenced. Tangye pump working well, and one of the old boilers suffices to keep up steam for it. New boiler arrived safely, having been floated from the ship to the mine. Middle level joined and completely timbered through to the south-west end. Mr. Doering expected to start 10 heads of stamps, and keep them working while the other 10 were being re-erected. A telegram received 27th ult. states: "Commenced crushing." This will have left the mine probably about 18th or 19th ult.

Gie Appantoo.—The directors, in sending a full report on the mines by Mr. W. H. Tinney, M.E., who was sent out on the recommendation of Mr. McCarthy, say they consider the report generally very satisfactory and encouraging. The crushings for the last three months have been as follows:—Dec., 1890, 478 ozs.; Jan., 1891, 230 ozs.; Feb., 1891, 462 ozs. During Jan. the machinery at Prestea was stopped for repairs. In order to reap the full benefit of our stamping power, it is necessary to further develop the mine. To do this, and for the erection of the new machinery, it will be necessary that the remaining debentures shall be taken up, which would secure early increased returns.

Wassau (Gold Coast).—The yield of gold for the month of Jan. last was 182½ ozs. of the nett value of 697*l*. 2s. 6d. During this month the mill worked 21 days, and crushed 231 tons of ore, giving a yield of gold per ton equal to 0.79 ozs. It will be seen by the above return that the mine is gradually surmounting the difficulty it has had to contend with for the past five or six months, the water having now been forked out of two shafts; and as soon as the new boiler (which is in course of erection) is set to work the Bishop shaft will become available for a further supply of ore. The yield, also, per ton for Jan. shows an increase over that of Dec. of nearly 50 per cent.; and, as sinking in the three shafts goes on, we may reasonably expect this improvement to continue.

Clutha.—Manager's report for week ending Feb. 28:—Clutha section—No. 3 winze: Measurement at date, 68 ft.; work done for week, 6 ft.; the quartz lead is about 1 ft. wide, and pans about 12 dwts. The 50-ft. level: Measurement at date, 93 ft.; work done for week, 18 ft.; in ground favourable for driving, but carrying very little gold. I am getting up rails and a truck from the Victoria to lay here. North reef: Measurement at date, 50 ft.; work done for week, 7 ft.; does not prospect quite so well as earlier in the week. North reef—Prospecting drive: Measurement at date, 17 ft.; work done for week, 6 ft.; a slight improvement here in size and grade of reef. Cross-cut north: Measurement at date, 207 ft.; work done for week, 6 ft. 6 ins.; is passing through a more stratified formation, which, though hard, breaks fairly well. Cross-cut south: Measurement at date. 7 ft. 6 ins.; work done for week, 3 ft. 6 ins. Only a day shift at work here. Winze in cutting—The 50-ft. level: Measurement at date, 17 ft.; work done for week, 7 ft.; the shoot of gold has gone out in the east corner of the winze.

Pigg's Peak Estate (Mar. 1).—Your favours of Jan. 22 and 29 are to hand. My last letter was dated Feb. 23. Mining: I note your remarks under this head, and am now extending the work. I have stopped the cross-cut in main drive of Peak after driving 24 ft., and put the contractors to work on a 50 ft. drive at a point about 200 ft. west of the present working, from which I am getting very encouraging prospects. The drive will be known as No. 2 south drive. I have also let a contract to put in a drive on the reef near the Pirate Reef. These workings will be known as No. 1 works. Devil's Reef: The rich leaders spoken of in my last letter have both pinched out, one at 30 ft. and the other at 12 ft. This was very disappointing, as I thought we had struck something that would lead us to a large deposit of ore. Work enough has been done on this reef to show that the gold is all carried in small leaders running through the ironstone. Whether we will find a body that will warrant the erection of a battery remains yet to be proved. At present we have enough ore to run till the end of this month. Development work has gone on very slowly as it takes about 80 natives to keep the waggons going during the stormy weather we have been having. The output for Feb. is going to be very small—more so than I anticipated. Heretofore about 65 per cent. of our

gold has been caught in the boxes, and I calculated about the same amount this time. I had scraped from the plates 66 lbs. of amalgam which was a good showing, but when I cleaned up the boxes I only obtained an additional 21 lbs., overthrowing all my calculations. I can only attribute this discrepancy to the gold being fine and light, and as we are compelled to use an over supply of water on the plates, owing to the heavy gangue, it did not remain in the boxes. The clean-up shows that the ore will under run 2 ozs.—how much I cannot say, as we are not finished at the present writing. The small tonnage put through is on account of the heavy rains, which are unpreeedented in the history of the country. When I wrote in to Barberton last Sunday asking the offiee to cable the discovery of the rich leaders. I anticipated a large yield for the month, but after going another 2 ft., they pinched out; in addition to this, the rain came down in torrents, and I could only run the battery one day in the week. I know that this yield will be a great disappointment to all, but none more so than myself. Note.—The cablegram received and communieated to the newspapers on Mar. 16 (being about a fortnight later than the above report) stated :—"Have made a fresh contract to haul 1,000 tons."

BRITISH MINING INTELLIGENCE.

D'ERESBY AND GWYDYR (Apl. 1).—The two tribute bargains are raising a fair quantity of lead. Surface: We are better supplied with water this week, and dressing is going on as usual. We are also well on with the new watercourse and launders for taking the No. 4 water to the wheel.—H. Nottingham.

DRAKEWALLS (Apl. 2).—We have completed the cutting of the tip-plat at the 160-fm. level, plat sollar put iu, bearers aud serews fixed for taking up the weight of the sinking lift, and have commenced to sink the Engine shaft to-day. The lode in the 160 driving east is improving, produeing 8 tons of muudic per fm., intermixed with tin. The lode in the 160 west is producing 8 tons of mundie, and saving work for tin. The lode iu the stope in the back of the 160 west yields 11 tons of mundic per fm., with a little tin. In the stope in the bottom of the 147 east the lode yields 10 tons of mundic per fm. and a little tin. In the 147 driving east the lode is hard for exploration; it has a very kindly appearance, and is yielding 3 tons of mundie per fm. and saving work for tin. Nothing new to report in the 147 west. The stope in the bottom of the 132 west of the cross-course will yield 3 tons of eopper ore and 3 tons of mundic per fm., and the stope in the back of the 132 west of the cross-course 6 tons of copper and mundic ores per fm. The masons are getting on as fast as possible with the walls for the diggers, although the rough weather of the last two or three days has rather impeded our progress. We have fiuished earting the copper ore to the quay for the next sampling. We purpose turning the draught for another clean out of arsenic soot on Saturday next.—H. Rodda.

EAST GRASSINGTON (Apl. 1.)—Report from the mine manager: —Hammond shaft: The 47 west has been extended 3 fms., and stoped 9 fms., giving 12 fms. of ground removed here during the past month. The lode is slightly narrower in eonsequenee of a braneh vein goiug out obliquely immediately behind the present end, but is now more conceutrated, with well-defined walls, the filling matter being soft limespar and gossan, mixed with branches of blue and grey lead ores; worth fully 23 cwt. per fm.) At the close of current month we shall be clear of our old workings immediately above, and shall employ an additional pare of men stoping behind; hence better progress,will be attained in extending this point, which, to my mind, never appeared so promising as at present, into whole grouud westwards, and communicate and deepen the western shaft with all dispatch, thus carrying out the *modus operandi* foreshadowed at the annual meeting. Stope in back of level yields 10 cwt. of lead ore per fm. A rise 23 fms. east of shaft is up 28 ft., and within 4 ft. of communicating with intermediate level. The vein is 2 ft. wide, yielding 8 cwt. of lead ore per fm. No. 2 sump: This sump has been deepened 10 fms. below the 47, with drivage advaneed 20 ft. westwards, in a lode varrying from 12 to 24 ins. wide, carrying sugary spar and gossan, well mixed with good quality lead ore; worth 10 cwt. per fm. We are heavily watered here. Stopes in intermediate level and 37 east, worth together 21 cwt. of lead ore per fm. Harris' main engine shaft: In the 47 east we are passing through a temporary nip, the lode gradually widening out again, and diseharging quite a stream of water, and earrying a thin leader of gossany clay charged with good spots of lead ore. The winze below the 37 is being sunk day and night to meet the rise in back of the level, and so soon as holed will expedite progress here, and enable us systematieally to take away the payable section of ore ground behind the end. The 37 east has been advanced 19 ft. during the month, the first few feet being extremely hard ground. East of No. 2 heave the vein is opening out, and improving in value every foot as we advance, and is now 18 ins. wide, carrying spar and gossan, intermixed with good patches of lead ore, worth 12 cwt. per fm. and improving. Winze behind the end sunk by a full pare of men. Stopes worth together 20 cwt. of lead ore per fm. Surface: Notwithstanding the unprecedented long severe winter, the bleak and exposed location of our mines, with continuous and arduous attention, we contrived to carry on dressing operations. Weather still severe. Dressing and smelting in full swing. I am glad to notice the price of lead advancing; every shilling realised will correspondingly increase our profits.

LEADHILLS (Mar. 31.)—Browu's vein: Five men are set to drive the 145-fm. level, now 146 fms. 4 ft. north of Jeffery's shaft, at 120s. per fm.; vein about 4 ft. wide, well mixed with promising quartz all over with ore; worth 20 cwt. per fm. Two to drive in string at 145 north of Jeffrey's shaft, at 90s. per fm.; kindly quartz and ore; worth 10 cwt. per fm. Five to stope above the 145 north of Jeffrey's shaft, at 45s. per fm.; worth 25 cwt. of ore per fm. Four to No. 1 stope above the 145 south of Wilson's shaft, at 45s. per fm.; worth 25 cwt. of ore per fm. Four to No. 2 stope, at 42s. 6d. per fm.; worth 35 cwt. of ore per fm. Four to stope above the 145 north of Wilson's shaft, at 40s. per fm.; worth 30 cwt. of orc per fm. Five to drivc the 130-fm. level, now 173 fms. 5 ft. north of Jeffrey's shaft, at 115s. per fm.; vein 5 ft. wide, showing a nice rib of quartz, and although without ore, the general appearance is promising for bearing it. Five to No. 1 stope above the 130 north of Jeffrey's shaft, at 37s. 6d. per fm.; worth 25 cwt. of ore per fm. Four to No. 2 stope, at 45s. per fm.; worth 30 cwt. of ore per fm. Five to No. 3 stope, at 45s. per fm.; worth 15 cwt. of ore per fm. Four to No. 4 stope, at 47s. 6d. per fm.; worth 25 cwt. of ore per fm. Four to stope above the 130 south of Jeffrey's shaft, at 42s. 6d. per fm.; worth 25 cwt. of ore per fm. Two to stope above the 130 north of Wilson's shaft, at 40s. per fm.; worth 20 cwt. of ore per fm. Five to drive the 115-fm. level, now 30 fms. north of Jeffrey's shaft, at 110s. per fm.; vein 3 ft. wide and without orc, being rather dried at present. Five to stope above the 115 north of Jeffrey's shaft, at 50s. per fm.; worth 25 cwt. of ore per fm. Two to drive above the 115 south of Wilson's shaft, at 65s. per fm.; worth 30 cwt. of ore per fm. Two to drive the 85-fm. level, now 210 fms. 3 ft. 6 ins. north of Jeffrey's shaft, at 125s. per fm.; vein above 4 ft. wide, nieely mixed with kindly quartz, but without ore. Four to drive the 70-fm. level, now 57 fms. 4 ft. 6 ins. south of Wilson's shaft, at 90s. per fm.; vein 4 ft. wide, keeping too dark and dried for bearing ore. Four to drive the 35-fm. level, now 75 fms. 3 ft. south of Flat Rod shaft, at 95s. per fm.; vein above 4 ft. wide, mostly stone, with quartz joints, and ore worth 25 ewt. per fm. Four to stope above the 35 south of Flat Rod shaft, at 32s. 6d. per fm.; worth 50 cwt. of ore per fm. Sarroweole vein: Eight to clean out broken ore from stope above Gripp's adit north of George's Roust.—T. Newbigging.

MID-DEVON.—Report for week ending Mar. 21.—Surface: The water-courses are now quite free from snow, and the flow of water is ample. The machinery has worked continuously, and been kept as near as possible to four revolutions per minute. A shaft: The water is being slowly drained; it is 5½ fms. below the 70 plat. C shaft: The 50 east, No. 3 stope worked on by six men, yields fully 2¾ tons of copper ore per eubic fm.; strata unehanged.—J. Neill.

MID-DEVON.—Report for week ending Mar. 28.—Surface: The machinery is being kept as near as possible just over four revolutions per minute, which drains the water in shaft slowly. A shaft: Water 9 fms. below the 70 plat. C shaft: The 50 east No. 3 stope, worked on by six men, has fallen off in the yield of ore siuce Wednesday. The deposits have been intercepted by a hard floor of capel and garnet, which underlies east very fast, causing a contraction of the deposit of ore, the present yield being only 2 tons per cubic fm. There are indieations in the highest point of it again opening and improving in the yield.—J. Neill.

PHŒNIX UNITED (Apl. 2).—In concluding their setting report the managers write:—We have at various points seven pitches at tributes varying from 7s. 6d. to 13s. in the £ for tin.

ROMAN GRAVELS (Apl. 2).—The 155 south is driven 10 fms. 3 ft. 6 ins., and the forebreast cannot now be far away from the caunter lode. As stated in previous reports this level has been driven in the centre division of Roman lode, and we had an idea that the three divisions of the vein would come together on this side of the caunter, but such has not yet proved to be the case. The caunter lode at the 140 south east has greatly improved this week, and is to-day worth 1 ton of lead ore and about 10 cwt. of blende to the fm. The lode in present forebreast is in two parts, which look like eoming together very shortly, when, no doubt, further improvement will result. The 140 south has also improved, the vein in the forebreast to-day being 3 ft. wide, producing 1 ton of lead ore to the fm. This level is now driven 87½ fms. The 140 uorth is driven 87 fms. 5 ft., and the forebreast is now, we calculate, 5 ft. beyond the perpendicular of the winze, being sunk from the level above, which is to-day 13 fms. deep. The lode in the forebreast is 5½ ft. wide, worth quite 1½ tons of lead ore to the fm., and it is an encouraging feature to note that the ore ground is extending north of the winze. The vein in the winze is also producing 1½ tons per fm., and the sinking is being pushed as fast as possible and preparations are being made to rise against it from the 140 level. The forebreast of this level has been driven beyond the winze in order that when the commuuieation has been brought about the men may be able to resume driving without interference by the working of the stopes, which will at once be started north and south from the winze. There is no change to notiee in the 125 south forebreast, but we have just reached the veiu in the winze (at 7 fms. 1 ft. 6 ius. below this level), which is being put down in time for the coming up of the 140 south; the vein at present exposed shows a niee mixture of ore. The four stopes in back of the 125, are still producing about 1½ tons of lead ore eaeh to the fm., and the same value may be plaeed upon the four stopes in back of the 110. The lode in the end of the drivage south from Jones' winze iu back of the 80 south, is not looking as well this week, and is only worth ¾ ton per fm. There are now three stopes in back of this drivage, which average quite 3 tons of lead ore and 1 ton of blende each to the fm. We have sampled to day 20 tons of blende for sale on Thursday next. —A. Waters.

SOUTH CONDURROW (Apl. 1).—We are forcing on the rise above the 123-fm. level at Marshall's shaft, and sinking below the 100 west of Plantation shaft. We hope to effect a communication between these places in a few days. The stope in the baek of the 123 is worth 8*l*. per fm. Marshall's shaft is in course of sinking by nine men below the 123. There is nothing new to report in the cross-cuts at the 40 and 70-fm. levels. The 40 end east of engliue shaft is worth 8*l*. per fm.; the stope behind the end is worth 8*l*. per fm. Two other stopes in the back of the 40 are worth 14*l*. per fm. each.—W. Rich, W. Thomas.

SOUTH DARREN (Apl. 2)—Satisfactory progress is being made in cutting tackle room at the 142. The 130 end west is let to 4 men, at 9*l*. per fm.; the driving this week has been by the side of the lode. It will be broken down by next week, when we will give the value. As seen at present it is strong, and shows good spots of lead and copper. The drawing is kept on two cores. The morning core has been mostly occupied by drawing from the shaftmen and sending down timber, &c. The men picking ore stuff in the 142 west have been a good part of their time repairing the ladderway. Hitches are cut down to the 120 level. We hope soon to have the ladderway in thorough repair from the 40 down to the bottom.—J. Mitchell.

WEARDALE.—Report on Weardale Co.'s mines for week ending Mar. 21:—Ore raised for week, 84 tous; ore dressed for week, 76 tons; ore slag and fume smelted for week, 109 tons, producing 52 tons of pig lead.

WEARDALE.—Report for week ending Mar. 28:—Ore raised for week, 85 tons; ore dressed for week, 88 tons; ore slag and fume smelted for week, 105 tons, produciug 58 tons of pig lead.

WEST WHEAL GRENVILLE (Mar. 24).—The 130-fm. level driving north of the engiue shaft is extended 2 fms. 4 ft. 6 ins.; the ground in this end is of much the same character as reported last week. The

120 cross-cut driving north is extended 95 fms. 2 ft.; there is no material change to notice in this drivage since our last report. In the 120 east of cross-cut on No. 4 we are about commencing to drive south to find the heave of vein. The 120 driving east of cross-cut on No. 2 is extended 18 fms. 3 ft.; the vein in this drivage continues about 2 ft. wide composed of quartz, peach, mundic, and producing stones of tin ore.—J. Skeat, N. Temby.

WEST WHEAL GRENVILLE (Mar. 31).—The cross-cut driving north of the engiue shaft at the 130-fm. level is extended 3 fms. 2 ft. The ground in this end is still of a mixed character, strongly mineralised, with arsenical mundic. The 120 crass-cut driving north is extended 96 fms. 3 ft. 6 ins. In this drivage we have just passed through a branch underlying slightly north, letting out water and carrying a little tin. In the 120 east on No. 4 we have driven south about 5 ft. The granite in this drivage is of a well defined character. The 120-fm. level driving east of cross-cut on No. 2 vein is extended 19 fms. 5 ft. The vein in this drivage is of much the same character as last week; somewhat larger aud letting out water freely.—J. Skeat, N. Temby.

WHEAL CREBOR (Mar. 31).—The points in operation at the mine are as under:—6 men cutting through the lode in the 156 end east of the new shaft, at 7*l.* per fm. The part of the lode carried in driving the end east of winze is worth 4 tons of mundic, with a little copper ore per fm. When the work of cross-cutting the lode is finished, we will advise you of its size and value. Eight men stoping the bottom of the 144 east of the new shaft, four east and four west of winze, at 3*l.* per fm. The lode in each place will yield 4 tons of copper ore and 4 tons of mundic per fm. Four men stoping the back of the 144 west of cross-cut east of new shaft, at 3*l.* per fm.; lode worth 3 tons of copper ore and 6 tons of mundic per fm. In the upper level we have 10 men working in five different places on tribute, their tributes varying from 10s. to 13s. 4d. in the £.—P. D. Holman.

WHEAL METAL AND FLOW (Apl. 1).—Fair progress is being made iu driving the 27 east of Watson's engine shaft. The lode is again better defined, and shows a little tin when washed on the vanning shovel. The Flow is as good as ever. Our extra work and labour costs are abating.—S. P. Curtis.

WHEAL UNY (Apl. 1).—We have completed the skiproad in Hind's shaft to the 244-fm. level, and drawn a small pile or two from footwall of shaft. The lode for 6 ft. wide and length of shaft is worth about 25*l.* per fm. Still lode to the north of us. The lode in the western end of shaft at the 244 looks better, and seeing the granite dips east we have great faith iu this end opening out something really good. The 230 end and stope with all other points maintain their last valuation.—J. White, D. H. Williams.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO (Mar. 5).—Manager's report for month of Feb. (four weeks):—Mining—exploration and development: The long west cross-cut at tunnel level, San José, was driven 28.5 ft., and the 100 lode was intersected in an unproductive state. 12 ft. wide, and with its westeru wall very well defined. A drift was started south from the above cross-cut on the course of the 100 lode; drivage, 9 ft. The west cross-cut at 12-fm. level, north of No. 5 winze, was driven 15.1 ft., on hard limestone; total length of cross-cut, 17.5 ft. The north end at 24-fm. level on the 100 lode was driven 27 ft., ou barren ground. The breast was connected with the west cross-cut driven from the main lode, 10 ft. north of No. 7 winze. This cross-cut was further driven west 18 ft., having reached the westeru wall of the 100 lode, which is very wide at this point, but entirely barren. A short cross-cut east at the 50-fm. level, 100 ft. north of Balvanera shaft, was driven, in order to prove the eastern country rock, 9.4 ft.: total exploration, 107 ft. A considerable amount of dead work was done at the main stope, north of No. 7 winze, searching for ore on its sides and ends, and rising the northern part of the back. The Balvanera shaft was fouud to be filled with waste below the 50-fm. level, and the hoistiug engine spent a fortnight in clearing it to the bottom. It was an expensive piece of work, but the shaft is uow empty and ready for work at the 62-fm. cross-cut. Stoping: The ore ground stoped away during the month was only about 32 fms., and the condition of the stopes at eud of the month was as follows:—The main stope over 24-fm. level north of No. 7 winze has impoverished in its northern part, and is only productive in its southeru part for a length of 70 ft. The width of the ore varies from 8 to 16 ft., but it is scattered and is not probably worth more than 30 per cent. in mineral. The average height of the back is 37 ft. above the rail at the 24-fm. level. A slide is cutting off the ore at this place very rapidly. The 31 stope north and south of No. 7 winze is 90 ft. long, from 6 to 12 ft. wide, and only 9 ft. thick to the rail at the 24 level. The ore is scattered, but some of it is of good grade. The 36 stope on the 100 lode is 47 ft. long betweeu the two winzes, about 10 ft. wide. and 35 ft. thick to the rail at the 24-fm. level. The ore in the southern part is about 8 ft. wide, but very narrow on the northeru end. The stope betweeu Nos. 4 and 5 winzes stands the same as before. Surface work — Ore cleaning: The rough ores extracted in the month amounted to about 477 tons, which yielded, after cobbing, 240 tons. The cause of the small extraction of ore was that the hoisting engine was employed for three weeks in hoisting waste from the bottom of the shaft. The ore stamped was 250 cars equal to 225 tons, with an average assay value of 42.0 ozs. per ton. The stamped ore sent to the chlorination furnaces was 389 tons. with an average assay of 37.6 ozs. per ton. The roasted ore served to the leaching vats was 640 tons, with an average assay value of 28.6 ozs. per ton. The tailiugs discharged from the leaching vats amounted to 610 tons, with an average assay of 2.6 ozs. per ton. The precipitate obtaiued from the leaching vats amounted to 5,643 lbs., with an assay value of $19,436.46. The silver obtained from the refinery was 24 bars, which were sold at the Alamos mint through Mr. Oscar Ocharan, producing $24,724.13. Financial result: The amount realised for silver was $24,724.13, and from argentiferous pig-lead sold (5 tons) to Quintera Co., $994.96; total receipts, $25,719.09; the expeuditure for the month was $13,517.99; there being an excess of receipts over expenditure amounting to $12,201.10, but the argentiferous stocks in hand were decreased during the month by $10,301, consequently, the result of the month's working was a profit of $1,890.10, having debited to profit and loss account $2,605.92 spent in mining explorations and other deadwork. Prospects: The rapid manner in which the pay-shoot is shortening at the main stope, owing to the occurrance of the slide previously mentioned, which is cutting off the ore as the back of the stope is raised. is a matter of considerable anxiety, as the complete failing of that important stope would not only be a serious blow to our ore reserves, but would also place us in temporary difficulty to supply the mill, the other stopes not beiug in condition to produce a full supply, and there having been no time yet to fully develop the new ore body on the 100 lode and make it available for stoping. Labour is still plentiful, and we expect to get a good supply of fuel in the next two or three months. Water, however, is becoming more scarce every day, and we have some difficulty and delays in the leaching works. We are running out of stock of salt, and our agent at the Santa Cruz saltfields has been unable to extract any yet, but expects to begin to send some in a week or so.

ANGLO-MEXICAN.—The superintendent at the mine reports for the week ending Feb. 14 as follows:—West drift, 814-ft. level, has been advanced 13 ft. during the past week by hand drilling, making the total 294 ft. East drift, 814 ft. level, advanced by hand drilling 7 ft. during the past week, making the total 268 ft. The face of the drift shows about 1 ft. of fairly good-looking ore. The width of ore now in sight is very much less thau we had a few weeks ago. However, I do not consider that the prospect is in any way discouraging, and I shall hope to find that further work will prove that there has been merely a temporary narrowing of the ore body. Nabor winze, below 814-ft. level, has been sunk 10 ft., making the total depth 31 ft. This winze is also being worked by hand drilling. Owing to the unusually hard character of the ore we have been obliged to leave it, and so are sinking iu the hanging-wall. I am, therefore, unable to give you any information as to the exact width or value of the ore. The last samples taken were very good, and as far as we are able to judge, the present prospect is most encouraging. Surface drift above Sta Herlinda tunnel level advanced 5 ft., making the total 191 ft. For some distance no regular streak of ore has been found, but within the past few days we have again found ore in the footwall; this streak is about 8 ins. wide. East drift, on the main vein above Sta Herlinda tunnel level, advanced 4 ft., making the total distance from the cross-cut from the surface drift 98 ft. Estrada upraise, 646-ft. level: Progress, 5 ft.; total, 30 ft. Having struck a streak of ore about 1 ft. wide, we deemed it advisable to run off intermediate drifts on both sides. Main incline shaft sunk 13 ft., making the total 1,014 ft.

ANTIOQUIA.—The statement for the month of Jan. is as follows:—238 tons produced 77 ozs.; average, 6 dwts. Estimated value of gold, 198*l.*; cost at the mines, Medellin, and in London, 606*l.* 17s. 10d.; estimated loss, 408*l.* 17s. 10d. During the month sums amounting to 233*l.* 2s., included in the above statement of cost, were expended in Colombia on capital account and extra stores. The wire-rope incline was at work bringing down mineral from Grupero lode for the new mill at date of the advices, but it was not finished in sufficient time to allow of any mineral crushed in the new mill being included in the above returns. Such mineral will come into the return for next month. The workings on the Carmen lode were all poor during the month.

ASIA MINOR (Mar. 25).—Ara Dere Mine: The lode in the drive is improving, and now carries a good mixture of lead. The lode in wiuze has also shown some improvement, and is worth about 1 ton per fm. The rise is expected to hole to surface very shortly, when good ventilation will be secured. Chief Mine: The men cutting through the lode in intermediate Hamburg have met with good ore, the extent of which canuot be determined yet. Other cross-cuts will be made back east, and the lode carefully proved. The cross-cut in Savalan main level (special drivage) has gone through a branch heavily charged with ore. The extensive exploratory works are being pushed on with the utmost vigour. 180 men are now stoping on ground worth 15 to 25 cwt. Dolu Dere Mine: The lode in the wiuze east of brook has considerably increased in value, and will be pushed on energetically. The cross-cut for the three Pappa Sawa lodes has met with some lode stuff showing ore, and the first lode is expected to be intersected any day now. Dressing Floors: The whole of machinery, &c., has been thoroughly overhauled and put in condition to run continuously for the rest of the year. Dressing was resumed on Mar. 15.

AUSTRALIAN BROKEN HILL CONSOLS.—The mining manager reports by mail for the fortnight ending Feb. 19:—Engine shaft sunk 5½ ft.; total, 508½ ft. Formation very good, and full width of shaft, 280 ft. Level west driven 21 ft.; total, 343 ft. Lode in face well defined, aud containing large proportion of good galena. Rise at 195-ft. Rich vein, improved considerably in thickness and width, and now looks as well as ever. Have raised during fortnight 3 tons, comprising native silver, sulphide of silver, and fahlerz, containing in all 25,497 ozs. of silver, which, with 5½ tons of similar ores already on haud, and containing 13,279 ozs. of silver, making altogether a parcel of 8½ tons of ores, 38,776 ozs. of silver, will be shipped to London by mail steamer of 4th prox. Incline level driven 6 ft.; total, 24 ft. Sulphide of silver and fahlerz showing in face, but country exceptionally hard and water plentiful, renderiug progress difficult and slow. As soon as erection of rock-drill plant is complete the drills will be set to work here. North-west cross-cut driven 4½ ft.; total, 13½ ft. No change. 180-ft. level: Winze sunk 4 ft.; total, 19 ft. No change. 180-ft. level: Stopes in good galena. Block 95: Shaft sunk 6½ ft.; total, 104½ ft. No change. Block 97: North shaft sunk 11½ ft.; total, 21 ft. No change, with exception of underlay being somewhat flatter. Surface: Erection of air compressor and riveting of receiver getting well forward.

BELCHER CONSOLIDATED.—Have sunk 8 ft. on Diamond veiu into excellent milling rock; vein has increased to 3 ft. in width. Gangul also prospects well in free gold, every trial showing good results. Ore in mill produced $21.92 to $30 free gold per ton; cost of milling and mining, $2 per ton. Not yet commenced reduction of sulphurets, which average 6 to 8 per cent., and assay as high as $300 per ton. Differari ore averages $18 to $19 free gold, besides sulphurets, which are very rich.

BONNIE DUNDEE.—Mine manager's report for fortnight ending Jan. 31:—We have continued stoping from the back of No. 7 south-west level, on an average of about 2 ft. of reef; this is mixed through from 5 to 10 ft. of formation; some of the stone shows fair gold, and I think should crush from 1½ to 2 ozs. per ton. No. 7 south-west level: On Saturday, the 17th inst., a contract was let for driving this level a further distance of 50 ft. to four men for the sum of 18s. 6d. per ft., and 28 ft. have been driven for the fortnight, making a total

distance from the old underlie 190 ft.; the ground has been very good for driving during the fortnight, and is still good in the face. The reef in this level is still improving, and is now an average of a foot right across the face; good-looking stone, with every appearance of still opening out. During the fortnight I started a winze from the bottom of the small underhand stope from No. 7 south-west level, and have sunk a distance of 9 ft., making total from level 15 ft.; the ground has been, and is still, pretty hard. During the sinking we have had an average of about a foot of first-class stone, some of it showing splendid gold, the best that we have ever seen in the mine up to the present. There is still about a foot of good stone in the bottom of winze. Have raised about 90 tons for the fortnight; total on surface, 210 tons. Have started crushing, and expect to put through about 300 tons.

— (Feb. 23).—Crushed 325 tons, for a yield of 710 ozs. Owing to the steady rain we have been getting lately we have a considerable increase in the water. All machinery in good working order.

— (Apl. 1).—Mr. E. H. T. Plant cables that a crushing of 450 tons will be commenced on 15th inst.

BRATSBERG.—Report for week ending Mar. 21.—Hoffnung Mine: There is little or no change to notice at either of the points at No. 2 adit level. No. 3 is still yielding about ¾ ton per fm. No. 4 level has improved again, now producing ¾ ton per fm., and the lode is of a more average size, viz., about 2½ ft. wide. Ball's shaft is yielding good saving stuff, but not enough to value; the indications, however, are favourable. The sink at Murchison's is cut through, and we shall now proceed to stope out a piece of ground east of the sink for convenience of further proving the lode in this direction, where at present it is yielding fully ½ ton of rich ore per fm. Johannes Mine: The outlook of the level driving on Johannes lode at the intermediate cross-cut is such that we have suspended it, and placed the men to resume the level going west on Howard lode. Having lent some men to the smelting company—and the men engaged at the level driving east being among the number—nothing has been done here since last report. The rise on Howard lode is worth 1 ton per fm. Surface work and remarks: Owing to a breakage at the air compressor, which took several days to repair, the erection of the jigging machinery has been delayed during the past week, but the necessary timberwork has made satisfactory progress. The cases containing the belt pulleys and plummer blocks, as well as the barrel of pipe fittings, are on the works, but there is a bundle of pipes missing. —J. D. HOLMAN.

BRITISH BROKEN HILL (Feb. 18).—No. 1 shaft, second level: The extension of the new section into the crushed portion of the mine has made fair progress. The extension westwards into the new body of ore is much easier work, and advances much more rapidly than in the first mentioned direction. No. 2 shaft, first level: Work is being continued here, and the whole of the old stoped ground is now nearly all timbered up. No. 7 shaft—50-ft. level; The shoot of ore at this level has now been worked out, and the men have been put into the work at second level. The ore broken during the last few weeks is stacked in the timbers, and need not be raised till needed for the smelter. No. 5 shaft: Has been deepened during the week 8 ft., making total below first level 66 ft. The ground has been rather easier during the week, and a little water is making its appearance now from the bottom of the shaft, but not in sufficient quantities to cause us any inconvenience. Surface: Good work is now being done on the smelter and blower engine, and the erection of both is proceeding vigorously. The machinery is not yet quite completely delivered, but it is to be hoped that the balance will be to hand when it is wanted. The carpenter's work in the re-construction of the O.D. mill is going on well, and the first wanted ironwork is coming to hand.

CANTABRIAN (Mar. 21.)—During the week we have drawn to surface one of the drawing lifts in Hastings' engine shaft, and the shaftsmen are at present employed in cutting ground for bearers at the water level below adit, so as to enable us to drop the new bucket lift, the windbore, clackpiece and bucket-working of which we intend to send down next week. In the 24-metre level, driving east of Carter's shaft, the lode is at present small, but yielding beautiful stones of solid copper ore. A promising lode. I have put the men employed in the 12-metre level, east of Carter's shaft, to stope the back of the same, where the lode is worth 15 cwt. of ore per fm. From this point we sent to surface this morning a nice little pile of mineral. Capt. Roskilley states that about 25 tons of rich ore are waiting for shipment.—Capt. ROSKILLEY.

COLAR CENTRAL (Mar. 4).—Eastern section, North division, New shaft: 200 ft. north has been driven 17 ft.; total from shaft, 33 ft. The ground is very fine grained and compact. We have no water at all in this shaft, which is quite unusual for a depth of 200 ft. South division, Main shaft: 260 ft. north, has been advanced 16 ft.; total from shaft, 61 ft. There is scarcely anything now to drive on, but we carry a fair hanging-wall. The 260 ft. south has been driven 20 ft.; total, 65 ft. We have about 1 ft. of vein matter, with small streaks of quartz, but nothing to value, as we can only just get a trace of gold from it in washing. Marden's shaft: 240 ft. north has been advanced 21 ft., or a total from shaft of 154 ft. We have about 1 ft. of solid good-looking quartz; it does not, however, contain any appreciable amount of gold. The 240 ft. south has been driven 21 ft.; total, 108 ft. The quartz is at present about 1 ft. wide, but at one time during the past week it was a good 3 ft. in width in the bottom. It only shows a light colour of gold in the pan. These two levels in Marden's shaft have been most disappointing, as the indications from first sinkiug the shaft down to 150 ft. seemed to promise well. Up above and nearly all along the 80-ft. level we could get very fair colours of gold from the quartz.—A. S. B. OAKLEY.

COLORADO.—The manager's report for fortnight ending Mar. 15, just to hand, states that the Terrible Mine, 8th level west, is now in 490 ft. from the Silver-ore shaft; the lode is 4 to 5 ft. wide, and some very fine ore is being opened up, being far richer than that hitherto met with. The 9th level west is now being driven, and is in 394 ft. from the Silver-ore shaft; the quartz carries considerable mineral. The 7th level west is also being prepared for a continuation of the driving in consequence of the rich ore being developed in this portion of the property. The 14th level: The raise to connect the Austin winze will, it is expected, considerably increase the output. The 15th level east: The mineral vein is 2 to 3 ins. wide, and the ore milled 1-5th oz. gold, 60½ ozs. silver per ton, 27 per cent. lead. The 1st level: The ore sold from this point gave 236 ozs. silver per ton. Brown lode cross-cut—Rockwell adit level: From present indications this cross-cut is thought to be very near the vein. Rockwell adit level: Last sale of ore gave 11 ozs. gold, 77 ozs. silver per ton, and 11 per cent. lead; 12 ozs. gold, 139½ ozs. silver per ton, and 32 per cent. lead. Brown adit level: Ore sold gave 112 ozs. silver per ton. There are 21 different points at work upon the Terrible, Coin, and Brown lodes. North of the Coin the company owns other properties, one of which is a masterly lode, having a large outcrop, and believed to be rich. Work has now commenced on this lode, with a good force of men, both by sinking on the Discovery shaft and cross-cutting from the Mammoth tunnel in depth.

CORTEZ (Mar. 7).—Report from the superintendent at the mines. —Work at the mines for the week ending this date has been as follows:—South cross-cut, No. 1 east: Advanced 4 ft. North-east raise: Stoped 67 tons of ore. North-west raise: Stoped 136 tons of ore. Ore run into mine ore house: 208 tons. Ore trammed to mill: 219 tons. Ore worked at mill: 180 tons. Average assay for the week, 83.33-100ths ozs. silver per ton. Will ship to-morrow lot No. 60, bars No. 838/849, 12 bars, containing, as per our assay, 16,103.55-100ths fine ozs. silver; gold not yet assayed.

CORTEZ (Mar. 14).—Report from the superintendent:—Cross-cut in No. 1 tunnel east advanced 3½ ft. North-east raise: Stoped 68 tons of ore. North-west raise: Stoped 135 tons of ore. Middle tunnel west: Stoped 10 tons of ore. Run into mine ore house, 196 tons of ore. Ore trammed to mill, 132 tons. Ore worked in mill, 165 tons. Average assay for the week, 80 24-100 ozs. silver per ton.

DAY DAWN P.C.—Report of mining manager for the fortnight ending Feb. 14.—The output of quartz is 1,120 trucks; sent to the Excelsior mill 1,140 tons. Your underlie shaft has been sunk a further depth of 10 ft., making a total depth of 86 ft. below the No. 12 level; the formation is 8 ft. wide, carrying no stone. The shaftmen have been engaged during a part of this fortnight in opening out the 242-ft. level, on brown stone, from which we have hauled about 20 tons of quartz, and tipped it into the paddock. We are driving west, at present opposite an old level, which I shall have to clean out and re-timber, after which I will start stoping on about 4 ft. of fair-looking stone. Whenever a favourable opportunity presents itself I will open out on the eastern side also. The leading stope over this level is carrying 5 ft. of stone, of good quality. Nos. 2 and 3 stopes are carrying 6 ft. of stone, of good quality. No. 1 stope, 3 ft., of fair quality. The No. 1 stope, going west from the No. 2 winze, will average 3 ft. of stone, of fair quality. No. 11 level has been extended a further distance of 8 ft., making a total distance of 413 ft., with 1 ft. of stone in the face, of fair quality. The leading stope is carrying 3 ft. of stone, of good quality. The No. 7 stope: 10 ft. of stone, of good quality. In the Nos. 4, 6, and stopes, the stone will average 5 ft. thick, all of good quality. In the No. 3 stope, the stone is very bunchy, varying in thickness from 2 ft. up to 7 ft., but of very good quality. The No. 2 stope is carrying about 1 ft. of medium quality stone. In the No. 1 stope we have about 3 ft. of stone, of fair quality. In the stope over the hanging-wall drive the stone will average 2 ft., of fair quality. No. 10 level: The stope over this level is carrying 6 ft. of stone, of good quality. In the stope over the hanging-wall drive, the stone has opened out to about 3 ft., of fair quality. The number of trucks of quartz hauled from each level is as follows:—No. 12 level, 315 trucks; Nos. 10 and 11 level, 698 trucks; from No. 2 shaft over the No. 6, west level, 20 trucks; from No. 2 shaft over the No. 5, west level, 87 trucks; total, 1,120 trucks. Lease No. 1,280: No. 2 level has been extended an additional 22 ft., making the total distance from the underlie 70 ft. The formation here is about 2 ft. 6 ins. wide, and apparently making larger; it carries a little stone of very poor quality. There is no change to report in the character of the country through which we are driving. Owing to the fact that we have been shorthanded throughout the past fortnight there has been nothing done in the No. 1 drive. In conclusion, I may add that the water has been exceedingly heavy for the last few weeks.

EMERALD (COLUMBIA) (Feb. 8).—The manager writes as follows:—This week we have had in the lower part of the canal a big landslip, but with 40 hands have removed all in two days without disturbing the work in the upper part. Fortunately, yesterday we had a rainfall, and consequently the supply of water had increased a little. In the upper part we have been working in steps towards the bridge following on towards the second best veins, at the same time beginning new ones from the narrow part or Angostura towards the bridge.

EMMA (Mar. 16).—Telephone message from the mine, received last night, gives a very good account of the present appearances; for instance, in drift from old Emma tunnel shows a seam of ore 4 to 6 ins. thick, and 2 ft. of vein rock, with ore in small quantities mixed throughout. Drift from Cincinnati level and drift from point of connection above level No. 4 north-west show much the same as Emma level. In fact, I consider the showing much the best we have ever had, but will not this time be too sanguine.—C. W. BENNETT.

ESMERALDA (Mar. 10).—The manager writes: We have been stoping the ore that we cut in the south winze from Durand, but have not been able to obtain very much as yet. The ore is in bunches and spots, and the rock requires to be very closely watched as it is taken out. What we have taken out, however, is good ore, and some of it is exceedingly rich.

— Cablegram, Mar. 25: "Durand south drift; face is changing in appearance; looks encouraging."

GRAVEL (Feb. 21.)—Works: During the month of Jan. the average number of men employed was 290, of which 140 were employed upon the Agua de Dois Section, and the rest in finishing up the ditch from San José, laying syphon and putting in sluice at the mine. About 200 ft. of sluice has been got in and is ready for running. Half the second syphon only has been laid, owing to the ground being so rocky and irregular. It is very satisfactory to hear that the board have been able to obtain so much detailed information from Mr. Griffith regarding the works, and that they are pleased with what has been done; eventually no delay to finishing the ditch has occurred from the delay in the arrival of the pipes. We shall now have the syphon erected and the mine ready to work before the water can be passed through the ditch. The error in the calculations of Mr. Griffith as to the probable time required to finish the ditch has arisen through the difficulty in getting a large supply of timber, and the time taken to drive some of the tunnels in rock. We still hope to get the water on by the end of the month; nothing can delay us but want of timber, and that only for a few days.—W. S. WELTON.

GYMPIE GOLDEN CROWN.—Report for fortnight ending Feb. 12.—I have to report that during the past fortnight work on the Crown and March at the 240-ft. level has been carried on as usual; there is a good body of crushing stuff on both reefs, with a little gold in all the faces. Lease 777, two mile main shaft: The cross-cut, being carried in east at the 210-ft. level, has been advanced 14 ft.; total, 250 ft.; the country is very hard at present, being a perfect mass of conglomerate boulders. The water continues about the same in the face. On the Peter and Paul reef the north drive has been carried in a total distance of 48 ft.; the cross-course that was met with in the main shaft has just beeu met with in this drive, and appears to have thrown the slate up some distauce. The south drive has been advanced a total distance of 36 ft.; in the back of the drive splendid slate country is being met with. "A" stope: The south drive has been commenced. The quartz shoot is finished, and breakiug down the reef in the north drive will be commenced on Monday. At the eastern shaft the cross-cuts east and west at the 130-ft. level are being coutiuued. The eastern cross-cut is advanced a total distance of 66 ft., and the western 63 ft.—T. Ramage.

HARRIETVILLE (Feb. 20).—Fortnightly report—The following is the progress made during the past fortnight, viz.:—Mons Meg Mine: The shaft on main shoot below the lower level south of tunnel J bas been sunk to a further depth of 14 ft.; total, 20 ft.; the lode is 15 ins. wide, aud of fair quality; it is much smaller, however, than it was in the drive where its width was about 7 ft. There are indications of its widening as sinking progresses. Although the drive from the Tiddledee has drained the Mons Meg workings, the shaft is still forming a reservoir for the water in the surrounding rock, thereby retarding sinking operations. The drive north 170 ft. above tunnel J has advanced 15 ft.; total, 66 ft.; the lode is 2 ft. wide, and payable throughout. The drive north of tunnel K on the main lode has been extended 21 ft., making a total of 271 ft.; the lode here is from 4 to 7 ft. wide, and shows colours of gold. We have commenced to rise on the new shoot north of tunnel J. A trial crushing of 126 tons from this shoot has yielded at the rate of 2 dwts. 6 grs. of gold per ton. We hope for an improvement here as the rise advances. Guerdon Mine: Tunuel J has been extended 18 ft. towards the Guerdon, making a total of 421 ft. from the Mons Meg lode. The ground is still very hard, and small quartz veins continue to be met with which are highly mineralised, but carry no gold. South Mons Meg Mine: The rise at the back of the lower level south of No. 3 tunnel has advanced 16 ft.; total, 140 ft.; the lode is 18 ins. wide, and carries a little gold. Tiddledee Mine: The drive south of tunnel D towards Mons Meg has been extended 26 ft.; total, 916 ft.; the lode here is 4 ft. wide, but poor. Water is copious in consequence of the drainage from the Mons Meg workings. The cross-cut east of the above drive has advanced 8 ft., making a total of 20 ft. We are here coutinually intersecting small quartz veins, which carry a little gold. The drive south-east of tunnel D towards Tracy's old workings has advanced 5 ft. 6 ins.; total, 60 ft.; the lode is small and generally poor. New lease: The shaft on the new shoot below the drive south of tunnel D has been sunk 7 ft.; the total depth being 30 ft.; the lode at the bottom is 4 ft. wide, and shows fair gold in the stone. The influx of water, however, is rather heavy. The drive south-east of tunnel C towards new shoot has been extended 36 ft.; total, 135 ft.; there is a good footwall iu the end, but very little lode matter. The drive south-east of tunnel B toward the new shoot has advauced 38 ft.; total, 144 ft.; the ground is not so hard as it has been. Surface: The drive north of the shallow tunnel near tunnel D has advanced 12 ft.; total, 33 ft.; there is a small lode in the end, but no evidence of the continuation of the auriferous stone found at the surface has yet been met with. Furnaces: The furnaces continue to roast the accumulated pyrites, and are doing good work. Wheeler's pans: The amalgamators are working night and day on roasted concentrates; the extraction of gold being equal to from 80 per cent. to 85 per cent. of the assay contents. Mill: The mill is continually employed, 15 heads on Mous Meg ore, and 10 heads on quartz from the new shoot south of tunnel D. Machinery: All machinery both at mines and mill is working satisfactorily.—T. G. Davey.

JAVALI (Feb. 12).—Manager's report:—Our produce of quartz in the past month was 111 tons from Nispero, 102 tons (after the 10th) from Pim's tunnel, and 7 tons from Dolores; total, 220 tons of quartz, treated by 10 stamps working on an average of 22 days; yield from stamps, 185¼ ozs., and from tailings, 9 ozs.; total, 194¼ ozs. of gold, valued at 534*l*. 14s.; total cost for Jan., 455*l*. 14s., which include 115*l*. 10s. for freights, duties, and Chontales account. Pim's tunnel was driven 24½ varas; now carrying 6 ft. of the lode, worth 10 dwts. of gold to the ton, and continues to improve in going west. According to our cross-cut above, the lode is about 20 ft. in width, but we have not yet cut through here to the south wall. In the coming wet season, and after Pim's tunnel has been driven further ahead, the quartz from stoping can be brought out for the stamps at a comparative small cost, so that with our present encouraging prospects we have every hope of giving them very good profits. The bottom of the Nispero sink seems now to be falling off in value; is here 20 ft. deeper than the Esperanza tunnel, and 86 ft. below Pim's, but with lode still payable.

KAPANGA (Feb. 17).—Report for the four weeks ending 14th inst.:—We have crushed for the month 80 tons of quartz, and treated 23 lbs. of picked stone, which together yielded 174 ozs. of amalgam, giving 60 ozs. 1 dwt. of retorted gold. The machinery throughout is in fairly good condition.—W. H. Argall.

MAMMOTH.—The manager, Captain Johnston, reporting under date, Mar. 19, says the mill has been running 24 hours a day since Mar. 6 (date of re-starting). All the stopes are looking splendid, and the ore in sight will last for years. Will ship bullion soon.

MYSORE REEFS (Mar. 11).—Fortnightly report.—Harvey's shaft: This shaft has been suuk 6 ft., which makes a depth of 27 ft. 2 ins. below the 460-ft. level. The rock is very hard and difficult to blast, and we had a great deal of hindrance with the air and water pipes being constantly cut down and broken with the blasting. Winze below the 460-ft. level: We are going down in a mass of quartz which is slightly improved in value, worth now, according to assay, 5 dwts. of gold to the ton; 2 ft. 9 ins. have beeu sunk since my last, which makes a depth of 14 ft. 3 ins. below the level. The 400-ft. level south has been extended 7 ft. 6 ins., now 71 ft. 11 ins. from shaft; the lode iu the present end is 2 ft. 6 ins. wide, composed of quartz and pyrites, aud worth, according to assay, 3 dwts. 6 grs. of gold to the ton. Prospecting shaft north of Harvey's has been sunk 16 ft. 3 ins., now 67 ft. 3 ins. from surface. We are now in the hard rock, and I have to-day commenced a cross-cut east from the bottom to search for the lode. In my last report I find I was in error, having written south instead of north.—M. Scantlebury.

MYSORE-WYNAAD CONSOLIDATED.—The mining manager reports by mail for the fortnight ending Mar. 11:—North shaft: This shaft has been sunk 9 ft. 3 ins., making a total depth of 125 ft. 6 ins. from surface. There is no change in the shaft except that the rock is getting a little harder. The men have also been occupied during the fortuight iu cutting a cistern plat and hitches for bearers ready to put in a standing lift. This will be done about the end of this mouth, when we have sunk about 20 ft. below the bearers. The lift we now have in the shaft is getting too long, so we shall put it in the cistern, and continue sinking with a short lift. I do not propose to put in a plunger until we are dowu 200 ft. We started a rock-drill in this shaft a week ago, but the compressor did not run satisfactorily, so I stopped it, and this caused a little delay. The crank shaft of the compressor has now been turned up on a lathe, and I expect to make a satisfactory start with it to-morrow. South shaft: This shaft has been sunk 5 ft., making a depth of 65 ft. from surface. There is no chauge, and the ground is very hard for sinking. If the compressor runs satisfactorily I shall have a rock-drill at work here by next mail day, and hope to make much better speed. All other work is going on satisfactorily.

NEW CALIFORNIA.—Mine report for first half of Mar.:—Shaft—Sinking below the 2,000-ft. level down 2,132 ft.: The shaft is going down in good ore, the lode being from 3 to 4 ft. wide, yielding from 7 to 9 tons per fm. Regular shipments of milling stuff are being made from the sinking with very satisfactory results; the average obtained so far is about ½ oz. of gold per ton. The 2,000-ft. level—Drift east of shaft in 96 ft.: The vein followed in this working has a very good appearance, but is as yet small and without pay. The 2,000-ft. level—Drift west of shaft in 718 ft.: There is no payable rock in the lode just at present, but we may look forward to a change shortly, as in the further advancement of the drift we shall be nearing the ore ground of the 1,900 stopes. The 2,000-ft. level—Stopes east and west of winze 2, 1,900—2,000: Stoping has been fairly started in winze 2, where the lode is yielding at the rate of 8 tons of good ore per fm. As soon as is practicable the small force of men which we have begun with will be increased, in view of a larger output from this point. The 1,900-ft. level—Stopes east of winze 3, 1,800—1,900: The lode yields well in smelting and milling ore of good grade in the block of ground east of the winze, but the prospecting ou the west side has not resulted in any fresh discovery of ore. The 1,800-ft. level.—Stopes west of shaft: The lode has piuched in the backs of the stopes, and there is not much to be expected further from this block of lode. The 1,500-ft. level.—Stopes on south vein east of junctiou: The stopes are yielding a higher grade rock, and continue to yield 5 tons per fm. The 1,500-ft. level.—Prospect drift ou south branch at 204 ft. from shaft: A branch of good ore having been discovered in prospecting at 204 ft. west of shaft, along the main level, it is being followed up into excellent prospects, the ore being now 2 ft. wide, and of good grade.—A. Rickard.

NEW DEVALA-MOYAR (Mar. 10).—Cross-cut in east end of 116-ft. level: This point has beeu driven 6 ft.; total distance, 21 ft.; ground continues very hard, and no signs as yet of any reef standing to the north. Preparations are being made to resume sinking the bottom winze on the reef, and we hope to get this started withiu a week. Your telegram regardiug sinking a vertical shaft was duly received, and the ground is being cleared and pegged out. Timber for the frame and poppet-heads is also being cut, and as soon as detailed instructions arrive this work will be started. The crushing for Feb. of 250 tons has yielded 67 ozs. of retorted gold. The engines at the mill are having a thorough overhaul, and I hope to resume crushing at the end of the week. Our stopes are all in good order, and work is being carried on regularly.—R. B. Johnston.

NEW EBERHARDT (Mar. 8).—The mine manager reports as follows:—I shall be pleased to comply with your instructions in the matter of Eberhardt as soon as the condition of the roads will permit. You are, of course, aware that I have here at the Monitor mill something like 1,000 ft. of the railroad-track irons, several tons in weight, which were taken from the tunnel at Eberhardt by me, and which must be returned before any cars can be run to within 1,000 ft. of the face of our prospecting point in the tunnel. Then you are fully aware that the ladders in our winzes aud upraises are rotten, and must be replaced by new ones, and the lumber has to be brought from Eureka to Eberhardt by freight teams, a distance of 47 miles, which at this time cannot be done, I assure you. But you may fully rely upon my moving over at the earliest moment possible, and as soon as I can get over there I shall endeavour to press all points of repair that we may be able to commence our prospecting work as soon as possible. I do not expect to be able to get to work at Eberhardt in full force before May. My first move will be to get the track and lumber in then I can get men at work repairing. I have already ordered the luuiber to be shipped to be available at Eureka not later than Apl. 15, which will be certainly as early as I can get it delivered. I shall let a contract for coal as soon as possible, but there is so much snow upon the mountains around Eberhardt that it is doubtful if anyone will take a contract for some time with any degree of certainty of their filling it. I have also to procure steels, iron, powder, candles, fuse, caps, and, in fact, a general supply. Mine: I now beg to hand you statement for the week ending Mar. 7, 1891. Total weight of ore extracted and assorted for the week, 30 tons; assay value of same as per mine samples, $29 per ton. Our mine prospects have not been quite as good during the past week, but I think our showing for an improvement in the grade of our ore during the comiug week is quite favourable. The cause of the drop in the grade of ore is from the fact that it is scattered over a larger surface, and in consequence thereof we have been obliged to break a larger quantity of lime and spar, which, of course, would naturally reduce the value per ton. However, the ore seems to be more concentrated at this writing, and I trust our assays for the coming week will be better, although I cannot expect any great change, for we have only four men in the Monitor Mine. The La Grippe has struck this section very heavily; all our men are sick, or nearly all of them, aud those who have been fortunate in escaping the sickness here had to stay home with their families, but I hope that we shall soon have a full force at work again. The general appearance of the mine, although not quite as favourable as what it has been for the past few weeks, yet I have no fears but what it will open out again in the near future.

— The following cable has also been received:—"Weekly output quantity, 35 tons. The average is $40 per ton."

NEW HOOVER HILL.—Report to Mar. 20:—Provost shaft: Driving south at the 50-ft. level there is plenty of quartz in the end, but it only pans a few colours of gold. Sinking below this level the quartz is very much split up (as in my last report) into small streaks, and it is impossible to tell what they will lead to; I hope into other bunches of ore.

ORITA (Feb. 18.)—The following are details of the operations during run No. 54:—Mine: The only change to note since last writing is at Mondeco, where the bedrock has risen, and we had to move the monitors sooner than expected. The bank has again run soft and the gravel fine. The pipeclay up to now at this section has not given much trouble; it is only about 2 ft. 6 ins. thick. Deep cut: We are working here day and night, but drive as we will the work looks but little done. I hope in about eight days to be able to set in frames for 80 ft. of sluice at head of mine, and to have cleared away the greater part of overhanging rock in the cut. Branch sluice: The gravel at one part of this face is, I am glad to say, running softer. While we move monitors, &c., at Mondeco the water is in use here. Syphon pipe: I have eight men retimbering this. Remarks: I mean our next clean-up to come from Mondeco, and while water is in use here continue work in deep cut, prepare sluice for same and for new opening. After run at Mondeco we will turn to branch sluice, and by the time this run terminates I hope to be ready in the main sluice for the water. Without seeing it is difficult to form an idea of the dead work we have just now in hand, but I have every hope of improvement as soon as we get through the work I refer to.—H. J. Prender.

OSCAR (Mar. 26).—Report from the mines:—Hodgkinson's lode: There is a good lode in bottom of shaft over 3 ft. wide, composed chiefly of quartz, and containing copper and iron pyrites in bunches. The assays for week have shown value averaging 8 dwts. 17 grs. gold per ton. In the 200-ft. level north the lode has much improved, and has become more regular and compact. The quartz is 2½ ft. in width, and is carrying a quantity of galena; assays values have varied from 3 dwts. 9 grs. to 2 ozs. 13 dwts. 7 grs. gold per ton. An improvement is also noticeable in the same level south, where the white crystalline quartz previously reported on is being in part replaced by a band of hard blue mineralised quartz, assaying 13 dwts. 17 grs. gold per ton. The lode in cross-cut is showing quartz 2½ ft. wide. The men have commenced to drive on course of lode, and in the end going north the lode has already much improved. The assay value of average sample of lode quartz was shown to be 1 oz. 9 dwts. 2 grs. There is no alteration to call for remarks at any other point of working.

OURO PRETO (Feb. 22).—Passagem Mine: Incline shaft No. 1: Owing to the breakdown of the pumping wheel the sump has been under water for the greater part of the month, and very little progress was made in clearing attle broken iu altering incline. Incline shaft No. 2: The water in this shaft also rose to the 315 level, but the wire-rope transmission from rods in No. 1 shaft is all fixed, and we hope soon to resume work in bottom. The 365 level: This level is under water for about a fortnight, but is now dry, and ends have been measured. The north-east end was advanced 1.60 metres through schist, carrying a small branch of quartz. In the south-west end, which was driven 1.70 metres, there is no improvement, the only ore being a small vein against the roof. Rise 24, over 365 north-east, is in schist carrying spots of pyrites, and a branch of ore has appeared along the floor; it was extended 1.30 metres. Rise 25, over 365 north-east, was advanced 1.40 metres, full size, in quartz carrying good lines and patches of pyrites. The 315 level north-east was driven 1.80 metres. The quartz is still increasing in size, and is now nearly the size of the end, but it carries little pyrites. Rise 21, over 315 south-west, was advanced 2.20 metres. It carries a small branch of ore along the floor, but between this and the hanging-wall there is a thick bar of schist. A level cutting was put in the bottom of this rise to the footwall, and another branch of ore was found under the floor, but the greater part of the stuff broken is schist. Rise 23 over 315 north-east was advanced 1.80 metres, in hard sterile quartzite. The 265 level south-west was driven 2.20 metres, but continues without change in unproductive schistose rock. The 265 level north-east was advanced 2.20 metres, and is full size, in a good body of ore, but was suspended to allow of a rise being put up to open out ground on north-east side of No. 2 shaft. The rise has been advanced 3.90 metres, and carries a branch of about 1.00 metres thick of fair quality ore. Rise 22 over 265 south-west was advanced 6.20 metres, when it holed to the sink at the 215 level. Some good stoping ground is standing in the upper half of the rise, and the communication has also had the effect of draining a portion of the lower lode, which, as far as worked, has yielded rich pyritous and tourmaline ore. The rise is being fitted with shoot, &c., and stopes have been commenced on the lower lode. Cross-cut under 235 is being driven to intersect branches of the lower lode; it was advanced 2.30 metres, and at present shows a branch of quartz in the footwall schist. The 175 end south-west: The improvement mentioned in last report has not been maintained, the quartz having become much smaller; the end was driven 6.20 metres. Rise 17 at 175 south-west was advanced 3.30 metres, on a good regular body of quartz, well spotted with pyrites. Rise 2 at 175 north-east: This rise is in poor ground at present, but is being put up to explore the ground under the 165 stopes, where the ore appears to be making downwards; it was advanced 1.60 metres. Stoping: The north-east section yielded much less ore than formerly, on account of the ore inside of No. 2 shaft having been worked out over the 265 level. Below that level this shoot is not as yet sufficiently opened out for stoping, and part of the force had to be employed in the south-west section. The stopes between the two shafts on the lower lode also show a falling off, the ore being found only in small bunches in hard schist. In the 165 stopes the lode still is of a strong massive nature, though chiefly composed of quartz. On the north-east side of No. 2 shaft below the 215 there is also a very large body of quartz, but it carries little pyrites. A shaft stope has been opened at the 315 level, and the lode, which carried at the outset a good deal of quartzite, has lately somewhat improved. In the south-west section no less than 400 cubic metres of ground were broken in the 315 stopes, but with the exception of one stope, where there is a width of nearly 4.00 metres of fair quality ore, the lode generally carries a large admixture of quartzite and schist. Over the 265 level three stopes were carried forward in good productive lode, about 2.50 metres thick, and composed of quartz with large patches of tourmaline and arsenical pyrites. In one of these stopes also some of the lower branches are being worked and yielding stones of rich pyritic ore. A stope started at the 175 level south-west is also looking well, and should produce a fair amount of good quality ore. Surface: The pumping wheel has been repaired and a new gudgeon was made and fixed in the axle. The 24 stamps wheel also was overhauled, and underwent considerable repairs. On the new work a good force was employed in rising stone for building, and in cutting watercourse to turbine, and the arch has been turned over the new furnace, though the furnace itself is not yet finished on account of want of bricks.—H. J. Gifford.

PITTSBURG (Mar. 15).—We lost seven and three-quarter days run of one mill during past two weeks from bad weather, not being able to bring the ore to mill. We now have plenty of water, and anticipate no more trouble in that direction during the season. There is but small change in the mine, except the improvement in No. 7 tunnel.

RUBY.—Report upon the mines for the week ending Mar. 7:—Dunderberg: No change to note since my last report. The 800 level has been advanced 14 ft.: total, 32 ft. We have seven men on days' pay, and 12 tributers at work here. Lord Byron: We have 26 tributers at work here, and two men on day's pay. Some of the tributers have got some good prospects. The ground in the 150-ft. level having got softer, I have put two men on day's pay to make connection with the winze. Bullwhacker: We have five men at work here. No particular change.

RUBY (Mar. 14).—Dunderberg: We are still following the quartz in the Home Ticket, which I am sorry to say does not show any improvement. The 800-ft. drift has been advanced 16 ft.; total, 18 ft. We have seven men on day's pay, and 10 tributers at work here. Lord Byron: No change of note during the week. We have two men on day's pay, and 26 tributers at work here. Bullwhacker: We have four men at work here. Mine looks the same as last week.

SOUTH-EAST MYSORE (Mar. 11).—Fortnightly report:—In the cross-cut east of the 500-ft. level north, 26 ft. from the main level, a lode, 2 ft. 6 ins. wide, has been intersected, showing two good walls. We have driven on it for about 12 ft., and in the present end there is 1 ft. of kindly quartz, with other lodey matter, worth 3 dwts. of gold to the ton. I am under the impression that the main part of the lode is still to the east, and this what we are driving on is only a splice from the main. We have, therefore, put a rock-drill to continue the cross-cut east. In the cross-cut west there are a few stringers of quartz. This will be continued for a few days more, and if nothing more promising is seen it will be suspended. The rock in the 500-ft. level south is still very hard. A week since we decided to suspend the driving for a time, and commence to cross-cut east, as we think the lode should be in this direction.—M. Scantlebury.

VALLEY GOLD.—From reports received from the manager, under the date of Mar. 29, it appears that notwithstanding the heaviest rain and snow storm on record from Feb. 18 to 23 (5.76 ins. of rain and 4 ft. of snow in 24 hours being reported in the valley), no damage whatever occurred to any of the dams, and in spite of the terrific force of water through the tunnel, none of the boxes or flume were injured, nor were any of the timbers or spragging carried away. Hardly any other mining or water company on the Pacific coast but has suffered serious damage. The gravel keeps about the same quality; splendid hydraulicing gravel, if we only get enough of it.

—(Mar. 29).—The manager cabled as follows:—"Advanced 300 ft.; gravel unchanged; still hydraulicing."

REVIEWS.

The Visit of the Tenant-Farmer Delegates to Canada in 1890.

This pamphlet comprises the reports of Major Stevenson, Knockbrack, Goshaden, Londonderry: Mr. George Brown, Watten Mairs, Caithness, N.B.; and Mr. Henry Simmons, Bearwood Farm, Wokingham, on the Agricultural Resources of Canada:—Prince Edward Island, Nova Scotia, New Brunswick. Quebec, Ontario, Manitoba, the North-West Territories, and British Columbia. The work is published by authority of the Government of Canada (Department of Agriculture.

Trade Unionism, New and Old. By George Howell, M.P. Methuen and Co., 18, Bury Street, London, W.C.

This book has been published to meet the need that has sprung up for this class of literature in consequeuce of the revival of Trade Unions all over the country. The great social question of the day, viz., the relation between capital and labour is dealt with in a masterly and interesting way, and though most people may not be wiling to go quite so far as the author of this book would desire to take them, still they will find much food for thought and reflection in the volume he has now issued to the public. The book is really a history of the labour question from the middle ages down to the present time, and as such cannot fail to be interesting to a large class of readers outside those immediately concerned in the disputes now prevalent.

BRILLIANT GOLD MINES CO., LIMITED.

The Brilliant is a mine in Charters Towers, Queensland, the returns from which are so remarkable that they deserve special comment. The yield for the quarter ending Mar. 31 was 5,224 tons, 9,426 ozs., value 35,400*l*. The average yield per month last year was 2,093 ozs. while the average yield per month for 1891, so far, has been 3,142 ozs. Those who are qualified to speak describe the reef as by no means of a patchy character, but as auriferous throughout, and declare that "its life is beyond doubt." It has been the uncertain character of the Australian reefs that has done so much to discredit them in the eyes of English investors, but there is no getting away from the remarkable figures we have given in connection with the Brilliant Co. Its capital is 50,000*l*. The shares are fully paid, and there is no further liability. Dividends are declared monthly, and meetings are held in the colony half-yearly. The dividends, which commenced in August, 1889, have so far amounted to 37s. per share. The agents for the company in London are Messrs. Forbes and Co., 16, Cornhill.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN and BIRMINGHAM BANK, LIMITED.

Investors in all classes of Stocks and Shares should read Mr. Thos. Thompson's Mining and Investment Circular, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

LESTER AND HOOK,

Option, Stock, and Mining Share Dealers,

2, COPTHALL CHAMBERS, E.C., and MINING EXCHANGE, 9, OLD BROAD STREET, E.C.

A GREAT ADVANTAGE TO RAILWAY OPERATORS.

Lester and Hook are prepared to deal in Home, Colonial, Foreign, and American Rails, for two months forward on deposit of 2 per cent., and guarantee to close at any time before the expiration of the account specified on the contract.

Lester and Hook advise immediate purchase of Louisville, Mexican Ordinary, Milwaukee, Brighton "A," and Canada Pacifics. The above Stocks are leading the Market, and a rapid advance in prices is fully anticipated.

Telegraphic Address: — "LONGEVOUS, LONDON."

MEMBERS OF THE MINING EXCHANGE.

BURRELL, BRADDOCK & CO.,

Stock and Share Brokers, Mining and Financial Agents,

STOCK EXCHANGE BUILDINGS,

90, QUEEN STREET, MELBOURNE,

Undertake Agencies for Investments in AUSTRALIA, and negociate the purchase of Mining Properties.

Personal inspection by a member of the firm of all properties under negociation, thus ensuring the safest guarantee of the *bonâ fides* of mines, &c.

REFERENCES.—MESSRS. BURRELL & COMPANY, 117 and 118, Leadenhall Street, London, E.C.

Bankers THE COMMERCIAL BANK OF AUSTRALIA.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

Board.

B. B. TRENCH, Esq., Chairman.

Sir Charles Metcalfe, Bart. | Major J. W. M. Cotton.
L. Balfour Burns, Esq. | Richard Smith, Esq.
Sir Stuart S. Hogg. | Edward Dicey, Esq., C.B.

Head Office.—19, ST. SWITHIN'S LANE, LONDON, E.C.

South African Office.

NATAL CHAMBERS, JOHANNESBURG.

General Managers in South Africa.

W. Y. CAMPBELL, F.G.S., and E. W. EVANS.

Bankers.—THE MANCHESTER AND LIVERPOOL DISTRICT BANKING COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South Africau Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular contaiuing special information will be posted weekly from the South African Office to all subscribers.

A Special Cable Code for Prompt and Economical Communication between the South African and London Offices.

Further information can be obtained at the Head Office of the Company.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

RECOMMENDATIONS FOR CURRENT ACCOUNT:—

INDIAN CONSOLIDATED,
MYSORE REEFS,
NINE REEFS,
MYSORE WEST,
MYSORE WYNAAD.
DEVALA MOYAR.

All recommendations this month have, up to the present, been correct, and large profits to our followers the result.

We make Mines a special study, and invite correspondence, whether business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close market price of the day on 10 per cent. deposit, and carry them over as long as clients wish at low contaugo rates.

We close speculative accounts at any time, and pay profits instantly, irrespective of account day. We sell shares at current prices for forward delivery at one, two, or three months on 15 per cent. deposit. Clients may rely on fair treatmeut at our hands. We are members of the Mining Exchange, aud subject to the rules and regulations of that iustitution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

ARTHUR FORBES & CO.,

AUSTRALIAN INVESTMENT AND MINING AGENCY,

BRISBANE, QUEENSLAND,

And at 16, CORNHILL, LONDON, E.C.

Telegraphic Address:—"ORPHARION, LONDON."

Have special business in Australian Securities generally, and in the following Australian Mining Stocks:—

Brilliant, Victory, New Victoria, Sunburst, Golden Gate, Brilliant Block, St. George United, Day Dawn, and other Charters Towers Mines; Broken Hills, Mount Morgan, Raub (Pahang), Muldiva, Gympie Mines, &c.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

G. W. M.—We advise you to pay no attention to his circular.
Brewery.—See remark above. Do not trust his predictions. Your own common sense is more reliable, and at least more disintcrested.
Bona fide.—As a speculation hold Nos. 3, 4 and 5, but not at all Nos. 1, 6 and 8. Nos. 9 and 10 are fully paid shares.
Alarmed.—No occasion for alarm. Hold your Flagstaffs. They rose this week.
Exmouth.—You must consider the profit alreadv sbown. They are, however, spoken of as going much higher.
Unfortunate.—Get rid of your shares now, as you do not wisb to pay call.
Forward (W. A. K.)—Buy while they are so low. They are expected to go better. Emmas are also likely to have a good rise.
Surveyor (Felixstowe).—The amount is so small that it would not be worth while having them carried over. Certainly take them up.
M. S. P.—You will see a profit, we think, by waiting a little. Do not sell if it can he avoided.
Colonist.—By all means bold tbem.
Bondholder (S. S.).—Sell, if you can get a reasonable price.
Star (Oldham).—Cannot advise such a large number. About 100 for a speculation, we think, is enough.
Breakwater.—Re-construction is near at hand, and sbould be supported.
Voter.—Two of the same name, hut in different parts of tbe world. The one you mean is in Venezuela. Shares are dealt in here.
O. L. Y.—At this ruinous price do not advise you to disposc of your bolding, but wait, as we expect they will improve.
Yurvari.—No. wait.
B. W. X.—We advise you to hold. The sbares are fully paid, and have every appearance of going higher.
Gunner.—Under the circumstances we do not advise you to increase holding. The chances are that if those you bave are sold at once you may get in cheaper later on.
Reader (Lincs.).—Prospects not very bright, and at present should not he bought. The circular does not merit your attention.
Weston.—It has a good mining chance. Hold those and Loma for better prices.
Teacher.—Unsaleable in London. You are mistaken, as tbere has never heen a free market for them.

The Mining World.

LONDON: SATURDAY, April 4, 1891.

The "Mining World" is not the property of a Mining Speculator nor under the control of any clique.

A MUCH-CIRCULARISED COMPANY.

Victory shareholders merit sympathy. Since last Dec. a fierce battle has been fought over their affairs, the immediate result being the reduction of the market price of the shares from 3s. or 4s. to a few pence. Long experience of similar squabbles led us, with unerring instinct, to forecast such a result, but we had fondly hoped that, with the advent of Mr. T. H. Watson to the board (whose election we strongly urged), and his nomination to the post of chairman, the Hallett party would at least give the company a little breathing time, and allow the development of the mine to occupy the exclusivc attention of the directors. This they have not done, for whilst the board have been doiug their best to carry on a vigorous mining campaign on the spot, they have had to protect their flank and rear from the attacks of the guerilla troops led with some ability by Mr. Hallett as generalissimo, and Mr. Pamplin as chief of staff. These have been met by an advance guard led by Mr. S. P. Gilbert, and pretty effectually routed all along the line. The spectacle has not been an exhilirating one, particularly for the shareholders, who have seen their shares dwindling vilely as the belligerents have come to closo quarters. With every desire to do justice to all sides, space has failed us for the re-production of the literary artillery they have discharged. Perhaps after all that space has been better occupied by the matter which has filled it than it would been have by a reproduction of the far from Chesterfield language in which the warriors have indulged, for this in its turn would have necessitated the issue of a special "slang supplement" in order that the readers might with more or less intelligence be made familiar with the morsels from the choice vocabulary employed. We are bound to own that from the side of argument Mr. S. P. Gilbert decidedly scores, whilst from that of vigorous language the Hallett party, to use a vernacular which they will understand, "take the cake," though even Mr. Gilbert is not deficieut on the side of "forceful expression."

But as we have said, our sympathy is with the poor shareholders, who have not only suffered in their basket and their store by the fall of the shares, but from a deluge of circulars comparable in its way only to the deluge which overtook the patriarch when he put to sea in the ark. Here is a list of documents that have been issued on the supposed bchalf of the "submerged tenth" of the Victory Mine:—

1. Circular froin the Hallett party, dated Dec. 23.
2. Circular from the Hallett party (following up last one), dated Jan. 5.
3. Circular from the Hallett party, dated Feb. 26, issued so hurriedly that it was thought unnecessary to finish the closing sentence ion page 2 which therefore is cast on the mercy of the world like a grammatical orphan with all its sins of syntax on its head.
4. Form of subscription (we knew this would come sooner or later) towards expenses of the Hallett party.—No date.
5. Circular from the manager, dated Feb., '91, showing what he could do with 290*l.* a mouth if he got it.
6. Circular (marked 3 A) from the Hallett party about a suggested enquiry by the Board of Tradc.
7. Circular from the board signed by their new chairman, showing the inevitable result if these squabbles were continued.
8. Circular from Mr. S. P. Gilbert, dated Mar. 17, giving the retort direct to the strictures of the Hallett party in their various previous effusions.

Life is too short to read all these productions, and the mind of man too narrow in its scope to dissect all the statements they contain, much less to attach to each their relative importance. But leaving the wordy communications of the Hallett party on the one side, and the pretty direct replies of Mr. S. P. Gilbert on the other, we ask the shareholders to consider the thoughtful statements made by their new chairman, Mr. T. H. Watson, in his epistle dated Mar. 12.

This gentleman touches, with the skill of the practised physician, the pulse of the shareholders when he says: "You are already heartily sick and tired of the frequent circulars lately received." He goes on to recall what occurred at the last general meeting on Dec. 31, and says that tho more recent proceedings of the Hallett party have confirmed the view he then took of the unwisdom of the course they have pursued. He was anxious to become better acquainted with the facts, and wrote to Mr. S. P. Gilbert to this effect. Not merely was he invited to make an examination of everything, but to join the board, which he did, and subsequently became its chairman. This, to do Mr. Gilbert and the board common justice, is not like the conduct of persons who wish to evade enquiry, or have any dark doings to hide. After Jan. 7 the whole of the board expressed their willingness to resign, but only remained in office because Mr. Watson wished that they should do so—"as the directors represented a large majority of the shareholders, while the other parties only represented a minority." The debenture issue of 10,000*l.* has been severely criticised, but Mr. Watsou points out that every shareholder had the opportunity of subscribing to it, whilst for the repayment of a portion of it the company's shares have been accepted in lieu of cash. In regard to the sale to Aaron's Reef, Mr. Watson states that though the mode of payment was a little unfortunate, yet of the 25,000*l.* arranged to be paid, the Victory Co. has received nearly 14,000*l.*, and until the balance is paid the property will not be fully conveyed. Capt. Nicholls has returned home to consult with the board, has laid his plans before them, and it seems that for about 2,000*l.* he can equip the mine, so that when the lode is cut (which may be shortly expected) "the stamps can no doubt be kept working day and night." This is the position as stated by the new chairman, and we implore the shareholders to consider it seriously, for it opens up a chance of redeeming the past. He makes a direct appeal to the Hallett party to abstain from the course of action they have hitherto pursued, and we earnestly hope that in the interests of the shareholders (which they have so often declared to be their only motive) they will respond to this request. He even offers to meet them in this way—to elect two directors representing the views of the minority to seats on the board. If the Hallett party will accept these advances all may yet be well, and "Victory" may justify its name. If they do not, the shareholders will be better able than heretofore to understand the true position of the case.

NEW GUSTON.

A WORD WITH THE SHAREHOLDERS.

The profit of this company for the past year, including the balance brought forward, amounted to 80,035*l.* Of this sum 65,000*l.* has been paid in dividends on a capital of 110,000*l.*; 1,097*l.* has been written off mines development account, and the balance carried forward, consisting mainly of ore shipped but not realised on Dec. 31, was 13,938*l.* From this balance, and the proceeds of the ore raised during the currency of the present financial year, 22,000*l.* will be absorbed by the payment of a 4s. dividend, which is at the rate of 80 per cent. per annum. The total dividends for 1890 were 12s. per share, or 60 per cent. on the capital of the company. The 436 shareholders whose lucky names are included within the four corners of the company's register will, with the dividend presently to be paid, have received 143,374*l.* upon a capital of 110,000*l.* The dividends, be it remarked, have steadily increased from an average of 20 per cent. in 1888, to 60 per cent. in 1890, and to, as we have said, 80 per cent. in the current financial year. With the new capital authorised and raised some time ago most important and valuable additions have been made to the original property, and during the year no effort has been spared to push on exploratory works, and to maintain and augment the equipment of the mine. The expenditure may have been large in these directions, but it has resulted, as the report puts it, in the discovery of valuable ore bodies. Reading this, we are prepared for the further statement that, "the mines are in a most satisfactory condition, and the prospects exceedingly good." The ores raised are sold to the highest bidders, and in the general

interests of the shareholders no better plan could be devised. The 4,469 tons raised during the year realised 101,098*l.*, or an average of 22*l.* 12s. 6d. per ton. In the litigation forced upon them, the directors have been uniformly successful, and so far as the mines and their surroundings are concerned there is not a cloud upon the bright picture of the company's prosperity.

At this point we should have been glad to have left New Guston affairs to the consolatory reflections of the shareholders and to the quiet meditation of those who are continually asking us to recommend to them some good mining investment, but we must go further. It is agreed that even when horses are restive they should not be swopped in crossing the stream, but to do this becomes insensate folly when the horses are going all right and giving a better account of the burden they are dealing with than could at oue time have been dreamt of in the wildest philosophy of the most hare-brained visionary. It will scarcely be credited by outsiders that at the forthcoming meeting there will be an attempt to disturb the New Guston management to which the shareholders owe so much, and that two gentlemen will ask the shareholders to appoint them as directors, whose names are quite unknown to mining fame, and one of whom, indeed, less than a year ago, was not even a shareholder. That such a proposal should meet with any support whatever almost passes the comprehension of business men, but on a consideration of the facts, we trust any such support, in the interest of those who may have vouchsafed it, will be withdrawn. The opposition have, indeed, seemed to gain a perception of the weakness of their own case, because since the report was issued they have made a change of front. The original intention was to put themselves in opposition to the present directors, but now they only seek to serve with them—as if any need for their services existed. If the shareholders consult their best interests, they will as resolutely oppose the second proposal as we believe they were prepared to do the first. Keeping strictly to New Guston, we ask the shareholders to consider what was its position when the present board took it over. It lay, like the man in the parable, by the wayside, bleeding and dying. Would these two embryo directors then have acted the part of the good Samaritan, or would they, like the priest and Levite, have passed by on the other side? We leave our readers to reply according to their experience of the world. Within four months of the management of the present board, New Guston was standing upon a pair of good financial legs, and since then—two and a half years—it has paid in dividends 143,374*l.* The shares were then sold at 6d., but 27s. 6d. per share has since been paid in dividends, and the stock is now saleable at 3*l.* 10s., or, as the report puts it, the selling value of the mine from *nil* has become 385,000*l.* If shareholders endorse to any appreciable extent by their votes a policy which would change or modify in any sense management that has brought about such brilliant results as these then the proverbial common sense of the English character is a myth, and ought to be relegated to cob-web regions of an antiquated philosophy.

What should the shareholders do under these circumstances? Why, put a stop at once to meddling with a board that has paid them the dividends we have named. How can they do it? *By sending their proxies, without delay, to the directors, and by withdrawing those which, under a misapprehension of the facts, they may have given to their would-be colleagues.*

MINERAL STATISTICS.

These statistics, since they have been prepared by the Government, are infinitely more full, more reliable, and, therefore, more valuable than under the old unsatisfactory *regimé*. This year there are published maps of the districts which the Government inspectors have under their supervision. The first summary shows that during 1890 the total number of persons employed in and about all the mines in the United Kingdom of Great Britain and Ireland, together with the Isle of Man, and inclusive of those employed on private branch railways and tramways, and in washing and coking coal on premises adjacent to or belonging to the mines (this latter information being an addition to summaries given under former Acts), amounted to 674,434, of whom 5,890 were females above ground. During the year the number of persons employed in and about all the mines, exclusive of those employed on private branch railways and tramways, and in washing and coking coal, was 655,287, of whom 5,599 were females, the aggregate increase being 48,132. The total number of fatal accidents was 899, and the total number of deaths occasioned thereby 1,206, being a decrease of 13 in the number of fatal accidents, and an increase of 78 in the number of lives lost, compared with the totals of the preceding year. There was one death for every 543 persons employed, which is more favourable than the ratio 1 in 538 of the preceding year. The total number of persons employed in and about the mines under the Coal Mines Regulation Act was 613,233, of whom 4,206 were females working above ground, the aggregate increase being 49,493 compared with the preceding year. Secondly, that there were 861 fatal accidents and 1,160 deaths, the number of accidents being 13 more than in the preceding year, and the number of deaths being 96 more. Thirdly, that there was one fatal accident for every 712 persons employed, and one death for every 528 persons employed. The accident ratio is more favourable, but the death ratio slightly less so than in the preceding year.

The quantities and kinds of mineral wrought in the different districts were 194,605,887 tons, of which 181,614,288 was coal and 8,117,476 ironstone, the rest being fire-clay, oil shale, and other minerals, making a total increase of 4,972,231 tons compared with the preceding year, there being an increase of 4,697,564 tons of coal, but a decrease of 153,066 tons of ironstone. The ratios of the fatal accidents and the deaths to the number of persons employed in and about the mines under the present and former Coal Mines Acts, are given in averages for the periods covered by the first three Acts and in detail with averages since 1872, from which it appears that the occupation of the miner is now more than twice as safe as it was at the commencement of the Mining Acts, the average ratio under the first Act being one death in every 233 persons employed, under the second Act one death in 258, under the third Act one death in 312, under the fourth Act one death in 466, whilst for the present year it is one in 528, a much more favourable ratio. The ratios of accidents and deaths to the number of persons employed and tons of mineral wrought in each of the districts, show a general average of 226,023 tons of mineral wrought for every fatal accident, and only 167,763 tons for every death, as compared with the slightly less favourable quantity of 223,624 tons per fatal accident and the considerably more favourable quantity of 178,227 tons per death in the preceding year.

During 1890 the total number of persons employed in and about the mines under the Metalliferous Mines Regulation Act was 42,054, of whom 1,393 were females employed above ground. Secondly, that there were 38 fatal accidents and 46 deaths, the uumber of accidents being 26 less and the number of deaths 18 less than in the preceding year. Thirdly, that there was one fatal accident for every 1,106 persons employed, and one death for every 914 persons employed, which are more favourable ratios than in any preceding year.

THE OUTLOOK FOR MONTANA.

The Montana meeting on Tuesday was of an unusually important character. For some time the shareholders have felt that the concern was under a cloud, and have been too apt to regard the price of the shares as wholly attributable to the underground condition of the mines, instead of, as they might more correctly have done, to the generally depressed state of the mining market. The speech of Mr. R. T. Bayliss has now laid bare the position to them as clearly and as fully as the mouth of man can do it, or the pen of the ready writer reproduce it. We do not for a moment grudge the large demand our *verbatim* report of the one hour's speech of this gentleman has made upon our space. There is no part of that discourse which we should like to see omitted. It was admirably arranged, eloquently delivered, and produced an impression for good upon the audience, which will be reflected in the country when it is read *in extenso* by the shareholders. It is not often that one can speak for an hour by the clock to a body of City men, whose engagements are calling them elsewhere, and preserve their attention from the opening till the close; and yet we venture to think that scarcely half-a-dozen of those present left the room during the progress of Mr. Bayliss's address, and none felt that any portion of their time had been wasted.

Mr. Bayliss dealt first with the present condition of the mines; next with his views in regard to their future development; and lastly with his own resignation and that of Mr. G. H. Robinson, his second in command. Under the first head of discourse he showed that there are now 187,000 tons of ore ready for extraction—in other words, a two years' supply, whilst the developments last year revealed reserves practically equal to the present rate of extraction "without abnormal discoveries." There is also the possibility of valuable discoveries in the Empire lode on the 400 and 800-ft. levels, and also in the Drumlummon Mine. Dealing with his second topic, Mr. Bayliss emphasised, with all the force he could, that exploratory work should not be curtailed, giving as an illustration that it is as necessary to mining as preparing the ground for the reception of seed is to farming. He showed more, that "deadwork," so called—a term which he takes exception to—has yielded quite 50 per cent. more than has been expended upon it. He recommends the most vigorous development of the Empire lode, which he expects in the future to "equal as a producer the famous Drumlummon Mine." With regard to the Drumlummon itself, he urges its exploration in depth, and, as an inducement, mentioned, that the mine is equipped so that the shaft can be carried down 2,500 ft., and also the extraordinary similarity between its lode and that of the renowned Comstock Mine. Indeed, the comparison does not fail at a single point, except for the time being, at all events, at the all-important one of production, for the Comstock has yielded from one stope alone 12,000,000*l.* sterling. Whilst endeavouring to raise extraction to the highest possible point, consistent with the fair working of the mine, Mr. Bayliss has been equally zealous to reduce costs to the lowest ratio, having due regard to efficiency. He challenges comparison in this respect with any mine working under similar conditions.

The last part of his address was probably in a sense not the least interesting. After seven years' residence at the mine, he is leaving the spot where he has been of such immense service, and so also is Mr. Robinson, under the circumstances we set forth a

week ago. But, practically, the concern will, as heretofore, have the benefit of his services as one of the board in London, whilst it will have the advantage of those of Mr. Robinson's near the spot. Mr. Robinson will live within one hour's railway journey from the mine, visiting it several times in each week, whilst Mr. Bayliss will probably go there at least once in each year. It is not a case, as he said, of rats leaving a sinking ship. There is a ship, but there are no rats. The ship is still being guided at home and abroad by the men who have already steered it so well, and it is apparently bound for that harbour of prosperity to which the speech and the metaphor of Mr. Bayliss alike pointed.

The discussion, which followed the speeches of the chairman, Mr. Crowther and Mr. Bayliss, was scarcely worthy of the occasion, and the contribution made to it by Mr. Johns (who has so often spoken with effect at these meetings) scarcely toed the line of his former performances. He was unfortunate in an attempt to attach too literal a meaning to an expression which fell from Mr. Crowther, which everybody else seemed to understand had merely a relative bearing to the subject matter, and his idea that the directors should reduce their remuneration met with no support, particularly when, as was stated by Mr. Charles Thomas, the board had, in the period of the company's greatest prosperity, refused to allow it to be augmented. We believe with Mr. Crowther that the work the directors do for this company is a labour of love, and would be done equally as well with fees or without them ; but it is for shareholders in companies where they are served for nothing by their directors to consider what measure of responsibility they can, in case of need bring home to those who receive no payment for their work. At present ridiculous prices Montana shares look, as they say on the market, "one of the best purchases of the day."

COPPER.

The statistical position of copper continues favourable for an early rise in that metal. The stocks in England and France during the last 12 months have been reduced from 91,938 tons to 58,353 tons, thus showing that the requirements of trade have exceeded the actual supplies. Last month the deliveries of copper in England and France were 9,962 tons, as compared with 11,535 tons in Mar., 1890. The uncertain factor in this metal is, and has ever been, America, the reports from which are of the most contradictory character—some saying that the production is to be lessened by the discharge of multitudes of workmen, and others that it is to be increased by the engagement of as many fresh miners as can be secured. It is generally admitted on that side that stocks are reduced, and reports even go so far as to say that a proportion of the production of the mines is mortgaged in advance to eager buyers. As we have said, statistics continue favourable for a rise in the metal. Stocks are moderate as compared with what they were 12 months ago, and the rise which is now shown in prices this year as compared with last, that is 52*l*. 10s. as against 47*l*. 5s., does not seem uncalled for, seeing that the reduction in visible supplies has been about 35 per cent., and the rise in price only 10 per cent. Looking at the position generally—with stocks decreasing rapidly—there is every prospect of prices advancing, and the great copper-producing mines may look forward to better dividends. (Since the foregoing remarks were penned, the Rio Tinto dividend of 18s. has come to justify them.) We have but a single word to add, and it is one of warning. Such warning was unheeded before, for it was said, "We can buy copper as we want it, and prices are more likely still to fall than to rise." A little later on consumers had to give 80*l*. or 90*l*. a ton for what they rejected at 40*l*. It only needed some bold operators to take advantage of the position, and these became incarnate in the members of the syndicate, only their boldness went the full length of rashness. Others not so rash, but judiciously quite as bold, may come in, and then the last state of the consumer will be worse than the first. He should also bear in mind that the state of things in Chili, a great copper-producing country, is by no means favourable to the production of the metal, and that from this important source supplies for the time being are likely materially to fall off.

AFFAIRS IN SOUTH AFRICA.

Kimberley, Feb. 23, 1891.

The New Diamond Mine.

In my last I believe I informed you that matters in relation to the new diamond mine at Wesselton were *in statu quo*, in consequence of the absence of Mr. Marais, the agent of Mr. Wessels, the proprietor, and Mr. Ward, the lessee, in Cape Town, whither they had gone to consult with Mr. Wessels on the subject. They have since returned, and were at once interviewed by deputations from the Beaconsfield Town Council, and the Claimholders' Association, for the purpose of ascertaining whether there was any prospect of the mine being thrown open to the public. Mr. Marais was exceedingly reticent, and would give no definite reply, except that there were legal difficulties in the way. Mr. Ward has since been more communicative, and has plainly declared that he has no intention of throwing the mine open as a public diggings. Subsequently, at a meeting of the Town Council, which Mr. Ward was invited to attend, he was asked whether, in the event of his determining to sell the farm, he would give the Council the first chance of purchasing, but he replied that he would not pledge himself to anything, nor give any promise. And so the matter stands in a very curious position. Generally, it is considered that the directors of the De Beers Co. are playing a waiting game. They know that Mr. Ward must do something before June 30, and they also know that he is comparatively a poor man, and, therefore, before that date he will gladly come to terms. Meantime, Mr. Ward and his partners are working the mine, and report says they are doing well. Although Mr. Ward is comparatively a poor man, he surely would find no difficulty in raising the money to pay Mr. Wessels his 150,000*l*., either by raising a loan or forming a company, but some doubt whether he could do so here. He might succeed in the London market, but here the influence of the giant company is so great that few would care to enter the lists against them. Meantime the lawyers have plenty of work in preparation for them. What Mr. Marais alludes to when he says there are legal difficulties in the way nobody knows, but already Mr. Ward's interests are assailed in this way. A few days ago a Mr. A. Eland, well known as being connected with the Otto's Kopje Diamond Mining Co., astonished not a few by advertising in the local papers that he is entitled to one-fourth share in the concession, or written agreement, held by H. A. Ward from J. J. Wessels, to purchase the Wesselton estate, and that he would not hold himself bound by any matter or thing done by the said H. A. Ward in connection therewith unless his consent had first been obtained. Whereupon Mr. Ward instantly replied, and denied that A. Eland had any right or claim to the said concession, and warned the public against treating or dealing with him in connection therewith. Then again, with regard to the claim peggees, Mr. Marais, on behalf of Mr. Wessels, has given notice that unless the pegs and the tents are immediately removed the parties will be treated as trespassers. So far as I can learn only one person has taken any notice of his warning.

The De Beers Co. and the Kimberley Town Council.

The lawyers are also getting a nice little picking out of this case. After no end of impediments, correspondence, and delay, a friendly action between these parties has just been decided in our High Court. It arose in the following manner. In the early dry digging days the *débris* from the sortings was for some time heaped around the mine, until it accumulated to such an extent as to threaten to prevent ingress and egress to the mine. When the Mining Board was formed, some years ago, this question was tackled, and various sites were pointed out in several parts of the town which were then vacant. These were called depositing sites, or areas, and for years the *débris* was conveyed thither, and left uncared for. Before the amalgamation of the mines many of these stands were purchased by private individuals, who built upon them as the town increased, but these depositing sites still occupy a very large quantity of land, and the *débris* heaps remained untouched. Then the De Beers Co. came into existence, and still nothing was done with regard to these *débris* heaps until about two years ago. Two things then happened. First, the Town Council applied to the Government for title to the ground on which these heaps were placed, so that they might sell the stands, and raise money for municipal purposes ; and, secondly, *débris* washing was fast becoming a regular industry. The Government immediately gave the title asked for, but as soon as the Town Council advertised some of the stands for sale, the De Beers Co. obtained an interdict, and stopped it. They contended that when the amalgamation took place they not only bought the several mines, but also the *débris* heaps, and they interdicted the Council from either selling the land or touching the *débris* heaps. A lengthy correspondence was the result, the Council contending that the company was acting on the dog-in-the-manger principle ; they would neither give out the *débris* heaps, nor allow the Council to do so, and, moreover, the Council held that the ground belonged to the Municipality, and all the *débris* thereon also. At last the case came on before the High Court, last week, and judgment was given against the De Beers Co. on all points. The company has since entered an appeal to the Supreme Court, though how they can expect to have the decision reversed puzzles everybody but lawyers, seeing that they offered a compromise just previous to the trial to the effect that they would withdraw claim to the ground provided the Council gave them the *débris*, but this offer the Council refused to accept.

The Nooitgedacht Gold Mining Co.

During the past week there have been several meetings of the exasperated shareholders of this peculiarly managed company, the directors of which seem to have spent 128,193*l*. in 18 months, and, as alleged, have nothing to show for it. At the last adjourned meeting a scheme of re-construction was agreed to, which really was the only course open short of liquidation. One of the local papers remarks—"The Nooitgedacht Co. is a disgrace to Kimberley and to everyone connected with it, and it is such concerns which have caused the reputation of our goldfields to stink in the nostrils of all honest men both here and in England, a reputation which will require an abnormal output of gold to again sweeten. The sooner such financial abortions are liquidated and re-constructed the better for the good name

of South Africa, and for those who are neither financiers nor promoters."

Kimberley, Mar. 9, 1891.

The New Diamond Mine.

The new diamond mine at Wesselton still continues to be the topic of absorbing interest on the diamond fields, and there seems to be every probability that it will produce a plentiful crop of work for the legal fraternity. The finds still continue to be so good that it is now taken for granted that it will ultimately prove as rich as the wonderful Kimberley or De Beers Mines, and this being so, you may imagine that it must in some way or other have a very serious effect on the diamond industry. As time goes on it becomes more and more apparent that Mr. Ward's (the lessee) interest in the mine is becoming small by degrees and beautifully less. I think in my last I mentioned that a Mr. Eland (a director in the Otto's Kopje Co.) had advertised that he had a share in Mr. Ward's interest, and warned the public that Mr. Ward could do nothing without his consent. This Mr. Ward has publicly denied, and nothing more has since been heard of the matter. Since then another, and more formidable, claimant has turned up in the person of Mr. Coronel, a share-broker and speculator of this town, and in this way. It appears that Mr. Coronel is a large shareholder in the unfortunate Cape of Good Hope Bank, and the heavy calls which have been made on the shareholders would have simply ruined him. Fortunately for him, the liquidators applied for, and obtained from the Supreme Court, leave to effect a compromise whenever they found that by so doing they were benefitting the estate. It so happened that some time ago Mr. Coronel rendered Mr. Ward considerable pecuniary assistance. As soon as the discovery of diamonds were found on the farm, this fact came to the knowledge of the liquidators, and the result was that a compromise was effected for the sum of 40,000*l*. Whether Mr. Coronel paid this amount, or whether he merely handed over his claim in the new mine, has not yet appeared, but it is a well-known fact that he is a shareholder in the De Beers Co., and hence it is easy to guess that the compromise was very speedily effected. Then, again, there is a well-founded report that another shareholder in the De Beers Co. advanced a very large amount to Mr. Ward some time ago. The gentleman in question is in a large way of business in this town, but the amount advanced is asserted to be largely in excess of anything he could possibly spare out of it. Besides these instances, I have heard of three other gentlemen who are also in the same swim, so that it is taken for granted here that the new mine is practically in the hands of the De Beers Co. And, taking all things into consideration, it is just as well that it should be so. Since I last wrote, strong efforts have been made by a party of demagogues (I can really find no other designation for them) to bring strong pressure to bear on the Government and Parliament to throw the new mine open as public diggings. In point of fact, they are endeavouring to make political capital out of the affair, and are paying delegates to stump the country for the purpose of stirring up the public mind. They either cannot, or will not, see that a large increase in the output of diamonds must tend to ruin the industry. Already in their own interests the fiat has gone forth from the De Beers office, and the consequence has been that the poor *débris* washers have suffered considerably by a heavy fall in the price of their diamonds, and at the present moment the industry is completely paralysed. There seems to be a very general impression that when Mr. Rhodes comes out (and he is very shortly expected) he will put things straight. That the present is a very important juncture in the diamond industry is very generally conceded.

The Randt Output.

All the Feb. returns are not in yet, but there seems to be every probability that long before this reaches you the cable will have conveyed the intelligence that it has reached 55,000 ozs. That things are gradually, but surely, taking a turn for the better at the Randt is readily acknowledged by all who have been there lately, and the day is fast approaching when it will be recognised as the richest goldfield in the world. Nor is the De Kaap going to be very far behind. From time to time I have lately advised your readers to look well after the low-priced De Kaap shares; they are, most of them, down far below their value, and it is impossible to say how soon they may come to the front again.

Mashonaland.

In several South African papers lately, impatient people have written to enquire why nothing has been heard of the Chartered Co.'s Mashonaland prospectors, or any private prospectors, as to their success, or non-success. Some people never will make allowances for distances, and the difficulties of communication in a new and wild country. However, only to-day I hear that a letter has just been received here from a well-known private prospector, who informs his friends that the auriferous deposits there far exceed his most sanguine expectations.

It is notified that Mr. Robert Littlejohn has been appointed general manager in South Africa of the African Banking Corporation, Limited. Mr. Littlejohn will leave for the Cape at an early date.

PRODUCTION OF SILVER IN THE UNITED STATES.

(*Continued from page* 196, vol. xxxix.)

Deduct :—	Fine ounces.	
Foreign silver bullion imported into the United States (approximate)	5,833,000	
Silver in ores imported into the United States (approximate)	7,000,000	
Total imported	12,833,000	
Less : Foreign silver bullion deposited at mints and assay offices	926,558	
Foreign silver included in fine bars manufactured by private refineries in the United States and classified at the mints and custom-house as domestic (approximate)		11,906,442
Estimated silver product for 1889...		49,880,812

The total product of all the private refineries in the United States manufacturing bars of fine silver, during the last year, as reported to the Bureau, was 57,079,401 ozs. of fine silver, of which 9,214,419 ozs. were reported as having been obtained from foreign ores and base bullion, leaving 47,864,982 ozs. as the product of ores from their own mines. Unrefined silver bullion containing 2,024,760 fine ozs., the product of United States mines, was deposited at the mints and assay offices during the year.

According to this table the product of silver from the mines of the United States was 50,518,682 fine ozs., or slightly in excess of the amount shown by the previous table. As the separation of the product of United States mines from that of foreign ores made by private refineries is not exact, something of a mean between these two estimates has been adopted as approximately representing the silver product of the United States during the calendar year, viz., 50,000,000 fine ozs. The product of silver in the United States has steadily increased, with slight exceptions, each year since 1880, the product of 1889 being 66 per cent. greater than that of 1880. The product for each year since 1878 is exhibited in the following table :—

Production of Silver from the Mines of the United States, 1878-1889.

Calendar Years.	Fine Ozs.	Commercial Value.	Coining Value.
1878	34,960,000	$40,270,000	$45,200,000
1879	31,550,000	35,430,000	40,800,000
1880	30,320,000	34,720,000	39,200,000
1881	33,260,000	37,850,000	43,000,000
1882	36,200,000	41,120,000	46,800,000
1883	35,730,000	39,660,000	46,200,000
1884	37,800,000	42,070,000	48,800,000
1885	39,910,000	42,500,000	51,600,000
1886	39,410,000	39,230,000	52,000,000
1887	41,260,000	40,410,000	53,350,000
1888	45,730,000	43,020,000	59,195,000
1889	50,000,000	46,750,000	64,646,464

FRONTINO AND BOLIVIA GOLD MINING CO.

The directors have issued the half-yearly report of Mr. Eustice, the manager, to Dec. 25, 1890. From this document, which is very exhaustive, we give the following summary :—On the whole the present prospects of the Company, to say the least, are very encouraging. The Silencio Mine, which has yielded remarkably for the past four months, still maintains an apparent intrinsic value, which can be equally compared with its appearance three months past. Judging from character of the lode, its general look and bearing in all the points of operation, there is evidence of fairly good returns for some time to come, but it should be expected that its costs cannot yet be lowered, whilst in addition to the extraction of milling ore, such exploratory works continue. One point which deserves attention in this mine is the matter of ventilation, which must soon be thought of. Perhaps the most economical and beneficial method would be to continue rising above the 150-ft. level north to the Maria Dama adit. This will to all intents and purposes be equivalent to a shaft for ventilation. The now present ends north are long distances from the shaft, and now and then give trouble for want of air. At Cordóba the work of driving levels and sinking winzes, &c., must, too, have deserved attention. This mine is good, and although not so rich in value per ton, its yield has been fairly good. The opening up of other stopes will add indefinitely to its value. The result at Tigrito, although encouraging, may be considered small and insignificant ; but although the mine is now idle, it is probable that a further trial will "sound" its prospects for the future continuance of its operations. Cecilia has lost heavily, but the mine was practically worked out. The only resource was to take the initiative in a line to make a new mine of it, by exploiting the bottom of No. 7 level, and which has resulted in very nearly doubling the returns monthly. It is hoped, and extra force is now at work with the object of communicating the No. 7 and No. 8 levels which will undoubtedly rid the labour cost of almost one-half its present sum. The prospects of the mine at first was gloomy, but the

money spent will doubtless be earned before the lapse of any long period. The leased mines have lately fallen back, but with the exception of one or two they are an agglomeration of small undertakings, and as the lessee in each and all are persons who merely hold them for the trifle they manage to extract by working in a crude way with a few men, most of whom are ill-paid, little improvement may be expected.

SILVER KING MINING CO., LIMITED.

THIS company has been formed with a capital of 400,000*l.* in shares of 1*l.* each, for the purpose of acquiring, as a going concern, and developing, silver mines situate in the mining district of Calico, California, U.S.A. The property consists of 35 mines and mining claims, comprising an area of about 500 acres, together with a mill site of 160 acres, on which are a 20-stamp silver mill, office buildings, several miles of iron and steel tramway track laid in and about the mines, two gravity cable railroads, ore cars, ore houses, ore bins, dressing floors, &c., in full operation, and in working condition. The mines have been thoroughly examined and favourably reported upon. One of these reports (by Mr. Edwards) states that there is ore in sight amounting to 373,000 tons, and of a gross assay value of 6,323,000 ozs. This gentleman, who has been appointed manager, says :—"I have no doubt that the deep tunnels as they progress will develop vast bodies of ore of varying grade, so that the life of the property will be extended almost indefinitely." The price to be paid for the property has been fixed by the vendor at 350,000*l.*, payable as to 30,000*l.* in cash, 133,333*l.* in fully paid-up shares of the company, and the balance of 186,667*l.* either in cash or in fully paid-up shares at the option of the directors, thus leaving 50,000*l.* available for working capital, which Mr. Edwards considers ample for all developments. The subscription lists will be opened on Monday next and closed on the Wednesday following.

ALBION STEAM COAL CO., LIMITED.

THIS company has been formed for the purpose of purchasing the Albion Colliery, situate in the Taff Valley, and in close proximity to the ports of Newport, Cardiff, Penarth, and Barry. The prospectus reads extremely well, and sets forth facts and figures which promise for the company a prosperous future. In the first place we notice that the colliery, which comprises seven leasehold properties having 53 years to run, has a mineral area of 1,153 acres, and is well known as producing steam coal of very good quality. In the second place, it numbers amongst its present customers several of the largest steamship companies and coal shippers in the world; and, thirdly, it raised and sold during the year 1890, 368,025 tons, and promises to do considerably better during the current year. For these three reasons we think the company stands a very fair chance of success, and especially seeing that its directors are gentlemen of no little experience in the business they will be called upon to transact. The capital of the company is 250,000*l.* in 25,000 shares of 10*l.* each, in addition to which there will be 100,000*l.* in 5 per cent. debenture bonds of 100*l.* each. The price to be paid for the property is 310,000*l.*, the vendors paying all the expenses connected with the formation of the company. The subscription list will open on Monday next, and close on or before the following Saturday.

THE YURUARI CO., LIMITED.

THE secretary advises receipt of mail from the mines, dated Chili, Mar. 6 (delayed owing to the holidays). In it Mr. Pryor says :—A considerable flow of water in the shaft has checked my progress in sinking for a few days. You will see that I am progressing rapidly, and I have been encouraged by a distinct improvement in the lode at bottom of shaft. I did not anticipate such trouble with water, but its presence is always a hopeful sign of the lode improving. (Miners are aware that an outcrop of water indicates the near presence of a pay-shoot, and this proved to be the case in the Cenicero shaft three years ago.) I am also much pleased with the appearance of the lode in No. 5 level west (new ground), details of which are also given in the mine report. On the whole, the mine wears a decidedly hopeful aspect. From pay-roll enclosed, you will observe I have effected considerable reductions in wages, averaging 15 to 20 per cent. all round. In the matter of cord-wood, the cessation of pumping at Cenicero saves us about 130 cords (value about 200*l.*) per month. Elsewhere I have reduced the consumption, which may now be stated at two cords per day. As to ceasing pumping without instructions from the board, while I have never been accused of shirking responsibility, I considered this a question of sufficient importance to await direct instructions on the subject from the chairman, he being a practical miner, and conversant with all the circumstances. I fully appreciate the energetic action of the directors in financial matters and the great difficulties which they have had to encounter. Your instructions to continue developments until the mill can be continually run shall have my attention. The directors may depend, as ever, on my placing my best services in the direction of the company's interests.

DON PEDRO (Feb. 28.)—Maquine Mine monthly report.—General remarks :—Operations for the month have been vigorously carried on in bottom of mine, viz., 50-fm. cross-cut, a driving horizontal from No. 4 stope, also some mineral has been taken from bottom No. 3 stope, to make secure same. The mineral extracted from the above-named places has been of a high standard. Some low quality box-work has been extracted from the south line of gold. After reporting favourably on the various stopes and levels, the manager says :—Running work: In the early part of the month, unusually heavy rains were experienced, and in consequence caused much damage to the roads. Camargos Bridge being washed away, and we had to place a new one. Many tons of mineral also was carried away with floods from the mine dump. Machinery and pumping power all are working very satisfactorily, and the mine kept in fork without trouble. Remittance: Result of sampling the lode, 1,582 oitavas = 182 ozs. troy, which has realised 682*l.* 19s. 10d.

THE ELKHORN MINING CO.

DIRECTORS ISSUE A GRATIFYING REPORT.

THE annual report of the board will prove agreeable reading to the shareholders. It is a record of success "all along the line," and success that seems but the earnest of better things yet to come. The revenue account for the 10 months shows a profit of 54,567*l.*, of which sum 40,360*l.* has been applied towards the payments of three interim quarterly dividends at the rate of 20 per cent., 30 per cent., and 40 per cent. respectively, leaving 14,206*l.* to be carried forward. Shareholders will be rejoiced to learn that the directors propose as hitherto to declare quarterly dividends in March, June, Sept., and Dec., running from the date upon which the company obtained possession of the mines. From the report of Capt. Plummer it appears that during the period covered by the report, the mill crushed 9,270.16 tons, producing a yield in bullion of the value of $386,717.54, equal to $41.71 per ton. 1,064.67 tons of high grade ore were sold to the smelters, and realised $89,185.28, or an average of $83.76 per ton. Capt. Plummer reports the actual cost per ton for mining, milling and prospecting work as amounting to $18.52 per ton as against $23.77, when the property was taken over, and $20.38 per ton on which the estimates in the prospectus were based. The accounts show slightly greater costs, in consequence of the board having decided to charge against revenue certain expenses for improvements and developments frequently charged to capital account. Simultaneously with the ordinary working of the mine prospecting has been carried on and valuable high grade ore bodies have been discovered. The directors express their thanks to the Mining and Financial Trust Syndicate, Limited, for the very valuable assistance afforded them at the outset of the company's career, whereby the board were enabled to enter into possession of the property 16 days after the shares were allotted, and earn substantial profits at least two months before they were entitled to by the terms of their contract. They also tender their thanks to Capt. Plummer, and all the members of the staff, both at home and abroad, for their zealous and able services.

The meeting on Thursday next ought to be a very agreeable function.

COMMERCIAL NOTES.

METALS.

THE Metal Market has been quiet during the current week. Bank rate remains 3 per cent. Bar silver improved to 45d., closing at $44\frac{11}{16}$d.

COPPER was firmer, but closes easier. G.M.B. Warrants improved to 53*l.* 5s. and 53*l.* 7s. 6d. three months, but yesterday declined to 52*l.* 12s. 6d cash, and 52*l.* 15s. three months. To-day prices are lower, 52*l.* 7s. 6d. to 52*l.* 5s. cash and 52*l.* 7s. 6d. three months. The monthly figures show a decrease in visible supply of 678 tons, viz., 58,353 tons against 59,031 tons on Mar. 1. The total supplies to England and France in March were 9,284 tons, and deliveries 9,962 tons. We quote English tough, 55*l.* to 57*l.*; best selected, 57*l.* to 58*l.* 10s.; strong sheets, 65*l.* to 66*l.*; India sheets, 60*l.* 10s. to 61*l.* 10s.; yellow metal, $5\frac{3}{4}$d. to 6d.; ore 9s. 3d. to 10s. 9d. per unit.

TIN has been steady. Straits sold from 90*l.* 7s. 6d. to 90*l.* 12s. 6d. cash, and 90*l.* 15s. to 91*l.* 2s. 6d. three months. To-day prices are steady, 90*l.* 12s. 6d. cash, and 91*l.* to 91*l.* 5s. three months.

The arrivals in London have been 2,503 tons. Delivery 1,944 tons, including 150 tons to America. Stock, 3,578 tons. The Straits shipments for Mar. were 3,525 tons. English ingots 93*l.* 10s. to 94*l.* The Dutch market is steady. Bauca, $54\frac{1}{2}$ fl.; billiton, $54\frac{1}{4}$ fl. The production of banca for 1890-91 is given as 107,000 piculs, against 89,691 piculs in 1889-90.

TINPLATES are quiet, and we quote ordinary coke, Liverpool, 17s. 6d. for April-May and 14s. 6d. for July-August.

SPELTER steady, and we quote ordinary brands 23*l.* to 23*l.* 5s. ex ship here.

SHEET ZINC.—Of 120 tons offered in public sales yesterday 70 tons sold at 25*l.* 10s. per ton nett at works, being 10s. per ton lower than last sale.

LEAD quiet. We quote soft Spanish, 12*l.* 12s. 6d. to 12*l.* 13s. 9d.; soft English, 12*l.* 15s. to 13*l.*; L.B. China pigs, 13*l.* 5s.; sheets, 13*l.* 15s.

QUICKSILVER quiet. Rothschild quotes 8*l.* 5s.; second-hands, 8*l.* 3s. 6d.

ANTIMONY. Hallett's still quote 67*l.* 10s. for America; ordinary brands and delivery obtainable at 62*l.*

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING APL. 4.

Anglo-Italian Bank	12 per cent.
Antwerp Waterworks	$2\frac{1}{2}$ per cent.
Bank of South Australia	6 per cent.
British and Australasian Trust	2s. 6d. per share.
Deutsche Bank	10 per cent.
Dunaberg and Witepsk Railway	10s. per share.
East London Waterworks	8 per cent.
Evered and Co.	10 per cent.
G. W. Bacon and Co.	12 per cent.
Ionian Bank	5 per cent.
Land Corporation of West Australia	5s. per share.
London Stereoscopic Co....	5 per cent.

REPORTS OF MEETINGS.

POTOSI, LIMITED.

THE RESOLUTIONS FOR RE-CONSTRUCTION ARE UNANIMOUSLY CONFIRMED, AND THE CHAIRMAN REITERATES HIS BELIEF IN THE ULTIMATE SUCCESS OF THE COMPANY.

AN extraordinary general meeting of the shareholders of Potosi, Limited, was held on Tuesday, Mar. 31, at Winchester House, Old Broad Street, E.C., at which the following resolutions, passed at an extraordinary general meeting held on Mar. 13, 1891, were submitted for confirmation as special resolutions, viz. :—

RESOLUTIONS.

(1.) "That it is expedient to re-construct the company, and accordingly that the company be wound-up voluntarily, and that Mr. John Bryce Wilkinson be, and he is, hereby appointed liquidator for the purposes of such winding-up." 2. "That the liquidator be and he is hereby authorised to consent to the registration of a new company to be named 'Potosi Consols Limited' with a memorandum and articles of association, which have already been prepared with the privity and approval of the directors of this company." 3. "That the draft re-construction agreement submitted to this meeting, and expressed to be made between this company and its liquidator of the one part, and Potosi Consols Limited of the other part, be and the same is hereby approved; and that the liqudator be and he is hereby authorised, pursuant to section 161 of the Companies Act 1862, to enter into an agreement with such new company, when incorporated, in the terms of the said draft, and to carry the same into effect with such (if any) modifications as may seem to him expedient."

Mr. S. F. Somes

(the chairman of the company) presided.

Mr. J. BRYCE WILKINSON (the secretary) read the notice calling the meeting which also stated: "N.B.—The drafts of the agreement and memorandum and articles of association may be inspected by any shareholder at the compauy's offices during the usual business hours."

The SECRETARY also read the above resolutions.

The CHAIRMAN: Gentlemen, this, of course, is entirely a formal meeting. You are aware—those of you who were here on the last occasion—that the resolutions were carried with only one dissentient, and there were a good number of shareholders present then. As we have nothing fresh to state it is no use for me to occupy your time by talking about nothing, but if any of the shareholders wish to make any remarks we shall, of course, be ready to hear them. I may, perhaps, state that we have had only one or two more dissentient shareholders writing, representing, perhaps, 400 or 500 shares, but I may say that the majority of the shareholders express no dissent to the proposed re-construction of the company, but are in favour of it—(cheers)—and we anticipate without doubt that it will be carried out successfully in a short time. We shall send out the proper notices some time before the payments have to be made. I think that is all I have to say except to put the resolutions to the meeting.

Mr. GRIFFITHS: Have you had any fresh information from the mine?

The CHAIRMAN: No; we have nothing fresh from Mr. De Lemos. We informed him of the re-construction scheme, and have requested him to go up to the mines, and to

TAKE WITH HIM AN EXPERT

who is out there—a very first-ratc man, and to make a full and independent report upon all points.

Mr. GRIFFITHS: Exactly so.

The CHAIRMAN: And from the letters we received from Mr. De Lemos I have uo doubt he will proceed to the mines about the beginning of Apl.

Mr. J. W. LEDGER: I suppose it is certain that 36,000*l.* will be sufficient to do what we wish.

The CHAIRMAN: Yes; as far as we can tell.

Mr. LEDGER: You think the prospects good then?

The CHAIRMAN: As far as we can judge, and from what the manager writes us, we believe that the indications are favourable, and we have only to get down on

THE POTOSI LODE,

but a pump is nccessary now in order to keep the water out. Mr. Pryor, our manager, is seeing to this.

Mr. LEDGER: What do you expect to get the mill for?

The CHAIRMAN: If we send out a new mill of 40 stamps it would cost about 10,000*l.*, complete.

Mr. LEDGER: 10,000*l.* for 40 stamps?

The CHAIRMAN: Yes.

A SHAREHOLDER: Have any of the directors been out to the mine, sir?

The CHAIRMAN: None of those who are present to-day; but Mr. Scriven and Mr. Nevett visited the mines some time ago.

The CHAIRMAN then called upon the solicitor of the company to read the draft agreement.

Mr. LATTEY (the solicitor to the company) then read the most important parts of the agreement, and explained its provisions for the transfer of the property of the old company to the new. There was a clause, he stated, for the abandonment of the re-construction scheme if the opposition to it was of a serious nature on the part of any large holders in the company, but from the support the board had received in the matter, there was no likelihood of that option having to be exercised. He added that if any shareholder desired to inspect the document he would be pleased to show it to him at his (the speaker's) office, and to show the draft of the new articles of association also.

Mr. CUFF: I suppose the new articles are just on the same lines as the old ones?

The SOLICITOR said yes, with the exception that there will be no preference, but only ordinary shares, and, in addition, they were brought

UP TO DATE,

as the regulations of the Stock Exchange Committee in regard to articles of association for joint stock companies varied from time to time. There had been special attention paid to this fact in drawing up the articles.

The CHAIRMAN: I suppose I may now put the resolutions to the meeting. You have all heard them read by the secretary, and I think you will hardly wish me to read them through again. I, therefore, move the resolutions.

Mr. G. S. DUFF (director) seconded.

The motion was carried unanimously.

The CHAIRMAN: That concludes the business of the meeting, and I am sorry that it was necessary to trouble you to come for such a formal matter. I hope that the scheme will be carried through in a satisfactory way, and that

WE SHALL YET MAKE THE SUCCESS OF POTOSI FOR WHICH WE HAVE WAITED SO LONG.

I trust at length, when we get fully to work and the mill up, the result will show that we have been quite justified in laying this proposition before you. As I stated at the last meeting, if my colleagues and myself had not faith and confidence in this matter, we should not have put it before you. (Hear, hear.)

Mr. GRIFFITHS proposed a hearty vote of thanks to the chairman and directors, and he thought that the shareholders were indebted to them for their exertions in regard to the carrying out of the re-construction scheme.

Mr. LEDGER seconded the motion.

The resolution was carried.

The CHAIRMAN thanked the shareholders for their support and confidence.

This concluded the proceedings, and the meeting then separated.

THE MEXICAN MINERAL RAILWAY CO., LIMITED.

THE CONDUIT ALMOST READY—THE RAILWAY TO BE READY IN AUGUST AND THE MILL TO BE READY IN MAY—NO DOUBT FELT AS TO VALUE OF PALMAREJO MINES.

THE second annual general meeting of the shareholders of the Mexican Mineral Railway Co., Limited, was held at the Offices, 4, Copthall Buildings, on Thursday, "to receive the directors' report and balance-sheet for the period ending Dec. 31, 1890, for the transaction of the ordinary business of the company, and for considering special business under article 102-G, as stated in the report."

Mr. John W. Hart

presided.

Mr. ROBERT J. SCRIVEN (secretary) read the notice of meeting.

ABSENCE OF THE CHAIRMAN.

The CHAIRMAN: Gentlemen, I have to apologise to-day for the unavoidable absence of our chairman, Mr. Pigou, who is too unwell to be present. He has placed his notes in my hand, and I will endeavour to address you from them. You have heard the notice read, and we will at once proceed to deal with the accounts, the adoption of which, along with the report, I now beg to move.

Mr. E. J. DUVAL: I second the motion.

Carried unanimously.

STATE OF THE WORKS.

The CHAIRMAN: The more serious part of my task now commences, as the notes from which I shall address you have uot been in my hands more than a quarter of an hour, but as far as I am able to lay before you the facts relating to the company's operations, I will do so from these notes and also from additional remarks of my own in reference to the report of 1890. It will not be out of place to remind you of the circumstances under which this company was formed in 1880 when we undertook to construct and complete the Mexican Mineral Railway and water conduit for the Palmarejo Mining Co. The work which the Mexican Mineral Railway Co. was established to do opened out a fine prospect of profit, and as many of our shareholders are interested in Palmarejo Co., and thereby interested in the completion of these works, this was made a business for which there existed exceptional facilities. The Palmarejo is unquestionably a mining property of great intrinsic value, but after being examined by a most eminent expert, he was of opinion that it could not be profitably worked unless we carried out the operations before described, which are now nearing conclusion. The Palmarejo Co., though having a considerable amount of capital in haud, had not sufficient with which to carry out these enlarged plans. It had to attend to the building of its mill and the erection of its reduction works, and its available funds were wholly insufficient to deal with such works as we have taken in hand. Our compauy was, therefore, in the position of parties who might expect to drive what I may describe as a hard bargain, but I do not think that we did so, although we secured a contract which must prove amply remunerative to us, and one which at the same time will compensate the Palmarejo over and over again. Now that we are drawing near the conclusion of our work we may fairly review the facts, because I notice that when we get criticism or complaint it invariably comes from Palmarejo shareholders who have shown the most apathy in regard to enquiring into the nature of the business, and it will be a satisfaction to the proprietors of both companies to know that from the first moment to the present time the most perfect harmony on all points connected with the two concerns has existed both between the respective boards and the working staff. I feel sure that that harmony will continue as long as we are associated with each other. (Hear, hear.) Gentlemen, the engineering part of the work is divided into two branches, having separate objects.

A CONDUIT AND A RAILWAY.

The one is the construction of a conduit to supply water power, and the other is the making of the railway. I will deal with the

conduit first, because it is, I believe, unique in that part of the country to employ water power of the character we shall have. As designed, our conduit derives its supply from the Chinapas River, and in future will require a further outlay, only of such a sum as may be necessary to keep the channel in order. The mill that is now being finished by the Palmarejo Co. will, as far as can be estimated, exhaust a portion only of the water supply, and, therefore, it is to the future use of the surplus that we may fairly look for further profits—a point that must not be lost sight of by our shareholders should they feel tempted at any time to exercise their option to exchange their shares in this company into Palmarejo shares.

A VALUABLE OPTION.

Here I am simply calling attention to the fact that you have the right to participate in the value of that undertaking should it attain to the position which we have every reason to believe it will reach. The photographs on the wall will show the character of the works constructed. They were taken some time since, and are, therefore, not photographs up to date, for if they were, you would find the works in a much more advanced state. So far they show, I think, that those works are substantial, and such as we would be allowed to construct in this country. Therefore, they could not be otherwise than of a first-class character, and are fully equal to any constructed in Mexico. The conduit works, I may explain, have always received our first attention in preference to the railway, the object being to enable us to

GIVE A WATER SUPPLY TO THE MILL

as quickly as possible, and, if practicable, to turn to account the working of the mill before the completion of the railway. Then there is the further advantage that on the completion of the conduit the whole of our workmen employed there can be diverted to the remaining portion of the railway not yet finished, though I may say it is in a very advanced state. I need not dwell longer on the merits of the water power more than to tell you that it is a power that far surpasses any other class of power. We have no expense as far as providing fuel goes. We have simply to supply water-power that takes the place of the steam engine—an advantage which Palmarejo shareholders should fully appreciate. There is another point in reference to our undertaking which stands possibly as an exception in Mexico, and that is that we do not carry on our works on credit.

CASH *v.* CREDIT.

Cash payments are regularly made which enable us to command the best class of labour which, I may say, is scarce, and even the best is not very good. We have the advantage of having the confidence of the workmen, because cash is paid for everything, and there are no outstanding debts. Our accouuts are paid regularly, and we have paid all connected with the work in cash even to the payment of our plant and expenses in this country. We have had one considerable cause of anxiety during the past year, and that is

THE FLUCTUATING VALUE OF SILVER.

As far as this is concerned, you will see it is estimated that we have lost, at least, 11,000*l*. That, of course, is a very serious item, and arises from the fact that at one moment we could get $7 for each 1*l*. sterling sent from this country.

A SHAREHOLDER: $6½ you mean.

The CHAIRMAN: No I do not; for we have drawn at $7.30 per £, and have been obliged to draw as low as $5⅓. On comparing the difference you will see that we lost something like $1½ on every 1*l*. we had to send from this country. There is another point that also caused us considerable anxiety. By the terms of our contract Palmarejo Co. is bound to construct a mill by the tiue we are ready to offer them water supply. This necessitated the issue by that company of bonds to the extent of 75,000*l*. That, I am very pleased to say, they succeeded in doing, and as the result they will carry ou the works, and I have ascertained, from the best information,

THE MILL WILL BE READY ABOUT MAY,

that is about the time our conduit is finished, and shortly afterwards the railway will be finished. As far as the railway is concerned, it has been a very heavy work—far surpassing any of our original anticipations. Otherwise we thought we had an excessive capital when we commenced, but owing to the difficult nature of the work the expenses have been heavier than we expected. It may be a satisfaction to you to know (because it has been questioned by many) the opiuion of the engineer as to the efficiency of the railway and the rolling stock to meet the requirements of the traffic. Our engineer has reported in his last letter that "the station at Zapote is at the foot of an incline about a mile long, with several curves on a grade as severe as will occur elsewhere on the line, and that even with the rough temporary waggons in use during the construction a heavy load is taken up without difficulty." As we are not likely to meet with any gradients more severe than the one he has described, we may rest at ease, feeling sure that

WE HAVE SOLVED A PROBLEM

that has caused no iittle anxiety, namely, the construction of a gradieut of about 4 per cent. with sharp and steep curves. I am sure it will be satisfactory to every shareholder that our engineer and general manager, Mr. Holtham (whose character and capabilities are well and favourably known to us), is doing his best for the company, and as he is carrying out his part, we must perform ours as regards funds. We must have these at our disposal for the completion of the works. We have decided to spread the securities amongst our own proprietors. The amount allotted to each is, therefore, with one or two exceptions, very small, but is thoroughly well secured, and bears interest from the date of payment. We have fixed the premium ou payment in 1895 at 20 per cent., because the transaction thoroughly justifies it, and a notice containing the exact particulars will be posted immediately to each member after the meeting. It might be convenient at this stage if I concluded my remarks and asked the meeting to consent to refer to the resolution in the notice asking the additional sum or the powers to raise it.

DIRECTORS SET AN EXAMPLE.

I may go beyond that, however, and now disregard the troublesome task of following other people's notes, and tell you that the directors and a few of their friends have volunteered at least two-thirds of that amount. I am not certain that if we had taken a little more trouble we might not have got the full amount without troubling you, but first we have to ask your authority to raise it. The mouey is going into a superior undertaking, that is, carrying a good rate of interest, which has always been paid, and with the certainty of a large return under the terms of the contract, in addition to the valuable option of being made a shareholder in the mine itself, because we thought that if, through our instrumentality, Palmarejo Co. should be raised from the low level on which it once was to the position of a first-class company, we had the right to participate in those advantages, and those advantages you undoubtedly derived from the fact that you have been good enough to subcribe the money to do that which they could not do for themselves. (Hear, hear.) If you will keep all these prospective advantages in view with the assured return during the construction of a considerable rate of interest, even taking our lowest condition in the contract, I think you will see it to your advantage to continue to support the compauy in which you are already interested rather than to allow others to do it for you. If you do not take the proportion due to you the money will be forthcoming without doubt or question. As I have already told you, the directors and a few friends are prepared to provide an amount equal to about two-thirds of the total, aud this sum has been promised within only a few days, whereas, if we had had a little longer time uo doubt the whole of it would have been taken. At this stage it will be more convenient if I ask the shareholders to give the necessary powers as proposed in the resolution, which the secretary will read, and which I formally move.

Mr. SCRIVEN read the resolution: "Resolved, that the company in general meeting here assembled authorise the directors to raise such further sum or sums of money not exceeding 30,000*l*. beyond the present debenture issue at such times and in such manner as they may think fit."

Mr. GOLD: I second the motion.

The CHAIRMAN: The returns I have spoken of—the handsome returns—are likely to be derived from one mill only, but there is no doubt that a company such as this cannot fail to erect a second mill immediately after they get their heads above water, and they have been in low water for some years past.

Mr. SIMON: There are 4,300*l*. calls in arrear. Is there a chance of getting in these amounts, as they would put the company in a better position?

The CHAIRMAN: We have anticipated your remark. These amounts were due in Dec., and we have collected nearly the whole of it since.

The motion was carried unanimously.

NOT OVER-CAPITALISED.

The CHAIRMAN: I omitted an important part of my subject in dealing with our prospects and returns. We are not over-capitalised, even with the extra 30,000*l*. which we are about to raise. You will find on reference to the agreement of which this is part that we are guaranteed to have 16s. per ton, and if we bring down the minimum quantity sufficient to serve one mill and work 300 days in a year we will then get a sum of 19,200*l*., out of which we have to take small working expeuses, and I am satisfied this will not only pay the 7 per cent. upon debentures, but I will be very much surprised if it does not pay something like 15 per cent. on the share capital. That is a result we anticipated from one mill alone, but of course if a second mill be erected you are able to see what you can look forward to. It may be a further satisfaction to tell you that as far as the capacity of the railway is concerned, I believe the whole of the mine's produce will be brought down in about two or three days' working per week, if we have storage capacity at the upper and lower ends, and this is being provided.

PALMAREJO MILL OR MILLS.

Therefore we are quite open to any amount of business that may come to us, and Palmarejo Co. may see its way to erect a third mill. (Hear, hear and laughter.) As regards time, our engineers confirm their statements. A few days ago we had a wire stating that the conduit would be finished by the end of June and the railway in Aug. Our engineer is a very cautious man, and is particularly guarded against expressing an opinion hurriedly, and if he has given these dates I think he will be within them, because, having known him personally for a great many years, I know he will not commit himself to an opinion without feeling pretty sure, and it will be no surprise to me if he does finish a little withiu the time named in his telegram. You will know for yourselves, from having read the conditions, that we have only to notify the Palmarejo Co. on the completion of the works, and having obtained their certificate to put in force all the obligations under the contract. Therefore, if we really open the works, as we expect to do, in Junc or Aug., then the advantages to be derived will take effect. It will not be a question of waiting for terms or conditions, because we shall give notice in good time. They will have to accept the time, and from thence the terms and conditions of the contract will take effect. The new issue will carry with it all the advantages of the former issue as part aud parcel of the original contract. Whatever rights and advantages the original subscribers have the new comers also have the same rights. I think I have followed as closely as I can the ideas of the chairman and interpolated some views of my own. (Cheers.)

A SHAREHOLDER: Having regard to the discrepancy of time between the completion of the railway and the construction of the mill, would it not be possible to commence crushing during the three months' interval.

The CHAIRMAN: That has been anticipated a year ago. Our one object in completing the conduit has been to provide the mill with motive power, and we have given instructions to utilise the line as far as it is constructed, and develop the means to get the ores ready, so that they may commence work immediately, and hence, if we cannot carry by railway the whole of the ore, we can do so in part as far the line goes. It will then be for them to devise the means to transport the ore the short distance necessary, and they have had their instructions long ago to do that.

PROSPECT OF EARLY COMPLETION OF WORKS.

Therefore, we have been giving the greatest attention to the conduit, which will be ready almost as soon as the mill, and I shall be surprised if the railway does not follow immediately after for the reasons previously stated. (Cheers.) The next business is for you to re-elect

me as director as my services cease to-day. It will be for you to say if you wish to retain them. (Cheers.)

Mr. Duval: I have great pleasure in proposing that Mr. Hart's services be retained. (Cheers.)

Mr. Mays: I second, and wish Mr. Hart the good fortune of presiding over a similar meeting a year hence, and having the pleasure of telling us that the third mill for Palmarejo is well on its way to completion. (Laughter.)

The motion was carried unanimously, and

The Chairman, after returning thanks, moved the re-election of Mr. A. A. Yeatman as auditor.

Mr. Grancini seconded the motion, and it was carried unanimously.

Mr. Applegarth, in proposing a vote of thanks to the chairman and directors, said: I happen to know that they have performed their duties in no ordinary manner. They have spent an enormous amount of time, and given a large amount of work to the business both in London and away from it on behalf of the company. They have not only well earned their remuneration as directors, but earned our sympathy and thanks for the manner in which they have performed their duties. (Cheers.)

Mr. Duval seconded the motion, which was carried unanimously.

The Chairman: Our chairman is unfortunately not here, but in his absence I may say what I might hesitate to do in his presence, that if your thanks are due to any one for an excessive amount of work on your behalf they are due to your chairman who is indefatigable, and so far as his colleagues are concerned, I can only say that they endeavour to do their best. (Cheers.)

MOUNT ALBION SILVER MINING AND SMELTING CO., LIMITED.

A DROUGHT, FOLLOWED BY FLOODS, INTERFERES WITH SMELTING OPERATIONS—NO DIVIDEND—MORE PLANT NECESSARY.

The seventh ordinary general meeting of this company was held at Winchester House on Thursday, Mar. 19.

J. I. Wright, Esq.,

presided.

The Secretary (Mr. T. E. Smith) read the notice convening the meeting, and the report of the directors was taken as read.

MISFORTUNES.

The Chairman: Gentlemen, I have to regret, as I had on the last occasion, that Mr. Sichel, who is really the chairman, is unable to take that position to-day because of ill-health. The directors in meeting you to-day would certainly have felt much happier if the record of the past year had been more successful financially. The misfortune has been that during the first four months of the year we had first of all drought, and then floods to contend with, which resulted in a considerable loss as far as the smelting was concerned. We also had some difficulty with the new furnace which was erected. It seemed to go all right for a little time, but it then went out of gear, and alteratious were necessary, and some expense was incurred before smelting could be carried on successfully. Besides all this, the character of the ore unfortunately changed for the worse. The silver contents became less, and a considerable quantity of the ore raised was fractious, and it was impossible for us to smelt it with the furnaces we had. Notwithstanding all this, gentlemen, we have been able to show a gross profit of 9,625*l*. 13s., and we propose, with your permission, to write off 10 per cent. from the buildings, machinery, and plant, which will amount to 2,564*l*. 10s. 6d.; and 4,300*l*. from the expenditure for prospecting and dead work, together with a sum of 6,000*l*., which was set apart last year for a purpose of this description, which will reduce the amount from 27,830*l*. to 17,530*l*.; leaving a net balance to be carried forward for the year of 748*l*. 0s. 2d. You will find in the profit and loss account a charge which the auditors have debited us with on the score of income tax, amounting to 290*l*. 16s. 10d. As we have earned scarcely any money we do not intend to pay this; and, therefore, that amount, after deducting what is properly due to the income tax commissioners, will be credited in the account for next year. As you are aware, we have appointed

A NEW MANAGER.

At the last meeting I told you the reason why we did appoint him, and since that time we have received a number of reports from him Those reports are of a most cheering nature. He speaks very favourably of the mines, and very favourably also of the material which he has at his disposal in the way of machinery and plant. In his first report, dated Oct. 31, and in all his subsequent letters, he has been constantly urging upon us the necessity of providing him with concentrating and milling plant. There are immense quantities of ore, which would be at the remunerative disposal of the company if we had plant of that description; but as this is really a matter of ways and means, we have the subject under our very grave consideration, for we think that while we can make a profit from the ores which may be smelted, and especially the black ore, of which he speaks very encouragingly, it would be foolish on our part, until we know positively that we can safely make an outlay in that direction, to incur further expense. We are, therefore, waiting to see what the near future will bring us before doing anything in the matter.

ABSOLUTELY DEPENDENT UPON THE LOCAL MANAGEMENT.

It is needless for me to remind you that your directors are some thousands of miles removed from the scene of operations, and that correspondence is of a very slow order indeed; all that we can do, therefore, is to take care that the management on the spot is competent and efficient, and finance the whole affair, and do our best on this side to give you a profit. We feel the gravity of the position; for we are entirely dependent upon the management of the officers over there. No effort on our part other than that of remonstrance can have any effect upon that management if it is determined to go wrong. We think, however, that in Capt. Rogers we have an efficient servant. His reports are certainly very florid and point to good things. We cannot, of course, back up his expressions and fancies as regards the happy results that are likely to accrue from his last finds, but we hope that what he has said will be borne out by facts.

The Secretary then read a number of extracts from voluminous reports by Capt. Rogers, after which

The Chairman moved the adoption of the report, which was seconded by Mr. Welldon.

Mr. Raphael asked what amount of available cash the company had, and would it be sufficient for the additional machinery required?

GREAT DISSATISFACTION.

Mr. Harris (Glasgow) expressed great dissatisfaction at the condition of the company, which, he said, was started three years ago with very definite promises made by the vendors, Messrs. James Moffatt and Co., whom he believed to be a most respectable and high-class firm in Australia. They were told in the prospectus that if the company succeeded in smelting about 400 tons per month, a dividend of from 20 to 30 per cent. would be earned; and if sufficient capital were provided for the necessary machinery the production could be increased without any difficulty to 500 tons, upon which a "minimum" dividend of 45 per cent. per annum could be paid. He dared not say that these were misstatements, and, therefore, the only conclusion he could come to was that there had been gross mismanagement. Out of the directors' own months he convicted them. Instead of the results promised, the company had proved

A DEPLORABLE FIASCO.

He objected to the directors taking 1,000*l*. a year in fees, and hoped they would forego their emoluments in the circumstances.

The Chairman, replying to Mr. Raphael, said that the available cash at the present time was not sufficient to provide the concentrating and milling plant.

Mr. G. Sichel said that the statements in the prospectus were based on the retrospective, and could not be held as a guarantee for the future. He had been advised on that point by Mr. Romer, Q.C. It was monstrous to talk of holding the directors responsible for the non-success of the mine. Only one member of the board was connected with the company when it was launched, and since their appointment, they had assisted the company financially on several occasions. They would, therefore,

NOT GIVE UP ONE PENNY

of their fees, and the shareholders had the remedy in their own hands, for they could appoint a new board. He thought the labourer was worthy of his hire. (Hear, hear.)

Capt. Clarke supported the directors.

The accounts were adopted, and some formal business transacted, after which the proceedings closed.

THE MINING CO. OF IRELAND.

(From our Dublin Correspondent.)

WINDING-UP RESOLUTION, AND APPOINTMENT OF LIQUIDATORS.

An extraordinary general meeting was held at the Central Hall, in this city, on the 12th inst., to confirm a resolution for the winding-up of the company, and for the appointment of liquidators.

Mr. A. Shackleton

presided.

The Chairman moved the confirmation of the resolution, which was seconded by Mr. Chandlee, and adopted unanimously.

The appointment of liquidators to carry out the resolution was then proceeded with.

Mr. A. Webb, M.P., said, as the company was to be wound up, the only remaining question was—who should do the work? If they were in the position of simply having a number of account books, complicated accounts and papers, balance in bank, and debts outstanding, it might be well to put the matter in the hands of a chartered accountant; but, as the affairs to be wound up were mere matters of current business, it would be better if the affairs were put into the hands of those who had had to do with the management, and who fully understood the condition of their affairs. The remuneration would be entirely with the shareholders, and if they were not satisfied with the manner in which the work was conducted they need give the liquidators nothing. Managers' and clerks' salaries amounted to 20*l*. a week, but as the company was being wound up that sum would diminish. He proposed that Messrs. John A. Casey, R. S. Chandlee, and A. Shackleton be appointed liquidators, as they fully understood the working of the company; there would be no expense between them and the clerks and managers in their employment—the latter continuing their services until the business was closed.

Mr. Burrowes having seconded the motion,

Mr. Joshua Fayle, in supporting it, said he was convinced that no better men could be appointed than the three directors named, as their stake in the company in itself guaranteed the care they would take in watching its interests in the process of winding up.

Mr. T. Herne moved that Mr. T. Kevans be appointed as liquidator. As a shareholder, he said, he ought to know what those nominated would charge for their work. He objected to those who had had charge of their work for the past eight years being selected, for they made only a muddle of the work when they were at it. They ought to get a change, and he would not be satisfied until he knew what price they were to charge.

Mr. J. Devine seconded the nomination of Mr. Kevans.

Mr. Herne: What would be charged by the liquidators on either side?

Mr. T. Kevans said he was prepared to accept the fee of 400*l*. to cover all expenses, such as clerical or otherwise, and he would not ask to be paid until the final dividend went to the shareholders. The 400*l*. would not include legal or auction advertising expenses.

Mr. Guinness considered that, as regarded the liquidation, the programme put forward by the chairman should be carried out, but he would suggest that Mr. T. Davis, one of the largest shareholders, should act with the three gentlemen named in carrying out the work.

Mr. Clinch seconded the motion, which was altered to meet Mr. Guinness's views.

Mr. Daniel: What was the amount of remuneration expected by the directors?

The Chairman: The four who offered themselves were willing to undertake the liquidation, charging only the cost out of pocket. If, at the end, the shareholders thought fit to give them personal remuneration, well and good; if not, they would not expect anything.

Mr. Herne: What were the costs out of pocket? He would not leave himself at the mercy of any lot of shareholders.

The Chairman said it was impossible to tell.

Mr. T. Stuart said Mr. Herne had given no reason for his amendment. If they did not appoint the directors as liquidators they would be insulting them. Surely Mr. Kevans did not mean that the cash out of pocket was to be included iu the 400*l*. he said he would charge?

Mr. Kevans: The 400*l*. will include everything except law costs and advertising.

Mr. Stuart: You do not mean to say that the cash out of pocket would be covered by the 400*l*.?

Mr. Kevans: Certainly; and will include the wages of the men superintending the stuff now in process of manufacture.

The Chairman urged the meeting to recollect that the interests of the proposed liquidators were identical with those of the shareholders, and that they were all interested in having the affairs of the company wound up as speedily as they could, realising as much as possible. As to the *employés*, their services would not be retained longer than required.

A ballot for the election of liquidators was then taken, with the following result:—For Messrs. Casey, Davis, Chandlee, and Shackleton, 467; for Mr. Kevans, 274. The four directors were accordingly declared elected.

A vote of thanks ended the proceedings.

EMBREVILLE FREEHOLD LAND, IRON AND RAILWAY.

A SANGUINE CHAIRMAN—APPLICANTS FOR THE ORES.

An extraordinary general meeting of this company was held on Mar. 25, at Winchester House, for the purpose of considering, and, if thought fit, passing a resolution authorising the directors to sell a certain portion of the property upon the terms of two agreements to be submitted to the meeting.

The Hon. H. Brand

presided, and having detailed the past history of the company, and referred to his recent visit to the mines, and the progress of the railway, stated that the ores in their mine had opened up better than the board had expected, and there was no reason for the present generation troubling themselves about the quantity of it. With regard to the quality, their manager had reported that the ores were within the Bessemer limit, although they could not arrive at any definite conclusion in that respect at present. As soon as the railway was opened the board expected that they would be able to sell surplus ore at the rate of 100 tons to 200 tons per day.

THEY HAD SEVERAL FIRMS SEEKING FOR THEIR ORES,

and the board believed that they would soon be selling it at a very satisfactory profit. Out of the amount received for the sale of ore and timber, they calculated that they would be able to pay the interest on their debenture debt, and to have something considerable towards the preference dividend. He believed that they had already about 15,000 tons of ore banked out for sale. Having fully explained the position of the company with regard to the Town site, he concluded by moving the following resolution:—"That the directors be, and they are hereby, authorised to sell certain portions of the company's property, including the Embreville Town site and Jackson's Farm, in accordance with the terms of the agreement," which was seconded and carried after some discussion.

Mr. Dalgleish said that he had been to America and seen the property. He had put down trial holes and assayed the ore obtained, which he found to be on the whole good, and he thought that he might inform the shareholders that they had ore on their property suitable for making Bessemer pigs, which would command a very good price in the market. He was equally satisfied with regard to the railway, and he thought that the shareholders need have no fear for the future.

The proceedings then terminated.

SHELTON IRON, STEEL, AND COAL CO., LIMITED.

PROSPECTUS ESTIMATES EXCEEDED.

The ordinary general meeting of this company was held last week at Winchester House.

Mr. S. Kendal

presided.

The Chairman, in moving the adoption of the report, said that the shareholders were, no doubt, aware that the present company was formed by the amalgamation of two large businesses, and they would be pleased to hear that since the inception of the company those businesses had worked together in a most satisfactory manner. At the time the prospectus was issued the figures of the businesses were gone into, and it was found that the net profits for the past 10 years averaged something like 25,000*l*. per annum. In the year under review that estimate had been considerably exceeded, and it amounted to 32,000*l*., and that result had been obtained notwithstanding the general depression through which they had had to pass. The market price of bar iron had fallen no less than 33 per cent., and the price of labour in their collieries had risen 20 per cent. Under those circumstances he thought that the net profit was a very satisfactory amount. The whole of the preliminary expenses had been wiped off during the year, which he did not think was a very usual thing. They had paid the interest on their debentures and provided for the sinking fund, placed 3,000*l*. to the reserve fund, and proposed to carry forward 12,539*l*. The board intended to go in a great deal for the manufacturing of steel as it was being used to such a large extent, and they hoped to get their steel as well known in the trade as their iron was at the present time. They were preparing to increase their plant and machinery for the purpose. It was not proposed to pay any dividend on the ordinary shares on that occasion but to carry a large amount over.

THE VENDORS HELD THE WHOLE OF THE ORDINARY SHARES,

and those gentlemen preferred that the dividend should be passed as it would add to the stability of the company. With regard to the item of stock in the balance-sheet, the stock had been taken at a very low figure, and consisted, to a great extent, of a large quantity of the raw material, and had been taken at either market or cost price. The company had their own collieries, did their own smelting and puddling, and carried the whole work of treating the ore through themselves. He had every confidence in the future of the company. He concluded by moving the adoption of the report and the declaration of a dividend for the half-year ended Dec. 31 at the rate of 10 per cent. per annum on the preference shares.

Other formal business having been transacted, the proceedings terminated with a vote of thanks to the chairman.

THE NEW ZEALAND ANTIMONY CO., LIMITED.

EXHAUSTIVE STATEMENT FROM THE CHAIRMAN—THE LATEST NEWS FROM THE COMPANY—THREE COURSES OPEN—A FRIENDLY COMMITTEE FORMED—AN ADJOURNMENT FOR A FORTNIGHT.

The ordinary general meeting of the New Zealand Antimony Co., Limited, was held at Winchester House, Old Broad Street, E.C., yesterday, for the purposes following, namely:—To receive and consider the statement of income and expenditure and the balance-sheet, the reports of the directors and of the auditors and any matters incident thereto, to elect directors and other officers in the place of those retiring by rotation, and to transact the other ordinary business of the company. The notice added:—"The directors will, at this meeting, take the opinion of the shareholders upon the question of raising the sum of 12,500*l*. by the issue of debentures of the company."

Mr. James Gibberd

presided.

Mr. Everard Calvert (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The Chairman said that he did not feel that he could enter upon the business of the day without referring, however briefly, to the circumstances under which they had met. To him they were sufficiently sad and depressing, for it was only last week that he had followed to the grave he who should have taken the chair on that occasion. In

THE DEATH OF MR. NAIDLEY

he felt that he had sustained that severe deprivation, the loss of a friend. They had all lost one who with earnestness and integrity of purpose strove to further their interests, and who spared neither time nor thought nor labour in the endeavour to work out the redemption of the company. One of his last conscious acts whilst he laid on what was his deathbed was to dictate a memorandum setting forth for the benefit of his colleagues his views as to the best course to be pursued in the present emergency. All those present he was sure would join in expression of regret at his untimely end and in sympathy with the chief sufferers those whom he had left behind. In calling the attention of the shareholders to the accounts, there were one or two matters upon which he wished to remark. They would observe that in the profit and loss account for 1890, and in the amended account for 1889, the board had written off per centages from several items. That was simply in accordance with sound business principles. Plant, machinery, and tools all depreciated in value, and the benefits of permanent mining work were in time exhausted, and those items ought not, therefore, in the judgment of the directors to be taken in year after year without allowance or reduction. Of course that was simply a matter of account, and neither added to or diminished the funds in the possession of the company. Another matter which might have caused some surprise, was the writing down of the property to 20,000*l*. The explanation was simple, and was as follows:—The New Zealand Government imposed a property-tax of one penny in the £, and the present Commissioner had stated that that must be paid upon the amount at which the property stood in the balance-sheet. The representative of the company, Mr. Richardson, had paid provisionally upon 100,000*l*., and wrote that he (the Commissioner) now positively stated "that he would be bound to enforce the payment of the tax on whatever amount the balance-sheet of the company showed to be the estimate of the value of the property. Now, either the mine would be carried on, or it would not, if it was not the valuation would matter little, but if it is the directors did not think that they should place the company in a position of having to pay several hundred pounds out of newly raised capital, for which there would be no return. They had therefore thought it better to place the amount at 20,000*l*., but even that would involve a payment of about 40*l*. He now wished to refer to the matter of the compromise that the shareholders authorised them to make when they were last called together. The letters that had since come to hand from their colonial solicitors, confirmed the directors' views as to the wisdom of the course pursued in settling that action. The shareholders were aware that it was stated in the prospectus "a report has been received from the mine that 14,000 tons of ore are ready for shipment." They could find no trace whatever of any such statement, made by or on behalf of the vendors. But Mr. Logan wrote that there were 1,500 tons at grass waiting treatment by machinery and any case based upon the assumption that it had been asserted that there was this or any other quantity ready for shipment, must, he thought, necessarily have broken down. Allowance must, however, be made for stoppage and unforeseen accidents; the quantity, therefore, after this month, which has been broken, owing to the holidays, ought to, and I have no doubt will, show a substantial increase, and once the mine is in the order I have pointed out to you that it should be (and to obtain this all our efforts must now be directed), the quantity of 50 to 60 tons a month must be forthcoming." This calculation the directors at the time regarded as so little encouraging, that, in their judgment, they felt that the best thing would be to at once wind up the company, but the later information

that they had received had, as he had already said, altered their views in the matter. It appeared that they were mistaken in assuming that the 50 to 60 tons promised was conditional on No. 1 lode being cut, as Mr. Richardson spoke of sending for the following month 50 tons for the next 60 and the next 70 tons. Now, in this case, he was glad to say the promise had been fulfilled, inasmuch as they yesterday received a cablegram stating that 46 tons had been shipped, and, therefore, Mr. Richardson was within 4 tons of his promise. Having alluded to the serious error in localising No. 1 lode by Mr. Fitzherbert, their inspector, which had cost them 800*l.* of useless outlay, and necessitated their commencing again at the original spot. Mr. Fitzherbert had resigned his position, and that resignation had beeu acceptcd, but he (the speaker) regretted that he should ever have been appointed. (Hear, hear.) With regard to

THE FINANCIAL POSITION,

it became evident to them that towards the close of last year they could not hope to turn the corner, and that further funds would be needed if the mine was to be carried on. The general results were sufficiently favourable to induce them to believe that the right course to adopt was to re-construct the company, in order to raise the further capital needed. But they were met by an initial difficulty. This company, unlike other companies, had a large block of shareholders resident in one spot, and they were advised that the Court would not pass any scheme of re-construction, as to which they had not been consulted. They therefore drew up their scheme and sent it out to Mr. Richardson, with instructions to call a meeting of colonial shareholders, submit it to them, and cable their decision. At that time a very unfortunate event occurred, namely, the discrepancy which had existed of late between the assays received from the colony and those taken here, which had ranged from 4 to 17 per cent. The first shipment was sold at 21*l.* per ton for 50 per cent. ore, with a sliding scale for each unit below 50 per cent. on that ore assayed. The assaying was very low, and they found that after paying expenses incurred, they only realised 9*l.* per ton net. The ore, however, had been drawn against at the rate of 14*l.* per ton, and they therefore had to disburse to the extent of 5*l.* a ton on the shipment. That was a very grave matter, and made so serious an inroad upon their funds here, that they thought it advisable to cable to the colony restrictiug their draft to 8*l.* a ton, instead of 14*l.*, and advising them what the result of the sale had been. Those on the other side were of opinion that 45 per cent. ore would realise 14*l.* per ton, but as a matter of fact ore of that character would have realised 16*l.* to 17*l.* per ton. The second shipment and the third shipment showed the same unfortunate results. Some weeks ago they telegraphed to Mr. Richardson on that subject, and as he replied by assuring them that the assays were correct, the board determined to take means to see whether they were correct or not. On the last shipment four different qualities, each of different grades, were taken, and in order that there should be no possible reason for doubt, they wrote to Messrs. Cookson, who bought the parcel in question, stating that a difference had arisen as to the sampling of the ore, and that they were to have someone present at the sampling. To that request Messrs. Cookson kindly assented. After explaining the process of sampling, he said that samples of the various qualities (four in all), one of which was given to the sampler, one sent to Messrs. Claudet, the assayers agreed upon, aud one to themselves, the certificate of the assayers showed the following differences as compared with the colonial

ASSAYS :—

Lot No. 1, colonial assay, 4 1 per cent., assays here 36.40 per cent. ; lot No. 2, colonial assay 48 per cent., assays here 41.50 per cent. ; lot No. 3, colonial assay 50 per cent., assays here 36.20 per cent. ; lot No. 4, colonial assay 53 per cent., assays here 36.10 per cent. In order to test Messrs. Claudet's accuracy they sent their samples of lots 1 and 4 to Mr. Riley, a well-known assayer, and the results were fractionally the same as those received from Messrs. Claudet. He thought they would agree with him that nothing more could be done. They had exercised the utmost care in watching the sampling, and there had been two independent assays, both agreeing, and yet they would see that the results were from 4½ per cent. to 17 per cent. below what they were in the colony. They assumed that they were right, but he gathered from the report of the New Zealand shareholders on the other side that they had formed the impressiou that the board were not qualified for their duties. At all events the decision they came to was that the shareholders on the other side were were willing to join in the re-construction, but only on condition that the funds so raised should be remitted to Wellington to be placed at the disposal of a local board. They had explained to the shareholders that they were not to be blamed. The assays here were by chemical tests, which were most reliable, and they could only assume that in the colony they had not sampled the ore, and hence the diversity in the colonial and English assays.

Mr. Lomas : What is the number of shares held in New Zealand?

The Chairman : I think the number is 29,000. Continuing, the Chairman said that the ore got from the mine for sometime past had been of a poorer quality than they had ever got before in the history of the company. From the very last report they found that as it came from the mine it did not assay more than 50 per cent., so they saw that a very large quantity had to pass through the mill without getting any great results. For instance, last month they were told that they passed through the mill 100 tons per week, resulting in the shipment of 50 tons of ore per month, averaging, according to their assays, 45 per cent. What it would be when it came here they did not know, but, judging from the last three shipments, it would not average more than 37 per cent. He should imagine that if they were correct in their percentage of ore that they would require considerably more than 70 tons shipped to pay the expenses. Therefore, if any improvement were to be looked for, it would be foolish on their part to recommend the shareholders to carry on the company on no footing at all. But they had to bear in mind that the grade of ore they got from the mines had been very low of late, because they had not been working on regular lodes. They expected in a short time to get richer ore that would yield greater results per ton, and that they would cut the ore along that celebrated lode in No. 1 tunnel. Suppose they got 50 per cent. ore, the 60 to 70 tons would about cover the expense, and if a larger quantity were found there would be a margin of profit. That was how the case stood now. He did not want to say one word that would lead them to a false conclusion, but it did appear to him that under the light of the last advice it would be a pity to throw away the concern by a liquidation. He would just point out the three courses open to them. First, there was liquidation, which they did not recommend. Then there were the debentures which the directors suggested in the report ; and then there was re-construction. He did not think that the debentures if issued would be taken up, as every geutleman applied to would be waiting for his right or left-hand neighbour to take them up, and he thought that the only course which the company could adopt was re-construction, and a great deal of difficulty lay in their way with respect to that re-construction, arising from the fact that the New Zealand shareholders had recently showed a great distrust towards the London board; and if the shareholders decided on re-construction the New Zealand shareholders would only agree to it on the condition that they had the control of the funds of the company. The directors had received the shorthand writer's report of the meeting held, where there were a great many hard words said about the London board, which showed that it was the opinion of those shareholders that the board had been throwing away the ore sent over in the London market. Under those circumstances he thought that there were great difficulties in the way of re-construction, and if, under the circumstances, the shareholders would like to appoint a committee to confer with the board, and recommend to the shareholders which course should be pursued. the directors would be happy to meet them. As he had said, the three courses before them were,

LIQUIDATION, DEBENTURES, OR RE-CONSTRUCTION.

He desired to have the opinion of the shareholders upon the matter. Since the death of his friend and colleague, Mr. Naidley, there had been only two directors, and the responsibility was too great for them to undertake. They would welcome the advice and co-operation of the shareholders, and would be glad, as he had said, to meet a consultative committee to go into the question of the course to be adopted. Having alluded to the syndicate agreement, and stated that their legal advisers believed that they had a good claim for the restitution of the money from Sir Walter Butler, who was a director at the time of the signing of the agreement, he said that had the company been in funds that action would have been prosecuted before now. He concluded with an expression of his willingness to answer any questions, and formally moved the adoption of the report and statement of accounts.

Mr. Simpson (director) seconded the motion, and read various extracts recently received from the mine, which corroborated the remarks of the chairman as to more encouraging prospects at the present time.

Mr. Arbuthnot asked if there was any special clauses in the article giving the colonial shareholders power over those here.

The Chairman : No.

Mr. Arbuthnot said, could the colonial shareholders force the hands of the English shareholders ?

The Chairman said no ; but they could prevent the company from carrying out the re-construction soheme. A majority of 75 per cent. was needed.

Mr. Bristow asked if the articles of association gave the board power to issue debentures.

The Chairman : Yes.

Mr. Simpson said that the articles gave the board almost unlimited power.

In reply to another shareholder,

The Chairman said that a debenture resolution would not be binding on anyone. It would be optional to anyone to take up what they liked.

Mr. Bristow advised an adjournment.

The Chairman said the appointment of a consultative committee would carry with it an adjournment, as that committee would have to report to a future meeting.

In reply to Mr. Lomas,

The Chairman said that if new directors were appointed, the present board would give all the assistance in their power.

Mr. Lomas said that the death of Mr. Naidley was, no doubt, accelerated by his anxiety for the affairs of the company. The shareholders all had confidence in the present board. (Hear, hear.) They wanted no change. (Hear, hear.) He advocated the issue of debentures as the best policy. He did not consider re-construction would be any good. If debentures failed let them liquidate.

Mr. Jackson did not think that they would get money on debentures. He saw two steps only before them, either re-construction or liquidation. He thought that the proposal of the chairman was a fair and just one—for a committee to calmly and dispassionately go thoroughly into the matter, and that the meeting should

STAND ADJOURNED

to receive the report of the committee and directors. (Hear, hear.)

The general opinion of the meeting was in favour of this course.

The report was then adopted.

Mr. Cates said they could not have better directors than they now had, but he felt that the hands of the board should be strengthened by the addition of one or two more directors.

A Shareholder suggested that the offer should be made to the New Zealaud board to appoint representative members on the London board.

Another Shareholder suggested that the New Zealand board should be allowed to appoint an assayer on this side of their own.

The Chairman said the London board would be only too glad to agree to either proposal.

A Shareholder was about to propose the re-election of the retiring directors, when the Chairman interposed, and thought that it was better the matter should be left to the adjourned meeting, as if the committee were to advise liquidation it would not be needful to appoint any new board.

Mr. Arbuthnot said that it was desirable that thc meeting should place on record their entire confidencc in the English board, and that any negotiations should be made on that basis. (Hear, hear.)

A Voice :

A VOTE OF CONFIDENCE.

(Hear, hear.)

Mr. Arbuthnot : I will move that.

Mr. Cates seconded.
The motion was carried.
The Chairman briefly returned thanks on behalf of the board, and felt, he said, very much the kind expressions of the shareholders.
Mr. Simpson suggested that to bring the thing to a head, they should pass a resolution for the appointment of a committee. He would propose "That a committee consisting of Genl. Brett, Mr. Comfort, Mr. Arbuthnot and Mr. Jackson be appointed to confer with the directors (with power to add to their number), and that this meeting be adjourned for a fortnight."
Mr. Edgar Green seconded.
The motion was carried.
The auditors were re-appointed.
A vote of thanks to the chairman closed the meeting.

THE MONEY MARKET.

City, Friday Evening.

Holiday, quarter day, and dividend requirements, combined to cause some pressure for money, and for the time strengthened the Money Market, but the gradual return of the proceeds has at length eased the position, so that bills from 2⅜ are now nearer 2¼ per cent., and short loans from 3¼, ½ per cent. have relapsed to about 2½ per cent. Although, until the turn of the financial year, and the release of the dividends on the Funds on Monday, the easier tendency canno be relied upon. The Treasury Bills allotted on Wednesday went at low rates, or under 2¼ per cent. for three months' bills, and about 2⅜ per cent. for the "yearlings." Imports of gold have continued in the form of sovereigns, but exports have preponderated to the extent of 287,000*l.*, and this, with 640,000*l.* in coin absorbed for circulation, and 170,000*l.* also in notes, have, as the *Gazette* return shows, reduced the reserve by 1,100,000*l.* to 13,835,000*l.*, against 15,354,000*l.* at this time last year. The full effect, however, is not shown, as the liability under deposits has been reduced, and the proportion is, therefore, only 1⅜ per cent. less at 33⅜ per cent., or within a fraction of the lowest points consonant with safe banking. The public deposits are over a million less, due to the quarter's disbursements, and the private deposits have also been reduced by half a million. The private securities have fallen off nearly the same in spite of the heavy demand, probably as Treasury bills held by the Bank fell due.

The Stock Exchange has in a sense been a howling wilderness, for only within the last day or so has there been anything approaching an attendance, and even then business has been practically dead. It would seem as if the financial situation is becoming chronic, and the death of Mr. T. C. Baring, M.P., is a fresh blow to the markets. Politics, too, have come to the front in the shape of the embroglio between Italy and the United States, the dastardly assassination in Bulgaria, and our own little affair in the wilds of India. These matters are all units, it is true, but still they cause misgivings of a character which become intensified in a period when it is difficult to sell other than the soundest securities. The influence of the decision of Sharp *v.* Wakefield is having its effects again on breweries where those enterprises known to have an extensive tied trade have suffered in an appreciable degree. Allsopp's Ordinary has lost about 7 per cent., but in the latter, as in Guinness's, gambling has lately revived. Consols and India stocks are lamer, while Colonial are firm. Foreign bonds have fallen, and Uruguay and Argentine exhibit a serious loss. Cedulas have become unsaleable on an advancing gold premium, and increasing defaults in the country over interest now due; however, some definite announcement is looked for in respect to the future of Cedulas. In English Railways there is a fall on disappointing traffics, caused, perhaps, by chilly weather and the fact that Easter this year is a week earlier than last. Grand Trunk and Canadian Pacific Railway descriptions alone have resisted the downward movement, and, as regards the latter, all is arranged for the company to enter New York. American lines were irregular and featureless. On balance, prices have shrunk solely due to lack of business here, and general nervousness. Mexican Railways remain weak, and Nitrates and Miscellaneous show similar symptoms. Banks appear to expand, however, as the opposition to 1*l.* notes increases.

Money was in comparatively good supply to-day, consequently rates for short loans declined to 2¼, ¾ per cent., and for discounting three months' bills to 2⅛. However, business in the latter was so small as to render the market nominal. The Paris "cheque" was again firmer, and the New York exchange remains so persistently at gold point as to warrant the fear on that side that gold exports are to be resumed.

At the Bank of England to-day 35,000*l.* arrived from Australia, but 10,000 sovereigns were taken for Roumania. Bar silver declined to 44 11/16d. per oz.

With next to nothing doing, the markets have been very dull to-day, and prices generally, as might be expected from the unfavourable concatenation of events have further relapsed. The Funds were weak, but unaltered for money at 96⅜, ½, while easier for account at 96⅝. The Two and a-half per Cent. and Indian Stocks were flatter, and Victoria Three and a-half fell ½ on the notification that the new loan wanted will be immediately issued, the Associated Banks under-writing it at 98. Foreign Stocks were flatter, particularly Argentine, through a further reported advance in the gold premium to 275 per cent. The Sterling Loans are ½ to 1 lower, the Buenos Ayres Two per Cent, and the Cedulas ¼ to ½ although some of the gold issues are being paid, and there is some prospect of an arrangement of the others. Uruguay also receded ¼ to ½, and International Stocks ⅛ to ¼, Italian continuing weak on the commercial crisis in that country. Home Rails, apart from North British, were rather lower, with a fall of nearly 1 per cent. in South Eastern "A." Brighton "A" also fell to 153½, but rallied on the traffic return. American Stocks also receded ¼ to ½, with ¾ in Northern Pacific Preference and 1 in Wabash Debentures, but there was a rather better feeliug at the close. Grand Trunk Stocks improved ¼ to ¾; Mexican Issues ½ to 1½, closing at the best. Ottoman Bank Shares further receded, although the Defence Conversion has been a great success, and most Miscellaneous Securities have relapsed, with 3 per cent. in Allsopp's Preference.

Annexed are the final quotations to-day:—Consols Account, 96 3/16, 96 11/16; Egyptian Preference, 94, 94¼; Egyptian Unified, 98¼, 98⅜; French Four-and-Half per Cents., 104¼, 104¾; Hungarian, 91⅞, 92⅛; Italian, 93, 93⅛; Mexican, 89¾, 90¼; Peru Corporation, 10, 10¼; Peru Corporation Preference, 28¾, 29¼; Russian, 1873, 98½, 99; Portuguese, 56½, 56⅝; Spanish, 76 1/16, 76 3/16 xd.; Turkish, 1871, 99¼, 99¾; Turkish New Defence, 1 5/16, 1 1/16 pm.; Caledonian Railway, 114⅞, 115; Great Eastern, 96¼, 96½; Great Western, 159⅜, 159⅝; Brighton "A," 153¾, 154; North Western, 174½, 174¾; Metropolitan, 79, 79½; Metropolitan District, 30, 30½; Midland, 149⅝, 149¾; North British, 42⅞, 43⅛; North Eastern, 162¾, 163⅜; South Eastern "A," 93½, 93¾; Mexican Railway Ordinary, 41, 41¼; Grand Trunk 8 15/16, 9 1/16; Grand Trunk First Preference, 59¼, 59¾; Grand Trunk Second, 39¼, 39¾; Grand Trunk Third, 21⅛, 21⅜, Canadian Pacific, 79⅜, 79⅝; Denver Preferred, 58¾, 59; Erie, 18⅞, 19⅛; Milwaukee, 57⅛, 57⅜; Lake Shore, 112, 112½; Louisville, 75⅜, 75⅝; Atlantic First, 31, 31½; Ontario, 17¼, 17½; Ohio, 16¾, 17¼; Norfolk and Western, 54½, 54¾; Reading, 15¼, 15½; Reading 5 per Cent. Bonds, 51½, 52½; Union Pacific, 45¾, 46; Wabash Preference, 18, 18½; Ottoman Bank, 14¼, 14⅜; Anglo-Telegraph, 47¼, 47¾; National Telephone, 4⅜, 4⅝; Hudson's Bay, 17⅜, 18; Suez Canal, 97½, 98; Guinness Brewery, Ordinary, 303, 306; Allsopp's Ordinary, 33, 35; Bryant and May, 13¾, 14; Eastmans, 10, 10¼.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

To the Editor of the Mining World and Engineering Record.

EMMA SHARES.

Sir,—I noticed a letter in your paper last week from "Observer," respecting the Emma Mine, which I endorse, and confirm, all he says. Also, in my book I have a note of the editor's remarks, Nov. 15, "That about Apl. the price of Emma shares will, in our opinion, be higher than they have been for some years." I am quite of opinion we shall see those remarks fulfilled before the end of the present month. No doubt the time has arrived to buy Emmas largely for a sharp rise. As to his remarks as to a call, I have ascertained that no call will be needed to meet expenses. As the winter closes, the company is in high expectations of large returns, which are generally the early part of May; the facilities in connecting the drifts with the tunnel reducing expenses very largely, and such bodies of ore opened up, no doubt make a great prize in store for the Emma shareholders. Also, Colorados have excellent prospects under the present management, and must very shortly have a considerable rise.—I am, &c.,

G. I. H.

YURUARI MEETING.

Sir,—The shareholders are indebted to you for your full and impartial report of the meeting. I have not much of an opinion of the present board, but I think they are preferable to placing the concern in the hands of people who may have other motives to serve. Vendors and their agents do not usually turn up at meetings for the benefit of shareholders, and solicitors do not deliver speeches wholly for the love of the thing. At least that is my experience. But I was consumedly amused by the naive statement of the chairman where he said that "no shareholder has contributed 6d. to the London outlay." He went on to explain this extraordinary statement by saying that the present directors had paid in calls about 13,000*l.*, and the London expenses had not been more than 9,000*l.*, so that you are 4,000*l.* to the good with regard to money." I do not doubt, as the report shows, that that statement was received with laughter. I should have been surprised if it had been received in any other way.

Do Mr. Watt and his colleagues need to be told that their 13,000*l.* was not a free gift to the company. If it had been, then, indeed, the shareholders would have had not 4,000*l.*, but 13,000*l.* to the good, but the latter sum was put into the company as their own private speculation, by which they stood to gain or lose as the other shareholders, including myself, did. Any independent shareholder can argue in the same way with the same measure of accuracy, and no more—and that measure is small.—I am, &c.,

100 Shares.

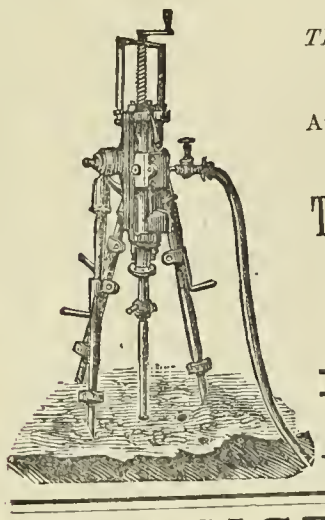
YURUARI MEETING—HOW IT STRIKES A SHAREHOLDER.

Sir,—I am quite satisfied with the result of the Yuruari meeting. When solicitors buy shares to attend meetings and deliver speeches in favour of a certain line of policy, I invariably, with the instinct of self-preservation, vote against that policy. The address of the eloquent gentleman of the legal profession who spoke a week ago was interlarded with the mention of actions, injunctions, and writs, out of which, as you truly remark, dividends are not made for shareholders, though fees are piled up for lawyers. The shareholders were shrewd enough to see this, and voted accordingly. At the same time, I do not think Yuruari affairs will ever quieten down until we have a stronger board than at present exists. When we have that stronger board the shares will be worth more than they are to-day.—I am, &c.,

A Shareholder for Years.

Apl. 2, 1891.

Colombian Mines.—The reports from most of these mines are to hand, and speaking generally, they read exceedingly well. Colon looks likely to see a speedy termination to her legal or water troubles; Colombian Hydraulic looks well; Gravel Gold is approaching daily the commencement of working; Loma gravel is becoming richer than hitherto; Orita gravel is becoming softer—a most important feature; Tolima looks splendid as ever, and North Tolima has made a good profit. Taken altogether the record is a very favourable one, and such as to induce confidence both in Colombia and its mines.—From Mr. Thos. Thompson's Apl. Circular.



GOLD MEDAL AT THE CRYSTAL PALACE MINING EXHIBITION, 1890, and THE ONLY GOLD MEDAL AWARDED AT THE LEEDS MINING EXHIBITION, 1890

HIGHEST AWARDS:—Silver Medal, Sydney, 1879. Silver Medal, Paris, 1878. First Silver Medal, Mining Institute of Cornwall, 1881 and 1883. Awarded the First Prize at the Rock Drill Boring Competition, at East Pool Mine, Cornwall, Sept., 1883. Inventions Exhibition of 1885; and the Gold Medal at Liverpool of 1886 Winner.

AND ECLIPSING ALL OTHER MACHINES IN THE TRIPOD COMPETITION AT THE MINING EXHIBITION, CRYSTAL PALACE, 1890.

THE PATENT "ECLIPSE" ROCK DRILL and RELIANCE AIR COMPRESSOR

now supplied to the English, Foreign, and Colonial Governments, and are also in use in a number of the large Mines, Railways, Quarries, and Harbour Works in Great Britain and Abroad, and largely used in the United States of America.

THE MINING COMPANY OF IRELAND, LIMITED.

(In Liquidation.)

VOLUNTARY WINDING UP OF THE COMPANY.

NOTICE OF SALES.

The LIQUIDATORS HEREBY GIVE NOTICE that they will be prepared to receive Tenders up to May 1, 1891, for the purchase of the following Properties, detailed particulars of which will be furnished on application:—

(1.) RINGSEND LEAD WORKS, Ringsend, Dublin, in which the manufacture of sheet lead, lead water pipes, composition gas pipe, Corporation alloyed pipes, &c., is being carried on. These Premises are held under leases for a long term, at a gross rent of £151 12s. 3d. a year and taxes. A small portion of land and a cottage adjoining are held under a short lease at £25 a year and taxes, and are at present sub-let at about the same rent.

(2.) BALLYCORUS LEAD WORKS, near Carrick Mines, County Dublin, in which the operations and manufactures of smelting lead ore, desilverising, making shot, and red lead, &c., are being carried on. The premises are leasehold, subject to the yearly rent of £1 18s and taxes. Premises let to tenants produce about £110 a year, and there are several workmen's cottages on the property. The mountain and land adjacent to the land on which the chimney is erected are held under a short lease, subject to the yearly rent of £30, and realise by grazing lettings about sufficient to pay the rent.

NOTE.

Tenders will be received for the purchase of the foregoing lots, either together or separately.

(3). The SLIEVARDAGH COLLIERIES, near Thurles, in the County of Tipperary. The Company's mining rights extend over a very large tract of country, a great portion of which is unworked, and there is an almost inexhaustible supply of coal and culm therein. The property is variously held, including surface land, part of it being in fee, and not subject to any rent or royalty whatever. There is a large number of cottages on the property. The collieries have been worked until quite recently, and are in working order. All particulars as to the takings will be given on application.

(4.) A large Stock of excellent Culm at the pits' mouths at Slievardagh will be Sold with the Collieries.

(5.) The MINES of KNOCKMAHON and ARDMORE (near Bonmahon, a shipping place in the County of Waterford, and within 5 miles of a railway station), held in fee, and not subject to any rent. Knockmahon was partially worked for many years with great success by the Company, and immense quantities of Copper Ore of good quality were raised, but Ardmore has not been worked by the Company. The property presents ample opportunity for further exploration.

Full particulars as to title and otherwise can be had on application to

REPORTS OF MEETINGS.

MONTANA CO., LIMITED.

MR. R. T. BAYLISS DELIVERS AN EXHAUSTIVE SPEECH ON THE FUTURE OF THE MINE, IN WHICH HE EXPRESSES UNSWERVING CONFIDENCE—THE NEW ARRANGEMENTS AS TO THE MANAGEMENT RECEIVED WITH SATISFACTION BY THE SHAREHOLDERS —SPEECHES BY MR. THOMAS PHILLPOTTS AND MR. CROWTHER.

THE fourteenth ordinary general meeting of the shareholders was held at Winchester House, Old Broad Street, on Tuesday, 31st ult. The notice stated that "the business of the meeting will be to receive and consider the statement of income and expenditure, the balance-sheet and report of the directors and auditor for the past half-year, to elect two directors in place of those retiring by rotation, to elect an auditor, and to transact any other business which, under the articles, ought to be transacted at an ordinary meeting."

Mr. Thomas Phillpotts

(managing director of the company) presided.

ABSENCE OF MR. PIXLEY.

The CHAIRMAN: Gentlemen, our colleague, Mr. Pixley, who is recruiting his health abroad, hoped to have returned to England in time to attend this meetiug, but, iu a letter I received from him a few days ago, he expresses his regret that he cannot be present, and requests me to apologise to you for his unavoidable absence. Iu occupying his seat on this occasion, I trust that I may receive tho same generous support you are in the habit of accordiug to him. I will now call upon the secretary to read the notice convening this meeting.

Mr. THOMAS NEAL (secretary) read the notice of meeting, and the report of the board was taken as read.

A FULL REPORT.

The CHAIRMAN: I presume that we may take the report as read. (Hear, hear.) Iu moving the adoption of the saue, I will only trespass upon your patience a few minutes, for, as Mr. R. T. Bayliss is with us to-day, you will, I am sure, be as anxious to have, as he is to give, an account of his stewardship. I shall leave it to him to explain the nature and extent of the underground developmeuts in the mine, and, with the assistance of the illustrations on the wall, you will be readily able to follow his remarks. Our report is drawn upon the same lines as heretofore, and although some old shareholders consider it too voluminous, I would remind such critics that in the course of six months many thousands of shares chauge hands, and we are anxious to give to our new shareholders information upon all points which we think may be of interest to theu. These gentlemen will notice from the tabular statements on pages 3 to 6 that the dividends paid during this last six years and a half have ranged from 5 to 30 per cent. per annum.

WHAT THE MINES HAVE DONE.

They will observe also that in the same period the mines have returned a profit of 673,000*l*.—which is more thau the total eapital of the company—and that from this amount we shall have paid up to Apl. 15 537,000*l*. in dividends, the greater portion of the balance having been expended in the acquisition of additional mineral ground, machinery, &c., and this will naturally lead them to hope that so soon as we get through the barren and impoverished ground we have recently encountered, we may reasonably expect to meet with a recurrence of those richer deposits of ore found in the upper levels, and this conclusion, we have every reason to believe, will eventually prove to be correct. Mr. R. T. Bayliss and Mr. G. H. Robinson both share in the disappointment we must all feel, that, although every effort has been made to push on our explorations during the past year, which have exceeded by 10 per cent. the work done in the previous year, this work has not resulted in the discovery of any richer ore bodies. The greatest development of pay ore has been iu the north end of the mine, and our largest supply of high grade orc at present comes from the Empire shoot; but both Mr. Bayliss and Mr. Robinson are of opinion that persistent efforts in prosecuting our explorations will eventually be crowned with success, and that the prospects of the company, so far from being discouraging, warrant them in anticipating that the future returns from our properties will be as remunerative as they have been in the past. With regard to the Bluebird and Hickey property, we consider that a sufficient expenditure has been made to prove the value of this mine, and to show that it may hereafter be worked profitably in the interests of the Montana Co.; but in the present financial position of the company we do not think it advisable to incur any extra expense which can be avoided. We, therefore, recommend the postponement for a time of the further development of this property. Unhappily we are still engaged in litigation, which promises to be both tedious and costly, but we are advised that these suits will be decided in our favour. At the same time we must not forget that many intricate legal points are involved. I think, therefore, you will agree with us that it is advisable the conduct of this business should bo left in the hands of those agents and the legal and professional experts who have hitherto been protecting our interests. The accounts are so clear and explicit that I need not occupy your time in discussing them, and will now beg to call your atteution to the last paragraphs of our report. You may imagine our surprise when, at our first interview with Mr. R. T. Bayliss on his arrival in London, we received from him the resignations of both himself and Mr. Robinson, and it was with much regret we learned that these geutlemen felt it necessary to take this step in consequence of impaired health, and the conviction that they must completely break down if they continued to reside in such a trying climate and iu such a rarefied atmosphere.

THE NEW MANAGERIAL ARRANGEMENTS.

Now, gentlemen, I need scarcely tell you that we have carefully—very carefully—considered the position of the company and the importance of the issues involved. We have fully discussed all details with Mr. Bayliss, and after much anxious deliberation as to the most practical method of reducing the expenditure, and how best to safeguard the interests of the shareholders, have determined to recommend the adoption of the following scheme:—The 10-stamp mill is worn out. It was an old one when purchased, and erected many years ago, and is not worth the costly expense of the repairs required to put it in good working order. We propose to shut it down and dismantle it. We shall still have the 50 and the 60-stamp mills, both of which are in perfect repair and good working order. Twenty heads of the 50-stamp mill will be devoted to crushing ores of $20 per ton value and upwards, the remaining 30 heads of stamps, together with those in the 60-stamp mill, to crushing ore of a lower grade. We shall thus have 20 stamps crushing our high grade ore, and 90 stamps crushing ores of a lower grade. The present salaries paid to Mr. Bayliss, Mr. Robinson, and a few members of the staff, will cease. But we propose to still retain the services of Messrs. Bayliss and Robinson, who will undertake the mine surveys, and exercise a general supervision of our works and legal business, at a remuneration of 2,000*l*. a year. We shall also have to make a slight increase in the remuneration of two members of the staff. By these changes it is estimated that the net reduction in our expenses will amount, in round figures, to about $10,000 a month. It will be seen on page 19 of Mr. Robinson's report that he estimates our reserves of ore on Dec. 31 last at 40,400 tons high grade, and 146,800 tons low grade, making a total of 186,200 tons, which is more than equal to a two years' supply for our mills.

REASONABLE EXPECTATIONS.

During these two years it is confidently expected that we shall, by continuing our exploratory works, discover fresh ore bodies, which will add considerably to our reserves of both high and low-grade ores, but, assuming that no appreciable improvement takes place in the quality of such ore bodies, Mr. Bayliss calculates that the proposed scheme will enable us to pay a yearly dividend of 5 per cent. per annum on the capital of the company, leaving a margin of profit of about 8,000*l*. to meet charges on capital account, legal expenses, and other contingencies. We have taken the present value of our ores as being $10 and $20 per ton, but I need scarcely point out to you that any increase in these values will materially add to our yearly profit. I have thus merely given you the broad outlines of the scheme proposed, which, if it meets with your sanction and approval, we shall be prepared to carry out. In conclusion, I have now to submit to you the following resolution, viz., "That the report of the directors and the accounts to Dec. 31, 1890, as presented, be received and adopted." (Loud cheers.)

SAVING OF EXPENSE BY NEW ARRANGEMENT.

Mr. FREDERICK P. CROWTHER (director): Gentlemen, my words shall be few to-day, but they will be to this effect—to recommend you strougly to adopt the policy which will be laid before you by Mr. Bayliss. It has been carefully thought out by the board, and meets with our commendation. It is the only policy that can bo adopted at the present time that will safeguard all your interests. Mr. Bayliss and Mr. Robinson are necessary to this company, and the plan which we have arranged will retain their services very fully at your disposal (those of Mr. Robinsou especially), and at a very much decreased cost as compared with that we havo sustained in the past. The actual saving upon the combiued salaries of Mr. Bayliss and Mr. Robinson will amount to about 4,600*l*. a year, and although we get thoso services at this greatly reduced cost I do not think we shall lose very much by their changing their positions from residents to non-residents. Mr. Robinson pro poses to take up his abode at Helena, which is within 21 miles of the mine

and within an hour's journey by railway. There need be no difficulty about him looking after affairs upon the spot, and he has in Mr. Henley a man who has been with us for 15 months, and of whom Mr. Bayliss and Mr. Robinson both give the highest character as an able and wise superintendent, thoroughly capable of dealing with all the developments as they occur in the mine and the indications which he ought to follow in his work. Now, I know that a great many people are very much discouraged for the moment, because having read our report they consider it

A VERY COLD-BLOODED DOCUMENT.

Well, I admit that it is a very cold-blooded document. You see that we have been holding out to you promises for a considerable period, and, naturally, have arrived at that position at which, whilst we have not changed our views—*I want you clearly to understand that*—yet we have changed our way of expressing ourselves. We have brought you down to what you may call the "hard pan," and the mine in future must speak for itself. Our motives have been good in the past in seeking to encourage you to develop your large property in a miner-like manner. Our policy in the present is to encourage you to continue those developments, and the changes we have made in the management are all with the idea and the object of saving, as much as it is possible to save, in carrying out that policy. Mr. Bayliss will explain to you in detail what I have failed to do, and, in truth, it is no use both speaking to the same points. He is thoroughly acquainted with the property, and can make himself very well understood to you all now as he has done in the past, and therefore at this point I shall only just ask you to listen to a matter which Mr. Phillpotts has requested me to deal—a point that he omitted, and that is in reference to Mr. Bayliss and Mr. Robinson. These two gentlemen are going into partnership as consulting, civil, and mining engineers. They will have an office in Marysville, and an office in London.

FUTURE PLANS.

Mr. Robinson will undertake the supervision of the mines very much upon the same liues that he is doing now. Mr. Bayliss undertakes to visit them as often as is necessary, from this side at least once a year, so that he will make a visit in the summer, and be able to report to the shareholders at the Sept. meeting the results of his observations after a personal visit. I think that is a plan which will keep you in closer contact with your property even than now, and we propose that he shall retain his seat at the board. It is very necessary that Mr. Bayliss should remain with us. Of that I am thoroughly conviuced. There may be differcuces of opinion amongst you who do not know all the circumstances, but as far as I am concerned I have not the shadow of a doubt upon that point, that it is advisable—strongly advisable—in your own interests, if not vital—and I use the word with all its force—that Mr. Bayliss should remain in connection with this mine. He is a very capable and a very able man, although I say so in his presence. (Cheers.) I have now to second the resolution, "That the report of the directors, and accounts to Dec. 31, 1890, be received and adopted." (Cheers.)

The Chairman was about to put the motion, when Mr. Johns suggested that the speech of Mr. Bayliss should first be heard, the discussion taken upon it, and then the motion might more conveniently be put when all the facts were before the shareholders.

VIEWS OF MR. R. T. BAYLISS.

Mr. Rawlinson T. Bayliss (managing director), on rising to address the meeting, was received with loud applause. He said: Mr. Chairman and gentlemen, in order to give you ample time for questioning me I intend to make my remarks this morning as brief as possible, consistent with a full (and I trust you will think intelligent) explanation of the condition of your affairs in Montana, and I shall be considerably assisted in this endeavour if you will extend to me the same patient hearing that you have granted on previous occasions, and reserve, until the conclusion of my address, all comment upon what I may say, and any questions that you may desire to put to me connected with your property. (Hear, hear.) I will undertake then to answer fully and frankly every question that you may put to me, and give any and all the additional information that shareholders may desire.

THREE TOPICS OF DISCOURSE.

For convenience sake, I propose to subdivide my remarks under three heads:—First, the present condition of the mine and its immediate prospects; secondly, my views as to the future working of your property, and the probable results which will be obtained; and thirdly, and lastly, the resignation of Mr. Robinson and myself. With regard to

THE PRESENT CONDITION OF THE MINE,

I feel bound to state that it is not as favourable to-day as I expected that it would be when I addressed you 12 months ago. Nor is it as satisfactory as we were justified in assuming at that time, from indications then present, that it would be now. This is entirely due to two causes—first, to the fact that our developments in the 1,200-ft. level, from No. 2 shaft, have not as yet resulted in the discovery of the ore body first encountered in the 1,000-ft. level, and so profitably worked at that point; and, secondly, that our efforts to find the continuation of the Empire ore body in the 800-ft. level have not yet been successful. When addressing you last Mar., and stating that I believed 12 months hence you would have reason to congratulate yourselves upon the improved condition of the mine, I expected that the development of other portions of your mine would produce the 85,000 tons of ore required for treatment in the mills during the year, and I further relied upon the development in the 1,200-ft. level, and particularly upon the development in the Empire lode in the 800-ft. level, to add a very large tonnage of ore to our high-grade reserves. My first expectation was fully realised, but my second has not been realised, and the addition of over 50,000 tons of ore, which it was my hope to show in your reserves to Dec. 31, has been consequently delayed, and I am denied the pleasure of assuring you (as I had hoped to do) that the condition of your mine was as much improved during the year 1890 as we thought that it would be. Now, if you will kindly follow me in my description of this section of

THE EMPIRE LODE,

I will endeavour to make this point quite clear to you, and will explain the ground upon which my confidence is based, that the discovery of the Empire lode in the 800-ft. level has only been delayed, and that its ultimate discovery may be regarded almost as a practical certainty, and as merely a question of time and exploration. Here on the map is the 400-ft. level of the Drumlummon Mine, and from the surface to this level the Empire lode, within the limited space of these developments, has been shown to contain a well-defined ore body, between 450 and 500 ft. in length, and from 3 to 13 ft. in width. The enclosing walls of the vein as exposed in these developments are very well marked, and altogether it has the appearance of being a strong and permanent vein. Here is the 800-ft. level, where we have been searching for the continuance of this ore body now being worked in the 400, but so far our efforts have not been successful. In our earlier calculations respecting the position in which we might expect to find the continuation of this ore body in the 800-ft. level, we had to be mainly guided by the dip of the lode from the surface to the 400-ft. level, and a cross-cut was run into the hanging-wall from that point with the object of intersecting the vein in that level. But although the cross-cut was advanced for upwards of 100 ft. beyond the point at which we were led to believe from our calculations the Empire lode would be met with, nothing was encountered corresponding in any way to the Empire vein as known in the 400-ft. level. Having failed to find the continuation by the work done in that cross-cut, we again attacked the Empire lode from the 400-ft. level, and have lately commenced to sink a winze with the object of ascertaining the dip or direction of the Empire ore body at greater depth below the 400 level, and to a great extent we have been rewarded for that development, because it has proved conclusively that almost immediately below the 400-ft. level

THE EMPIRE LODE RAPIDLY STRAIGHTENS UP,

and at a point about 60 ft. below, represented by the bottom of the winze, it reverses its dip entirely—I mean, instead of dipping to the east at au angle of 70 degs., it turns over and dips towards the west to a considerable extent. That change, if continued from the 400 down to the 800, would throw the Empire vein considerably beyond the point at which we first anticipated it would be encountered.

IMPORTANCE OF THIS DEVELOPMENT.

A cross-cut is now being driven towards the west, in the 800-ft. level, to test this point, and I am very hopeful that the work we are now doing will ultimately be successful, and if the Empire vein be found at that level to be of the same length and same average width that it is in the 400 it will add upwards of 100,000 tons of ore to our reserves, and the indications go to prove that it will be a high-grade and not a low-grade ore. (Cheers.) I believe the discovery of the Empire lode in the 800-ft. level has only been delayed, and am most sanguine that the work we are now doing will sustain our conviction, that the Empire vein will ultimately prove as productive below the 400 as it has been from the surface to that level. Turning to your old Drumlummon Mine, and the 1,200-ft. level from No. 2 shaft, at the time I addressed you last year we had just made the discovery of the ore body in the 1,000-ft. level, represented in the plan, and looked forward with the greatest confidence to the further discovery of that ore body in the 1,200-ft. level. There again, however, we have had to face another disappointment, for although the vein has been encountered in the 1,200-ft. level, and the ore body to some extent has been found there, and is in places of considerable value, it has not on the whole fulfilled our expectations. That is a great disappointment, but it is a matter which has not altogether discouraged us, for we think there is every reason to believe that valuable ore bodies will yet be encountered in this level, both north and south from the No. 2 shaft. Passing again to the 1,400-ft. level from No. 1 shaft, which has been partially explored since I addressed you last year—although I am unable to report the discovery of any valuable ore body resulting from that work, I have the satisfaction of assuring you that the information we have derived from that development is of the most gratifying description, and holds out greater encouragement for the continued and vigorous prosecution of your mine in depth than has been present with us during the past two or three years. (Cheers.) Now, briefly summarising the foregoing remarks, and reviewing the present condition of your mine and its immediate prospects, you will see, if you have read your reports, that you have now available in the mine, and

READY FOR EXTRACTION, 187,000 TONS

of ore, which can be profitably worked, and which will supply your mills with all the quartz they can treat for at least two years. But the operations of the past two years, gentlemen, have proved something more, namely, that the other developments of the mine have revealed resources practically equal to your rate of extraction, and that without any abnormal discoveries. Thus you will see that even if the discouraging conditions to which I have referred should continue, any suspension of your operations, owing to the inability of your mine to be self-supporting, is very remote, and, moreover, you have before you the possibility of new and valuable discoveries in the Empire lode on the 400 and 800-ft. levels, and the further possibility of very valuable discoveries in the lower levels of your Drumlummon Mine, either of which would place this company in the prosperous condition it has occupied in the past, and which I firmly believe it will again attain in the future. (Cheers.) I now approach the second subject of my remarks in explanation of the policy which I think should be pursued in our future working. The views I hold are based upon an intimate association with the operations of your mine for nearly seven years, and if they are not thoroughly approved by any shareholders who may be present, and who may be experts in mining affairs, I trust that, at any rate, they will lead to, and invite, a discussion, resulting in the adoption of a policy, which shall be most conducive to the prosperity of this com-

pany, which for seven years past has been the great object of my life, and is so still. (Cheers.) In relation to this question of future working, I will first assert that it is of the most vital importance that your

OPERATIONS AND DEVELOPMENT SHOULD NOT BE CURTAILED,

but should be increased wherever and whenever it may be necessary and possible. Judging from letters which have been written by shareholders, and addressed to my colleagues on this subject, I gather that some of the proprietors are of the opinion that the expenditure incurred on explorations in the past has been both excessive and extravagant. Those letters have been written, I feel sure, under a complete misapprehension of the facts, for, probably, no one outside those actively connected with the management of your mine can realise to what extent the efforts and expenditure we have made in that direction have insured the very existence of your mine. (Hear, hear.) There are, no doubt, many amongst you who fail to appreciate the fact that but for the persistent manner in which your directors have pursued this policy of exploration and development in the past, Montana shareholders would have been called upon, as shareholders in so many other mining companies have been called upon, to face the question of raising further capital, and to elect between the discomfiting alternatives of re-construction or liquidation. You have never been called upon to raise further capital by re-construction, and I do not think it likely you ever will so long as your present directors remain in office. (Cheers.) I think it is very probable that much misconception concerning development work is due, in the case of shareholders who may be unfamiliar with mining operations, to the use of that very improper and misleading term "deadwork," so frequently applied to explorations.

A SIMILE.

You might just as well, and with as much reason, accuse the farmer of doing deadwork when he ploughs his land and puts seed into the ground—for cultivation is to a farm what exploration is to a mine—(cheers)—and if, as the owner of each industry, you will neither prospect the one nor cultivate the other, bankruptcy, and ultimate ruin, will overtake you just as soon, and just as surely, in the one case as it will in the other. To show you, further, the utter fallacy of the doctrine which has been advanced, that any practical economy can be made by curtailing your expenditure on exploratory work, I may say that, aside from the discovery of ore bodies contained in your mine, the extraction of which is necessary for the continued operation of your mill, this so-called

"DEAD-WORK" HAS BEEN A GREAT SOURCE OF REVENUE

to you during the past six years. I am putting a very low estimate upon the value of ore taken from within the limits of exploratory drifts driven during that time when I tell you it has yielded a sum equal to 50 per cent. more than the total amount expended to date—(cheers)—so that I beg of you, gentlemen, and of any shareholders who may find fault with us for our expenditure under this head, to take a more reasonable view of what we have been doing, what we are doing now, and, in spite of all criticism, what it is our intention to continue doing—first, for the reason that we consider such exploration work necessary to the very existence of your mine; secondly, because we consider that the expenditure is judicious; and lastly, for the reason which I have just recently mentioned to you—because it is actually a source of considerable profit.

SUGGESTIONS FOR FUTURE WORK.

With regard to the direction in which your future developments shall be made, and having at the same time regard to the all important question of the speedy discovery of new and valuable ore bodies, I would suggest that the most vigorous work should be devoted to your Empire Mine, north of your present workings, for in that direction you have a large extent of the Empire lode which, up to this time, has not been touched; and when you reflect that, as the result of the limited development which you have put upon that mine to this date, you have extracted from that one stope alone, and have still visible there, ore of the value of $600,000, you will appreciate the possibilities of this mine, which I fully expect will prove in the future to equal as a producer your famous Drumlummon Mine. I would also recommend most energetic work in the Empire Mine in the 800-ft. level, which I am convinced will ultimately meet with success, and, if so, the future development of that mine to the lowest levels of the Drumlummon can easily be accomplished, and should add to your reserves such quantity and quality of high grade ore as will place us in a position of almost complete security. These I regard as the two most important points concerning the development of the upper portion of the mine, but there are others which are not being overlooked, and which, I think, you may safely leave with great confidence to the discretion of your mining superintendent. With regard to Drumlummon proper, I would urge the most active and persistent development of your mine in depth, for it is in that direction I look for the discovery of new and valuable ore bodies, upon which I base my faith in the future prosperity of this portion of the mine. I do not rely solely upon my own observations or experience in saying this, as it is the opinion of eminent geologists who have examined and are familiar with your mine, and who think you are justified in looking to the lower levels of this property for a very large production of valuable ore.

COMSTOCK AND DRUMLUMMON LODES.

Further than this, I have been very much struck in studying lately with Mr. Robinson the geology of another very large and productive lode in the United States to find the strong similarity which exists in the geological and structural features of that lode and our own, and also to find that up to the present point in our history the experience of that lode was almost the counterpart of our own. The lode to which I refer is the Comstock, in Nevada, and although I do not want to suggest that you are the happy owners of a mine which will even approach in productiveness that phenomenal lode, I do feel there is sufficient similarity in its geological and other features to justify strong hopes that the results experienced there may in proportion be ultimately ours. Now, without wearying you with geological or technical details I will point out a few of the features common to both lodes. Both fissures, according to competent authorities, were formed about the same time. Both lodes have experienced a second period of disturbance and mineralisation. The strike, or course, of both lodes is identical, being north 15 degs. east. Each vein is paralleled by a dyke of igneous rock, and in each case these dykes are recognised as having played a most important part in the formation and character of the ore bodies. In the Comstock vein disturbances were encountered precisely similar to those we have experienced in No. 1 shaft. Both lodes die out at each end in precisely the same manner. In both cases the footwall is more clearly defined than the hanging-wall. The occurrence of the precious metal in both lodes is almost identical—the value of gold and silver being about the same. In both veins the ore shoots occur in a similar manner, and are of the same shape.

AN IMPORTANT POINT.

Both lodes—and this is a point I want you to notice—after been productive for from 500 ft. to 700 ft. from the surface, became barren, or nearly so, and this point in each mine is coincident with the change of dip. Now, there are very many other points of similarity between the Comstock and Drumlummon lodes, but they are of a more technical description, and although especially interesting to mining engineers who may study them, I fear they might be somewhat wearisome to this audience. I will not, therefore, continue the comparison any further, but hope to point the moral by telling you that the owners of one mine upon the Comstock lode—the Consolidated California and Virginia—although naturally disappointed when they encountered this barren zone in their mine, were men of fearless enterprise, and being fortified by the opinion of eminent geologists (as you have been), determined (as you will have to determine) to sink below the barren zone, if within the limit of human effort to do so. That determination, fearlessly entered upon, proved a very wise one, for at a point 800 ft. further in depth, and when near the 1,400-ft. level, they encountered the great bonanza of that lode, which yielded from one stope alone over $60,000,000, or 12,000,000*l*. Now, gentlemen, my object in referring to the Comstock lode you must please not mistake, and it must not be inferred that I predict the discovery of an ore body of such magnitude in the lower levels of the Drumlummon Mine. I have merely mentioned the fact to add force to my recommendation, that the developments in depth should be continued in a persistent manner. Whilst it is not given to any of us to state in advance what measure of success may attend our further workings, I will point out that there is every reason to believe that if you persist in your developments your mine may ultimately be found to be proportionately as rich in its lower levels as the mine to which I have referred, and that if you prosecute your development work with the same determination, there is equal probability of the same success. On that point I should like to ask you why you should hesitate to adopt this policy of sinking to the deep with all possible speed, or why you should carp at the expense of doing so, particularly when, through the foresight of your directors, you have in your possession new hoisting engines, new air-compressors, new pumps, and other appliances which have a capacity sufficient to take you down 2,500 ft.; why should you have any fear of your mine not proving richer in its lower levels, as so many other mines of this class have done; and why should you despair of your mine which has produced ore to the value of 1,751,812*l*., and is producing still? I can only tell you that if you have any fear I have no share in it; but if ever the day should come when I have either despair or fear you may fully rely that I shall tell you so in the most unmistakable language. It may be as well to mention that the facts I have given you with regard to the Comstock lode are gathered from a published report, ordered by Congress, and prepared at the public expense, and I may add that it is considered one of the most comprehensive and complete mining reports that has ever been published. The plans and sections illustrating that report are in the room, and if any shareholder is interested in the subject, and would like some further information at the conclusion of my address, I shall be most pleased to exhibit these plans and give him all the information in my power. (Cheers.) Another important point in the policy to be adopted for future working is the question of expenditure and cost of operation. Upon this point your directors have also received many letters from shareholders, but beyond making suggestions that the men who are responsible for the successful operation of your mine, and who are devoting the greater part of their time and labour to the furtherance of your interests, should work for nothing—we have not received any practical assistance from our correspondents, or any suggestions for effecting any further economy in expenditure. You have been briefly told by Mr. Crowther what

ECONOMIES WE INTEND TO INTRODUCE

into the future management, and it will be found that they consist chiefly in the re-arrangement of the local management in Marysville, and not in any way by curtailing the expense of development, or the cost of mining, or the treatment of the ore in the mills.

A CHALLENGE.

The actual cost incurred during 1890, per ton of ore extracted, was $8.72: being for mining, $2.37; for prospecting, $1.75; for milling, $2.95; and general and extraneous charges, $1.65; and I challenge anyone to name a mine in the United States, working under the same conditions that we are in Marysville, and devoting to exploratory work the same expenditure, where the ore is being mined and milled for anything less than the sum which I have named to you. (Cheers.) Therefore, I desire to state most explicitly, that apart from the reduction in cost of management which we intend to introduce, the expenditure cannot be reduced in any manner providing that the mechanical operations of your mills and the equipment of your mine are maintained in the same high state of efficiency as at present, and it would most surely be a penny wise and pound foolish policy to maintain the concern upon any lower standing. I see some of the shareholders here to-day who have expressed dissatisfaction in the past with the cost of operating charges incurred in Marysville, and I invite those gentlemen to rise at the conclusion of my address and to embrace this opportunity, now that we are face to face, of telling me in what particular they consider the cost of operation is extravagant, and how they would proceed to effect any further economy. In concluding my remarks on this second head, I can only assure you that during the whole time of my management I

have endeavoured to cut down the operating expenses to the lowest point possible, compatible with good and truly economical management, and, although I may not be able to convince every one of you that your operating expenses are not only reasonable, but extremely low, I have the satisfaction of knowing that it is a fact, fully recognised by mining men in the United States, who are familiar with the management of your property, and the working results which have been obtained during the past six years. (Cheers.)

A FRANK EXPLANATION.

I now desire to give you a very frank explanation concerning the resignation of Mr. Robinson and myself, and I take this opportunity of expressing to my colleagues, as well as to the shareholders, our joint gratitude for the unvarying confidence which, I believe, a very large majority of you have reposed in us for nearly seven years. Seven years in such a locality, and working under such a strain as we have been called upon to bear, takes

A VERY BIG SLICE OUT OF A MAN'S LIFE—

especially when you consider the anxiety and disappointments we have had to face during the past two or three years. We were influenced in the step we have taken by the knowledge that our physical condition during the past 12 months has pointed to the necessity of some greater change of scene and action than can be found within the limited basin surrounding your camp and works in Marysville. We, therefore, determined to hand in our resignation before this meeting, and, as stated in the report, it is our intention to enter into partnership as mining and consulting engineers, with an office in London and an office in Helena. Having come to that conclusion, our first concern was as to the future management of your property, for we were most anxious that our resignation should not affect your interests adversely, and that your directors should not be inconvenienced in the appointment of successors in our stead. We, therefore, did not fix any arbitrary date upon which those resignations should come into effect, but left that matter entirely within the discretion of your board to fix such term of notice as in their opinion might be desirable for your interests. We, naturally, felt very great regret at severing our connection with a mine in which we had worked so long, and in the future prosperity of which we had such great confidence, and that regret gave birth to the idea that if the directors were disposed to avail themselves of

OUR PROFESSIONAL SERVICES AS CONSULTING ENGINEERS,

that our long experience of your property and the detailed information which we have acquired during the past seven years need not be lost to this company. (Cheers.) We therefore suggested to your directors that if a competent superintendent were appointed at Marysville, acting under the direct supervision of Mr. Robinson, who will reside in Helena, and who can visit the mine two or three times a week, and oftener when necessary, and at the same time be responsible for all the mining surveys, and the weekly reports to the directors—that the practical management of your property might continue without being disturbed, and that, with the further assistance I can render your directors in London by retaining my seat on the board, and by visiting the mine once or twice in each year, the future administration might continue under the same guidance as in the past, and at a cost of about one-third what you have been paying hitherto to Mr. Robinson and myself. Realising the difficulties which would beset two strange men, however competent, in taking up the reins of the local management, we felt it nothing short of our clear duty to make this suggestion to the directors, and after carefully considering the matter from every point of view —so carefully, indeed, that I am afraid it delayed this meeting one week—your directors have come to the conclusion, that if the management be continued on these lines it will be in the very best interests of the company, and arrangements have been made accordingly. (Cheers.) Now, gentlemen, I want to make it clear to you, as I have already made it equally clear to my colleagues, that this proposal must be regarded in the nature of a suggestion only, and is presented merely with the desire to assist in securing, at the least possible cost, the most efficient local administration of your affairs in Marysville and in the belief which, I think I may state, without outraging modesty, that the management of your property, if entrusted to our care, will be more satisfactory than it would be if placed in the hands of two strange men, however qualified, who would probably be strangers in the country; who would certainly be strangers in the mine; who would have to associate with strange men; and who would be ignorant of many of the details of the past seven years' operations, which will be matters of vital interest to this company in the future. (Cheers.) These remarks may perhaps induce some shareholders to think that I am trying to grind my own hatchet, but, gentlemen, that is not so. I am speaking now from the standpoint of a shareholder and a director, and advising the adoption of a policy which I consider in the best interest of the company, and I may, perhaps, add a little force to that statement when I tell you that I have not any doubt that, if Mr. Robinson and myself devoted to ordinary professional engagements the time and attention which we shall ungrudgingly devote to the affairs of the Montana Co., under the arrangement which has been made, our receipts would, I consider, be very much more than the remuneration we shall draw from your company. In conclusion, I desire to remove from your minds any misapprehension that the resignation of Mr. Robinson and myself bears any other significance than what I have stated. (Cheers.)

THREADBARE SIMILE REPLIED TO.

I have heard it said that it has the appearance of rats leaving the sinking ship; and although I am perfectly aware that there are many persons who will advance that threadbare simile upon every occasion, and without stopping to consider what reasons a mine manager may have for giving up his appointment, I altogether fail to understand what excuse we give by our action for any supposition that the mine or the Montana Co. is in the condition of a sinking ship. (Hear, hear.) On the contrary, we have shown our very strong desire to stay with the ship and to render all assistance we can in sailing it once again (as we did a few years ago) into the harbour of prosperity. (Cheers.) For the sake of past associations, and for our own professional credit, we are anxious to remain closely identified with the active management of your mine until what has recently been termed its pristine glory is again revived, and when that takes place we shall be very pleased to retire altogether, for having justified our unswerving faith in the mine, we shall be amply rewarded for any personal or pecuniary sacrifice which we may have to make meanwhile. A few more words before I sit down.

ONLY DECEIVED AS TO TIME.

I am quite conscious that you have every reason to believe I was too sanguine when I addressed you 12 months ago, and I am in honour bound to admit it; but mark my words—I was too sanguine *only as to time*, and the future will not only justify the statement I have just made, but it will justify all I said to you 12 months ago, with the one exception of the time I then named for the dawn of returning prosperity. (Cheers.) All I have said to you this morning I have carefully weighed, and it forms my honest belief, and the opinions I hold are also shared by Mr. Robinson. Whether he or I are retained in your service, or whether the management passes into other hands, we feel sure that if due regard be paid to the development and exploration of your mine,

YOU HAVE A MOST PROSPEROUS FUTURE IN FRONT OF YOU.

If you entrust the management to other hands (as you are at perfect liberty to do at any moment your directors think fit), we shall always endeavour to promote the success and prosperity of this company whenever it may lie in our power to do so, and so long as you entrust your interests to our keeping, I can assure you that they shall receive the same faithful, honest, and earnest attention that we have devoted at all times to the prosperity and the welfare of the Montana Co. during the past seven years. (Loud applause.)

VIEWS OF SHAREHOLDERS.

Mr. Jasper W. Johns: As a shareholder, who has stuck to this company through thick and thin, I should like to say a few words as to what we have heard this morning, which I hope my fellow shareholders will consider acceptable. I listened to Mr. Crowther, and am bound to say I do not like the strong words that he has used this morning, with reference to Mr. Bayliss and Mr. Robinson, when he decribed their services as "absolutely vital" to this mine. If that be so, it is a very poor look-out for us in the future; and in saying that I am not going to impugn either the honesty or ability of those gentlemeu, or their earnestness on behalf of the shareholders; but death happens to the best of us; and are we really to believe from Mr. Crowther that if it were to happen to these gentlemen that they should he killed, or that they should be lost in crossing the Atlantic, that this concern would go to the bottom? (Oh.)

Mr. Crowther: Certainly not. (Cheers.)

Mr. Johns: Are we to understand that if these gentlemen died suddenly it is all over with the mine? The words used were that they were absolutely necessary for this mine, and that their services were vital. If that does not mean what I say, then I do not know English. (Laughter.)

Mr. Crowther: Those words had a relative bearing. Mr. Johns has taken them in one direction, whereas they were meant in another. (Hear, hear.) I consider that the services of Mr. Bayliss and Mr. Robinson are vital, absolutely vital to our interests in connection with our law-suits, and not in connection with the working of the mine, and the future developments that may take place. I do consider them vital upon certain points, more especially in connection with the law suits. (Loud cheers.)

Mr. Johns: Very well; having obtained that explanation, my point is met, my object is attained. I felt quite sure he did not mean what he said, and that it only wanted a little further explanation to throw us into a more satisfactory state of mind. I agree with Mr. Crowther that

THE SERVICES OF THESE GENTLEMEN ARE EXTREMELY VITAL

to the affairs of the company at the present moment, and I think we may make it a request to them, almost an understanding, that when they do sever their connection with us they shall not both leave at the same time. Such a loss would be extremely disastrous to our interests, for the guiding hand of an old officer is required before a new one can properly feel his feet. The directors in the past have sought to encourage us to develop the mine. Well, we have developed it, and have stuck to our shares while encouraged by their words, but we cannot forget that many people, while we still held our shares, have sold their shares at a very good profit, and consequently I, for one, feel a little sore, and cannot help it. This is an occasion when

WE MAY FAIRLY APPROACH THE BOARD,

and say that when mines pay as little as ours do at present everybody must take that into consideration. I am not one of those who suggest unwise economy amongst the staff that, if I may be permitted to say so, do almost all the work that is done for the company, but I think we have good grounds upon this occasion to ask the board to meet us in a most generous spirit. In good times their remuneration increases; in bad times it does not decrease. Now, I should like a little mutuality, and I think it would be becoming of the board if they met us in this sense with regard to the future. Mr. Bayliss gives us hope as to the Empire lode, and I think he is right. I think we are going to have there a good and profitable lode, and I, for one, would be favourable to go without a dividend for a year or two, if necessary, so that the whole of this money might be expended in the most rapid and economical manner to discover these rich orebodies, which we hope are still within reach of us. (Cheers.) I do not think anybody will cry about the 5 per cent., particularly if the board reduce their remuneration, because it cannot be right when it costs us 87,000*l.* to divide 17,000*l.* I am not one of those who run away from a sinking ship, and neither are Messrs. Bayliss and Robinson, so that I think it would be a great loss had we sustained the misfortune of losing their services.

POLICY OF THE BOARD ENDORSED.

I believe the policy the board have foreshadowed is the right one—that of developing at the greatest possible speed and at the least possible expense. (Hear, hear.)

Mr. Wells Owen: I have listened to the remarks of Mr. Bayliss with great pleasure, especially those parts of them which relate to

the comparison of the geological features of the Drumlummon and Comstock lodes. I, for one, entirely agree with him. There are enormous possibilities in mining, and I believe most thoroughly that in the future we shall find this mine as profitable as it has been in the past. At present the difficulty seems to be to find a sufficiency of high-class ore, although, as far as understand it, there is an abundance of low-class ore. Our milling power is sufficient to treat a certain tonnage of ore per annum, which when of the high class description the profits were very large. Now it is low class, and the profits are correspondingly less ; but assuming my statement to be correct, that we have any amouut of this low class ore—has the board taken into consideration the advisability of

INCREASING LARGELY THE MILLING POWER,

and so augmenting our profits in that way ?

Mr. Charles Thomas : I will only refer to the remuneration of the directors. As an old and original shareholder in Montana, I have made very few chauges in my holding, but I would say this, that it is at times like the present that the directors have more anxiety and labour to keep the concern afloat and to increase its prosperity than at any other, and surely that is not the right period to select for cutting down their fees. We have six directors of the highest standing in the City of London, and you give them 200*l.* each for their remuneration.

JUSTICE TO THE BOARD.

I can remember well the time when the prosperity of this company was so great that the shareholders got into such an ecstatic state that they wanted to double or quadruple the fees of the directors. (Hear, hear.) Wiser counsels prevailed, and the directors declined positively to allow any addition to be made to their salaries—(cheers)—and I think now that we are in darker times, but still (after the statement of Mr. Bayliss) with more prosperous times in store, I strongly deprecate that any change be made in the remuneration of the directors. (Renewed cheers.)

AS TO THE MILLING POWER.

Mr. Crowther : With regard to the suggestion of Mr. Wells Owen and the increase of milling power—if you had the practical experience of working the mine that we have had for seven years you would understand that it is rather over milled now ; and as to the advisability of increasing the milling power, there cannot be any question—it must not be done. It is difficult enough to keep the power we have going. The mill is eating up 7,000 tons a month, which is something tremendous. Taking the ore bodies we have, it is quite as much as the mine ought to bear, and, if anything, it is a little more than it ought to bear, and I may say that Mr. Darlington, who has had 40 years' practical experience, will tell you that we have carefully discussed that question times without number, and decided, without hesitation, that we must not give to it any more milling power. When we put up a 60-stamp mill it was to treat low grade ore, of which we had as large a quantity then as now, and because the 50-stamp mill was a silver mill, and was not suitable to treat profitably the low grade ores. Therefore, we put up the new 60-stamp gold mill for that purpose.

ONE WHO HAS SEEN THE MINE TESTIFIES.

Mr. Simms : It was my good fortune to visit the mine two or three years ago, and possibly a word from me may not be out of place. I should not have risen but to endorse the last speaker's remarks. Very few people know what it takes to keep a 60-stamp mill at work. I have had a great deal to do with mines and the extraction and treatment of ore, and if gentlemen had more experience they would not talk flippantly about doubling the stamping power. I came late to the meeting, and had not the opportunity of listening to the chairman's opening address, and heard nothing about the recent developments of the mine, but from what I observed when there I can only say that I never saw a mine managed more economically and more efficiently in my life. (Cheers.) I have a very good opinion as to the future of the mine, with adequate development work.

The report was unanimously adopted.

The Chairman proposed the next resolution, "That Mr. F. P. Crowther be re-elected a director," and said : You are all sufficiently acquainted with Mr. Crowther and the interest he takes in our affairs, and also how hard he works on our behalf. He retires on this occasion, and I have great pleasure in proposing the resolution for his re-election. (Cheers.)

Mr. Darlington : I have great pleasure in seconding that resolution.

Carried unanimously.

Mr. Crowther, in returning thanks, said : Like Mr. Bayliss, I owe a great deal to the Montana Co. and Montana shareholders, and shall never forget what I owe them as long as I live. Whilst I am able to work, with fees or without fees as far as I am concerned, I will work, for it is not a question of fees with me, Mr. Johns—

IT IS A LABOUR OF LOVE.

I am very fond of the old concern, and I mean to stick to it as long as I have life and health to do so. It falls to my lot to purpose the re-election of Mr. Thomas J. Bewick, who is an old and valued colleague, and one who cannot be spared. (Cheers.) I hope he will long have health and strength to work with us on the Montana board. (Cheers.)

The Chairman : I endorse all that Mr. Crowther has said, and second the resolution.

Mr. Bewick, in thanking the shareholders for his re-election, said : I shall continue to take the same interest and devote the same time that I have done to the interests of the company for the past six or seven years. I trust that the forecast put before us by Mr. Bayliss may be realised.

Mr. Pyke : I beg to propose "That Mr. Thomas A. Welton be re-elected as auditor to this company."

Mr. Johns : I second the motion.

Carried unanimously.

The Chairman : We will conclude the business of the meeting by a resolution I shall have great pleasure in moving, and it is "That the thanks of the shareholders be given to Mr. R. T. Bayliss for his administration of the affairs of the company in Montana, to Mr. G. H. Robinson, the assistant manager, and to all the officers of the company at home and abroad."

The motion was carried by acclamation, and the meeting was closed.

THE PRESIDENT LAND AND EXPLORATION CO., LIMITED.

SHAREHOLDERS DECIDE TO ADJOURN THE MEETING—REPORT AND BALANCE-SHEET NOT ADOPTED.

The annual general meeting of this company was held on Thursday last at Winchester House, Old Broad Street, for the purpose of receiving the directors' report and transacting the ordinary business of the company.

Mr. Alfred James Newton

presided.

The Secretary read the notice convening the meeting.

THE ACCOUNTS.

The Chairman : Gentlemen, the balance-sheet before us shows that out of the authorised capital 193,825 shares have been issued, and on that number of shares 193,825*l.* has been paid. At the date of this balance-sheet the calls in arrear amounted to 4,216*l.*, but by a foot-note you will notice since that date 2,235*l.* 15s. has been received. We owe on open accounts 920*l.* 8s. 1d. On the credit side of our balance-sheet we have the amouut paid for the estates, 164,400*l.*, and the Government duty and law expenses in connection with the transfer of the property, 3,227*l.* 4s. 2d., bringing up the total sum, as representing the value of the estates, to 167,627*l.* 4s. 2d. We have sundry debtors, 437*l.* 18s. 1d. ; stocks on hand, 998*l.* 11s. 5d. ; and cash at bankers and on current account, 17,369*l.* 6s. 1d. At the debit of development and general expenditure account we have 4,093*l.* 8s. 4d. That is the balance-sheet up to Dec. 31, 1890. On the development and general expenditure account we have expended on exploration expenses 1,243*l.* 8s. 10d. ; live stock, 212*l.* 2s. 6d. ; Government taxes, 164*l.* 7s. 6d. ; manager's salary, 718*l.* 15s. ; transport expenses, 5*l.* ; general charges, 419*l.* 10s. 9d. ; stationery, books and seal, 52*l.* 14s. 3d. ; Loudon office expenses, 467*l.* 7s. 3d. ; loss on exchange, 6*l.* 17s. 1d. ; directors' fees, 1,446*l.* 10s. On the credit side we have received by interest on deposits paid 567*l.* 14s. 10d. ; transfer fees, 30*l.* 10s. ; rent, 42*l.* ; and the balance carried forward is 4,093*l.* 8s. 4d., thus balancing the development account.

THE GENERAL POSITION.

Now, gentlemen, as regards the report. We have put before you an account of a very exhaustive nature giving you full particulars of the farms and estates owned by this company. We have also put before you a map enabling you to locate and fix the position of our properties, and therefore I do not think it is at all necessary I should in any way give you a hash up again of the information given in the pamphlet. Since the issue of this pamphlet we have had some intelligence from our manager, Mr. Scott, which I will shortly inform you of, but in the meantime I wish to say I think we may congratulate ourselves upon having secured the services of that gentleman. Men, who have known him in South Africa, assure us that we have got the right man in the right place—that he is a cautious, persevering, and energetic man. Since Mr. Scott has been in South Africa his attentiou has been specially directed to the re-survey, or non-survey by the Government of certain of our properties, and I think it only right to inform you we are extremely dissatisfied with the lack of survey, or the inefficient survey, by the Government. Several of our farms on re-survey have been reduced in area, and in one instance only has the area been increased. Mr. Scott, on the other side, as well as we here, are taking all possible steps to safeguard the interests of the company, and to impress upon the Transvaal Government the necessity of maintaining in its entirety the area under which we purchased our farms. Mr. Scott has gone at great length into this matter, and he assures us that his earnest attention is being directed to carrying out the wishes of the directors in this respect.

LATEST NEWS FROM THE MANAGER.

The latest report from Mr. Scott refers to the Mount Hope farm in the Pretoria district, and he says that numerous enquiries have been made as to whether this farm is for sale, and further, what reward the company will give if the location of a payable silver mine is divulged. A prospectiug party, under a Mr. Dixon, is now at work there. Mr. Scott says he is of opinion that we should act very prudently indeed before entertaining any overtures respecting the purchase of this farm. We have leased to a Mr. Gibson the right to erect and run a store on that farm. Mr. Scott will next proceed to the Lydenburg district. The company's farms are said to be of great value, and regular prospecting will be started shortly. The ores in this district are of low grade, but with the ample water power, and other facilities, there is no doubt about 3 dwts. of gold per ton of quartz will cover expenses.

RAILWAY CONSTRUCTION.

With reference to railways, a bill allowing the construction of railways was passed on May 31 last. This will have a most beneficial effect on the Transvaal generally, and on the mining district especially, and will prove of the utmost value to this company. Mr. Scott says, in conclusion, that the Pretoria Johannesburg Bar River Railway is fast approaching completion. With reference to the President Land and Exploration Co., there is no doubt whatever that we are being called upon to exercise patience. We are not spending the money of this company by development or exploration at a very great cost. We have a

VERY SUBSTANTIAL BALANCE IN CASH

at our bankers, and before expending that we want to be perfectly certain that we are on the right track. (Hear, hear.) I think you will agree it would be uuwise on our part merely to make a splash, and spend all our money. We intend to be guided to a very great extent by Mr. Scott's practical experience and observations, and when the necessity arises for us to make sales of our land. In the meantime, the strength of our position is in having a matter of

20,000*l.* in hard cash, and for us to patiently wait development results. (Hear, hear.) I now beg to move that the report and balance-sheet, as received, be adopted.

Mr. Geo. Reid (director) seconded the motion.

THE ACCOUNTS CRITICISED.

Mr. Munro: Mr. Chairman and gentlemen, in entering upon an enterprise like this, I am very much impressed with the need of patience. Patient confidence must dominate all our minds if we are to act as wise men, and enable our directors to conduct our affairs successfully. I should just like to ask two or three questions, and on the answers to those questions I shall regulate the steps I take afterwards. First of all, on the debit side of the accounts I am sure we are all one with the chairman as to the need of supporting Mr. Scott in all respects. He, at any rate, as the working individual, is entitled to his salary, which I have no doubt is well earned. But I look lower down and see an item of 419*l.* 10s. 3d. for general charges; then we have stationery, books and seal, which is right, but the next item is one of 467*l.* 7s. 3d. for office expenses. If the chairman will give us details as to these two items I shall be obliged. I was looking at the offices the other day and found there were only two small rooms for this company, and several others, and I fail to see how that expenditure is made up.

DIRECTORS' FEES.

There there is an amount of 1,446*l.* for directors' fees, which is 1,200*l.* per annum. In connection with that, will you kindly give us an idea as to how many hours per day and how often each member of the board meets, for his 20*l.* a month. I cannot really think that you gentlemen are really serious in making this claim for fees as the greater portion of the work is done on the other side. We do not want cheap men; we do not expect you to give your time for nothing; but I do think we ought to have something like reasonable services for the amount we are asked to pay.

Mr. Weston asked whether the London office expenses included the secretary's salary, and if so, what was his salary?

Mr. Gosnell: The prospectus stated that the company would have, after the purchase of the farms, 30,000*l.* as working capital, but looking at the accounts I find the working capital is nearer 20,000*l.*

A Shareholder said the 56 farms owned by this company seemed to have produced 42*l.* rental in 14 months. He also wished to know how many of the conveyances had been actually completed? Was it the case that, in a number of cases, the conveyance had not been completed. It appeared to him the farms had not been inspected in a systematic manner, some of them being far to the east and some far to the west, while the intermediate ones were apparently not visited. He did not wish to say anything unfair to the directors, but he could not help thinking these gentlemen had not been as energetic as the remuneration would seem demanded. He also wished to know whether it was true that the chairman only held 100 shares in the company.

Mr. Wood asked what proportion of the purchase-money was paid in shares.

Mr. Weston asked whether Mr. Scott devoted the whole of his time to this company.

Mr. Duckworth congratulated the directors on the fact that they had given the shareholders some information as to the company's properties. He had been out to South Africa, and, when in Pretoria, took the opportunity of calling on Mr. Scott, with whom he was very favourably impressed. No one who had been out to South Africa would grudge the amount paid to Mr. Scott. Had the directors taken any steps to induce suitable emigrants to take up these farms? If they had some

ENERGETIC SCOTCHMEN

out there the shareholders would soon have a return for their outlay.

The Chairman: We cannot in any way take exception to the way in which Mr. Munro made his remarks; and very properly asked for information on the item of 419*l.* 10s. 9d. Probably it would have been a better plan to have detailed those charges, but in these cases one has to submit to the opinion of the accountants. The item is composed of Kimberley, Pretoria, and Bloomfontein agency fees, Mr. Scott's outward travelling, Advocate Cooper's expenses in the Transvaal (100*l.* this item alone), and stationery and postages. Therefore I think the sum of 419*l.* 10s. 9d. is not excessive. ("No.") With reference to office expenses, you must remember our offices are in the very heart of the City, and these office expenses include rent and taxes, coals, gas, and secretary's salary.

A Voice: How much?

The Chairman: We pay Mr. Hodges 350*l.* a year, and he provides the clerks and offices. I am bound to say I consider Mr. Hodges is extremely reasonable, and I should not be disposed to cut it down. Mr. Weston has referred to only 17 farms having been explored, or rather surveyed, but he must bear in mind some of these farms are

400 MILES APART,

and he need not, therefore, be surprised that Mr. Scott has only been over 17 of them. As to the conveyances, I can say that the whole of the conveyances have been completed, and the deeds are in our possession in London. Mention has been made of the want of energy on this side of the water, but I can assure you if we accepted anything like a tithe of the proposals made to us we should be up to our ears in business, but we should be spending money.

OUR POLICY IS A WAITING POLICY.

The exploration of this large estate cannot be rushed, and therefore the board do not intend to rush into hasty expense. (Cheers.) One gentleman has asked what proportion of cash and shares the vendors received. They received 70,000*l.* in cash and 95,000*l.* in shares, so that you see the vendors have a very heavy stake in this company. One gentleman (I do not know whether he was serious) asked whether I held 100 shares only in this company. I do not really know my holding, but Mr. Hodges informs me I am on the register for 850 shares. I have

NEVER BOUGHT NOR SOLD SHARES

in this company. With regard to the question about Mr. Scott, I can say he is the exclusive servant of this company. With reference to the directors' fees, of course they are fixed by the articles of association, and we are perfectly entitled to the full amount, but of course after such an expression of opinion as we have had today, I think it will only be acting deferentially towards you if I promise that that matter will receive our attention, and probably the next time we meet it will be your pleasure to compliment us on the course that has been taken. As to the working capital, we have in cash 22,000*l.* 5,000*l.* has been spent, and there are 1,300 shares not allotted, so that I think you may take it the 30,000*l.* exists either in meal or malt.

Mr. Munro and several other shareholders, thought the directors ought to give a more definite assurance as to their fees.

The Chairman declined to give any definite pledge in the matter.

After some further discussion, the motion was put to the meeting, 22 votes being in its favour, and 30 against. It was, therefore, declared lost.

Mr. Weston then proposed the adjournment of the meeting to this day fortnight at the same hour and place.

Mr. Wood seconded the motion, which was carried unanimously.

The meeting was then adjourned.

OPHIR CONCESSIONS, LIMITED.

THE RESULT OF THE EXPEDITIONS—THE TITLE OF THE COMPANY RECOGNISED AND CONFIRMED BY THE PORTUGUESE GOVERNMENT.

The ordinary general meeting of this company was held on Thursday, Mar. 19, at the City Terminus Hotel.

Major-Genl. N. T. Parsons,

presided.

The Secretary (Mr. H. B. Greenwood) read the notice calling the meeting.

The Chairman said that when the directors met the shareholders at the last statutory meeting the chairman, Lord Greville, had very little of a satisfactory character to put before them. The expedition sent out under Capt. Petty had proved a failure, and the lookout with respect to other sub-companies was somewhat gloomy. The directors were satisfied at that time that the concession which they had acquired had by no means been misrepresented, and yet they were rather anxious as to the position of the company. The committee of shareholders appointed decided that no further action should be taken until the full details of the expeditions of the Sabi and Manica Ophir Mining Co. had been received. The directors, however, could not feel justified in carrying out a policy of complete inaction, and thought it only right that the services of Mr. De Kergariou, a successful prospector who had just returned to England after a journey through Manica, and was able to give them a considerable amount of information, should be obtained. That gentleman, who was present to meet the shareholders on that occasion, had located and registered what was undoubtedly

THE RICHEST REEF YET DISCOVERED IN EAST AFRICA.

Mr. Vaughan Williams, the representative of the Manica Ophir Mining Co., after a journey overland of great difficulty, had also met with success. He had located 50 claims acquired from them by his company in a reef of great promise in the Quitere district, and, presuming that Mr. Williams was right in the value of the ore, the situation was very favourable, and the location a fortunate one. It was only 30 miles from a river, navigable to that point by flat bottomed boats, so that heavy machinery could be easily and inexpensively placed on the property. Mr. Williams writes with great enthusiasm of the healthiness of the district, which abounds with timber to an extent practically inexhaustible, while there is available water-power amply sufficient for all necessary purposes. Your directors regret that they have to report to you the loss of the action brought against the company by Capt. Petty to recover payment of his claim for a journey, which was not only useless but mischievous to the interests of the company. The board were advised by the solicitor to the company that the defence would assuredly be successful, but Capt. Petty succeeded in satisfying a judge and jury that he had carried out his agreement, and earned the money he claimed by a story, supported by witnesses, which was in absolute contradiction to facts since established by independent witnesses—I allude to the British South African Co., the account of whose raid into Manica is in positive contradiction to the evidence upon which Capt. Petty won his case. Further, your own representative, Mr. De Kergariou is here to-day to give you the result of his own experience in two visits to the country, which Capt. Petty had the hardihood to describe as inaccessible, and as

A HOWLING WILDERNESS.

Your directors further regret that on the strong representations of the company's solicitor, that the verdict against the company would be reversed on appeal, they were induced to carry the trial to the Appeal Court. Unfortunately the point of law on which your solicitor relied was decided against this company, and it is to be deplored that the market value of your shares has been temporarily depreciated by a very unexpected cause. Much has been said in the Press with reference to the title of the company, under the contract acquired through the Baron Du Baneu from the Mozambique Co. of Lisbon, and your directors are pleased to be able to inform you that the title has been recognised and confirmed by the Portuguese Government, and the Colonial Minster in Lisbon on Dec. 30 last, acknowledged officially the right of the Mozambique Co. to grant to the Ophir Concessions, Limited, its sub-companies, and all future subsidiary companies that it may form, occupation without limit of time of the claims which your company has acquired. Unfortunately, the richness of this favoured land of Manica becoming widely known excited the cupidity of powerful neighbours, and in Nov. last an armed forced in the service of the British South African Co., under an alleged treaty with the petty chief, entered Manica and seized and made prisoners the unarmed officers of the Mozambique Co. The Chartered Co. has since been ordered to retire from Masse Kesse, and to observe the *modus vivendi*, but in the latest advices it is shown that the orders of Lord Salisbury have been treated with utter contempt in this matter. The assurances of Lord Salisbury in the House of Lords in reply to questions on the matter are, however, very satisfactory to the interests of this company, while there is every reason to believe that whatever may be the

destination of Manica, the rights of private companies properly acquired will be respected by the Chartered Co. Your directors propose to send out as soon as possible another expedition under Mr. De Kergariou, who has so ably accomplished a most successful location in the Mutari Valley, to prospect and locate further claims in another district, where he assures us there is every reason to believe further results will be secured not inferior to those already attained, on which your directors feel justified in heartily congratulating you. I have to inform you of the resignation of your chairman, Lord Greville, and Count Cecil Kearney, a director of the company. Lord Greville found that his residence in Ireland made his regular attendance at the board difficult, and Count Kearney, as managing director of another company, was unable to devote the necessary time to this company. Their places have been filled by your directors by the election of two members of the committee of shareholders appointed in July last. They appointed Dr. Ryley, who was chairman of that committee, in place of Lord Greville, and Mr. Henry Britten succeeds Count Kearney. I beg now to move the adoption of the report.

Mr. J. S. Langlands seconded.

A LONG DISCUSSION

took place, in the course of which several questions were asked with regard to the committee of inquiry and the management of the present company, the directors being challenged with regard to their present official position.

Mr. Britten said that he was one of the members of the committee, and in the course of their investigations they had to deal with the articles of association of the company, and those articles maintained that the directors appointed should remain in office till 1892, and that arrangement was not subject to any re-election. He could not say that he was in favour of such an arrangement, but it was the articles under which the company was constituted. He offered himself to the shareholders on that occasion for re-election, and his reason was that he did not know whether it was right for him to take a seat upon the board when he had been asked to do so, and he gave the shareholders the benefit of the doubt by putting his election in their hands on the present occasion.

Dr. J. Beresford Ryley said that he had thought at one time, as many of the shareholders did, that the directors were responsible for the utter mismanagement of the Petty expedition to South Africa, but since then further knowledge had come to him, and he had learnt facts which had altered his opinion, and he felt sure that if the shareholders knew as much as he did, they would be of the same opinion.

Mr. J. C. Grant said that he had faith in the company, and intended to invest in more shares.

Mr. Castle attacked the board on the point of mismanagement and the legality of the proceedings, and stated that many things which they had done had been done after he had advised them to the contrary.

Mr. H. Britten having addressed the meeting at some length upon the accouuts,

The Chairman moved the adoption of the report, which was seconded.

Mr. Bridgman moved the following amendment:—"That the report and balance-sheet should not be adopted; that the present directors should be called upon to retire, and that a committee should be appointed consisting of shareholders, with three to form a quorum, for the purpose of conferring with the present directors as to the services they had rendered to the company, and their claims for remuneration; to inquire generally into the expenditure of the company's capital, and to consider what alterations should be made in the articles of association; and, finally, that that meeting should stand adjourned until Apl. next for the purpose of receiving the report of such committee, and to remove from office, if deemed necessary, such of the directors as refused to resign their seats, and to appoint other directors to take their place," which was seconded by Mr. Borton, and having been put to the meeting by the Chairman, declared to have been lost and the report carried.

Mr. Bridgman demanded a poll.

Mr. J. Beresford Ryley said that he understood

THE SHAREHOLDERS DID NOT WANT TO STAY THERE ALL NIGHT,

he did not want to himself; he was told the amendment was illegal, and could not be considered at that meeting; but as it had been put, would the shareholders take the poll then, or on some future occasion. (Cries of "Now, now.")

A Voice: Get the farce over.

The Chairman said that they must finish the business of the day. He asked them to give their votes for the re-elcction of Mr. H. Britten as a director.

Mr. Briebach seconded the motion, which was carried.

The Chairman called on Mr. De Kergariou to address the meeting.

Mr. De Kergariou said that he had just returned from Africa, and had located several reefs for the company. Manicaland had just been invaded by the Chartered Co., which he took was a good sign of its richness. He believed that if the company made good use of its time they would succeed in locating other claims as good as those he had found. He was largely interested in the company, and as he was only paid for by successes he did his best for the company.

Mr. Mason, the auditor, was re-elected, and the Chairman stated that, as many of the shareholders had left the room, the poll would be adjourned, and due notice would be given. The proceedings then terminated.

THE JOE'S LUCK AND BON ACCORD (SHEBA) GOLD MINING CO,, LIMITED.

AN INDEPENDENT OPINION TO BE TAKEN AS TO THE VALUE OF THE PROPERTY.

The first ordinary (statutory) general meeting of the above company was held at Winchester House, 50, Old Broad Street, on Tuesday, Mar. 17.

Mr. W. J. Thompson

presided.

The Chairman said that the present meeting was purely a formal one, called by law, and he had no resolution to submit to the meeting. With regard to the shareholders who had decided to carry on the company, those present would be pleased to hear that out of 37,700 shareholders in Great Britain, 32,000 had taken up their shares, and of the 21,800 abroad, 4,800 had already taken up the shares, and the board had every reason to believe that they would have further applications from those holders. That left over at present 22,000 shares which had not been applied for, and considering the position of matters in the Transvaal, he thought that the shareholders would agree with the board that that was a very satisfactory state of things. They had received from various quarters favourable reports of the property, and as soon as they were able they intended to start the building of a tramway. It was a question that would come on later how they should deal with the shares which were not applied for, and the board would be glad to hear any gentleman's opinion on the matter. He thought that in the future the shareholders would probably be asked to tender for them. At the present time, however, their task was to get the best contract they could for a tramway, and the best opinion as to how the work was to be carried on on the other side. They had telegraphed to a gentleman of considerable experience, who was on his way home, to see if they could induce him to go through Barberton and give an independent opinion on the property for the shareholders to hear. As regarded the position of the company,

THEY HAD PAID OFF 750*l.*

debentures to those persons who did not wish to keep them, and they had 1,730*l.* from those holders who wished to leave their money in the hands of the company. They had about 800*l.* at the bank, and they did not propose to make any call for funds until the money was absolutely required. The board had been told that there was a considerable amount of ore in sight sufficient to last them from one to two years, and the cost of transport at the present time was considerably lower than two years ago. He trusted that the next time the directors met the shareholders they would have a fairly satisfactory report to lay before them. Mr. J. Harvey had joined the board, and he (the chairman) thought that that gentleman would be of great advantage to the company. He had no resolution to put to the meeting.

Messrs. George Gregory and Co., Stock and Share Dealers, have now removed to 4, Tokenhouse Buildings, Lothbury, Bank of England, E.C., immediately opposite to their previous address.

Holloway's Pills and Ointment.—Travellers to and from distant climes would do well to bear in mind that these changes and the altered diet and surroundings of their lives entail manifold risks to health. Occasions are sure to arise in which they will need a remedy such as these renowned Pills and Ointment, and no traveller by land or sea should ever fail to have a supply at hand. Then he may truly be said to have a physician always at his call for the various emergencies of travel. Chills and fevers should be promptly treated, and the printed directions should be carefully studied at the commencement of any illness, for Holloway's remedies can be safely used in all climates.

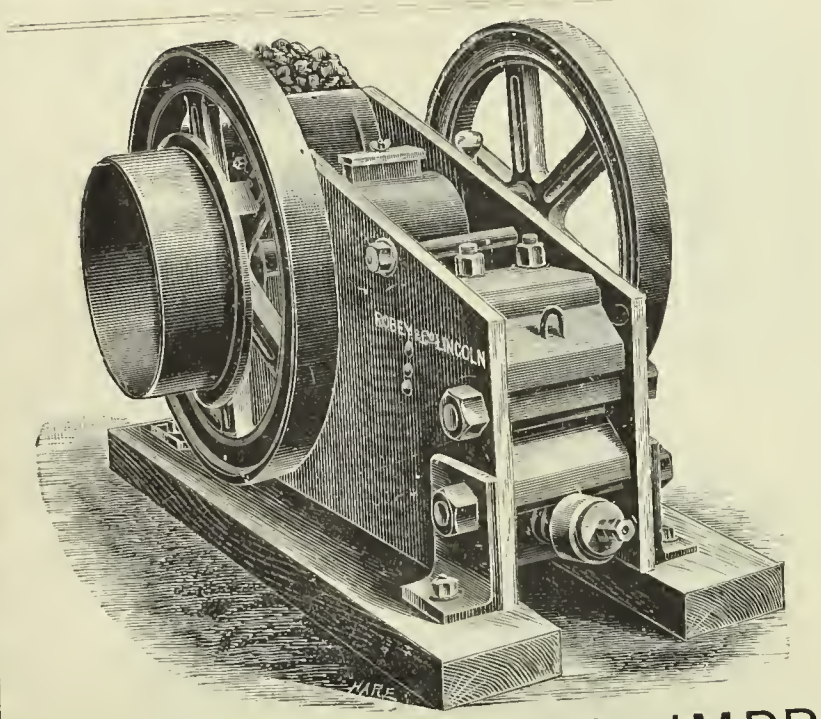
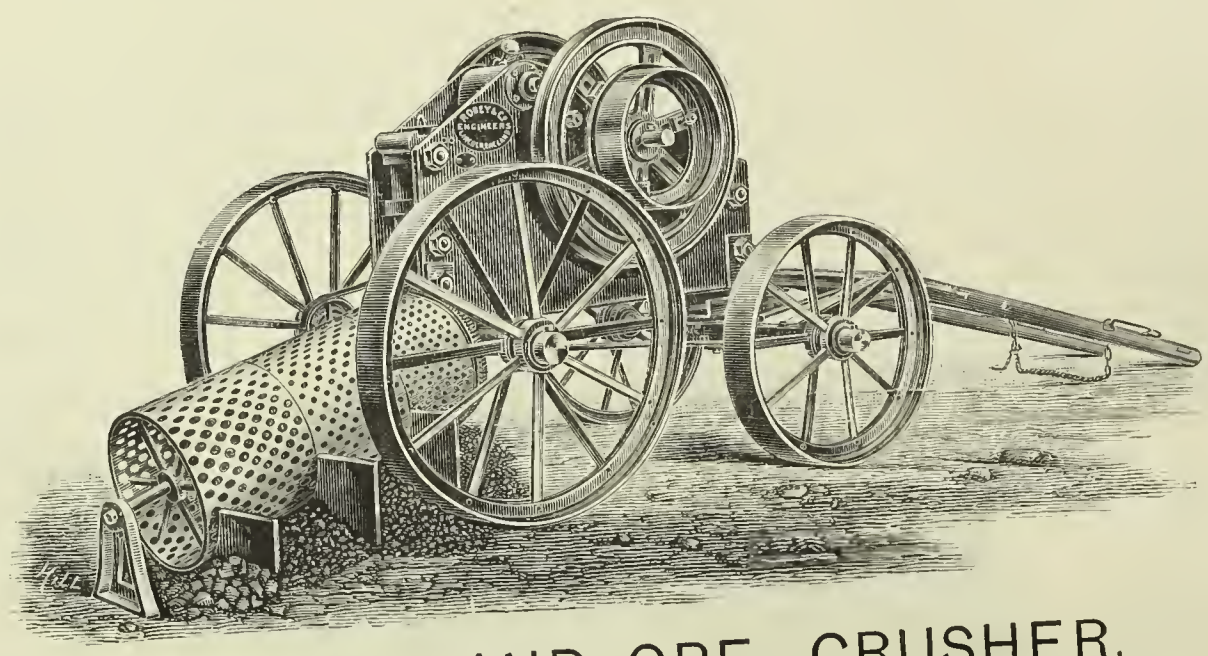
ROBEY & CO., Globe Works, LINCOLN.





ROBEY & CO.'s IMPROVED STONE BREAKER AND ORE CRUSHER.

ROBEY & CO.'S STONE BREAKER AND ORE CRUSHER, for crushing Ores, Quartz, Road Metal, Railway Ballast, Cement, Phosphates, Coke, Coal, &c.

The above illustrates the most simple form of Stone Breaker made, and has no equal for easy transport over bad roads or mountainous countries. Steel has been largely employed, and in the place of the usual heavy Cast-iron Frame, a neat and much stronger Frame of rolled steel is used, with a saving of some tons in weight. The great depth of the side gives it increased stiffness, and the materials of which the machine is constructed ensure great rigidity and thorough adaptability for heavy work.

The parts are few and simple, and thoroughly accessible for oiling, adjusting, and cleaning, and the liability to breakage is reduced to a minimum.

The jaws are easily renewed, and are made of our own special mixture and treatment, rendering the face well suited for quartz. These jaws can be adjusted while the machine is running so as to reduce the material to any desired size, and are adapted for either cubing or crushing.

IRON AND STEEL JOISTS.

MEASURES BROS.,
Southwark Street, London,

Can supply all SECTIONS from their Town Stock of 8,000 tons at lowest Market Prices.

THE GOLD ORES REDUCTION COMPANY, LIMITED.

ASSAYERS AND SMELTERS OF REFRACTORY GOLD, SILVER, ANTIMONY, COPPER, AND OTHER ORES.

REFINERS, AND GENERAL ORE AND METAL DEALERS.

Smelting Works: CANAL WHARF, HACKNEY WICK.

Office: 35, ROYAL EXCHANGE, LONDON, E.C.

WEST CARZISE MINE, CORNWALL.
15TH APRIL, 1891.

A. J. TANGYE, Auctioneer, Camborne, have received instructions to SELL by PUBLIC AUCTION, on WEDNESDAY, 15th April, 1891, at 1 o'clock in the afternoon, at WEST CARZISE MINE, FRADDOM (situate between Hayle and Leedstown), the whole of the MINING PLANT and MATERIALS of the above Mine. Comprising:—One 17½-in. horizontal engine, with gear for pumping; one 10-ton boiler and fittings; 30 fms. 1¾-in. iron rods; 10 fms. 8-in. pitwork; 10 fms. 8 in. wood rods; 2 balance bobs, shears with sheaves, capstan, horse whim with wire rope, shaft tackle, 2 horse whim kibbles, chain, smith's tools, 36 in. smith's bellows, anvil, mandrill, miners' tools, 60 fms. 6-in. and 8-in. wood launders with stands, 8 stands for flat rods with sheaves, scales and weights, carpenter's shop and bench, stable, dry tube, wood dry, blacksmith's shop, screw stocks, sundry new and old iron, account house furniture, &c.

The whole of the above will at first be offered in one lot and if not then disposed of, will immediately be put up in lots to suit the convenience of purchasers.

To view, apply to Capt. J. Curtis, Kennegy, near Marazion, and further particulars may be obtained from E. Ashmead, 2, Drapers Gardens, London; or of the Auctioneer, Camborne.

Dated April 2nd, 1891.

IRON MINE TO LET.

SITUATED at HAYTOR, three miles from Bovey Railway Station; shipping ports Teignmouth or Dartmouth.

The iron ore is magnetic, and suitable for steel-making purposes.

With a lease of the above Mine, terms and conditions would be included, if desired, for working tin, which has been discovered, and is now being worked in adjoining lands.

Principals only, or their solicitors, can obtain further information by applying to Mr. Hatherly, Yattendon, near Newbury, Berks.

THE WEST BRITON & CORNWALL ADVERTISER.

MINING MARKET.

City, Friday Evening.

SPECIAL FEATURES OF THE WEEK—BROKEN HILLS, SILATI, NUNDYDROOG, TOLIMA "A," MOUNT ZEEHAN AND ELMORE—GENERAL POSITION—GOOD OUTLOOK.

Australian Broken Hill Consols have again been the leading feature in relation to business. and the chief subject as regards conversation. "They will go to 5*l*.," cries an enthusiastic dealer, and while the younger members listen to him with the awe begotten of inexperience the older ones, metaphorically speaking, even in thought refuse to endorse a bill on the back the amount of which they do not know on the face. At the same time no one can deny that this particular market has been wonderfully sustained throughout the week, and it is generally believed that the backers of these shares are so strong that speaking after the manner of brokers "they can put the shares to anything." We may tell our readers that the biggest people in Berlin are at the back of these shares, and also that there is no truth in the report, that this company has sold a part of its property for half a million sterling. Sales are in contemplation, but contracts have not advanced to the "signed, sealed and delivered" stage. The shares have been as high as 2⅝ buyers, but close about 2¼, showing a rise of 2s. 6d. on the week. We should not be surprised to see much better prices during the next few days, but repeat that it is always safe to take a profit, and we fail to see that Australian Broken Hill shares present any exception to this wholesome rule. The production of the last fortnight was 40,055 ozs., and, whilst on the subject, we may say that the production of Broken Hill Proprietory Co. for one week was 173,705 ozs., and that the British Broken Hill furnace has been re-started.

Another feature of the week has been the reports on Silati—a concern which is responsible for more bad language on the market than almost any other that can be named. We discuss these reports so fully in our leader columns that we need only emphasise the fact here that they are by unknown persons, and cannot pretend to have the weight which was properly attached to the report of Messrs. Bewick and Moreing, or rather, of Mr. Alford, their South African partner. The shares fell upon its issue, but Oceanas are better on the week.

A third feature of a not uneventful week has been the rumour to-night that Nundydroog is in the market to purchase a portion of Goldfields of Mysore property. The rumour is no doubt true, but as yet it lacks official confirmation. The returns from India are published this week, and are decidedly satisfactory. Have our readers considered that Mysore is now selling gold at the rate of about 260,000*l*. worth a year; Ooregum, 133,428*l*.; and Nundydroog, 65,532*l*.?

We understand the purchase of the Kolar Mysore Goldfields has fallen through for the moment. The property is considered an important one, and adjoins the Road Block to the north of Balaghat.

Sufficient attention has not of late been called to Tolima "A" shares. The position of this mine is interesting. It was floated in 1870, and the profits to the present time, despite some barren periods, would be sufficient to pay 10 per cent. upon the whole capital of the company. The profits in some years have been phenomenal—in others, *nil*. Above the 90 the mine was in certain parts extremely rich, and now at the 90, the 100, and 110 great value is set upon the lode at both ends, whilst the reserves must be very large. The "A" shares carry a cumulative preference dividend of 10 per cent., which has been cleared by the payment announced to-night of 5s. to the end of 1885, whilst the cash in hand and the ore in process of realisation is sufficient to clear off all arrears to the present time. The reason that this clearance is not made is probably because the company needs the money as working capital, of which legitimately it has long been bereft, and because the ore after it is raised from the mine takes a long time to turn into cash. In fact, the mine for many years past has been its own chancellor of the exchequer.

Of late considerable enquiry has been aroused by the encouraging reports, followed by the still more gratifying remittances, from Mount Zeehan, a mine in Tasmania, which is rich in silver-lead, and to whose affairs we have frequently called attention. The more recent parcels of ore, we understand, have realised over 25*l*. to the ton, and some of the ore has yielded as many as 110 ozs. of silver to the ton, whilst also being valuable for lead. The mines are 9 miles from the port of shipment, but a railway is now being made, which it is expected will be finished about the end of the year. The ore is conveyed in its crude state to the port, and from thence shipped to England—the total cost being about 8*l*. per ton, so that it can easily be seen what a handsome profit is realised by a sale. At present the output is not much more than 2 or 3 tons a day, but it can be immensely increased when the railway is completed. The success of Mount Zeehan has lead to the acquirement in the neighbourhood of adjacent properties.

The re-construction of Elmore gold may be regarded as an accomplished fact—the shares having been considerably over-applied for.

Turning to the position of affairs on the market generally—that position may be briefly summarised. All South African gold shares are down, and we can well understand how, in the face of the general drop in these descriptions, even so well-managed a concern as the African Gold Share Trust has lost such a considerable proportion of its capital in the last 12 months, though it is by no means without hope of recovering lost ground. The Mar. crushings from the mines are not read favourably.

In the Land department the falls have predominated, but there has been an improved demand for Horo Concessions, which have advanced several points. In the Diamond section there has again been a fall in De Beers. On the whole we consider the report of St. Augustine, Limited, satisfactory. The shaft is now at a point near that at which the Kimberley and De Beers Mines first met with the rich blue.

The confidence now generally expressed, as to the permanence and productiveness of the Witwatersrandt goldfields, is unabated, and while quotations for shares have been falling, the yield of gold has, on the contrary, been steadily increasing, as will be seen from the following table:—

——	1887.	1888.	1889.	1890.	1891.
January ...	No Monthly Total Recorded.	11269	24986	35038	
February ...		12162	25800	36886	
March ...		14706	28075	37600	
April		15853	27136	38799	
May		19202	36298	38884

November ...		27336	36116	46800	
December ...		26148	39218	50352	
January ...					53205
February ...					50073
Total ...	34897	230917	379733	494801	103278

Total to date ... ... 1,243.626 ozs.

With the exception of the market for Broken Hill Consols the Australian section has been flabby, and some of the shares have lost the rise reported a week ago, notably Gympie Golden Crown, Day Dawn P.C, and Kangarillas, but Bonnie Dundees have shown a firm front and are better.

Goldfields of Mysore have to-day been very active, and at one time were 2⅝ buyers, but do not close so good. The position of Mysore West and Mysore Wynaad—the twins of the Indian market—is explained in our leader columns. The former company has made a call of 6d., and the shares are now 18s. 6d. paid. Nundydroogs have fallen on the week, but Ooregums have improved, and the cause is to be found in the gratifying report of which we give a synopsis elsewhere.

The Copper market has moved unevenly, but a better feeling prevails with regard to the Chili Mines. Mason and Barrys have suffered materially on a comparison of prices.

In the General Foreign section Flagstaffs are up, in company with Linares and New Gustons—the latter on the statement that the board, as it now exists, will hold the keys of the position at the meeting next week. Palmarejos and Pinos Altos are in demand—buyers generally putting in an appearance. There has been a good demand for Callao Bis on the favourable crushing, and also for Emmas. Oritos, Frontinos, and El Callao have been the chief sufferers during the week. It is strange, but true, that since the recent meeting there have been but few dealings in Yuruaris. The success of Potosi re-construction is assured.

Home mines are again on the down grade, and their record is poor indeed. With three exceptions the course of the market has been all on the inclined plane, but fortunately there is something like a reverse side to this badly cast medal.

Wheal Grenville paid a dividend of 2s. 6d., under circumstances described elsewhere. The progress with the eastern section of the mine is rapid. West Kitty shareholders were cheered by a dividend of 11s. Much regret is felt in Cornwall at the winding up of West Seton. In the good old days the dividends declared on a capital of 19,000*l*. were 233,450*l*., or 575*l*. per share, on the 400 shares into which the mine was then divided.

Great Laxey has paid a dividend of 10s. per share, with a bonus of 2s.—a result upon which directors and shareholders alike are to be congratulated. It is strange that the price of the shares should only be about what it was when the distributions were less than half this amount.

The outlook for the next week is decidedly hopeful, and we should not be surprised to see a general improvement in prices during its currency.

Kaffirs.

The disappointment felt by the crushing from the Randt for the past month has caused all shares in this class to fall, and great difficulty is experienced in getting the jobbers to make a close price in them.

May Consolidated report, in addition to causing a fall of 4s. to 5s. in its own shares, has had a depressing effect on the whole market. Johannesburg, Pioneer, Durban Roodepoort, Crown Reef, and City and Suburban have been the chief sufferers.

Business.—The following are lower:—Aurora, $\frac{1}{16}$; Bothas Reef 6d.; City and Suburban, $\frac{1}{4}$; Crown Reef, $\frac{1}{4}$; Durban Roodepoort, $\frac{5}{8}$; Geldenhuis, $\frac{1}{16}$; Glencairn, 1s.; Heriot, $\frac{1}{8}$; Johannesburg Pioneer, $\frac{1}{2}$; Jumpers, $\frac{3}{16}$ Langlaagte, $\frac{5}{16}$; Langlaagte Block B, $\frac{7}{16}$; Main Reef, 6d.; May Consolidated, 4s.; Robinsons, $\frac{1}{16}$; Royal, $\frac{1}{8}$; Salisbury New, 6d.; Simmer and Jack, $\frac{1}{16}$; Spes Bona, $\frac{1}{16}$; Vogelstrius, 6d.; Witwatersrandt, Knights, 1s.; and Wolhnter, $\frac{1}{16}$. The only rises are Pigg's Peak of $\frac{1}{8}$; Pigg's Preference, $\frac{1}{4}$; and Sheba, 1s. 6d.

Diamonds.

There is but little doing in diamond shares, and De Beers have again gone down, being pressed for sale. Burma Ruby are a shade firmer.

Business.—A fall has taken place in De Beers of $\frac{3}{16}$, and Gordon, 1s.; whilst the only rise is in Burma Ruby of $\frac{1}{16}$.

African Lands.

This section has again been neglected and has fallen generally. The exceptions have been Oceana and Horo Concessions. Explorings have lost ground as well as Silati River.

Business.—The following have fallen: Bechuanaland, $\frac{1}{8}$; British South African Chartered, $\frac{1}{16}$ Exploring, $\frac{3}{4}$; Exploration, $\frac{1}{16}$; Goldfields of South Africa, $\frac{1}{8}$; Moodies, 10s. pd., $\frac{1}{16}$; New Grahamstown, 6d.; Silati River, 6d.; and South African Gold Trust, $\frac{1}{8}$.

The only rises are Horo Concessions, $\frac{3}{16}$; Oceana, $\frac{1}{4}$, and Transvaal Gold, 6d.

Australian.

A large amount of business has been transacted, and Anstralian Broken Hills have again been to the fore, and although they have changed hands at 2 1/8 on the week, do not close so good, but yet show an advance of 1/8.

Day Dawn Block and Bonnie Dundee look good purchases.

Business.—A rise is shown in Australian Broken Hill of 1/8; Bonnie Dundee, 6d.; and Day Dawn Block, 3d.; whilst a fall is recorded in Day Dawn P.C. of 1s. 3d.; Gympie Golden Crown, 1s. 6d.; Kangarilla, 7/16; and New Queen, 3d.

Indians.

On the report that the Goldfields of Mysore had sold to a new company a portion of their property for 60,000*l*. the price went up to 2 3/16, 2 5/16.

Business.—A rise is shown in Goldfields of Mysore of 1/4; Ooregum Ordinary, 1/8; Ooregum Preference, 1/8; whilst a fall is reported in Balaghat, of 3d.; Mysore Reefs, 3d.; Mysore West, 6d.; Nnndydroog, 2s.; and South East Mysore, 3d.

Copper.

This market has been very dull, and in consequence prices have somewhat receded, Mason and Barry being the principal sufferer. The exceptions have been Pannlcillo and Tharsis.

The only two rises are in Pannlcillo of 5/16, and Tharsis, 1/4; whilst those qnoted lower are Copiapo, of 1/8; Libiola, 1/8; Mason and Barry, 5/8; Namaqua, 1/8, and Quebrada, 1/8.

General Foreign Shares.

A fair amount of business has been done in this description, and Flagstaff are better in spite of attempts to depress them. Palmarejos also have improved on a very small amonnt of general buying. Emma, Callao Bis, and Colorado close very strong and may improve at any moment. There seem but few shares on the market, and investors could not choose a better period at which to purchase. Tolima "A" have advanced on the receipt of a good report, while New Guston and Linares are also firmer.

Those on the down grade are Orita, Frontino and Pahang. The market, generally speaking, is firm.

Business.—The following have receded:—Dickens Custer, 3d.; El Callao, 1/4; Esmeralda, 3d.; Frontino, 2s.; Golden Feather, 6d.; New Gold Hill, 3d.; New Russell, 3d.; Orita, 4s.; Pahang, 1/16; Sierra Buttes, 1/16; Ditto Plumas Eureka, 1/16; St. John del Rey, 3d.; and Yankee Girl, 3d.

The following have risen:—Flagstaff, 3d.; Garfield, 3d.; Linares, 1/4; New Eberhardt, 3d.; New Guston, 1/8; New Viola, 3d.; Palmarejo, 1s. 6d.; Pinos Altos, 1s. 6d.; Tolima, 1/4; and United Mexican, 1s.

The following list shows the principal changes which have taken place:—

LATEST FROM THE MINES.

Indian Mines.

Balaghat Mysore.—A telegram, dated Apl. 6, gives last month's return of gold as follows:—"60 tons of quartz produced 116 ozs. of gold. Mill only worked third of month. Labour scarce from cholera." The directors have sold, through Messrs. Johnson, Matthey and Co., the gold obtained in the month of Feb., which realised 1,183*l*. 2s. 1d.

Burma Ruby.—The work at the Burma Ruby Mines' headqnarters at Mogok and Kyatpyin has progressed favourably dnring the past month. A large quantity of rubiferous earth has been washed with better results than at any previous time. Among the stones consigned to the board this week is one of 6 1/2 carats. Major Kunhardt, R.E., the Engineer-in-Chief, writes confidently of the prospects of the undertaking.

Indian Gold (Glasgow).—Information by cable:—"March. Koornmber ore: Total amount crushed is 620 tons, yielding 49 ozs. No. 11 ore: Total amount crushed is 200 tons, yielding 5 ozs. Result unsatisfactory, owing to the ore being very refractory. Concentrates reserved in order to treat the ore."

Mysore.—A telegram, dated Apl. 6, gives last month's retnrn of gold as follows:—"3,108 tons of quartz produced 5,001 ozs. of gold; also 476 ozs. obtained from tailings; making together 5,477 ozs. of gold." The directors have sold, through Messrs. Johnson, Matthey and Co., the gold obtained in the month of Feb., which realised 21,589*l*. 11s. 6d.

Mysore Reefs.—A telegram, dated Apl. 7, gives last month's return of gold as follows:—"425 tons of quartz produced 62 ozs. of gold."

New Devala Moyar.—The crushings for Jan., Feb. and Mar. yielded 226 ozs. (800*l*.), and 390 tons of concentrates, which have been stored for future treatment.

Nundydroog.—A telegram, dated Apl. 6, gives last month's retnrn of gold as follows:—"800 tons of quartz produced 1,520 ozs. of gold." The directors have sold, throngh Messrs. Johnson, Matthey and Co., the gold obtained in the month of Feb., which realised 5,461*l*. 13s. 8d.

Ooregum.—The directors have sold the gold produced in Feb. for 11,119*l*. 14s. 10d.

Colonial Mines.

Australian Broken Hill Consols.—A telegram from the managing director, resident at Broken Hill, dated Apl. 3, states :—"Five tons of ore, containing 40,055 ozs. of silver, raised dnring the fortnight. Eighth shipment, consisting of 5 tons of ore, containing 40,055 ozs. of silver, will be shipped for London per steamer leaving Adelaide on Apl. 15."

Blue Spur and Gabriel's Gully Consolidated.—The manager cables the return of gold for the month of Mar. at 326 ozs.

British Broken Hill Proprietary. — Cablegram, dated Melbourne, 6th inst. :—"Have started furnace at the mine. Doing well."

Broken Hill Proprietary.—Dnring the week ending 2nd inst., there were 4,963 tons of ore treated, yielding 695 tons of lead, containing 173,705 ozs. of silver. For the week ending Apl. 9 :—5,070 tons of ore were treated, yielding 862 tons of lead, containing 174,450 ozs. of silver.

Etheridge United.—A telegram from the mine, dated Apl. 7, is as follows :—"Commence cross-cut to strike reef at a depth of 130 ft. Caledonian : Expect to strike reef about the middle of May."

Harrietville.—A telegram from Mr. T. G. Davey, dated Apl. 6, is as follows :—"Cleaned up Apl. 3. 24 days. Moss Meg Mine, 580 tons, 317 ozs. new lease, 315 tons, 61 ozs. ; amalgamating pans, 57 tons, 163 ozs. We have struck Guerdon lode, tunnel J, and new shoot, tunnel B ; picces of rock containing visible gold in each lode."

Foreign Mines.

Colombian Hydraulic.—Cablegram of run No. 171 :—"We have cleaned up after a run of 37 days, during which time we have washed 760 hours. The gross returns are 1,250*l*." The profit in this run, at the present rate of exchange, will be about 300*l*.

De Lamar.—The board have received a cablegram stating that the property has been transferred to the company. Mr. Henry Bratnober has consented to take charge of the property pending the appointment of a general manager.

Esmeralda.—Cablegram yesterday :—"Ore from stopes is improving. Ore body is wider."

Gold Fields of Uruguay.—Milling for month of Mar. :—3,400 tons of ore crushed, 480 ozs. of bullion produced, value $6,000 ; 50 stamps running 29 days.

Jay Hawk.—Telegram from the manager : "Lode getting wider ; appearances are favourable for cutting into rich ore."

Mammoth.—The manager, Capt. Johnstone, reports that the bullion production during Mar. after the mill was re-started was at the average rate. He had sent into bank $16,600, and over $4,000 were still at the mill.

Mesquital Del Oro.—The following cablegram, giving the result of the Mar. mill-run, has been received from the mine :—"50 stamps ran 657 hours ; (27 days 9 hours) ; quantity of ore crushed was 2,042 tons ; bullion produced at clean-up, 1,286 ozs. ; value about 4,675*l*."

New California.—Telegram, Apl. 8 : "Bottom of shaft 2 ft. of ore ; 6½ ozs. of gold per ton ; 2,000 level rich."

New Eberhardt.—Cable from manager : "Prospects are more cheering. Weekly output quantity, 40 tons ; the average is $40 per ton. Expenses dnring the month of Mar., $2,800. I have commenced milling Apl. 6. Everything going on well. Ore pulping, $45 per ton."

Pestarena.—Mar. return :—Pestarena Mine, 302 tons of ore, 391 ozs. gold, showing an average yield of 1 oz. 5 dwts. 21 grs.

Pinos Altos Bullion.—The out-turn for the week ended 28th ulto. was $10,000.

St. John Del Rey.—Telegram from the mines, dated Rio de Janeiro Apl. 7 : "27 fms. sunk ; 5 fms. driven during Mar."

Tolima.—The dirctors of this company will pay, on May 2, a dividend of 5s. per share, free of income tax, on the A shares, being the balance of dividend at the rate of 10 per cent. per annum for the year 1885.

United Mexican.—Telegram :—San Cayetano : Gross returns for week ending Apl. 4, $2,180 ; expenditure for week ending Apl. 4, $2,690 ; loss for week ending Apl. 4, $510. El Cubo : Gross returns for week ending Apl. 4, $3,740 ; expenditure for week ending Apl. 4, $4,290 ; loss for week ending Apl. $550.

Vishnu.—The managing director cables under date Apl. 7 : "Vishnu running 40 stamps."

West Argentine.—Cablegram from the manager in Colorado : "North drift has the appearance of good body of ore. Ore in shaft improving as it goes down."

Home Mines.

Dolcoath. — For the first time for several years Dolcoath figured in the tin ticketing last week, selling 40 tons, which was divided into two parcels of 20 tons each. It is said the manager was well satisfied with the result.

Great Laxey.—The dividend of 10s. declared by this mine was accompanied by a bonus of 2s. The mine pays an excessive royalty to the Crown, and can get no relief.

New Morgan.—The result of crushing for month ending Apl. 4, was as follows :—1,450 tons of quartz crnshed, which yielded 380 ozs. of gold, being an average of 5 dwts. 6 grs. per ton. Crushing was resnmed on Monday, 6th inst., after usual day's hang up mill for overhaul and necessary repairs.

West Carzise.—The whole of the mining plant and materials of this mine is to be sold by auction on Wednesday next. The amount called up is about 6,000*l*.

FOR LATEST PRICES

AND ALL PARTICULARS OF FOREIGN AND HOME MINES

SEE PAGES 574 AND 575.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

Salisbury.—Crushing for last month was 950 ozs.

Simmer and Jack.—Cablegram :—"Mar. profit, 4,390."

Nigel.—The result of last month's crushing yielded 880 ozs.

Stanhope.—The result of last month's crushing yielded 773 ozs.

City and Suburban.—The result of last month's crushing yielded 652 ozs.

Worcester Exploration.—Result of last month's crushing is 1,003 ozs. of gold.

Wemmer.—Mar. : "830 tons crushed ; 900 ozs. of gold yielded ; 22 days' working."

New Primrose.—March crushing, 1,342 ozs. from 2,615 tons ; result of 30 days' crushing with 30 stamps.

African Gold Recovery.—Cable from the manager :—"Robinson tailings treated 1,735 tons, yielding 1,600 ozs."

Kleinfontein Estate.—Result of Mar. crushing, 2,200 tons ; crushed 560 ozs. smelted gold, 20 days, 50 stamps.

Durban-Roodepoort.—Crushings since Mar. 6 last are as follows : —"2,655 tons crushed, 26 working days, 1,540 ozs. of retorted gold."

May Consolidated.—Cable dated Apl. 6 : "The yield of gold during the past month (Mar.) was 1,700 ozs. from 4,900 tons. Mill running 28 days."

Wyldsdale.—The agent at Barberton telegraphs, under date 4th inst., in reference to another test crushing of Lomati reef : —14 tons ; 3 ozs. per ton."

Forbes Reef.—A telegram from the mines gives the result of crushing for the month of Mar. as follows :—"Crushed 1,400 tons of quartz, casing and surface soil, obtained 535 ozs. of gold."

Witwatersrandt (Knight's). — Mar. result :—"3,000 tons crushed, 750 ozs. of gold yielded, 24 working days." At the same time it is announced that a meeting of the company will be held at Johannesburg on May 26.

Transvaal Gold Exploration.—Cablegram :—"Mined during Mar., 625 tons ; battery working 23 days, double shifts ; crushed 725 tons mixed ore, yielding 1,050 ozs. ; pans, 500 ozs. ; sundries, 63 ozs. ; total for Mar., 1,613 ozs."

Jubilee.—The following extract from a letter received from the head office of the company in Pietermaritzburg shows the amount of ore crushed in Feb. for 21 working days :—Main reef, 400 tons ; south reef, 250 tons ; main reef leader, 137 tons ; total, 787 tons, producing 938 ozs. 10 dwts. Result of last month's crushing is 862 ozs. of gold. Have declared a dividend of 10 per cent., payable to all shareholders registered on Apl. 5.

Stanley (Sheba United).—Report from manager Mar. 20 : We started shipping ore to the mills on Wednesday ; also re-sinking the shaft. We are now down 330 ft. The crevice in the east 300-ft. level is still of very good width, averaging about 4 ft. The California struck their good ore at a depth of about 450 ft. Our ore is improving in value as we go down. Report from the manager under date Mar. 24.—I went up to the mines two days since, and found everything working satisfactorily. The shaft is in very hard rock, and has been sunk only 5 ft. since last Tuesday week. There is about 4 ins. of crevice with considerable copper in it, which is a good sign. We shall probably find a decided change in our vein when we get through this hard streak, for we are deep enough to expect a permanent change for the better. Last week we shipped 16 tons of milling ore from the east 300-ft. level, where the crevice is 4 ft. wide. The ore looks as if it should run 5 or 6 ozs. to the cord. I have not yet received the milling returns. We shall increase our output now that the work is fairly under way.

DICKENS CUSTER MINES.

The manager at the mines (Mr. A. H. Oxford) has written under date of Mar. 7 as follows :—Mine report for the month of Feb.—Charles Dickens Mine : No. 1 tunnel, on little or south vein winze, 30 ft. in going east. Here we have one man drifting to the west. The winze is down about 25 ft., the vein is 2 ft. wide, and of fair average ore. No. 2 tunnel, on little or south vein, winze No. 1, stope No. 3 : This is a stope we have started between 2 and 3 levels about 40 ft. from raise made by Robinson, between 3 and levels from which we are getting some good results. We commence raising up from the ceiling of 3 level, and intend stoping the No. 2 tunnel. The streak of ore at present is not very thick, but in places very rich. Samples taken from two different parts of the stope to-day, Mar. 7, assayed as follows :—Sample No. 1 : Silver, $915.75 ; gold, *nil* ; total, $915.75 to the ton. Sample No. 2 : Silver, $79 00 ; gold, $35.20 ; total, $114.20 to the ton. Under-hand stope west : This is an under-hand stope we have started to the west, near the top of the raise made by Mr. Robinson between 3 and 4 levels ; it is now about 20 ft. long and 14 ft. deep. The whole of the floor (20 ft.) is in good ore, some 2 or 3 ins. thick. The dip of the little or south vein is shaping its course more and more towards the big or north vein. I am hoping in my next report to be able to say that the two veing have come together.

BRITISH MINING INTELLIGENCE.

DEVON GREAT CONSOLS (Apl. 9.)—Wheal Maria, Capel Tor lode, Eastern shaft: In the 112-fm. level west, the lode is 1½ ft. wide, composed of capel with quartz, peach and a little mundic. In the 74-fm. level east, there is no alteration since last advice. Watson's engine shaft: In the 172-fm. west, the lode, part carrying 3 ft. wide, continues to yield saving work of copper and mundic ores with a little tin. In the 160-fm. level east, the lode is 4 ft. wide, composed of capel with quartz, fluor and small quantities of copper and mundic ore. We shall sample to-morrow 1,250 tons computed copper ore.—I. Richards.

DEVON UNITED (Apl. 9.)—Willesford's shaft: In the 144-fm. level west, the lode continues about 2½ ft. wide, composed of quartz and capel, with peach and a little mundic. In the 132-fm. level west, the lode is 2 ft. wide, very promising, and continues to yield 3 tons of copper ore per fm. In the stope in the back of the 132-fm. level, the lode is worth 2 tons of copper ore per fm. Watson's shaft: In the 60-fm. level west, the lode is about 1 ft. wide, composed of capel and quartz. Our sampling of copper ore to-morrow will be 82 tons.—I. Richards.

DRAKEWALLS (Apl. 9.)—Engine shaft sunk 2½ ft.; timber put in; skip road complete. In 160 east lode greatly improved; will produce 12 tons mundic per fm. for width 5 ft., and saving work for tin. In 160 west, lode yields 8 tons mundic and saving work for tin. Stope back of 160 west, 12 tons mundic, intermixed with tin. Lode in stope, bottom 147 east, 10 tons mundic, with a little tin. Ground in 147 east, 5 tons, and a small portion of tin. No change in 147 west. Water still flowing. Stope bottom of 132 west of cross-course, 3 tons of copper and 4 tons mundic per fm.; and lode in stope back of 132 west 5 tons copper and mundic. Copper ore sampled to-morrow; 105 tons. Contractors taken samples of arsenic soot, and have begun to cart away. Busy cleaning and preparing parcel of tin for sale next month.

MID-DEVON.—Report for week ending Apl. 4.—Surface: Machinery throughout doing effective duty. A shaft: Water drained to the bottom of the 80. C shaft: The 50, No. 3 stope, is suspended. The 60 east has been resumed by six men and driven by hand labour 4 ft. 6 ins.; total distance from shaft, 90 fms. 1 ft. 6 ins. The strata is composed of capel, garnet, hornstone and chlorite, intermixed with a little copper ore and arsenical mundic not sufficient to value. This drivage will, next week, be carried on by rock-drills.—J. Neill.

NEW MINERA.—Report for three weeks ending Apl. 3:—275-yds. level—South level: Lode 3 ft. wide, and worth 2 tons blende per fm. Main level: Lode 2 ft. wide, containing some lead ore. No. 1 rise: Up 14 yds., worth 3 tons blende and a little lead ore per fm. At 12 yds. up, levels have been commenced in both directions on the lode. The level east, worth 3 tons lead ore per fm., and the level west, worth 3 tons blende and 1 ton lead ore per fm. No. 2 rise: Commenced on the south level where there was a good lode worth 3 tons lead ore and 1 ton blende per fm. No. 3 rise: As stated in last report, a rise has been started on the short driving going towards the shaft, and is now up 3 yds., worth 2 tons blende and 1 ton lead ore per fm. No. 2 winze: Down 18 yds., and worth 3 tons blende per fm. 315-yds. level: The cross-cut is in 96 yds., and should be nearing the lode. The ground is changing. Dressing: The weather has been much against dressing. Yesterday and to-day the ground has been covered with several inches of snow. The improved machinery is being erected. A reservoir for pounding the pit water at night is nearly completed, and launders fixed to convey the water from the shaft to it. Up to date 91 tons blende and 53 tons lead ore have been sent off.—H. E. Taylor.

SOUTH CONDURROW (Apl. 7.)—We have holed the rise above the 123 at Marshall's shaft to the winze below the 80 west of Plantation shaft. This has given good ventilatiou. There is no other new feature in the mine calling for report this week, but we will have a full report for the meeting next week.—W. Rich.

SOUTH DARREN (Apl. 9.)—The shaftmen have finished cutting tackle room at the 142, and are now commenced to wideu the shaft to the bottom of the sink to make room for penthouse. The lode in the 130 end west is very strong, and contains good spots of lead and copper, but not quite sufficient to value. The lode looks promising for producing ore. The drawing of ore stuff and the repairs of the ladderway are being pushed on.—J. Mitchell.

TREGURTHA DOWNS (Apl. 8.)—I am pleased to say that our prospects are greatly improved by the important improvement in the lode in the western part of the mine, and we shortly expect to reach the north lode at the 110-fm. level. Judging from the appearances of the lode in the 95 we anticipate doubling our present returns as soon as this level is open for stoping.

WEST WHEAL GRENVILLE (Apl. 7).—The 130-fm. level driving north of the engine shaft is extended 4 fms. 1 ft. Associated with the arsenical mundic in this drivage we have this week found traces of tin. The 120 cross-cut driving north is extended 98 fms. 2 ft. The granite in this drivage continues of a mineralised character. In the 120 east of cross-cut on No. 4 we have driven out south to the east of the cross-course about 10 ft. The granite in this direction is mineralised and well defined. The 120-fm. level driving east of cross-cut on No. 2 is extended 21 fms. 5 ft. The vein in this end is fully 2½ ft. wide, from which water is issuing freely and carrying more peach, which shows good edge of tin on vanning shovel.—J. Skeat, N. Temby.

WHEAL CREBOR (Apl. 7).—In cutting through the lode in the 156 end east of shaft, we have just struck a division, but as yet cannot say whether it is the footwall of the lode or not. The width of the lode as now seen is 9 ft.; the first 4 ft. from the hanging wall will yield 4 tons of mundic with a little copper ore per fm., the remaining part, in which there are many crevices, is composed of capel, friable spar, white iron, producing mundic and copper ore, but not enough to pay for working. All other points in the mine are the same as reported last week.

FOREIGN MINING INTELLIGENCE.

ARGENTILLA (Apl. 2).—No. 2, Marine: Distance driven in Mar., 15½ metres, passing through kindly killas, containing small spots of silver-lead and a large quantity of pyrites. The ground has been fair for driving, letting out more water than the previous month. I have put the men to cross-cut south for the footwall; this is about 26 metres east from the other small cross-cut, or cross-cut No. 1. Quartz reef: Cross-cut south driven for the past month 11 metres, the ground being very favourable. If this continues we shall strike the reef sooner than we anticipated. Ogliastrone Valley, east: Driven since setting day, 4.80 metres on an east and west lode. This level has shown improvement every metre driven. The lode is well formed, with the appearance of a strong copper vein. As there are no other workings on this run of ground we have every reason to expect a good strike. I think it advisable to continue driving on this lode another month before cross-cutting into the large body of pyrites. I am of opinion this will be a copper lode from present appearance. No. 3, Rowe's workings, south cross-cut: Driven, 5.40 metres; passing through hard ground, we have had small strings of silver-lead at every metre driven.—J. B. Roberts.

BALAGHAT MYSORE (Mar. 18).—Since my last report I regret to say cholera has broken out in our camp; several persons have been attacked, and up to date six natives and one European have died from it. This has caused such a scare amongst the natives that those who were living in the camp have cleared out, whilst those that reside in the villages are for the present not allowed to leave their villages; the result is that our work is almost at a standstill. I am glad to say some days have now elapsed since the last death, we are, therefore, hoping the camp is again free of this plague; a few coolies are also returning to their work, and confidence is again being restored, so that in the course of a few days we hope to be again in full working order. North Engine shaft: We have not yet been able to secure the ground referred to in my last, and, consequently, have not resumed the sinking. The 500-ft. level north has been driven 10 ft. 3 ins., or 463 ft. 3 ins. from the shaft; the quartz is very small, and only assays 5 dwts. 21 grs. of gold per ton. The No. 1 winze in the bottom of this level has been sunk 3 ft., or 50 ft. below the level; I am sorry to say the quartz has not yet improved in size, being only about 1 ft. wide, but its value is better, being now worth 2 ozs. 6 dwts. 21 grs. of gold per ton. The stopes in the back of this level yield quartz of about 1 ft. wide, and assay, on an average, 2 ozs. 10 dwts. 6 grs. of gold per ton. The 500-ft. level south has been suspended for the want of coolies, but the driving will be resumed as early as possible. The stopes in the back of this level yield quartz of about 8 ins. wide, and assay 4 ozs. 13 dwts. 12 grs. of gold per ton. I am pleased to say the ground at the 410-ft. level north has been so far secured as to enable us to resume the sinking of the No. 3 winze, but this work had no sooner been begun than the cholera broke out amongst us: the coolies, therefore, left the camp, and this winze is, therefore, again idle. The stopes in the back of the 410 level north produce quartz of about 1 ft. wide, and assay, on an average, 2 ozs. 0 dwts. 2 grs. of gold per ton. Not being able to use the rock-drills in sinking the shaft below the 500-ft. level owing to the shaft undergoing necessary timbering, we have put the machines to rise in the back of the 410-ft. level north that the communication with the 330 machine winze, or Haines' shaft, might be effected as quickly as possible. We are up about 18 ft. above the level; the quartz is about 6 ins. wide, and worth about ½ oz. per ton. The machine winze in the bottom of the 330-ft. level north has been sunk 4 ft. 6 ins., or 43 ft. 6 ins. below the level; the quartz is about 6 ins. wide, and worth about 1 oz. of gold per ton. The stopes in the back of this level produce quartz of about 1 ft. wide, and assay 2 ozs. 13 dwts. 16 grs. of gold per ton. The plat stopes in the back of this level yield quartz of about 9 ins. wide, and assay 3 ozs. 7 dwts. 22 grs. per ton. Nothing has been done at the 270-ft. level south since my last. The stopes in the back of this level produce quartz of about 9 ins. wide, and assay 2 ozs. 14 dwts. 7 grs. of gold per ton. The stopes in the back of the 270-ft. level north yield quartz of about 1 ft. wide, and assay 18 dwts. 3 grs. of gold per ton. Haines shaft: We are pushing on with the timbering, and securing the ground, &c., as fast as our limited supply of labourers will allow us, and hope soon to be able to resume the sinking below the 270-ft. level. Surface: Owing to the cholera scare most of our surface hands, including blacksmiths, carpenters, bricklayers, engine drivers, foremen, &c., have left the mine; we have, therefore, the greatest difficulty to keep the most important places at work, whilst all new work has for the time been allowed to remain in abeyance. I regret to say we have also been obliged to stop the mill, but I trust we shall be able to set it to work again in the course of a few days.—J. Pryor.

BRATSBERG.—Report for week ending Mar. 28.—Hoffnung Mine: During the last few days there has been a decided improvement at No. 2 adit level, having been for some time unproductive, whilst to-day it is yielding good saving stuff. No. 1 rise in the back of this level is yielding ¾ ton per fm., and No. 2 rise is of about the same value. At No. 3 adit we have a lode in the back of the level producing at the rate of 1 ton per fm., but towards the bottom of the level but little ore is to be found. We think, however, that the ore will make downwards, hence prospects here are encouraging. At No. 4 level the lode, whilst remaining very regular in formation, has been very changeable in value for ore of late, at present it is yielding about ½ ton a fm. Ball's shaft is carrying a lode about 2 ft. wide, composed mostly of quartz, with a little ore intermixed, being saving stuff, but not enough to value. Progress here has been retarded owing to one of the miners blasting himself, but fortunately not very seriously. At Murchison's section below the mid level we have a lode worth fully ¾ ton per fm. During March 57 men employed at this mine. Johannes Mine: The level driving west on Howard lode is worth ½ ton per fm., and the rise in the back 1 ton per fm. The level east is still idle. 10 miners employed here during March. Surface work and remarks: The past week has been very considerably broken by the Easter holidays, observing, as they do in this country, Thursday and Friday, and the Saturday following being measuring and pay day, we have only had three working days. This, together with the fact that we have lent several men to the Smelting Co., has caused less duty in the mine, and, consequently, a correspondingly reduced output, the estimated production for March being 100 tons 20 per cent. ore. The re-erection of the dressing machinery has also suffered in progress, owing to the holidays, several of the temporarily engaged men on this work having left us a week since to be at home during Easter. The air-compressor has been running satisfactorily since the repaired breakage.—J. D. Holman.

CALLAO BIS (Mar. 16).—Independiente: The No. 3 cross-cut has been driven 20 ft.; from shaft, 40 ft.; ground very soft, and water proceeding from the face of the drift very freely. No. 2 level west has been driven 5 ft.; from shaft, 195 ft.; lode 2 ft. wide, of a soft nature, and of little value, but between very good hanging and footwalls. No. 2 raise: Stope advanced 10 ft.; lode showing 4 ft. wide,

of good value. No. 1 stope advanced 5 ft. ; from raise, 35 ft. ; lode 14 ft. wide, of good value. No. 1 level—North and south lode : Winze advauced 6 ft. ; from bottom of level, 16 ft. ; lode showing 5 ft. wide, of fair value. 1 have suspended this for the preseut to put the miners in the No. 3 cross-cut. Surface work—Cornish pump : Very good progress has been madc. The beam of the bob is already in its place, and in the course of a few days more we shall commence to put the main rods down the shaft. The tressel work is also completed to the shaft. New mill : Mortars and mortar blocks for 15 stamps are already in their places, and wc have commenced to cut foundation for mill. Engine : Considering the bad weather we have had, very good progress has been made.

— The directors received on Apl. 9 a telegram giving the result of the crushing up to Mar. 27, the totals, including the return to Mar. 19, recently published, being :—823 tons, yielding 978 ozs. gold. The telegram further states that the mine is improving.

CAPE COPPER.—Feb. report.—Ookiep : The 117-fm. level east of 72 winze is yielding a little saving stuff. We have started a cross-cut south at this depth, about 5 fms. to the west of 72 winze, with the object of reaching a point underneath the new shaft and of proving the ground in that direction, The stope in back of 105-fm. level east of 68 winze is producing 3 tons of copper ore per fm. The ground in thc 92-fm. level (No. 8) north-cast of 45 winze is composed chiefly of quartz contaiuing spots of copper ore. The rock in the 68-fm. level (No. 6) south of 24 winze is yielding occasional stones of copper ore. The stopes throughout the miue continue to yield well. Trial mines : Spriugbok : The wiuze sinking below the 86-fm. level is still yielding a little saving stuff. The stope in back of 86-fm. level south-east of No. 1 winze is yielding 2 tons of copper ore per fm., and the stope in the 36-fm. level south-east of Kelly's shaft is worth 2 tons per fm. Kotzees Mine : The rock in bottom of shaft sinking below the 25-fm. level is spotted with purple and yellow copper ore. Nababeep North : The winze sinking below the 31-fm. level is yielding a little saving stuff. The grouud in the 31-fm. level east of shaft having become unfavourable for copper ore, it has been suspended, and the men are put to cross-cut north and south in this driving, at the extreme end. Nababeep South : The 59-fm. cross-cut south-east of north-east level fully maintains its yield of one ton of copper ore per fm. The ground in the 59-fm. cross-cut north-west of north-east level is composed of quartz, iron and copper ore, but the latter not to value. Ookiep east : The stopes in the 58 and 66-fm. levels are worth 1½ tous of copper ore per fm.—Capt. Henwood.

— Returns for Feb. : Ookiep, 1,760 tons of 23 per cent. Arrivals at Port Nolloth : The "Taunton," "Golconda," and "Gloria. Bill of lading received : 670 tons of ore per "Cicero."

CHAMPION REEF.—Superintendent's report for the fortnight ending Mar. 16 :—Mysore section : At Carmichael's shaft the cutting of ground for the cistern box, &c., is now complete, and also the bearing timbers for taking up the weight of pump lift. The pumps from the present 12-in. drawing lift will be transferred, and the main rods brought down about 100 ft. further, in order to drop another small lift for sinking purposes. In the course of another week we hope to resume the sinking of the shaft. The cross-cut east at the 225 ft. has been extended 10 ft. 6 ins. ; total distance from shaft. 22 ft. ; there is no change in the appearance of the rock, the uuderlie of which still continues west. Ribblesdale's shaft : 6 ins. only have been sunk ; total depth, 222 ft. 9 ins. Owing to a scarcity of men to work the air-drills, the sinking has been delayed nearly the whole fortuight. During this time we have timbered the shaft down to within a few feet to bottom of shaft, and we have now resumed the siuking with hand labour until we can get more able men to run the drills. Garland's shaft has been sunk 2 ft. ; total depth, 212 ft. 6 ins. ; the coolies have only been sinking a few days, the remainder of the time they have been employed taking down a heavy piece of ground in the hanging of shaft, which was not safe to work under. Lode iu bottom of shaft is small. Dalyell's shaft has been sunk 3 ft. 9 ins. ; total depth, 218 ft. 6 ins. The labour done by the natives with the rock-drills is very unsatisfactory, and unless there is an improvement in the next measurement we shall stop the drills until we can get more competent men to work them. The native coolie has a great objection to working the drill in a wet shaft, and we cannot get good men to remain any length of time. The 160 end north at this shaft has been extended 9 ft. ; total length, 91 ft. 6 ins. This point is now suspended as we have holed into old workings. During the last 50 ft. of drivage the lode has had an aggregate width of 2 ft. of quartz, the value of which has varied from ½ oz. to 1 oz. 18 dwts. of gold per ton. The lode up close to the old workings is about 2 ft. wide, assays from which give 10 dwts. per ton. Coromandel section : At Prospect shaft the 320-ft. level north has been driven 7 ft. ; the lode is 3 ft. wide, carrying about 2 ft. of quartz, which assays 7 dwts. 20 grs. per ton. The 200 end south has been advanced 5½ ft. ; total length, 135 ft. ; during the last day or two the lode has been a little wider, but it is still small and irregular. A cross-cut east from bottom of winze below the 200 has beeu exteuded 8 ft 6 ins. ; the rock is still slightly mineralised, and the drivage will be continued a few feet further uutil we get through the formation of the lode. Two pares of men are now employed clearing a passage through the old workings north of Prospect shaft for ventilation. Surface work : At Mysore section the bob-pit and bed for pumping engine at Garland's shaft is finished, and the erection of the engine, angle-bob, &c., well advanced. The masons are now employed building the bed for hoisting engine, and an additional room to the miners' quarters. Machinery working satisfactorily throughout the mine, and the health of the camp is good.

COLAR CENTRAL (Mar. 18).—Eastern section, north division, new shaft : The 200 ft. north has been driven 15 ft., making a total distance of 48 ft. from shaft. We shall commence to cross-cut west, and hope to find the lode, which was cut off by the dyke in that direction. South division, main shaft : The 260 ft. north has been driven 18 ft. ; total, 79 ft. ; the lode is very small, with scarcely any quartz, but we still continue to carry a good hanging-wall. The 260 ft. south has been advanced 18 ft. ; total, 83 ft. from shaft, with a lode of about 6 ins., which shows only a trace of gold. East cross-cut has been commenced in this drift at about 50 ft. from shaft, but had to be temporarily suspended from want of coolie labour. Marden's shaft : The 240 ft. north has been driven 16 ft. ; total, 170 ft. from shaft ; there is now 1 ft. of quartz, showing about the same amount of gold as usual. The 240 ft. south has been advanced 14 ft., totalling 122 ft. ; the quartz has become much smaller at this point, being now from 6 to 9 ins. wide, showing only a trace of gold. We have been idle for a good many shifts during the fortnight owing to the outbreak of cholera on the goldfield. Three deaths occurred in this camp, causing many of our coolies to leave altogether We are still very short of labour, but hope during the next few days to be able to get some of our hands back agaiu.—A. S. B. Oakley.

CORTEZ.—The directors have received the following report from the superintendent at the miues (Mar. 21) :—Work at the mines for the week ending this date has been as follows : Average assay for the week, 70 54-100 ozs. silver. On Mar. 19 shipped 12 bars of bullion containing as per as our assay, 16,142 57-100 ozs. fiue silver, and 12 54-100 ozs. gold.

DAY DAWN BLOCK AND WYNDHAM.—Mine manager's report for fortnight ending Feb. 14.—No. 9 level west : The contractors have extended this level a further distance of 20 ft., making total distance from eastern boundary 626 ft. There is 1 ft. of stone on the footwall of poor quality. The present end of this level is just west of No. 2 shaft. An opening will be made on the north side of the level to connect with the shaft. No. 5 level : The stopes above this level, both on the foot and hanging-wall reefs, are yielding payable stone. No. 3 level west : The reef iu the stope above this level will average 18 ins. of stone of payable quality. No. 2 shaft : The cross-cut will be resumed during the coming fortnight. 805-ft. level west : In No. 1 drive a distance of 15 ft. has been driven on the course of the reef, making total distance opened up 62 ft. ; and in No. 2 drive a further distance of 23 ft. has been driven on the reef. The drives are now connected. Total distance opened up on the reef is 152 ft. The reef is 2½ ft. in thickness, is well-defined, and carries good minerals. A rise will be commenced for the purpose of opening up the block of ground between the 805-ft. level and the 630-ft. level. The prospects in this level are highly encouraging. 630-ft. level : A contract has been let to further extend this level a distanco of 100 ft., at 45s. per ft. 8 ft. have been driven ou wages and 12 ft. by the contractors. This makes the distance from the shaft 135 ft. The reef in the preseut end is 2½ ft. thick, and is highly charged with minerals, and shows a little gold. During the coming week a winze will be commenced to connect with 805-ft. level. No. 3 shaft : This shaft has been sunk a further depth of 6 ft., making total depth of underlie 332 ft. The country is hard granite.

DE LAMAR.—We are informed Capt. J. W. Plummer will undertake the management of thc De Lamar Mines, whilst still retaining his position as manager of the Elkhorn.

DUTCH GUYANA EXPLORATION SYNDICATE.—Report upon work done during the year 1890 :—Gross yield of gold, 42,616 grammes equal to 1,325 ozs. ; number of working days, 313 ; average number of sluices running, 3 ; number of men employed on sluices, 30. These results have been obtained by working in the simplest manner. The whole of the dead work upon the property has been paid for out of profits in working the alluvial, and a balance of 2,180*l*. 3s. 10d. remains in hand, which is being used for carrying on the developments.

ELMORE (Mar. 20).—Since writing you last week, the south cross-cut driven from the 540 level has been advanced 25 ft. ; total distance in from shaft, 155 ft. No change since my last report. The Confederate Star raise has been advanced 15 ft. ; total length of raise, 230 ft. At this point connection was made with the Old Star workings. There is considerable low-grade quartz exposed in the drifts ; after cleaning out the old wiuze, or shaft, we will be able to tell more about the quality aud quantity of the ore found in the Confederate Star ground.—G. A. McCornick.

ETHERIDGE UNITED (Jan. 21).—Fortnightly report : The Caledonian Miue—No. 1 shaft at the 80 ft. level : The work in progress is driving level and puttiug up a rise to connect with the upper workings to ventilate the mine, and opening up the ground. The reef in the level is getting very small on account of a hard granite bar or fault comiug in, and I cannot look for the reef getting large until we get through it. There is about 2 ft. of crushing ore in the rise, and 7 ft. between the walls of formation, but we will get the same fault in the rise very soon. In No. 2 shaft sinking is completed, and now driving for the reef. I expect to cut it in 10 ft. This will give us a good many stopes over head. No. 3 shaft : The reef will average 5 ft. in thickness, but is getting poorer in quality as we get near the surface. The mundic ore is not looking very well at the battery as yet. There will be about 40 tons mundic ore and 180 tons brown ore by the end of the month. We have had a heavy downfall of rain, which has filled the dams again.—M. Ferguson.

FLAGSTAFF (Mar. 21.)—Since my last report we have done exceedingly well in the number of feet driven. Main sixth level : This is now in 42 ft. The ground here is well mixed up with small bunches of iron. As I said in my last, we have cut a seam of iron 1 ft. wide. I have to-day put a man to work rising on it to see if it will not lead to a good body of ore. It is fair second-class. South drift : This is turning out a fair quantity of good ore. We are now rising on the ore there. There are now three pipes, they average from 1 to 3 ft. This is all first-class ore, carrying plenty of silver and lead, with the yellow crystallize carbonates. Seveuth level : The shaft we are sinking here is now down 18 ft. The seam of iron is still continuing about the same, from 6 ins. to 1 ft. wide. The hanging-wall here is standing straight up and down. This goes to show that we are in a "break." If we can get through this, and come to where the lode takes its natural course, we are likely to find good ore. This shaft is the only work I am doing now on seventh level. Number of tons mined the past week, 25—12 first-class and 13 second.—A. S. Swope.

GOLDEN FEATHER CHANNEL (Mar. 19).—We have experienced but little delay, and have suffered no loss whatever through the late rains, and as the weather for the past few days has been clear throughout the State, it is regarded as the forerunner of continual fine weather, and the end of the severe rain and snow storms, so that no further delay from this cause to our operations is anticipated. Miocene ditch is in perfect order throughout the entire length, and the pipe line from the reservoir to the claim is being rapidly completed. In fact, all the work is in such condition that our being able to get to mining in the claim at an early date is, in all human judgment, an absolute certainty. In conclusion, I am pleased to be able to report that all company affairs here continue in first-class condition.—F. McLaughlin.

GOLDEN GATE ALLUVIAL (Mar. 20).—Since my letter of the 2nd inst. there is but little to report beyond the cessation of the heavy storms that we have experienced during the last month, and

throughout which our head-dam passed unharmed. Our camps, roads, bridges, mining equipment, and all materials are to day in first-class order, and all preparations have been made to commence work upon the re-construction of the main flume, &c., at the earliest moment that such labour will be justified. The remarkably small snow-fall, and its rapid disappearance from the mountains, is a positive assurance that we will have an unparalleled early and long season's work in the claim this year. I am very pleased to be able to report that all affairs here are in the most satisfactory condition.—F. McLaughlin.

GOLDFIELDS OF MYSORE.—Superintendent's report for the fortnight ending Mar. 16:—The mining operations for the fortnight ending Mar. 16 have been confined to the sinking of south shaft, which has been sunk 8 ft.; total depth, 233 ft. 6 ins.; 18 coolies have been employed at this work, and considering the shaft is in hard country rock very fair progress has been made. The water has increased a little during the last foot or two, but up to the present we have no difficulty in keeping the shaft dry by hoisting the water in barrels. We are lowering the 8-in. drawing lift below the plunger pole at middle shaft. The pumps that were blocked by incrustation have been cleaned, and are being used again for this work.

GYMPIE GREAT EASTERN (Feb. 19).—Fortnightly report:—During the past fortnight the rise on the Orient reef has been extended 14 ft.; total, 72 ft. from where we cut the reef; there is about 15 ins. of crushing stuff showing coarse gold at every breaking down. The cross-cut at this level has been extended 6 ft.; total, 395 ft. from the shaft; the country is hard green stone. The north drive has been extended 9 ft.; total, 33 ft.; there is over 2 ft. of crushing stuff, but I have seen no gold in it. The south drive has been extended 9 ft.; total, 34 ft.; the reef is still broken up. I have started stoping going north; the reef is small, but shows colours of gold. When the ground is stoped a little higher we shall get better gold. The 690-ft. level: The back stopes above this level north and south are all showing a little gold. I shall wash up on Monday, the 23rd inst. There have been only 10 heads of stampers crushing the first fortnight and 15 the second. There are about five heads crushing for the Nicholls Lease since Feb. 6, and five head are hung up. There have been five more of the copper plates treated, for a return of 179 ozs. 10 dwts. 12 grs. of smelted gold. There are only five more to be treated, as the rest would not pay for treatment. Everything about the mine, winding engine, and battery is in good working order. There are 55 men employed—45 on the mine and 10 on the battery.—J. James.

INDIAN CONSOLIDATED (Mar. 16).—Phœnix section—No. 1 level: The drive in this level has been advanced 8 ft. The vein of quartz continues the same as in last report, and is at present of not much value. Hanging-wall still well defined and ground getting tighter. Tramway level: At this point we have driven 6 ft. for the fortnight. There is no change to mention, except that as in No. 1 the ground is getting harder, which will account for the distance driven not being greater. Stopes: We are breaking out as formerly reported in stopes E, F, G and K. The stone continues of much the same value, and we are able to keep the mill supplied. Mill: We stopped for a day to do some necessary repairs, but on the whole the battery has worked steadily, but water is failing fast. All surface works are in good order, and I am glad to say that up to date there has been little or no sickness in the mine.

— (Mar. 18).—Colar section: No. 1 new shaft has been sunk 6 ft.; total depth, 217 ft.; and the water has increased. We are much hindered hy the water, and have ordered up a new donkey pump to enable us to continue sinking. We have struck one small branch of quartz, but it is not the main lode. No. 2 new shaft 210: ft. north has been driven 6 ft. 9 ins., or a total of 112 ft. 3 ins., and suspended until we see what may be found in the east cross-cut from this level. The 210 ft. north: East cross-cut bas been driven 18 ft.; total length, 28 ft. 6 ins. We have had two branches of quartz in this cross-cut, but they do not show any gold. The 210 ft. south has been driven 4 ft. 9 ins. by hand labour, making a total length of 103 ft. The rock-drill has again been put to work here, and the last blast shows stringers of quartz towards the footwall side. The 210 south: East cross-cut has been advanced 22 ft.; total length from drift, 52 ft. 3 ins. We appear to have passed through all the quartz now, and have accordiugly removed the drill to work the main end going south. We have opened up on the quartz met with in this cross-cut, and have driven 5 ft. south, the lode being 2 ft. 6 ins. wide, and showing a little gold in the pan. In the north end we have just disclosed 3 ft. of quartz, whicb, however, only shows about 2 dwts. of gold. Main shaft: 240 ft. north drive has been driven 13 ft.; total, 122 ft. We have some quartz in the end, though of little value. No. 5 shaft: 156 ft. north has been driven 7 ft. 9 ins.: full length, 194 ft. 9 ins.; still in barren ground. The 156 north: East cross-cut No. 2 has been advanced 17 ft. 6 ins., and is now in 116 ft. 6 ins. from the level without our having come across the lode. Should we fail to meet with something here very soon it will not be worth while to continue this piece of drivage. The 450 back stope, drift south, has been driven 6 ft. 6 ins.; total, 10 ft.; still in barren ground, owing probably to the close proximity of the trap-dyke. New air compressor machinery: The fly-wheel and condenser have arrived on the mine, and are being placed in position. This work is in a forward state. In the cross-cut east from the 210 ft. south in No. 2 new shaft we have, I think, cut the same lode as the old men worked on. Unfortunately, at the point we have encountered it, the lode is very poor, but in driving north and south we may come across ore of a better grade.—A. S. B. Oakley.

KETCHAU (PAHANG).—The following extract from Mr. Becher's letter, dated from Singapore Mar. 3 last, received by this mail, gives the latest advices from the mine, viz.:—"I attach certificates of assay of sample of pulp from battery screens, giving a return of 5 ozs. 9 dwts. 17 grs. of bullion per ton. In place of the 48 ozs. 5 dwts., the shipment of wh'ch I advised in my letter of the 11th ult., you will be glad to learn that I received a bar weighing 70 ozs. 13 dwts. 9.6 grs., which I have sold to the Hong Kong and Shanghai Bank for $1,739.93, as per press copy of sale note enclosed. For your guidance I enclose also certificate of assay." The bar of gold weighing 70 ozs. 13 dwts. 9 6 grs., mentioned in the above letter, was referred to in circular of Feb. 16, as "45 additional arriving."

MONTE DEL ORO (Mar. 31).—Fortnightly report:—The sinking of Taylor's engine shaft helow the 244-ft. level, the driving of the 244-ft. level north of shaft No. 6, and the driving of the cross-cut west of the same level, have all been suspended, on account of the influx of water occasioned by the heavy rains recently experienced here. Providing the weather continues fine for a few days, we hope the engine will be successful in forking the water, thus enabling us to resume operations at the points herein mentioned. An advance of 5 ft. was made in driving the intermediate level north of winze No. 8, when at a total distance of 111 ft. operations were suspended owing to the lode showing no signs of improvement. In the 186-ft. level north of shaft No. 6, where the lode is composed of slate and flookan, 24½ ft. were driven in the two weeks, making its total length 603 ft. During the past fortnight a small amount of sinking has been done in Low's engine shaft, the delay being fully accounted for by the quantity of water to be contended with. At present two windlasses are being constantly employed in the attempt to fork the water, most of which is issuing at a point considerably above the bottom of the shaft.—J. Roberts.

MOSMAN.—Manager's report for fortnight ending Feb. 21.—North Australian Mine: Nothing of importance has taken place since last report so far as the working and development of the mine is concerned. Stone of very fair quality is still being raised in limited quantity. 38 tons of quartz has been raised during past fortnight, making a total of 73 tons in four weeks, all of which has passed under the stampers, the gold from which will be placed with the bank during next week. The grindings will take a day or two longer to finish. The yield looks near 3 ozs. per ton so far. Water: Owing to continued wet weather we have considerable water to pump. Eastward Ho Mine: Very little work is being done in this mine just now, only stoping from the 1,000 and 1,100-ft. levels, and this will be stopped forthwith, as the men cannot get on there any longer owing to want of ventilation, and must wait till the main shaft is broken through before any more work can be done. Stone raised: 68½ tons of quartz has been raised since the last crushing, and has passed under the stamps, and it will be cleaned up on Monday the 23rd, and looks for about 1¾ ozs. per ton. Wyndham shaft: Have sunk shaft 17 ft. during fortnight; total depth, 676 ft. The 400-ft. level south has been extended 7 ft.; total distance from shaft, 35 ft.; reef, 12 ins.; a little broken up, and somewhat poorer than it was. The 550-ft. level south: Driven 16 ft.; total from shaft, 42 ft.; the reef is only about 4 ins. in thickness; I think it will improve shortly. The 550-ft. level north: Extended 14 ft.; total from shaft, 41 ft.; reef, 10 ins. thick, of fair quality. The last shot put in in the face shows a great improvement in quality, which I hope will continue. Stone raised during fortnight 18¾ tons, all of which, together with the 20 tons previously raised (38½ tons), has passed under the stampers, and will be cleaned up on Monday next, the 23rd inst. Stopes: The reef in stopes is pinched. Stopes will be started at once above all three levels being driven.

MOUNT ZEEHAN (Feb. 23).—The manager writes as follows:—Queen Extended section No. 5: The level at 110 ft. has been carried a further distance of 16 ft.; total, 175 ft.; country is hard, white sandstone, and water is making freely. The drive northwards on the course of No. 1 lode has progressed 20 ft. 6 ins.; total, 47 ft.; the lode formation is here 6 ft. wide. The drive southwards from the level on the course of the same lode has been commenced, and has been carried a total distance of 27 ft., in black slate and pug, showing a lode formation 6 ft. wide. The air shaft on the same lode has been sunk a further depth of 13 ft. 6 ins., and has been timbered up; total depth, 65 ft. 6 ins.; the thickness of the lode formation here is 18 ins. The air shaft on No. 2 lode has been sunk a further depth of 4 ft. 6 ins., and has been timbered up: total depth, 29 ft., at which depth sinking has for the time been discontinued; 1 ton of first-class ore was obtained here. Montana section No. 9—Open cast stope on No. 1 lode: We have stoped a further distance of 35 ft. 6 ins. The south end stope has only 8 ins. of ore, while the north stope has been worked up to the boundary, where it shows nearly 4 ft. of solid ore. About 19 tons of first-class ore have been raised here during the fortnight. Only second-class ore is found at present. No. 3 lode in the west gallery: A chamber 5 ft. by 5 ft. is being cut, from which we will put up a rise to surface for air, the ventilation being very bad at present. Britaunia section No. 8: The north-west cross-cut has been driven a further distance of 8 ft.; total, 86 ft.; in hard, black slate, interspersed with iron pyrites. The 74½ tons of this company's ore, ex s.s. Prodano, contained 69½ per cent. of lead and 7,887 ozs. of silver.

MYSORE (Mar. 18).—Mining operations for the fortnight ending Mar. 16.—The progress made with the rock-drills continues to be very satisfactory. The 180 north of Rowse's shaft has been driven 20 ft.; total distance, 113 ft. 4 ins.; there is no lode at present in the end, but the ground is very congenial for the production of gold, and we expect to meet with quartz very soon. The 700 north of Rowse's shaft has been driven 26 ft.; total distance, 305 ft.; the lode is 2 ft. 9 ins. wide, and assaying 7 ozs. 8 dwts. The 550 south of incline shaft, on wide lode, has been driven 2 ft. 4 ins.; total distance, 10 ft.; the lode is 2 ft. 6 ins. wide, and assaying 6 dwts. 12 grs. The 466 cross-cut north-west of Rowse's shaft has been driven 25 ft. 5 ius.; total distance, 431 ft. 9 ins.; the ground is more favourable for driving, and letting out a little water. The 236 north of Rowse's shaft has been driven on No. 3 fold 2 ft. 6 ins.; total distance, 36 ft. 6 ins.; the lode is 4 ft. wide, and assaying 2 dwts. 12 grs. Glen's shaft: The 250 north of shaft has been driven 29 ft. 2 ins.; total distance, 126 ft.; the lode is 2 ft. wide, composed of schist and carbonate of lime and pyrites with occasional stones of quartz, but in a very unsettled state; we have commenced to cross-cut a little way east to see if there is any other part of the lode standing near by in this side of the level. Schaw's shaft: The 450 north of shaft has been driven 30 ft.; total distance, 205 ft.; the lode is 1 ft. wide, and assaying 6 dwts. 12 grs. The 450 south of shaft has been driveu 3 ft. 6 ius.; total distance, 63 ft. 6 ins.; the lode is 1 ft. wide, and assaying 2 dwts. 14 grs. The 320 north of shaft has been driven 3 ft.; total distance, 149 ft. 6 ins.; the lode is small and poor. The 320 south of shaft has been driven 4 ft. 6 ins.; total distance, 193 ft.; the lode is 1 ft. wide, and assaying 15 dwts. Tennant's shaft: The 360 north of shaft has been driven 28 ft.; total distance, 308 ft. 5 ins.; the lode is 2 ft. wide, assaying 5 dwts., and looking promising to improve. The 290 north of shaft has been driven 38 ft.; total distance, 620 ft.; the lode is small and unproductive. I expect this level will have to go about 100 ft. further to intersect the run of quartz we are driving on now in the 180. The 290 south of shaft has been driven 26 ft. 6 ins.; total distance, 282 ft.; the lode is 1 ft. wide, and yielding quartz which shows a trace of gold. The 180 north of shaft has heen driven 33 ft. 6 ins.; total distance, 788 ft.; the lode is 4½ ft. wide, aud assaying 12 dwts. This is a very fine body of quartz, and as the level gets further north I think the quality will improve. Stopes: The lode in the stope in bottom of the 700 south of the incline shaft is 4 ft. wide, and assaying 2 dwts. 14 grs. The lode in stope in back of the 700

south of incline shaft on the wide lode is 4 ft. 6 ins. wide, and assaying 3 ozs. 4 dwts. The lode in stope in back of the 700 south of Rowse's shaft is 3 ft. wide, and assaying 1 oz. 16 dwts. The lode in stope in back of the 700 north of Rowse's shaft is 3 ft. wide, and assaying 3 ozs. 14 dwts. 7 grs. The lode in No. 2 stope in back of this level is 3 ft. wide, and assaying 4 ozs. The lode in stope in back of the 620 south of the incline shaft is 3 ft. wide, and assaying 1 oz. 5 dwts. 17 grs. The lode in stope in back of the 620 north of Rowse's shaft is 1 ft. 6 ins. wide, and assaying 1 oz. 0 dwts. 5 grs. The lode in No. 2 stope in back of this level is 9 ins. wide, and assaying 3 ozs. 5 dwts. 8 grs. The lode in No. 3 stope in back of this level is 2 ft. wide, and assaying 16 dwts. The lode in stope in back of the 600 south of Rowse's shaft is 2 ft. wide, and assaying 2 ozs. 5 dwts. 17 grs. The lode in stope in back of the 550 north of Rowse's shaft is 3 ft. wide, and assaying 3 ozs. 5 dwts. 8 grs. The lode in stope in back of the 550 south of Rowse's is 3 ft. wide, and assaying 1 oz. 15 dwts. The lode in stope in bottom of the 550 south of shaft is 2 ft. wide, and assaying 1 oz. 15 dwts. The lode in stope in bottom of the 466 north of Rowse's shaft is 2 ft. wide, and assaying 1 oz. 19 dwts. 14 grs. The lode in stope in back of the 400 north of Rowse's shaft is 2 ft. wide, and assaying 13 dwts. 1 gr. The lode in stope in back of the 400 south of Taylor's shaft is 4 ft. wide, and assaying 3 dwts. 6 grs. The lode in stope in back of the 360 north of Plummer's shaft is 4 ft. wide, and assaying 1 dwt. 23 grs. The lode in stope in back of the 360 south of Plummer's is 2 ft. 6 ins. wide, and assaying 9 dwts. 19 grs. The lode in stope in back of the 296 north of Plummer's is 1 ft. 6 ins. wide, and assaying 3 dwts. 22 grs. The lode in stope in back of the 180 north of Tennant's shaft is 4 ft. wide, and assaying 1 oz. 16 dwts. Rising: The lode in the rise in back of the 290 north of Tennant's shaft is 3 ft. wide, and assaying 1 oz. 19 dwts. 14 grs. The lode in the two rises in back of the 180 north of Tennant's shaft averages 4 ft. wide, and assays 1 oz. 3 dwts. 10 grs. The lode in rise in back of the 180 south of Tennant's shaft is 1 ft. 6 ins. wide, and estimated to be worth 5 dwts. Sinking: Rowse's shaft has been sunk 18 ft.; total distance, 38 ft. below the 780. This shaft is still in the trap-dyke, but the character of the grouud is changing, and getting a little better for progress, and I am expecting it will be in schist again very soon. The winze in bottom of the 700 north of Rowse's shaft has been sunk 8 ft.; the lode is 4 ft. wide, and assaying 2 ozs. 17 dwts. 4 grs. The winze in bottom of the 320 south of Schaw's shaft has been sunk 3 ft.; total distance, 117 ft. 6 ins.; the lode is 6 ins. wide, and yielding occasional stones of quartz. The new shaft north of Tennant's has been sunk 13 ft.; total distance, 46 ft. 6 ins. All our surface operations are progressing in a very satisfactory manner.—J Gilbert.

NEW DEVALA MOYAR (Mar. 17.)—We have extended the cross-cut in the east end of the 116-ft. level 8 ft.; total, 29 ft.; and there are no signs of any reef standing to the north of the drive. As we required a drill to resume sinking the bottom winze on the reef, we have removed the rock-drill from the cross-cut, and started sinking with it. Our stopes are in good condition and regular stoping is being carried on. Quartz for the mill has been regularly sent all through this month, although the mill has been idle. The engines and boiler at the mill have had a thorough overhaul, and crushing was started yesterday at the mill and everything worked smoothly. We had a serious fire last week which burnt down the miners' quarters, but this has not interfered with the general work.—R. B. Johnston.

NEW EBERHARDT.—The mine manager reports Mar. 22 as follows:—Mine: Our mine prospects are as yet quite favourable. The total weight of ore extracted and assorted for the week 35 tons; assay value of the same as per mine samples, $38 per ton. The grade of the ore is not quite up to our total standard, but at the same time it is good milling ore. We are getting along very nicely with our mill repairs, and I hope to be able to commence milling about Apl. 1. The quartz team is running steadily, but it is not yet bringing full loads; but the roads are drying up very fast, and I trust in a few days the team will bring down its usual loads. We have on our mill dump 200 tons of ore, and about 250 tons on our mine dump ready for shipment to the mill.

NEW VISO (Mar. 31).—Manager's monthly report:—At the Santa Cristina deep adit we have cross-cut the lode from one side to the other and find it to be 15 yds. wide. It is quite compact, and some parts of it look promising and yield considerable quantities of arsenical pyrites, but at this place it produces no tin worthy of note. I have selected the kindliest part and resumed driving north-west on its course, which will take us into deeper ground and prove a part of the concession before us which has produced large quantities of tin at a shallow depth. On the continuation of this lode, and about 150 metres in advance of the deep adit, we are getting out tin ore of excellent quality, and in paying quantities. This point is about 20 yds. under the surface, and if it continues to open out according to its present appearance it will enable us to increase our tin sales. In several parts of our property we are carrying on exploratory work, and at one or two places we have got out a little tin during the past month. I have 2 tons of dressed tin which will be weighed off to-morrow and despatched to England.—R. R. Nancarrow.

NUNDYDROOG (Mar. 18).—Report of work done for fortnight ending Mar. 16:—The 450 north winze in bottom: Distance sunk, 8 ft.; total depth, 70 ft. The 520 south: Distance driven, 4 ft., by two Englishmen with a rock-drill; the lode maintains its size well, being now 2½ ft. in width, and assays 1 oz. 11 dwts. 12 grs. of gold per ton. The 450 north rise in back north stope: Ground stoped 8 fms., by three natives with a rock-drill; the lode is a strong one, 4 ft. in width, worth over 2 ozs. per ton. The 450 north rise in back south stope: Ground stoped 7 fms., by three natives with a rock-drill; the lode looks well here, being 4 ft. 6 ins. wide, but the quartz is rather white, and assays 1 oz. 4 dwts. per ton. The 450 south stope in bottom: Ground stoped 7 fms., by one Englishman with a rock-drill; the lode is 3 ft. wide, and assays 2¾ ozs. per ton. The 370 north cross-cut west: Distance driven 22 ft., by two Italians with a rock-drill; present length of cross-cut, 85 ft.; there is still a little water oozing from the end, but no change in the rock. The stopes working by hand are as follows:—The 450 north stope in back No. 2: Lode 3 ft. wide; assay value, 17 dwts. 12 grs. The 370 south: Stope in bottom; lode 3 ft.; assay value, 2 ozs. 9 dwts. The 370 north: Stope in back; lode 2 ft.; assay value, 3 ozs. 17 dwts. The 300 north: Stope in back; lode 1 ft.; assay value, 1 oz. 11 dwts. 12 grs. Taylor's shaft: Sunk 5 ft., by one Italian with a rock-drill; we are also widening the shaft, cutting ground for cistern plat, &c. The 520 cross-cut east: Distance driven, 26 ft., by three Italians with a rock-drill; total length of cross-cut, 46 ft.; we have met with a little quartz, and the appearance of the end is very encouraging; we expect soon to have the lode here. Kennedy's shaft: We have resumed sinking here, and now that we have the pumping engine working hope to make fair speed. There is a large quantity of water here still. North shaft, cross-cut west: Distance driven, 9 ft. 6 ins., by two Italians with a rock-drill; present length of cross-cut, 52 ft. 6 ins. We were delayed here considerably, owing to an accident; the ground is hard. Health: We have still several cases of cholera in the camp, there having been three deaths since my last report. I am glad to inform you, however, that there are no fresh cases to-day. The Europeans are all well, and at work. Mill samples: Rough quartz (through stonebreaker), 2 ozs. 8 dwts.; smalls, 1 oz. 16 dwts. 18 grs. —F. W. Grey.

OOREGUM.—Mine agent's report for the fortnight ending Mar. 18.—Since my report of the 4th inst. cholera has broken out in two or three of the adjoining mines, and several deaths have resulted, but at this camp we have been free from the epidemic for more than a week. There are at present only one or two cases on the whole field; it is reasouable therefore to assume that the disease is dying out. We have still great difficulty to carry on the work even on a limited scale, and some of the camps are in a state of temporary suspension. We have our Moplah maistries ready to return with their coolies immediately the medical officers will permit it. Wallroth's shaft has been sunk 9 ft. 9 ins.; total below 280-ft. level, 75 ft. 2 ins.; lode, 2 ft. 6 ins. wide; value, 4 ozs. 18 dwts. per ton. No. 1 winze bottom 280-ft. level north sunk 3 ft. 10 ins.; total 68 ft. 4 ins.; lode, 2 ft. wide; value, 1 oz. 6 dwts. 12 grs. per ton. No. 2 winze sunk 3 ft.; total, 21 ft. 10 ins.; lode, 10 ins. wide; no sample taken. No. 3 winze sunk 3 ft. 10 ins.; total, 34 ft. 2 ins.; lode, 6 ins. wide; value, 1 oz. 12 dwts. 16 grs. per ton. The 280-ft. level south advanced 11 ft. 6 ins.; total, 557 ft.; lode, 1 ft. 3 ins. wide; assaying 1 oz. 14 dwts. 20 grs. per ton. No. 2 winze bottom same level sunk 2 ft. 10 ins.; total, 62 ft. 10 ins.; lode, 2 ft. wide; value, 2 ozs. 3 dwts. 13 grs. per ton. Probyn's shaft: Sunk 11 ft. 3 ins.; total below 450-ft. level, 45 ft.; lode, 1 ft. 6 ins wide; value, 2 ozs. 17 dwts. 16 grs. per ton. The 450-ft. level south advanced 21 ft. 3 ins.; total, 105 ft. 6 ins.; lode, 4 ft. wide; value, 3 ozs. 5 dwts. 8 grs. per ton. All other development work suspended, and machines stoping. The stopes are yieldiug a fair amount of good quality quartz. Samples and measurements of same will be taken and reported in the next. Our return for February was 2,913 ozs. of gold from 1,197 tons of quartz, an average yield of 2 ozs. 8 dwts. 16 grs. per ton. The improvement in quality was in consequence of the extra amount broken from the rich stopes, which is above the average value of the quartz throughout the mine.

OSCAR.—The following report has been received from the mines, dated Apl. 6:—Hodgkinson's lode: Owing to the Easter holidays very little progress has been made since date of last report. The bottom of shaft is showing a good lode, with quartz 3 ft. wide, containing copper and iron pyrites dessiminated throughout. The assay values have varied, according to the amount of contained pyrites, from 3 dwts. 2 grs. to 2 ozs. 17 dwts. 5 grs. The lode has within the last few days assumed a more perpendicular dip, with an improved width of quartz, and value for same. The lode in the 200 north continues still to improve, with increased quantity of galena. The mineralised parts of lode have shown values from 2 ozs. 11 dwts. to 7 ozs. 13 dwts. An average sample of end assayed 17 dwts. 16 grs. A marked improvement has taken place in the 200 south, where, in place of the white crystalline quartz, we have quartz of a hard, blue mineralised character. Some samples have during the week assayed as high as 6 ozs. 19 dwts. Hewlett lode: The quartz continues to improve in the level driving north. In the south level no change is noticeable. By assay we make the average value of lode to be 13 dwts. 9 grs. gold per ton. Other places no alteration.

PESTARENA UNITED (Apl. 3).—Report for April:—Pestarena Mine, No. 1 lode: In the 160 end north the lode remains wide, but shows no pyrites to value. In the rise over the 150 north, the northern half of the stope is carrying about 60 centimetres of ore, producing 7 tons per fm., worth 10 dwts. per ton; the remainder is sterile. In the winze sinking under the 130 north, the lode produces 3 tons of ore per fm., worth 10 dwts. per ton. It will be communicated to the above rise in a few days. In the 90 end south, a branch carrying pyrites has come in from the hanging wall. The combined width of the lode is 1.30 metres in the bottom, and about 70 centimetres in the roof. It produces 10 tons of ore per fm; worth 15 dwts. per ton, but contains less pyrites than formerly. Caunter lode: The winze sinking under the 110-fm. level has been communicated to the rise from the 120 east. In the 90 end west from old cross-cut the lode is very flat, and contains less pyrites. It, however, maintains its size, and produces 7 tons of ore per fm; worth 14 dwts. per ton. In the intermediate over 90 west some good stoping ground is being opened out, producing 4 tons of ore per fm.; worth 10 dwts. per ton. In the 70 end west the lode is small and hard, showing occasional strings of quartz with pyrites. The 70 end east shows a little pyrites in the bottom, and looks promising. In the 55 ends east and west the lode is about 80 centimetres wide, carrying 40 centimetres of ore, and producing 5 tons per fm.; worth 12 dwts. per ton. A considerable quantity of water is issuing from the lode, and preparations are being made to carry it direct to the pumps. In the 46 end east the lode is 40 centimetres wide, and shows a little pyrites. The 150 cross-cut south has been resumed. The 90 cross-cut south has intersected a division which seems to be near a branch. The 55 cross-cut south has intersected the caunter lode. We have 7 stopes at work producing ore worth, on an average, a little over 19 dwts. per ton. All the mills have been restarted, but those in the upper mill house are still running at a reduced speed. The season being now advanced it is to be hoped that there will soon be sufficient water for all our requirements. The rising and timbering of the incline shaft between the 110-fm. and 120-fm. levels has been completed. The machinery, both at surface and underground, continues to work satisfactorily. Val Toppa Mine: In the rise stope over Zero, or Eastern lode, the vein on the eastern side has died out. On the western side it is about 40 centimetres wide, and produces 6 tons of ore per fm., worth 8 dwts. per ton, but carries less pyrites. In the stope over No. 1 level on branches a fair quantity of ore has been raised during the past month. The intermediate drift between No. 2 and 3 levels, on the junction of the Western lode and Great Quartz lode, is a trial drift; the quartz is all

the width of the end, and is impregnated with metallone, copper pyrites, and galena ; it produces 8 tons of ore per fm., worth 5 dwts. per ton, and we hope it will improve in value.—W. Roberts, W. H. Trelease.

RED MOUNTAIN.—The foreman writes, under date Mar. 15 :—Good progress is being made in driving the tunnel. In the last 60 ft. they have been cutting stringers, from which on the 14th they took out some very fine pieces of copper ore and galena.

RUBY.—Report upon the mines for the week ending Mar. 21 :—Dunderberg : We have seven men on day's pay and 10 tributers at work here. In the cross-cut from the 500-ft. level, where I mentioned we were working on a small seam of ore, the seam shows a little improvement, and the ground is more favourable looking. The 800 drift has been advanced 20 ft. ; total, 68 ft. Lord Byron : We have two men on day's pay and 26 tributers at work here. We have raised about 10 ft., in ground which looks well. Some of the tributers are doing considerable dead work. Bullwhacker : We have four men at work here. The mine is looking much better.

SOUTH-EAST MYSORE (Mar. 18).—Fortnightly report of the superintendent : The following progress has been made during the past fortnight. The 500 level drift north off cross-cut east : Advanced 19 ft. ; total, 19 ft. The lode has not changed, there is about 15 ins. of quartz in the end, the last assay of which was 3 dwts. 21 grs. The 500 north cross-cut east : This cross-cut was resumed for the last week of the fortnight with the idea of ascertaining if there is any more lode standing to the east ; 7 ft. 9 ins. have been driven, making the total length of the cross-cut 38 ft. 3 ins. The ground in the end looks kindly and small branches of quartz are constantly met with. The 500 north cross-cut west : Has been advanced 7 ft. 6 ins. ; total, 18 ft. There is no change. The 500 south cross-cut east : The cross-cut east from the end of this drift has been extended 14 ft. ; total, 14 ft. There is no change in the ground.

COMMERCIAL NOTES.

Metals.

Copper has been steady. The Warrant market has been quiet and the fluctuation in the price of G.M.B.'s only 5s. per ton, between 52*l*. 10s. and 52*l*. 5s., closing at 52*l*. 7s. 6d. cash, and three months at 52*l*. 15s. To-day's prices are 52*l*. 7s. 6d. cash, and 52*l*. 15s. three months. A considerable amount has been carried for three months at 3s. 9d. to 6s. 3d. per ton. Anaconda Matte sold at 9s. 9d. per unit. We quote English tough, 54*l*. 10s. to 56*l*. 10s. ; best selected, 57*l*. to 58*l*. 10s. ; strong sheets, 65*l*. to 66*l*. ; India sheets, 60*l*. 10s. to 61*l*. 10s. ; yellow metal, 5¾d. to 5⅞d. ; ore, 9s. 3d. to 10s. 9d. per unit.

Tin has been steady. Straits on the spot sold from 90*l*. 12s. 6d. to 90*l*. 17s. 6d., and three months 90*l*. 17s. 6d. to 91*l*. 2s. 6d., closing yesterday 90*l*. 12s. 6d. cash, and 91*l*. three months. To-day's prices are 90*l*. 10s. cash, and 90*l*. 15s. three months. The Straits shipments, so far, this month have been but small, about 400 tons. Australian rules 5s. premium over Straits. The Dutch market is steady. Banca, 54½fl. ; Billiton, 54¼fl. ; English ingots, 93*l*. 10s. to 94*l*.

Tinplates have been quiet, and we quote ordinary coke, Liverpool, 17s. 6d. per box for Apl.-May delivery. There has been less difficulty this week in effecting shipments to America.

Spelter quiet. We quote ordinary brands ex ship here 23*l*. per ton, with sellers thereat for May.

Lead qniet. We quote soft Spanish, 12*l*. 11s. 3d. to 12*l*. 12s. 6d. ; soft English, 12*l*. 15s. to 12*l*. 17s. 6d. ; L.B., 13*l*. 5s. ; sheets, 13*l*. 15s. export, 14*l*. home trade.

Quicksilver dull. Rothschilds quotes, 8*l*. 5s. ; second hands, 8*l*. 2s. 6d.

Antimony.—Halletts still quote 67*l*. 10s. for America ; ordinary brands and delivery, 60*l*. to 62*l*.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

THE NEW DIAMOND MINE *v.* DE BEERS.

To the Editor of the Mining World and Engineering Record.

Sir,—You must allow me to congratulate you upon your Kimberley correspondence. It is always thoroughly readable and reliable ; but just now it is also a long way ahead of all other papers in its information concerning the new mine and its relation to De Beers. My private advices confirm all that you have published, with the exception as to "good finds." If your correspondent would send you the official figures of the diamonds found I feel sure you would qualify the "good finds" by the single word "reported."

The De Beers shareholders can rest assured that Mr. Rhodes has not been asleep. He has well safeguarded their interests, and, in any event, if they do not *gain*, they will certainly *not lose* much by the new mine. To show that Mr. Rhodes has every confidence in the future of De Beers, it is only necessary to mention he holds about 20,000 shares, and during his last visit to England showed himself more sanguine than ever of the near approach of the good time predicted by him, when the 5*l*. shares will stand at 35*l*., and gladden the hearts of others as well as

Yours truly,

J. W. D.

Apl. 6, 1891.

EMMA MINE.

Sir,—The public are beginning to be alive to the remarks in your paper—the Mining World—as to the value of Emma shares. The surprise is the apathy that has existed up till now, but an interest is now beginning to manifest itself, and we may expect to see those shares in a very short time trebled in price, as this mine now has turned the corner, and no longer a prospective uncertainty, but a positive developed success, likely to turn out another Frontino and Bolivia. No further call required to meet expenses ; large quantities of ore ready for the market, as the snow clears ; veins of ore 10 ft. wide, 3 ft. thick, and all points of the mine so improved ; the large number of shares held by the miners and others on the spot ; Judge Bennett largely increasing his holding ; all this is a sufficient guarantee of the prospects of the mine—just now in excellent condition ; large outputs, and so inexpensive to work, trammed from the drifts through the tunnel, on to Salt Lake City, and sold at once. A little buying of those shares, which should be taken off the market, would send the shares booming. We have passed mid-April account, and before mid-May account we may expect to see those shares at very different prices.

Also several other American mines, such as Custers, Flagstaff, and Colorados, are in for a large rise. Colorados are in for a large rise under present management. The richness of the mine, worked at present on tribute, at a 25 per cent. positive profit, working 24 different points ; and the directors no fees until the mine is in a dividend-paying state. They are about working the mine by day work, then they expect the profits trebled—all this speaks well for the mine.—I am, &c.,

Observer.

FLAGSTAFF AND ITS FOES.

Sir,—The remarks made in the last issue of the Mining World touching Flagstaff shares should be read with care by all persons who hold them, and also by others who are seeking a good market speculation for something like an immediate rise. You have so often pointed out that the season is about to commence when mines at the great altitude of this one and its neighbour, Emma, can be worked with vigour, that there is no necessity to dwell upon that now, except to call attention to the fact that this is precisely the moment when circular writers who are trying to "bear" the shares, and wish probably to close their accounts without loss, attack such a concern as Flagstaff. I think such one-sided criticism as a certain writer, who shall be nameless, passes upon this concern defeats its own object, for his animus and his bias are only too clearly shown. The best way to treat a communication of this kind is not by taking the advice that is tendered but by acting in an entirely contrary sense. In the meantime I would advise this writer to close his "bear" account while he can get shares at the present price, for a little later on he will find himself unable to do so, in which case he will look in vain for any pity from me.—I am, &c.,

Not Afraid to Hold and to Buy.

Apl. 7.

SOUTH DARREN CO.

Sir,—I understand the re-construction of this company has been a success, and that the shares have been taken up fairly well. The mine will now have another chance, and seeing the richness of the lead produced, and the facilities for working cheaply, the company stands a good chance of once more paying dividends.

The mine has paid well in the past, and if another body of ore such as that which produced the former large profits is discovered the shareholders will reap a handsome reward for their courage. According to all I hear the prospect of coming upon such a body of ore is, at the present moment, extremely good. However, mining is a speculation at the best, and must always be looked upon as such. Great Laxey this week has declared a dividend of 12s. Why should not South Darren do equally well ?—I am, &c.,

"Nil Desperandum."

South African Office.

NATAL CHAMBERS, JOHANNESBURG.

General Managers in South Africa.

W. Y. CAMPBELL, F.G.S., and E. W. EVANS.

Bankers.—THE MANCHESTER AND LIVERPOOL DISTRICT BANKING COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakiugs, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A Special Cable Code for Prompt and Economical Communication between the South African and London Offices.

Further information can be obtained at the Head Office of the Company.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

RECOMMENDATIONS FOR CURRENT ACCOUNT:—

INDIAN CONSOLIDATED,
MYSORE REEFS,
NINE REEFS,
MYSORE WEST,
MYSORE WYNAAD.
DEVALA MOYAR.

All recommendations this month have, up to the present, been correct, and large profits to our followers the result.

We make Mines a special study, and invite correspondence, whether business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close market price of the day on 10 per cent. deposit, and carry them over as long as clients wish at low contaugo rates.

We close speculative accounts at any time, and pay profits instantly, irrespective of account day. We sell shares at current prices for forward delivery at one, two, or three months on 15 per cent. deposit. Clients may rely on fair treatment at our hands. We are members of the Mining Exchange, and subject to the rules and regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

ARTHUR FORBES & CO.,

AUSTRALIAN INVESTMENT AND MINING AGENCY,

BRISBANE, QUEENSLAND,

And at 16, CORNHILL, LONDON, E.C.

Telegraphic Address:—"ORPHARION, LONDON."

Have special business in Australian Securities generally, and in the following Australian Mining Stocks:—

Brilliant, Victory, New Victoria, Sunburst, Golden Gate, Brilliant Block, St. George United, Day Dawn, and other Charters Towers Mines; Broken Hills, Mount Morgan, Raub (Pahang), Muldiva, Gympie Mines, &c.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

B. R. Christopherson.—Add to the number rather than sell those you have.
Samuel R. Mills.—As a speculation only.
Reminder.—The market is dull for them. We advise you to keep them for better times.
Chancellor (Willesden).—It is misleading. The parties named are only doing it to suit their own ends.
Catcher.—Rather a poor outlook as an investment. Advise you to have nothing to do with them.
M. B. Murray.—It has paid good dividends, although only a new company, comparatively speaking. Certainly they should be held.
Mixed.—The rumours are unfounded ; we are informed from a good source.
W. Hodgson.—Although you saw the price quoted, it did not follow that the shares were actively dealt in. In fact, there has never been a free market, and it is simply a question of negotiation.
Gold Digger.—The profit is a handsome one in our estimation, and if you do not wish to lose it, advise you to sell at once.
Telephone.—We have received nothing officially, and advise you to take no further notice.
S. D. R. B. (Newcastle).—Most decidedly the preference shares are the best. Both are good for investment.
Frenchman.—Yes. You are entitled to the shares, as you buy with all rights.
Stevens.—It is without doubt a valuable property. The shares are a good investment, and we think you have come to a right conclusion in increasing your holding.
Metal.—Simply take your profit, and let others share the good things that are promised.
B. A. A. (Birmingham).—Sell and buy the low priced ones. They have a good chance of a market rise.
Mountaineer.—The meeting will be held next week. Hold on, for the present, to your shares.
X. Y. Z. (Lincoln).—We look for much higher prices. The mine is working at a profit, and for various reasons you should hold your shares.

The Mining World.

LONDON: SATURDAY, April 11, 1891.

The "Mining World" is not the property of a Mining Speculator nor under the control of any clique.

RANDT CRUSHINGS.

During the past week Randt gold shares have had one of their periodical fits of depression, and though in a few cases the receding tide was stopped yesterday, a reference to our comparative list will show that most of the leading shares have fallen rather heavily. It will be remembered that the Feb. returns were fairly satisfactory, considering the shortness of the month, and for a short time the "Kaffir circus" put on a cheerful appearance in anticipation of better yields for March. But, as a very general rule, the anticipations have been woefully disappointed. For the most part, the returns compare unfavourably with those of the preceding month, although the crushing period was three days longer. We are told that the disappointing yields are due to the fact that the recent heavy floods have so over-taxed the pumping capacity of many of the mines that it was only possible to work in the levels near the surface. There is always something to prevent the fruition of the hopes of those who have, in spite of repeated warnings, put their money into Randt shares. At one time there is not enough water ; at another there is too much of it. But whatever the cause, the result is the same to the shareholders, except that when they attempt to realise, they find that prices break away in the most unaccountable way. In the following table we compare the returns for the last three months of the principal mines whose crushings have been announced so far :—

	Jan.	Feb.	Mar.
	oz.	oz.	oz.
City and Suburban	881	690	652
Durban-Roodepoort	877	1,091	1,540
Ferreira	4,033	4,098	4,124
Geldenhuis Main Reef	425	360	410
Jubilee	1,020	938	852
Jumpers	—	—	2,771
Langlaagte	4,600	4,510	4,301
Langlaagte Block "B"	—	—	1,570
May Consolidated	2,078	2,399	1,700
Meyer and Charlton	2,120	2,178	1,273
Nigel	1,103	1,012	880
Robinson	5,935	6,570	6,805
Salisbury	400	720	950
Simmer and Jack	2,445	3,040	3,218
Stanhope	667	606	773
Wemmer	1,035	—	900

The Robinson, Simmer and Jack, and Durban-Roodeport yields are satisfactory, and it is to be noted that the mill at Meyer and Charlton was only at work 16 days owing to the necessity for repairs. A much better start was, however, expected from Block "B," with its 480,000*l.* capital, and May Consolidated, which has a capital of 430,000*l.*, is certainly not justifying its early promise ; while the Langlaagte returns are gradually becoming poorer. Altogether the Mar. returns are not calculated to inspire confidence in Randt mining, or, at all events, in the prevailing system of management.

THE OOREGUM REPORT.

The directors have issued a very satisfactory report to their shareholders. The receipts from the sales of gold and minor sources of revenue total up to 104,525*l.*, and after charging entire costs on buildings, machinery, and the like, a gross profit is shown of 41,256*l.* The debenture debt of 20,000*l.* with a bonus of 5,000*l.* has been paid off, and the net remaining profit is 27,820*l.* which will admit of a dividend of 10 per cent. on the preference shares, and an additional 5 per cent. on both the preference and ordinary shares, absorbing together 24,250*l.*, leaving a balance to carry forward of 3,570*l.* The directors point out that the legal action now pending has no bearing upon the payment of a dividend, but they have obtained the opinion of counsel, and are advised that a preference dividend of 10 per cent. must be paid upon the nominal amount of the preference shares before the ordinary shares can participate in profits. Therefore the directors will recommend to the shareholders in general meeting the payment of a dividend of 15 per cent. or 3s. per share on the preference shares, and 5 per cent. or 1s. per share on the ordinary shares, in accordance with the articles of association and the special resolution creating the preference shares. The directors hope to have the lawsuit settled before many months have elapsed. The condition of the mine is wholly satisfactory, and we are not surprised to learn that Mr. Malcolm Low has returned from his visit to the field with his opinions strengthened as to its value. The announcement is made of the purchase of a portion of the Goldfields property for a consideration of 20,000 fully paid ordinary shares. The report, as we have said, has been received with satisfaction, and the statements it contains will doubtless be emphasised and elaborated at the meeting next Tuesday, which promises to be one of exceptional interest.

THE DOLEFUL TALE OF SILATI.

A MINING ROMANCE IN ONE CHAPTER.

When the Oceana Co., in the full blaze of a glory which has since been dimmed by a cruel fate, brought forth Silati it was generally thought that the infant was over-weighted with capital. To put 600,000*l.* upon the back of a few Transvaal farms which had previously done nothing in particular, though making promises in general, was thought, even in the South African boom, a little too much to be carried, but now people regard it as an act of insensate folly. The market price not only justifies the former, but also the latter conclusion, for the shares (17s. 6d. paid) are now quoted at 6s. Silati directors, who for the most part occupy the same relationship to Oceana, were thought at least to have satisfied themselves that the farms were worth the capital placed upon them, and the speculating public who fancied they could buy Silatis with impunity, and sell out before the arrival of anything in the nature of a collapse now find themselves landed with shares for which there is scarcely a free market at the deplorable discount we have named.

Needless to say the reports upon which the prospectus was based were all of a most flattering kind. The general impression left by a perusal of this florid document was that Silati was an Eldorado, and that those who might get an allotment were of all beings the most to be envied. To realise these bright prognostications, Capt. James Williams was sent out. This gentleman is a Cornish miner, of great experience and integrity, and was specially recommended for the post by one of the first mining engineers in London. But with all his experience, Capt. Jas. Williams could not bring gold out of what proved little better than paving stones. He sank shafts here and there, and drove levels, but do what he could, his record was only one of dwts. as compared with the ounces talked of by the experts who had originally reported. His results, in fact, dwindled down to prospects of gold, whereas their assays ran up to ozs. — in one instance, to as many as 110 ozs. to the ton. Time went on, and the shareholders began to discover that the Silati Eldorado was but as the mirage of the desert which lures the traveller to his doom. The price of the shares began to fall ; rumours began to circulate ; complaints began to be made, and confidence and hope gave place to doubt and despair.

It was about this time it occurred to the directors that it would be well to employ a firm of mining engineers whose reputation was stainless, and whose ability was generally recognised, to find out where the truth lay—with the experts, who reported that Silati was in effect an Eldorado, or with Capt. Williams, whose experience had shown that nothing could be made of it. Their choice falling upon the firm of Messrs. Bewick and Moreing, was applauded with absolute unanimity. Mr. Alford is the South African partner of this firm—a gentleman whose experience and ability are freely and generally acknowledged, and he made the report. When he came to the end of his investigations he found he could scarcely corroborate a single statement that had been made in that romance, otherwise called a prospectus. He found the farms all but inaccessible for heavy transport ; the supply of water instead of being abundant, meagre to a degree ; the timber unsuited to the purposes of the mine, and the climate unhealthy for several months of the year, though on the score of labour he confirmed the prospectus by describing it as fairly plentiful. His con-

clusions with regard to the properties themselves were equally unfavourable. He examined the farms, and the general impression left by his report is that their value is purely agricultural. Of course, his attention was mainly concentrated on the Swiss and Laing reefs. In the former, it will be remembered, there was an opportune discovery just about the time the company was launched of "a reef with visible gold," but when Mr. Alford tried to find where it was truth compelled him to say "the workings show no indications of anything resembling a metalliferous deposit." Every test he made was unsatisfactory. No better encouragement was afforded him when he came to look at Laing's reef, which truth again compelled him to describe as "a small deposit of quartz embedded in shaley clay." In fact, respecting the whole of the southern part of the property, Mr. Alford, with a candour rarely seen in mining reports, said "nothing of a gold-bearing nature has been discovered." He could not fiud the slightest indication of the "only lasting and reliable class of deposit which could be expected to occur under circumstances of the true fissure vein extending into the granitic rocks in depth." In short, Mr. Alford came to the conclusion that there was nothing on the property to justify a large expenditure on plant and machinery, nor did he consider the geological conditions favourable to the occurrence of payable reefs. So much for Mr. Alford's report.

When it came home the directors were metaphorically if not literally "struck all of a heap." It was a totally different report from what they expected. The Baalam they had sent out to bless Silati had cursed it with an exceeding bitter curse. Figuratively speaking, Oceana put on mourning and Silati went about in sackcloth and ashes. In justice to Mr. Conybeare, be it said, he seemed to be the only man on the board capable of holding up his head. Oceana had brought forth Silati, but Mr. Conybeare, had conceived a geological theory. When the shareholders met to consider Mr. Alford's report they found, not Mr. Pasteur in the chair, but Mr. Conybeare. They found, also, a practical repudiation of the report of their own expressly chosen and appointed inspector, and in its place that elaborate geological theory of which Mr. Conybeare is the only living exponent, and which will probably die with him, as it has no disciples. The shareholders in a crowd accepted what probably none of them would have done as individuals—Mr. Conybeare's original views, and went away in the hope that the shares would rise. We advised them to cut their loss at the time with the least possible delay, aud the price at which we quote the shares to-day justifies the wisdom of the counsel we gave. Mr. Conybeare's faith in his geological theories was not so abiding, and its effect in dispelling the unpleasant impression produced by Mr. Alford's candid exposures not so pronounced as had been expected, and, therefore, it must have been shortly after the last meeting that the directors thought they would go to other experts to see whether they could bless where Mr. Alford had cursed.

We cannot this time congratulate them on their selection. Three gentlemen were employed, and their reports occupy about 100 printed pages. The first of these is by Mr. Philip S. B. Wrey, A.M.I.C.E., and before proceeding further we should like to know whether he is the gentleman who reported upon Golden Kopje, and recommended the shareholders to spend a large sum of money in development work. The 1*l.* shares are quoted at about 3s. 6d., with no active market. The other two gentlemen are Mr. J. E. McNellan, C. and M.E., and Mr. A. H. Halder, M. and C.E., but not one of the trio is known to mining fame in this country. We do not say this to detract from any merit their reports may possess, but merely to point out that if the English public are asked to choose between a firm the standing of Bewick and Moreing, whom they know, and these three gentlemen, whom they do not, their hesitation will be short and their choice soon made. All three gentlemen condemn fully the system of working adopted by Capt. Williams, and think the result might have been different if some other plan had been adopted. Mr. Wrey describes the reefs as "compact quartz lodes embedded in a thoroughly solid formation." He gives the same advice as to a "very large expenditure" that he gave to the unfortunate Golden Kopje shareholders; but did he know that in this case there remains only half a crown to be called up? Mr. McNellan, in his description of the different routes to the property, practically confirms what Mr. Alford has said, and also with respect to the climate, but thinks "the reef will be found in the solid formation." The site for the mill, all three say, has been badly chosen, and the water-race also comes in for censure — in fact, "there has been a large and useless expenditure." On these points we should like to have the rejoinder of Capt. Williams. Mr. McNellan declines to express more than his "belief" in the promising character of the reefs until the shafts have attained a greater depth. Mr. Halder makes some plain statements about the leasing of water rights to separate companies which have done harm to others, but thinks the Burghersdorp farm of value. Reading between the lines, the reports of these three gentlemen are not without internal evidence that they confirm the views of Mr. Alford, and the practical experience of Capt. Williams, rather than the Conybearian theories of geology, and the ornate language of the imaginative writers in the prospectus. We challenge the directors to say that upon any one of them, or all three combined, they could have floated Silati with a capital of 600,000*l.*, or any capital at all. To do this it needed much stronger meat in the shape of unfaltering reports, the opportune discovery of the Swiss reef, and the full tide of a South African boom.

If the shareholders are satisfied with the reports of this prophetic trio, and the theories of their geological high priest, Mr. Conybeare, we can only come to the sad conclusion, that we live in the lunatic asylum of the solar system.

THE QUARTER'S TRADE.

The Board of Trade (Customs) returns for March last complete the first quarter of the current year, and are unexpectedly favourable, inasmuch as the exports of home produce actually show a considerable increase, and this in spite of the influence of the Easter holidays, which were a week earlier this year than last. Our exports amounted to 21,663,000*l.* for the month, and 62,000,000*l.* for the quarter, showing an increase of 8 per cent. for the former, and a decrease of 1¼ per cent. for the latter; while the imports were 35,253,000*l.* and 102,270,000*l.* respectively, or a reduction of 2½ and 3 per cent. The reshipments were valued at 5,935,000*l.*, or a decline of 6½ per cent., and 16,187,000*l.* for the quarter, being a decline of 1¾ per cent. At the same time it is to be noted that the navigation returns exhibit a falling off in the tonnages entered and cleared our ports in connection with the Home as well as Foreign and Colonial trade. Our exports show a pretty general augmentation, particularly as regards yarnsand textile goods, although shipments of cotton piece goods to India, China, and Japan fell off. On the other hand imports have diminished, the principal exception being in manufactured and miscellaneous articles. Taking notice of metals and minerals and their manufactures, we find imports represented 1,830,000*l.*, or 98,000*l.* less than for the corresponding month, and our exports (including manufactures), 3,780,000*l.*, or an increase of 287,000*l.* Referring now to the tables below, these have resulted in a decrease of imports, except in tin, but even in this the increase in value does not equal that in quantity, while as regards copper ore it will be noted that the decrease iu value is not so great as that in the quantity, reflecting thereby an improvement in price, a feature which is also apparent in regard to regulus and precipitate. The falling off in copper ore is chiefly from Spain, the Cape, and Venezuela, and in precipitate from Spain, with a larger augmentation from the States. As regards exports, there is an increase in copper and tin, the former reflecting an improvement in prices. Copper ore has been taken mostly for France and Germany, and tin for Germauy, Sweden and "unenumerated" countries. Machinery shows an increase, both in respect of steam engines and other manufactures. Germany, Russia, Italy, Brazil, South Africa, the East Indies, Australasia, and "unenumerated" countries have absorbed the greater part of the increase in the former, while of the latter the increase is also very fairly well distributed, the Continent, Australia, South Africa, and the Argentine Republic, however, taking less. Coal has been about stationary, but in iron and steel, iron ore has fallen off mostly to the Continent, except Russia and the North, which, with Australia, have taken more. Bar, angle and bolt iron, and tin plates and wire show an increase, but other descriptions, particularly railway iron (nearly 50 per ceut.) a decrease, but the value it will be seen has not fallen in the same ratio.

The following table in our usual form shows the results for the month in regard to the imports and exports of metals, &c.:—

Article.	Quantity Tons.	Value £	Increase or decrease per cent. Quantity.	Value.
Imports.				
Copper ore	6,226 ...	57,673 ...	—50.2 ...	—48.5
,, reg. and precip. ...	6,373 ...	198,286 ...	— 0.5 ...	+ 6.5
,, un. and pt. wrought	3,160 ...	170,125 ...	—12.8 ...	— 7.7
Lead	10,536 ...	133,767 ...	—19.7 ...	—22.5

Iron and steel	256,437 ...	2,400,729 ...	—21.0 ...	— 5.7

GREAT LAXEY.

If the Great Laxey property were gifted with speech—happily for the shareholders in the company it possesses the more useful faculty of production—it might very well adapt as its own description, and with very slight modification, the oft-repeated line of the Laureate, and say, "Mines may come and mines may go; but I go on for ever." It has been going on for over 60 years, through good and bad times, and since 1863 it has never failed to yield a dividend to its proprietors. For the two last half-years the dividends and bonuses have amounted together to 24s. per share, or 30 per cent. upon the nominal capital of the company, although during the period the prices realised for its produce have averaged but little more than one-half of what used to be obtained not very many years since. There

could be no clearer evidence than this, that Great Laxey is really a wonderful property—a property with which everybody connected has abundant reason to be proud and satisfied. We need not, in this column, deal with the position or the prospects of the mine ; they were treated in such a thoroughly explicit manner by the chairman at the meeting, that we need only refer our readers to the report of the proceedings on another page. We may point out, however, that on the basis of the two last half-yearly distributions of profit the shares stand at a price which represents to the present investor a return of over 12½ per cent. on his capital. Such a yield as that ought to satisfy any reasonable person. At all events, we consider that the present shareholders would be very foolish if they were to realise, for the outlook of the company is exceedingly cheering, and they would have the greatest difficulty in employing their capital so profitably in any other direction. The chairman very properly drew attention to the extraordinary fact that in 60 years this small property has had to bear the burden of a payment of 162,093*l.* to the Crown for royalty and income tax, an amount equal to two and a half times the capital of the company, and representing 31½ per cent. upon the divided profits. Such an inflictiou as this upon our British industry that has to be carried on under great disadvantages is simply monstrous, more particularly so as foreign mines, merely dealing with lead as a bye-product, have absolute freedom to send as much of the metal here as they please. That such a tax should be imposed by a country which glories in its free-trade policy, is one of those unjust anomalies that should be swept away without delay ; and it is much to be hoped that the deliberations of the Royal Commission on Mineral Royalties will shortly result in the abolition of what can only be regarded by reasonable people as an utterly inequitable tax upon a home industry that is heavily handicapped in every direction.

ELKHORN—BIG RETURNS.

It is no reflection on the other speakers who took part in the interesting meeting of Elkhorn Co., on Thursday, to say that the speech of Mr. Bennett was the most important delivered on that occasion. The Elkhorn Co. was introduced to the public by the Mining and Financial Trust Syndicate, of which Mr. Bennett is the directing spirit, and but for a timely subscription made by persons in the immediate neighbourhood of the mine, and who, presumably, knew its value, this remarkable property would have been lost to the British public. The prospectus promised that in 12 months the dividends would be 44,500*l.*, but in *10 months only* they have been 45,700*l.* We, therefore, have the somewhat rare instance of the estimates of an original prospectus being exceeded in the happy experience of the shareholders. These are the leading facts in connection with this highly productive property, but there are others to which Mr. Bennett pointedly drew attention. He has often been asked why Capt. Plummer—a good name to conjure with—has never estimated the reserves, and the explanation is that that gentleman, being cautious, has declined to do so, whilst the sandrock made a sure basis of calculation impossible. Mr. Bennett showed by incontestible figures that the present output is assured for five years to come, and mentioned the latter developments of the mine (which have almost escaped the attention of the shareholders, and certainly that of the market) as adding largely to the prolongation of its life, and as being calculated (if they had been announced by certain other mines) to advance the shares 1*l.* or 2*l.* each, though in the case of Elkhorn they did not advance them a single shilling. Mr. Bennett described himself as largely interested in Elkhorn, both in money and reputation, and expressed himself satisfied with the new arrangements that have been made with respect to the services of Capt. Plummer. This gentleman will act as superintendent of De Lamar Mines, and will also supervise operations at Elkhorn, having at the latter property a good lieutenant in the person of Mr. Molson. The shares of this company (as also of De Lamar) are largely held about the spot, and we gather from all that was said that Elkhorn is only on the threshold of a prosperity which will be as prolonged as it has hitherto been remarkable.

LOMA.

In a portion of this issue we give photographic illustrations showing, to natural size, the gold taken within the last few months from the Loma Mines as exhibited at the recent meeting of shareholders. These paper illustrations may be regarded as the presage of metallic reality. The gold on that occasion exhibited was the result of only a few hours' washing and hydraulicking, so that shareholders may be able to form their own opinion as to what may be expected when the water gets fully to play on the gravel, which is known to be rich in coarse gold. This is the testimony of many witnesses, and amongst the latest is Mr. R. G. Webster, M.P., who has just returned from the mine and fully endorsed all that the chairmau said at the meeting. He even stated that "the estimates of a friend of the chairman's at $1 per cubic yd. is well within the mark ; indeed, in my opinion, Mr. Sankey has minimised the facts concerning that district." Mr. Sankey said, "I think we ought to be making and distributing in dividends at least 30,000*l.* a year"—that is given the 1,000 miner's ins. of water now being brought to bear and taking the gravel as of the value of 30c. per cubic yd. The mine is, however, to be worked with 3,000 miner's ins., and Mr. Griffiths, who is an expert, and has lately returned from the spot, said, "All other mines will have to take a back seat when Loma gets to work." As Mr. Skertchley, another mining engineer, says, "Loma should shortly stand amongst the best paying mines of the world. The evidence is rapidly accumulating that these gentlemen are not mistaken, and that buyers of Loma shares are wiser than sellers.

NEWBERY-VAUTIN AFFAIRS.

When the new board took office a little while ago, it was with feelings of considerable misgiving as to the future of the concern ; but we gather from what was said by their mouthpiece at Wednesday's meeting (Major Elers), that the prospects still before it are not by any means to be despised, or such as to cause the shareholders to lose heart. Indeed, with that moral support from the shareholders which will not be withheld, and that unity of feeliug on the board which has now been re-established, there is good ground to hope that Newbery-Vautin Co. will yet see brighter days. Should it do so we shall be greatly rejoiced, for we have long been of opinion that at all events from certain classes of gold bearing quartz, the patents are the best known, and there is no reason why with careful management the success that has been achieved at Mount Morgan Mine should not be repeated on other gold fields. The first action of the new board was to obtain a better arrangement in the South African department of its business, and this was successfully accomplished, and their next was to come to a decision, like the old stewards in the comedies, to work without wages. On both points they are to be commended though it is always with some misgiving we hear of directors working absolutely for nothing. It sounds well at a meeting to say so, but in some notable cases that we have known, it has not worked well in practice. We think the interests of companies are, as a rule, better served by directors being paid a moderate remuneration for the work they do, and this we find was also the opinion of Mr. Thorne, a gentleman of considerable company experience, who, on this occasion, took the chief part in the discussion. We agree with Mr. Lumley that from one cause and another, the company's patents have not yet had a fair chance, but the present directors are determined that they shall have that chance, and we shall await the result with an interest born of hopeful expectation.

MYSORE WYNAAD AND MYSORE WEST.

Mysore Wynaad and Mysore West shareholders are certainly to be congratulated, inasmuch as they have secured a block of land on the Champion line of reef at an almost nominal price when compared with the large sums that are now being cheerfully paid for similar blocks seemingly not in any sense more valuable. The meeting of Mysore Wynaad Co. on Tuesday was nominally to confirm resolutions by which the directors voluntarily reduce their fees, but its importance was mainly derived from the glad tidings Col. Malleson was able to give those present to the effect that the operations at Tank Block continue to promise most favourably. He pointed out that the identical reef from which the big Indian crushings we announce to-day have been made passes through the joint property of Mysore Wynaad and Mysore West, and he mentioned two facts which will be welcome to the shareholders, first, that there is sufficient money at command to work the mines to a success, and next, that at the ensuing annual meeting there is every probability that he will be able to give a good account of the mine. Meanwhile we undertake on our part to keep our readers *au courant* with the progress of this promising property by publishing with regularity the fortnightly reports furnished from the office, and such other information as we may be able to collect. It is perfectly true that Mysore Wynaad and Mysore West, like the early Christians, have come out of great tribulation, but they have now every appearance of entering upon a prosperous career. It is in this belief that we have so persistently recommended the shares to those who are seeking what they are pleased to call "a good mining investment."

RIO TINTO CO., LIMITED.

The 18th annual report and statement of accounts has been issued to the shareholders and will no doubt be regarded as very satisfactory documents. The profits on sales of produce, including the copper realised during the year, and other items at the credit of revenue account, together with 152,787*l.* 19s. 9d. brought down from the previous year, amount to no less a sum than 1,045,093*l.* 4s. 8d. After providing for the mortgage redemption and interest ; expenses of administration ; income and other taxes, and sundry other items at the debit of revenue account, there remains a net profit available for dividend of 691,005*l.* 19s. 9d. Out of this sum 243,750*l.* has already been absorbed by the 15s. dividend, paid in November last, and the directors recommend a further dividend of 18s. per share, and carrying forward the sum of 157,755*l.* The financial policy of the directors is highly to be commended, large amouuts having been carried to the credit of depreciation and other accounts. The quantity of pyrites extracted from the mine in 1890 was 1,261,754 tons, with an average copper content of 2.883 per cent. The copper produced at the mines during the year

was equal to 19,183 tons of 20 cwt. The quantity of copper in the reserve heaps is now 92,551 tons, which stand at a cost of 6*l*. 2s. 7d. per ton of copper. The plant erected at the mine for the production of sulphate of copper is now ready. That at Cwm Avon, upon a smaller scale, has been successfully worked during the year.

The actions against the Société des Métaux for non-fulfilment of contract have been continued in the English and French Courts. The former have given judgment in favour of the company, but the French Court of Appeal has not admitted the claim. The directors have requested the opinion of a French Advocate as to the advisability of appealing to the Court of Cassation, the final Court of Appeal in France, to enforce there the judgments obtained in this country. On the recommendation of the legal advisers of the company, and in deference to the opinion of counsel, the action against the "Comptoir d'Escompte," under their guarantee of the agreement with the Société des Métaux, has been discontinued. The smoke question, it appears, has been settled satisfactorily, the Spanish Government having suspended the Royal decree of 1888, which had for its object the abolition of the calcination of pyrites in the open air.

THE MONEY MARKET.

City, Friday Evening.

In anticipation of, and following the release of the dividends by the Government, and those of India and our colonies, the Money Market has fallen away very materially, money at call being hardly tenable at 1 per cent., while for a week, with the settlement in view, it has been securable at 1½ per cent. Discount under these circumstances, assisted by the low rates for Treasury Bills, and the reduction of ½ per cent. in the terms allowed for deposits by discounters, has also declined, touching 1¾, 1⅞ per cent., but the tendency is now rather harder at 1⅞, 2 per cent., there being few bills about, and takers fearing the possibility of a gold demand, which, in the present position of the Bank, would soon result in an advance in the rate. For the moment, however, there is no demand to speak of, and gold is coming forward from New York to pay for stock bought here and in Germany. Although the prospects are of ease, it is recognised that a sharp upward movement might occur at any time, hence caution is necessary. The Bank return simply records the changes usual at this period, in consequence of the distribution of the dividends. These have reduced the public deposits by very nearly the full amount, have reduced the private securities by redemption of loans, and have added to the private deposits, besides causing an increased circulation of coin and notes, which, in turn, has decreased the Reserve by 460,000*l*., to 13,375,000*l*., against 15,100,000*l*. last year, or 34½ per cent. of the liabilities.

The bi-monthly account in the Stock markets has occupied most attention, for, notwithstanding the small amount of business open, the anxiety of everyone had been pre-aroused by the occurrence of two failures, viz., Messrs. J. Taylor and Co. and J. P. H. Halls. Neither, however, were of much account, but, at the same time, quiet liquidation was going on for other parties, and this was naturally very disquieting. Quotations are not usually lower, as in the last few days rising markets have obtained; yet business has remained at stagnation level. The Argentine Government have attached the deposits in the banks and offered as security portions of their last Internal loan to the unlucky depositors. The latter's money is literally "confiscated" until June, and the doors of the banks, in other words, closed against them for that space of time. Nevertheless, the gold premium has fallen from 270 to 230 per cent., and the Bolsa and other financial bodies have actually congratulated the Finance Minister on such timely measures, his appropriation of what does not belong to him nothwithstanding. Stock has been scarce, Argentine included, and rates fairly low, foreigners being renewed at 1 to 3 per cent., American Railroads at 3 to 4, and English Railways either at "even" or with a "backwardation." Great Western Ordinary even commanded a contango, and generally in this department engagements for the fall have been reduced. Metropolitan, Sheffield, and Brighton "A" have shown strength, but Great Eastern weakness. Consols are in reality stationary; Rupee Paper and Colonial Inscribed lower. South American bonds on balance are flatter; Internationals almost without movement; and the variations in banks, breweries, and miscellaneous have all been small, and of small value. Waterworks are lower. Mexican Railways show a degree of firmness, and Grand Trunks thorough buoyancy; while in American Railroads a strong advance has also been established. New York is attempting an incipient boom, and their efforts here have certainly quickened business; but Northern Pacific Preference are exceptionally lower at the same time. The Reading Lake Shore and New York Central Companies appear to have formed an agreement between themselves.

Notwithstanding the settlement to-day, money was never dearer than 1½, ¾ per cent. for short dates, but there was quite a transition in the discount market, owing to gold exports. Instead of 1⅝ per cent. three months bills were finally 2⅛, ¼ and six months about 2½.

From the Bank of England 200,000*l*. was taken for Germany. Bar silver remained at 44⅝d., and Rupee Paper was steady.

There was an upward tendency in the Stock Markets this morning with an appearance of some more business, but it transpiring that about a quarter of a million was going to the Brazils *via* Germany, the markets fell away, it being feared that there was something wrong at Berlin, and the closing was dull except for all Argentine Securities, which in sympathy with a further fall in the gold premium to 220 per cent., and a rise of 6 per cent. in Buenos Ayres Great Southern Railway Stock, following the meeting of yesterday, and the more satisfactory advices from the River Plate. The funds were dull, Consols closing 96⅜ and 96½ for money and account respectively, or 1/16 to ⅛ lower. The 2½ per cent. receded ⅛, and India and Colonial were dull. Victoria Scrip is quoted par to ¼ pm. A failure is looked for because the loan has not been under-written by the banks, and there is no syndicate prepared to tender. This is the investors' opportunity, and the issue is cheap, equal to 96½ net at the premium, and allowing for the accrued interest and discount, and at which it pays more than New Zealand Scrip. Surely Victoria, our leading Australian colony, takes precedence of New Zealand? Argentine stocks have risen 1½ to 2 per cent., Buenos Ayres ½ to 1, and all Cedulas 1¼ to 1¾. Chilian have fallen, but Brazil are firmer. Uruguay have improved, but Internationals are only fractionally altered. In Rails Sheffield A. has further risen 1 per cent. in expectation of the passage of the Bill for the extension, but others after a rise have reacted, Brighton "A" and Great Western being ⅝ lower, the latter on the new issue of 2,600,000*l*. ordinary stock at 150 per cent. Great Eastern has receded ½, and others ⅛ to ⅜. American were buoyant, but lower prices from New York caused a relapse, but the closing was again better, Atchison's being over 1 higher, and others ¼ to ¾, except Milwaukee, Denver, Pacifics, Reading, and Ohio. Grand Trunk and Mexican issues relapsed ¼ to ¾. Central Argentine recovered yesterday's fall. Peruvian Corporation issues fell ¾ to 1 per cent., but Allsopps and Guinness were 1 higher.

Annexed are the final quotations to-day:—Consols Account, 96⅜, 96½; Egyptian Scrip, 94, 94¼; Egyptian Unified, 98⅛, 98⅜; French Four-and-Half per Cents., 104⅛, 104¾; Hungarian, 91½, 92; Italian, 93¼, 93½; Mexican, 31⅛, 31¾; Peru Corporation, 8¾, 9¼; Peru Corporation Preference, 26¾, 27¼; Russian, 1873, 98½, 99; Portuguese, 55¾, 56; Spanish, 76 1/16, 76 1/16; Turkish, 1871, 97¼, 97½; Turkish New Defence, 94, 94½ pm.; Caledonian Railway, 115½, 116; Great Eastern, 94⅞, 95⅛; Great Western, 158¾, 159; Brighton "A," 154, 154¼; North Western, 174, 174¼; Metropolitan, 80½, 81; Metropolitan District, 30½, 31; Midland, 149⅞, 150⅛; North British, 43¼, 43¾; North Eastern, 161⅝, 161⅞; South Eastern "A," 95¼, 95½; Grand Trunk 9¼, 9½; Grand Trunk First Preference, 62¾, 63; Grand Trunk Second, 42½, 42¾; Grand Trunk Third, 23, 23¼, Canadian Pacific, 81, 81¼; Denver Preferred, 60, 60¼; Erie, 20, 20¼; Milwaukee Common, 61½, 62; Lake Shore, 114¼, 114¾; Louisville, 79¾, 80; Atlantic First, 32½, 33; Ontario, 18, 18¼; Ohio, 17, 17⅛; Norfolk and Western, 54½, 54¾; Reading, 17, 17¼; Reading 5 per Cent. Bonds, 53, 54; Union Pacific, 49, 49¼; Wabash Preference, 18¾, 19¼; Ottoman Bank, 14 7/16, 14 9/16; Anglo-Telegraph, 46¾, 47¼; National Telephone, 4⅜, 4⅝; Hudson's Bay, 17¾, 18¼; Suez Canal, 98¾, 99¼; Guiuness Brewery, Ordinary, 307, 310; Allsopp's Ordinary, 31, 33; Bryant and May, 13¾, 14¼; Eastmans, 10⅛, 10⅜.

GOLDEN LEAF, LIMITED.

GOOD RETURNS CONTINUE.

The secretary announces the following telegram received from Mr. J. Henry Longmaid, the company's general manager:—"During Mar. the mill at Empire worked 60 stamps for 28 days, crushed 4,200 tons, and the yield was as follows: Bullion, $11,000; sundries, $300; total, $11,300. The working expenses for the month were $8,000—$3,300. Expended on capital account, $2,000." Golden Leaf: Mr. Longmaid adds:—"225 tons of first-class ore have been shipped from Bannack since Jan. 1, of the value of $8,000, in Butte. Golden Leaf Mine looking well."

LA PLATA MINES, LIMITED.

SHAREHOLDERS ALL BUT UNANIMOUS TO WORK THE WHITE CLOUD CLAIM.

The confidence felt in La Plata directors is well exemplified by the fact that the responses in favour of the bonding and working of the proposed new property have been received from all classes of the shareholders, far outnumbering the disapprovals. Out of a total number of about 385,000 shares issued the holders of only about 10,000 shares have not acquiesced in the proposal. The directors are thus confirmed in their opinion that the work should be carried out, and they are now proceeding with the preliminaries to that end. The property referred to consists of the White Cloud claim, situate in the Red Mountain district, within a day's journey from Leadville, and is in direct line between the "Guston" and "Silver Bell," in fact the White Cloud claim is described in the title deeds appearing in the records of the Ouray County as "the extension of the Guston in a northerly direction." The amount required for the development work is well within the resources of the La Plata Co., and no new or additional liability is laid upon the shareholders. The undertaking of the new work will not be allowed to interfere with the present operations at Leadville, and the profits which have been and are accruing from that source will be kept intact for division amongst the shareholders. The results for February month at La Plata, as cabled by the manager, are as follows:—"Mine royalties, $1,300; dump royalties, $315. Profit for the month, $1,150." There is more hope at this moment for La Plata shareholders than there has been at any time that could be named for years past.

Novel Application of Electricity.—The introduction of power into mansions and public buildings, for driving electric light machinery, affords an opportunity for providing a high pressure water supply for fire extinguishing purposes. Merryweather and Sons, of London, have devoted considerable attention to this matter, and, in some cases, the boiler existing is utilised for driving a fixed steam fire engine arranged to charge a system of hydrants, as at Col. North's new mansion at Eltham, and, in others, one of the firm's fire pumps is provided to be driven direct from the piston rod of a horizontal engine, a simple arrangement being fitted for putting the pump in or out of gear at will. This system has been adopted by Mr. Ed. de Segundo for Mr. Hanbury's mansion at Ware, a Merryweather's patent quick steam-raising boiler being also provided, which serves the double purpose of working the steam fire engine in seven minutes after an alarm of fire, should steam not be up in the ordinary boiler, or of driving the electric light machinery in case of accident to the ordinary boiler. Where the machinery is driven by water power at a distance, the current is utilised at the house for driving a fire pump connected to an electric motor, as at Thurland Castle.

REPORTS OF MEETINGS.

WHEAL GRENVILLE MINING CO.

A 2s. 6d. DIVIDEND—GRATIFYING PROGRESS WITH THE EASTERN SECTION—THE LATE SEVERE STORMS.

A GENERAL MEETING was held at the Offices, Union Court, Old Broad Street, on Wednesday, to pass the accounts; and if agreed upon to declare a dividend; and to transact the ordinary general business of the company.

Mr. R. W. Goold

(chairman of the company) presided.

Mr. D. JULYAN (secretary) read the notice of meeting and the minutes of the last meeting.

THE LATE STORM.

The CHAIRMAN: Gentlemen, you have before you the statement of accounts, showing the working of the mine during the past 12 weeks, together with the report of the agent, and I am very glad to add that you have Capt. Bishop himself before you, who will be prepared to answer all questions and give the fullest information, particularly with regard to the progress of the great work in the eastern section of the mine, with the execution of which he has been entrusted. Unfortunately for me, I have been unable to face the terrible weather experienced everywhere, and nowhere more severely than in Cornwall. It had been my intention to have paid a visit to the mine of two or three days' duration, in order that from personal observation I might have been able to make you acquainted with all the details of the progress of the different departments of work. My intention has been frustrated by the weather, which has also punished the shareholders considerably in the matter of profits. Our dressing operations have twice of late been entirely stopped through the weather, once in Dec., and the last time during the terrible storm we had in Mar. Our floors—in fact almost the whole mine—were from 6 to 8 ft. under snow, and consequently no dressing could be performed. The snow in the country roads was so deep that the miners were unable to get to their work, and we had even to cut a road all the way from the mine to the Camborne Railway Station to enable the carts to bring up coal to the mine. When I tell you this, and that the bob-pit also was so packed with snow that all pumping operations had to be stopped whilst it was cleared out, you will easily see that we have been near—very near—a great calamity; for if through the stoppage of coal supplies, or from any other cause, our great pumping engine had remained idle for many days, the result would have been nothing less than disastrous. It would have cost us an immense sum to have remedied the damage and a great deal of time; in fact, one can hardly estimate what the result to us would have been. That we have been saved from such a misfortune as that is due in great measure to

THE VIGILANCE DISPLAYED BY CAPT. BISHOP AND HIS AGENTS.

and our thanks are due to them for what they have done. Capt. Bishop will tell you the progress he is making with his great work. There is only one point in the whole of it which, to my own mind, is not quite so satisfactory as it might have been. We are carrying out what will be of immense importance to the mine, and perhaps the greatest and most momentous operation in connection with it is the communication of the new shaft, which is down 178 fms. (109 fms. full size, and from there to the 150, a lesser size), at a depth of 220 fms., with the 220 east of Goold shaft, and this, I venture to think, with all due submission to Capt. Bishop, is of the greatest moment to us of any operation in the whole mine, but perhaps he may not confirm me in this. A contract was let to drive that level and the 205 in Oct. last, when we were on the mine, by boring machinery. We have had that machinery at work since, and (perhaps wrongly), I think, we ought to have attained a speed of 10 fms. a month, but we have not. Now, speed in driving the 220 is of importance to us—very great importance. Speed in the 205 and 190 is not of so much importance to my mind, because at the 220 we have 184 fms. to drive, and of necessity, even supposing we could drive at the rate of 10 fms. a month, it must take 18 months to communicate that level with the shaft in the eastern section. To show you of what tremendous importance that point is, I may mention that we have 240 (Capt. Bishop says 250) fms. of ground between the two shafts, and have done very little in taking that ground away below the 165-fm. level. Now, when that communication is made we shall have the whole of our lode for those 250 fms. to work upon. It has hardly yet been tapped, but will be immediately available to bring away through the eastern shaft the greater part of it. What we have taken from above those levels we have had to bring to Goold shaft (250 fms.), and the men have become tired of the work—in fact, refuse to do it; so that when we get the communication between the shaft and the 220 we shall have any amount of tin ground to bring away, and if we can succeed in getting our new stamps in working order by that time, there is no question that soon after

WE SHALL BE ABLE TO DOUBLE OUR RETURNS.

Well, we have not attained the coveted 10 fms. a month, or anything like it, but the average in the 220 has just been over 6. I have talked about this to Capt. Bishop, who tells me I must not be impatient, but that the contractors have done all in their power to push on that end with all the vigour possible, and they have not been able to accomplish up to this time more than 6 fms. per month as an average during the six months, but during last month they have made better speed. They have accomplished 8½ fms., which may possibly be in consequence of the more favourable character of the ground through which they have had to drive. Well, I attach such tremendous importance to speed in drivage that I would be willing to pay much more per fathom, if by that payment it were possible to facilitate driving.

JUSTICE TO CAPT. BISHOP.

That is a point which I am sure Capt. Bishop will pay attention to; and of one thing I am certain (having watched operations closely), that all that a man can do to push that point on Capt. Bishop will do, so as to get the work done in the most speedy manner possible. I will ask you to remember that it was in Oct. last when the scheme for the development of the eastern section, which had been recommended to us long before by our late servant, and friend, Capt. Hodge, and confirmed by Capt. Bishop, was also laid before the shareholders by me in considerable detail. The scheme was approved as a whole, and Capt. Bishop will tell you the progress that has been made in each department. The calls that have been made upon the shareholders have been

PAID WITH SURPRISING READINESS.

You will see by the statement there is only a very small amount, comparatively speaking, due on the first instalment of that call. On Mar. 13 there was only due on the first moiety 918*l*., which has now been reduced to 498*l*. 15s. On Mar. 1, on the second moiety, there was due 6,742*l*. 10s., which has now been reduced to 2,050*l*. When you remember that Mar. 26 was the day allowed for the payment of the 7,500*l*. I think you will see that the shareholders have met us in a very nice spirit indeed, and paid up quite as readily as we could have expected, and this is all the more remarkable when we consider that

GREAT EFFORTS HAVE BEEN MADE IN CORNWALL

to persuade the shareholders resident there that what we hav done has savoured of illegality, and that we could not enforce th call we had made. After due consideration we decided to proceed, feeling sure that nobody would resist the call, and nobody will. (Cheers.) Our intentions are to give those who require it any reasonable time, because we have plenty of money and do not want to press anybody, and so with your sanction we shall deal leniently with those who may find it difficult to pay, but I have no doubt every shareholder will pay.

MR. GOOLD REITERATES HIS BELIEF.

I am not prepared to say even now that the proposition made to the shareholders in Oct., if they had been loyal enough to carry it out, was not the best. (Cheers.) I believe it was the best, although I see now the working of the call. (Hear, hear.) I believe if we had issued 1,000 shares at 15*l*., to get 15,000*l*., it would have been better for all parties. (Hear, hear.)

THEY DID.

All parties agreed at that meeting that this was the best course to be adopted, but all parties did not act so loyally by us afterwards as we thought they might have done. However, we have made the call, and you have the report before you. On the whole, I have no hesitation in stating that although, from the disastrous circumstances I have mentioned, your balance-sheet does not show so large a profit as we expected it to have shown, yet, upon the whole, looking to all the difficulties the agents have had to overcome, I do not think that the results of this statement can be considered other than satisfactory.

SALES MORE—PRICE LESS.

You will notice we have sold 135 tons 12 cwt. of tin, or 20 tons more than were returned during the previous quarter, and in the face of that, and of the fact that we have had a price less by 3*l*. per ton, the fact that we bring out a profit of between 700*l*. and 800*l*. is not unsatisfactory. (Cheers.) I should think that at least 14 days may be considered lost owing to the weather. The whole loss (I wish this to be remembered) has not fallen upon the quarter, the figures of which we are considering. The whole loss of the Dec. stoppage may have fallen upon them (perhaps not quite the whole), but the whole loss caused by the storm in Mar. certainly has not done so, and we must bear in mind that we shall have to sustain the biggest part of it during the current quarter. The first month of the current quarter has yielded a much better result than the first month of the last quarter, so that we may consider that at the end of the quarter we shall find ourselves in a better position than we are now, and many other circumstances seem to point to the same result. We have received for our tin 7,248*l*., and the costs have been 6,456*l*., which leaves us with a profit on the 12 weeks of 791*l*. 17s. 8d. The real profit is more than that, because in this quarter we have paid income-tax for the whole year, 307*l*.—three parts of which should be considered as falling upon other quarters. We had to trespass upon our bankers and overdraw our account, for which there is a charge of 100*l*., which should fall upon the new works at the eastern section. It was for the new work alone we wanted it. We wished to raise 25,000*l*., and the failure of our original plan led to this overdrawal, and consequent charge. I therefore reckon that we have

MADE A PROFIT OF NEARER 1,000*l*. THAN 800*l*.

We have already expended 11,860*l*. upon the eastern section, and it is satisfactory to see that the expenditure from Sept. 30, 1890, which was all derived from the working of the mine in one way or another, was no less than 4,210*l*.—a very nice sum to have been able to place to the account of new work. Looking at that fact, and also to this one, that we have found by the ordinary working a large sum in order to give us a fair claim to the consideration which the landlord shows, and which will amount to between 4,000*l*. and 5,000*l*. for the 2½ years over which dues are given up—I do not doubt the mine will pay the proportion I alluded to in Oct. We have raised 15,000*l*. The landlord has given equal to 5,000*l*., and I said then, and say now—the mine may be safely left to provide the other 5,000*l*. in the time, which will be done by degrees. In these accounts we have the landlord's contribution for the first three months. We might have claimed it three months before, but thought it better to find our own money first, and to ask him for his next. His proportion for the three months under review has been 293*l*. Before our two and a half years are up I believe Capt. Bishop will place us in a position to carry a good deal more than that to the new account, and that long before, the returns will increase to such an extent as will bring that item to 400*l*. a quarter at least. Then, I think, we shall have plenty of money to pay for all the developments we are undertaking. Under all these circumstances, I cannot but look upon the position of Wheal Grenville as other than greatly improved. (Cheers.) We have not done badly in times past. Looking back a decade

WE HAVE PAID TO OUR SHAREHOLDERS 75,000*l*.,

and the remarkable part of it is this, that during the last five years of that decade we have paid 55,500*l*. to them out of the 75,000*l*., so that

the mine has been for five years making great progress, and you may take my word for it that that progress is not going to cease. I can see the way pretty clearly, if I am spared, to a time when we shall have greater cause to congratulate ourselves upon the value of the property than we have now. I move the adoption of the report and accounts. (Cheers.)

Mr. Doré: I second the motion.

VIEWS OF CAPT. BISHOP.

Capt. Bishop: I can endorse the greater part of what the chairman has said in reference to the prospects of the mine. You will distinctly remember that we are developing a new mine altogether, because the mine was formerly in two sections—East Grenville and Wheal Grenville—and the bringing up of those drivages simply means the testing East Grenville below a point where it has proved very good above, and I do not think we have any reason to believe it will not prove equally well below. If so, you have a great property there, and what you require is to return a larger amount of stuff so as to have a larger sale of tin. We are confined in our stamping power at present. We have only 112 heads, but are preparing new stamps as rapidly as possible so as to drive 120 additional heads. We have a long piece of level to bring in the water from the main leat, as referred to in the report, about 180 fms., and we are endeavouring to carry out the work in the most modern way possible, so as to work far more cheaply than we can with the old stamps. The ground is favourable. Nature has indeed favoured us with the slope of the hill, which will make the work done to be more automatic than at the point where the old stamps are found, and I am certain that it is only a matter of time when

WE SHALL BE THOROUGHLY REWARDED FOR OUR OUTLAY.

I never hear an adverse opinion. I was talking underground the other day with some of the old tributers, who are as good miners as we can find anywhere, and in a jocular tone I said, "To carry on a mine like this one loses his honour, or gains additional honours." Two or three of the old men said (men 50 and 60 years of age), "You will never lose any honour by working down that valley; if there is not a great mine, there is none upon the flat lode." I said, "That has been my belief for years." The chairman differs from me, but I believe he is honest according to his knowledge, but my knowledge I claim to be better than his. Although he is older, he ought to bow to my greater experience. (Laughter.) I have to go down and see this mine, but he does not see it, and, therefore, only knows it theoretically. I say that men driving 6 fms. may do better work than other men driving 12, because it all depends on the nature of the rock through which they have to pass.

A PREDICTION.

I am as anxious as the chairman can be to accomplish 10 fms. a month, and I will offer now the prediction that we shall have it—in fact, I consider that virtually last month we did have it. We had the snowstorm, and Good Friday, which hindered us at least five days, but we drove 8 fms. 3 ft., and that was virtually 10 fms., but the ground has been troublesome, wet, hard, and ugly for advancing. In some of our ground, to put in an advancing blast 3 ft., you can get an effective result with 10 holes, but in other ground, 3 ft. will take 35 holes, so that you have a disadvantage where the ground is hard and of a more cross nature for "rip." It is cross ground for breaking. If you have to put in 35 holes against 10. that is a problem that the mathematical mind of the chairman will solve. (Cheers and laughter.) The very best is being done, and when you consider that we have only been since last Feb. 12 months putting up our rise, say one year and eight months, putting a shaft down 125 fms. in perpendicular form—I say it is not a job often seen or done in our country. I am very satisfied with the progress. Our boring machines did splendid work in rising, and average 6 fms. a mouth—in the eight months 48 fms. When you consider they have to go up 38 fms. perpendicularly, with no means of ventilation other than they derive from their own pipes, I consider that has been

A VERY SMART PIECE OF WORK,

quite unparalleled in our country. (Cheers.) The contractor knows that the more grouud he drives the more he receives, and I do not think Messrs. Holman Brothers are foolish on the matter of money. They offer every inducement to the men to do their best, and I feel certain that the best is beiug done. There is a great amount of tin ground lying high and dry that will come away profitably. I have every confidence that Grenville will pay back all the outlay upon it, and give a fair interest on the money. I do not promise you anything, and I am not a very sanguine man. I look at matters rather steadily, but do uot thiuk I shall be a false prophet in saying what I have said. (Cheers.)

AGENT HAS SCARCELY HAD A FREE HAND.

The Chairman: Our respected agent has not quite done what I wished him to do—shown the proportion of work he has accomplished. He can hardly be said to have had a free hand since last Oct. when it was resolved to accomplish this work. We were foiled a little in our plans of raising the money, and until we were fully assured on that point we could not give him full liberty. He has not done anything phenomenal, but yet he has done a vast amount of work.

WORK DONE.

Since Oct. he has purchased a new 90-in. engine, a new stamping engine, and he has goue on with the cuttiug down of the shaft which he has accomplished in an economical and skilful manner. He has driven a greater amount of fathoms, and sunk deeper than was ever done in my time in the mine before. He has cut out the foundations for the engine houses, commenced building the stamps engine house, and is now engaged in laying out his floors. He has taken down one engine and sent it to the makers for the necessary repairs. He has contracted for the building of the whole of the mason work required, and bound the contractors to finish the stamps engine house in the course of three months from the date of contract. In about six weeks hence, had it not beeu for the tremendous storm we should have had that engine house roofed in. That is a work of great importance, because after what he has said you will see that it is necessary we should have the stamps finished, and ready to go to work the day we can bring stuff away to feed them. When you consider the quantity that can be brought away I thiuk you will see we have a big thing before us. I am satisfied with everything except the driving of the 225, and in this Capt. Bishop is inconsistent, for he told us at the beginning of his speech that that could not be done, and later on he predicted it would be. (Laughter.)

QUESTIONS.

Mr. Strauss: I should like to ask one or two questions. In your report you state 135 tons of tin have been sold, but in a lump sum; whereas all the other Cornish mines state to whom the different parcels have been sold. East Pool does it, of which Capt. Bishop is also the manager. Who were the buyers of this tin, and at what prices were the parcels sold?

The Chairman: That question has been before us two or three times. The last meeting I attended in this room a shareholder asked it, and the only answer I could make to him was that I could not state those particulars without consultation with my colleagues. Some years ago the whole matter was brought up and fully discussed, and the conclusion come to at that time was that the reasons were sufficient to render it

INADVISABLE

for us to publish the information asked for, and we have simply continued the course that was then adopted, though I admit that some of the reasons which influenced us then may not be in operation now. You (to Mr. Strauss) can have the information you ask for sent to you direct at any moment, but I am at present of opinion that the reasons may not be altogether done away with, and that it would not be advisable to publish these particulars in detail, though you can have them every month.

Mr. Strauss: I do not ask it for my private information, but for the public information. The information ought to be on this table. Anyone knowing the cost-book system must know that everything should be on the table at the meeting. It is not a question of favour, for I am entitled to know to whom our tin has been sold, as the information cannot be got from any paper.

The Chairman: I am rather surprised Mr. Strauss has made such a remark, because it is rather reflecting upon us. He says nothing is on the table, but everything is in this room, and he has a perfect right to see it, and to have a complete knowledge of every transaction that takes place. Neither I nor my colleagues have the least wish to withhold information from him. I differ from him, however, in this respect, that a shareholder has any right at a cost-book meeting to ask for every petty detail to be given to him, but he has the fullest right to information, and it is at his disposal. To say that we are to provide details of everything, and have everything on the table before the shareholders, is going a step farther than I think the Stannaries law warrants.

Mr. Strauss: I ask you to give me the statement promised, becapse I intend to publish it. Wheal Grenville is the only mine between Camborne and Redruth which has not finally adopted the ticketing system, and I think that you (Mr. Goold) were one of those who complained most of the "ring," and I am rather astonished that now something like a remedy has been introduced you should not give it your support and approval. In addition to this, I affirm, and will maintain, that the

PRICE YOU GET FOR YOUR TIN IS LESS

than you would have got if you had sold it by ticketing, and I am quite ready to prove that statement by the figures.

The Chairman: I have a most perfect answer to this. I will answer it principally for myself. I am the largest shareholder in this mine, and have been ever since I joined it.

I HOLD NOT LESS THAN ONE-TENTH OF THE PROPERTY.

I am not saying that in the spirit of conceit, but only to show you that your interest is mine. Now, I have gone into the question of ticketing most thoroughly and anxiously. I endorse all Mr. Strauss said as to my finding fault with the original system, for bad it was in many respects; but I still retain my opinion, that we, in your interests, are doing the best we can in sometimes ticketing, and sometimes selling privately, and it is my intention to continue doing so.

Mr. Strauss: Surely there is no great mystery about this. Perhaps you will be kind enough to reveal to us what is in your mind, and the reasons you adopt the present systems.

The Chairman: No; there are certain things which a smelter may come and ask me, and there are certain things which I think it not to the general interest to divulge. I cannot give publicly the reasons which have brought me to this conclusion. I know what used to go on in the old days when the smelters formed a ring against the miners. But I am not to be brought to talk about that to-day, and do not see why I should. As chairman of the committee and your largest shareholder I have paid close and anxious attention to the matter, aud have come to the conclusion that

THE SYSTEM WE ARE ADOPTING IS THE BEST,

and as that is also the view of my colleagues, I shall carry on the same system. If you have any want of confidence in our mode of conducting your affairs, pray approach the matter in a direct way, and you will soon get your answer; mine will be that I will no longer act as your chairman.

Mr. Strauss: As regards want of confidence, we are not for a moment expressing it. I dare say the committee hold the majority of the shares, but at the same time I do not mind giving my reasons in a very few words, taking your own figures alone. I see your average price was 53*l.* 7s. 6d. I compare that with Tincroft for the same period. You received each time rather more than 4*l.* per ton than Tincroft. Consequently, you ought to have got for your tin in the last three months more than you did, or, say, 54*l.* 8s. or 54*l.* 10s. And the same is the case comparing it with two or three other mines—the prices of ticketiug and your average price—you have received 1*l.* less for your tin than the other mines.

The Chairman: Mr. Strauss's comparison fails here, because Tincroft tin is of a totally different character from our tin. He can say we have had 1*l.* less thau we ought to have had at the ticketing, but at one of our last sales when we did ticket we got 5s. per ton on the same standard below what we got from a private firm, and that is by no meaus a solitary instance. That is one of my reasons. Another is that we have tried it carefully, and the conclusion come to is that we really have doue better by private sales than by ticketing.

Mr. Strauss: Do you think the smelters such fools as to pay more privately than at the ticketing?

FOOLS *v.* FACTS.

The Chairman: I did not say anything so impertinent of them. I do not call smelters fools—I give you the facts.

Mr. Strauss: After getting the prices as promised I shall be able to show you that you received less than you would have got at the ticketing.

The Chairman: Mr. Strauss will get precisely the same answer three months hence as he gets now. I am determined to persist in the mode we have followed, and I do not think, under the circumstances, it is quite courteous on the part of a shareholder to persist in this matter in the way he has done. He may waste his time in future, for he will get precisely the same answer as he gets to-day. I now put the resolution.

Carried unanimously.

2s. 6d. DIVIDEND.

The Chairman next proposed a dividend of 2s. 6d. per share, payable forthwith.

Mr. F. G. Lane (member of committee) seconded the motion, which was carried.

The Chairman proposed "That the thanks of this meeting be given to Capt. Bishop and the agents for the energy with which the work in the eastern section had been carried on, and for their general care in the development of the mine, more especially during the trying times they had experienced, caused by the exceptionally severe weather."

Mr. R. B. Brown seconded the motion, which was carried by acclamation.

Mr, Strauss proposed a cordial vote of thanks to the chairman.

Mr. Bumpus seconded the motion, which was unanimously agreed to.

The Chairman, in returning thanks, laid stress upon the desire of the committee to do as they had ever done in the past, that is, place every possible information at the disposal of the shareholders. (Cheers.)

THE GREAT LAXEY MINING CO., LIMITED.

GRATIFYING MEETING—10s. DIVIDEND AND 2s. BONUS—MINE LOOKING WELL.

The half-yearly general meeting was held at the City Terminus Hotel, Cannon Street, London, on Wednesday.

Major James Spittall, H.K.

(chairman of the company) presided.

Mr. W. Allen (secretary) read the notice of meeting, and also the directors' report.

DIRECTORS' REPORT.

Apl. 8.—From the published statement of accounts which have now been in the hands of the shareholders for some time, it will be observed that there has been upon the whole a decrease of 1,706*l*. 11s. 5d. in the total amount realised by the sales of lead and blende, which is accounted for by the fact that only 700 tons of lead were sold during the past half-year, as against 800 tons in the preceding half-year, but it will also be observed, notwithstanding this deficiency, the credit balance carried forward to the current half-year is only 538*l*. 7s. 9d. less than the amount carried over from the previous half-year. Since meeting their fellow shareholders in Apl. last the directors have been enabled not only to strengthen the reserve fund as promised, but at the Oct. meeting they increased the divideud then paid from 10s. to 12s. per share by the addition of a 2s. bonus, and they are pleased to inform you that at their meetiug yesterday they were enabled to declare a similar dividend of 10s., and a bonus of 2s. per share, payable in 14 days from that date, and after providing for all liabilities they carry forward a substantial sum to the credit of current account, and the reserve fund remains intact with 4,874*l*. 9s. 1d. to credit. The report from the agents at the mine is, as usual, full and explicit, and there is no new feature of importance to add since the report was written. While everything has not progressed in quite the desired direction, the directors think they may fairly congratulate their fellow shareholders upon the results obtained.—J. Spittall, R. Penketh, W. B. Stevenson, P. Mosley, A. C. Tempest.

RECEIPTS INCREASED.

The Chairman: The directors have agaiu very great pleasure in coming before you with so satisfactory a report of the half-year's working, and also with what will be more satisfactory still—a very substantial dividend. The working of the present corresponds very much with that of the previous half-year of last year, but it is certainly below the working of the August half-year. In the previous half-year we were able to raise 800 tons as against 700 tons only during the present half-year, but we were able also at the last half-yearly meeting, in the island, not only to delare a dividend of 10s. and bonus, but also to carry 1,000*l*. to the reserve fund. Our raisings of blende during the present half-year had been 2,060 tons, as against 1,634 tons during the previous half-year, showing an increased amount in the present half-year of 426 tons.so that whilst we had a diminution of 100 tons in the amount of lead raised we had an excess of 426 tons in the amount of blende. The sum realised for lead during the Aug. half-year was 14,012*l*., and during the present half-year, 12,385*l*., showing that we received less during the present half-year for lead by 1,627*l*. than we did in the previous half-year. Then as to blende: in the present half-year we have received 10,926*l*. Putting that against the diminution of price on the salc of lead, the one will about balance the other.

EXPENSES REDUCED.

Then, as to our wages account: during the Aug. half-year it amounted to 8,019*l*., and during the present half-year to 7,971*l*., leaving a balance in favour of the present half-year of 48*l*. In our general expenses the amount during the previous half-year was 6,129*l*., and this half-year 5,764*l*.—a saving of 364*l*. During the present half-year the income-tax is charged, and is included in the 5,764*l*., so that there is virtually shown a saving of 703*l*., which, added to the 48*l*. on wages account, shows that there has been an economy in general expenditure of 752*l*. After providing for all known liabilities, and such contingencies as may arise, we have a balance left of 12,829*l*.

DIVIDEND AND BONUS OF 12s.

Out of that the directors have declared a dividend of 10s. a share, absorbing 7,500*l*., and a bonus of 2s., absorbing 1,500*l*. more, making a total of 9,000*l*., against 12,829*l*., thus leaving a credit balance to be carried over to the current half-year of 3,829*l*. Notwithstanding the exceptional advantages we had in the previous half-year when our raisings were somewhat greater, and when the price of metal, fortunateiy, favoured us more than it has done during the present half-year, although the variation has been but slight, yet the difference between the amount carried over last half-year and this is only less by 538*l*.

AS TO UNDERGROUND WORKING:

the agents' report shows that the 295-fm. level was not driven in the ordinary course, or at the ordinary place where such a level ought to have been driven, but was taken down 20-fms. for the purpose of avoiding driving through a large section of unproductive ground, which had to be passed before we could expect to reach the profitable part of the lode as shown in the levels above. That work to a certain extent has been largely iuterfered with during the present half-year owing to the influx of water into the bottom level, and it had to be discontinued for a short time, but has since progressed rapidly, and instead of driving in a straight line, as is usual, and cross-cutting to meet the lode, the level has been driven with an incline towards the lode, and has met with it at a much earlier point than anticipated. It has been driven upon the lode 3 fms. with satisfactory results. The 271-fm. level (which is now the 278) has been driven nearly 34½ fms.—about 21 fms. of it in an irregular and bunchy formation. This level has always been uncertain, but on the whole has been satisfactory. The 255 has a similar character, and is now nearly the most advanced level in the northern part of the mine. The 231 was, and is, at present, the pioneer level, and has been a most productive lode, but has latterly gone through some poor ground, and as the same ground will have to be gone through by the level below, the managers have thought it better to suspend operatious and reach the lode from the 255, which will soon become the pioneer level.

THE 255 HAS BEEN A MARVELLOUS SOURCE OF PROFIT

to the company hitherto, but is now in dead ground, which appears in the level above, but the manager says it should be pushed on at this increased depth with a view to finding the lode more settled and resuming its productiveness. Another valuable cousideration is this, that in being the pioneer level it will go through ground which is whole to the surface, and will indicate whether the levels can be profitably driven, or whether they should be extended only iu depth with the deeper levels. As to the 295, the manager says:—

"It is satisfactory to find that the lode continues for the most part strong, and ore-bearing iu depth, and it is advisable and important to hurry on the new bottom level from the Welsh shaft as rapidly as possible, as well as the lower levels iu Dumbell's section of the mine, in advanee of which we have every reasou to expect the known and already ascertained runs of ore to be steady and continuous."

We are still troubled with letters from shareholders about the royalty paid, and urging the directors to take steps to get it reduced. There is no doubt

THE ROYALTY IS EXCESSIVE,

and I informed you before that when the Mining Commission was sitting we eudeavoured to lay our views before it, and in order to be prepared with evidence, we ascertained some facts which you will be very much astonished to hear in regard to the royalty paid by this mine to the Crown for the last 60 years. Our investigations went back to 1830, from which time to 1855 the shareholders received in dividends 33,839*l*., whilst a larger amount was paid to the Crown for royalty, namely, 34,112*l*. The income-tax payable during that period was 674*l*. From 1856 to 1862 the mine was worked at a loss, and although expenses were heavy, the Crown received 10,878*l*. for royalty. The total royalty paid to the Crown from 1830 to 1890 amounts to 150,451*l*., aud the income-tax paid to 11,642*l*., makiug

A TOTAL OF 162,094*l*. 6s.

The percentage payable for royalty and income-tax amounts to 31¼ per cent. upon the divided profits. That is a very painful position to lay before you, particularly when we can get no relief. Any application made is met with the reply—"You pay dividends; your 4*l*. shares are at a considerable premium, and, therefore, it is scarcely consistent to ask for a reduction of royalty when you appear to be in such a flourishing condition." Although the shares were really 4*l*., yet that scarcely represents their value to any of the present holders who bought as high as 25*l*. down to the present price, but the reply to that is, "That is a matter for the public, and does not affect the lessors in any way." As to

THE PRESENT PRICE OF THE SHARES,

it is most extraordinary that a company increasing its dividends from 5s. to 10s. (not to speak of the bonus) should not have experienced any appreciable rise in the quotation of its shares, the last being 8½ to 9½. The extraordinary part of it is that, accordiug to the papers, the shares fell 10s. on the dividend, but, as a matter of fact, no transfers have come in. (Laughter.) The shares transferred during the past two years have been almost exclusively those thrown on the market by executors in realising the estates of deceased shareholders. Many transfers have been made to suit family arrangements, where the shares have not been sold but simply distributed. How the shares contiuue to droop I cannot explain, and I do not think anyone else can. The Bill for the railway has been withdrawn, but we have a decided advantage in the works which have been carried out iu our harbour. Laxey was proverbial for its danger at one time. It was an open harbour and unprotected. We had to transact our business by steam, and let the steamer go out and in during the same tide, for if an iushore gale arose

IT WAS ALL UP WITH THE STEAMER.

Extensive harbour improvements have been carried out within the past two years—greatly delayed because the Governmeut and the lessors thought we would contribute 1,000*l*., but we decidedly objected to do

this. We have built the existing pier, but did not see our way to increase our expenditure, and we also had notice that the pier having been built upon Crown property, and extending below water mark, was no longer our property, but theirs, and it has been taken possession of by the Government, who have built a jetty outside the existing pier, have lengthened and strengthened it, and altogether expended between 7,000*l.* and 8,000*l.* There was a motion before the Local Government in the Isle of Man for a further expenditure of 1,000*l.*, and I think there will be sufficient influence to carry the grant. We can now offer to ship owners a safe harbour, and the effect will be that we will not have the same difficulty in getting vessels to come there that we have had in the past. The moving cause in obtaining this great advantage was the wreck of a steamer going out of that harbour 12 or 18 months ago. I now move the adoption of the report and accounts. (Cheers.)

QUESTIONS.

Mr. Ramsbottom: I second it, and think the shareholders will agree with the sentence in the report which says, "On the whole it is satisfactory." I thought you would have alluded to the decreased raisings of lead, which have been so marked. Many shareholders cannot attend the meetings and look for information from the remarks you make from the chair. I observe a great decrease in merchants' bills, but take it that that decrease has not been at the expense of the stores. What is the reason that the steamship account is still kept up? Why not have it transferred to the reserve fund?

Mr. Cluff: The balance-sheet is very satisfactory, and when I looked at it last night I began to think we ought to have more than the 10s. dividend, for you could afford to pay more. I was, therefore, very pleased to hear that we were to have a bonus. Going back three years, I made a remark that the prospects for improvement in this company lay in a better price for metals and a r duction in working expenses. Last year I reminded you how we would benefit from the improved price in metals, and I am very pleased to find that we have benefited both from the one direction and the other—in other words, that the price of metals has improved and the rate of production has been reduced. (Hear, hear.) I think we may look to the future with confidence. The report should contain the names of the directors. I, too, am astonished at the price of the shares, which is the same now as it was when the dividends were only half what they are now.

REPLIES.

The Chairman: As to the decrease in lead in previous half-years as compared with this, you will find the present average well maintained, and that the previous half-year was exceptional. Laxey is a bunchy mine, and that accounts for it. The stores are well maintained, and we purchase by the cargo. The steam shipping account has been again before the directors, who, for the time being, have decided to retain it as it is. It may be advisable to invest a portion of it in a steamer, which is being built by an outsider expressly for mining cargoes and for the Laxey trade, and our old captain will be the commander of the new vessel. As to the dividends, we considered whether we should strengthen the reserve fund or give you a bonus, but as we had strengthened that fund last time we thought it better to give you the bonus, on the principle that turn about is fair play. (Laughter.) The steamshipping accounts are old balances arising between the present company and the old steamship company, whose affairs have not been yet wound up, but the asset is a perfectly good one.

The report was unanimously adopted.

The Chairman expressed thanks to the holders of 5,000 shares who had sent in proxies to the directors, and was himself thanked for presiding.

THE AFRICAN GOLD SHARE INVESTMENT CO., LIMITED.

THOUGH THE DEPRECIATION OF ALL SOUTH AFRICAN MINES HAS SERIOUSLY AFFECTED THE COMPANY, GROUNDS ARE GIVEN UPON TO BASE ANTICIPATION OF A PROSPERITY LIKE THAT ACHIEVED IN THE COMPANY'S FIRST 10 MONTHS' WORKING—IMPORTANT SPEECH BY MR. PERCY TARBUTT.

The second annual general meeting was held at Winchester House, on Monday.

Mr. E. J. Castle, Q.C.,

presided.

Mr. Charles S. C. Watkins (manager and secretary) read the notice of meeting.

A FULL RECORD OF THE YEAR'S WORK.

The Chairman: It is my duty to move the adoption of the report and accounts, and in doing so I feel it necessary to call your attention shortly to the position of the company, and the reasons which have caused the shares to be depreciated as much as they have been. The company was formed about the commencement of 1889 for the purpose of investing in South African gold shares and similar securities. At that time the principal available stocks on the Randt were at a very high premium, and after the company was formed, in obedience to the mandate of the shareholders, I may say, the board proceeded to invest the money, partly in these high-priced stocks of dividend-paying companies, and partly in what is called "getting in on the ground floor" of those companies, which they hoped would be developed and prove profitable. During the first year (1889), for the 10 months which this company was working, the transactions proved to be very remunerative. We invested money in different stocks, and by the close of 1889 found that for those 10 months working

WE HAD MADE A PROFIT OF SOMETHING LIKE 16,000*l.*,

which would have paid upon the capital 7 or 8 per cent. This was not bad, considering our money had only been employed for 10 months. But, gentlemen, the boom began to pass away, and a serious depreciation set in. This commenced before the end of 1889, and as we had to have accounts sent from Africa, and as other delays occurred, we were unable to meet you till some three months after the end of the year.

DEPRECIATION SETS IN.

Meanwhile we found the depreciation very serious, so serious, in fact, that we then thought it inadvisable to divide anything. When we met the shareholders last year the depreciation was explained. We had made 16,000*l.* profit, but considered it ought to be carried to reserve fund so as to meet emergencies. The depreciation, instead of passing away, became intensified. Do what we could, and struggle as we might to try and overtake the falling off in prices, we were unable to do it. We had the benefit of having Mr. Tarbutt actually on the Randt, who had the opportunity of inspecting the different mines. According to instructions we changed our investments as far as we could, and the result was that when we came to the end of the year we found that the depreciation, which had been continuing, was a depreciation which meant to you

37½ PER CENT. UPON THE AMOUNT INVESTED.

That depreciation I think every one will admit contrasts very favourably with what has taken place on the Randt mines generally. (Hear, hear.) I have a list here showing its actual extent in individual cases, but will only trouble you with one or two examples:—Auroras were 3¾, now 1¾; City and Suburbans, 16, now 4½; Ferreiras, 22, now 10; Glencairn, 2*l.*, now 8s. 6d. All these different stocks have fallen so much further than our holdings in the bulk have fallen, that anybody who looks the matter fairly in the face must admit that the

DIRECTORS HAVE NOT FAILED TO DO THEIR DUTY

to the shareholders, and have by their action prevented a much greater depreciation than might have occurred. (Laughter.) With regard to the money invested in other companies which have not yet come to the front, matters are *in statu quo*. That being the case, various plans occurred to us to improve the position of the company, and amongst other things suggested was amalgamation with the South African Gold Trust Co., the particulars of which I need not enter into to-day, as it is premature to deal with them, but for the purposes of such amalgamation, and in order that we might know our correct position, the members of the board who are not directors of the Gold Trust Co. (because some of them are) formed an independent committee, and carefully went over our securities. We had also the securities of the Gold Trust Co. before us, but made an independent and careful valuation of our stocks as they stood.

POSITION TRULY ASCERTAINED.

Wherever there was a market price we took the lowest, and wherever the companies were undeveloped and not in the market, we made a very careful estimate, not for the purpose of this meeting, but that we might know our exact position in case amalgamation negotiations were opened. That valuation has been submitted to our auditors and carefully discussed with them. They have pointed out that part of it depends on estimates, but what is an estimate? It is the only criterion for arriving at the value when there is no market value. You will find that the statement of the directors marks the estimated value up to 174,283*l.* 4s. 7d. Our auditors, where they have had the opportunity of checking that estimate, have admitted it was a fair one as regards the value for to-day. That being the case, we set to work to try and get such remunerative business as would help us to pull back the depreciation, which has been the inevitable result of investing in mines. No body of men could prevent the collapse which has taken place in mining securities in South Africa, and therefore I feel confident we have done our duty to you, and done it, I know, most anxiously. We have struggled on in the best way we would to recover lost ground, and have succeeded to a certain extent. We have had an opportunity of joining the re-construction of the Kleinfontein Co., and of taking shares in the Chartered Co., and we have also a part in the Mashonaland Agency. We have invested money, which, although unremunerative for the moment, will, we hope, in the future be a considerable source of income. I have done with the past, and will now deal with the present. What is the position at the present time? The company's shares are depreciated far less than any other shares.

Mr. Stobart: That is news to me.

PRESENT POSITION.

The Chairman: I did not catch the observation. A great deal of that depreciation depends on the market price of the day, which is always varying. Whether that market price is a fair representation of the present value of the shares of the Randt mines I take leave to doubt, and shall ask Mr. Tarbutt, who has been out and actually seen the different mines, and knows the work that is being done, to tell you, as he will, that they are in a far better condition than they have ever been, and far readier to pay dividends than they were in 1889, when we made a good profit. In regard to the accounts—the revenue account, instead of this year showing a balance of 16,000*l.* in our favour, shows a balance of 564*l.* 17s. 11d. One result of the market depreciation has been that the companies have ceased to pay dividends. During 1889 we derived a considerable sum from dividends which were paid by different companies, but these have ceased during the past year. Expenses have also been diminished, for whereas for the 10 months of 1889, although we spent 10,000*l.* in expenses (or 12,000*l.* for the year), this year our total expenses only comes to 10,000*l.* (Laughter.) That seems a large sum, but you must understand that we are not only carrying on our own business, but a considerable agency business, which produces a revenue, though not a large one, of 4,500*l.* a year. We are getting a revenue from dealing with other companies, and to enable us to do that we have to keep an office in Johannesburg, local directors, and a manager, and we have salaries, and directors' fees to pay in London. During last year we were actively employed, and there were many telegrams passing that cannot be sent for nothing. The sum of 6,848*l.* is made up of three principal figures—

SALARIES, DIRECTORS' FEES, AND RENT.

The salaries are 2,500*l.*, directors' fees, 1,800*l.*, and office rent, 700*l.* The managing director, Mr. Davies, who is away seriously ill, and who was paid 1,500*l.* a year—at his own request that salary was given up. (Cheers.) You may think it a large expense, but it was chiefly owing to his services that the profit of 16,000*l.* was made in our first 10 months' working. (Cheers.) When he found the depreciation so large he voluntarily gave up his salary, although, with the assistance of Mr. Watkins, our manager and secretary, he has been contented to do all he could for

the company ever since without payment. (Cheers.) As to directors' fees—the board will meet your wishes if any intimation comes from you in respect to them. The expenses in Johannesburg are 2,506*l*., made up of directors' fees, 500*l*., and 1,200*l*. for salaries, whilst the rest consists of payments for reports from engineers (whom we have to send to properties), telegraphing, and the like. We have carefully considered the matter, and my opinion is that these expenses are incompressible, although they may be diminished on the side of directors' fees.

NOW AS TO THE FUTURE.

At present the revenue does little more than meet the expenses, but we have every hope that it will steadily increase, and put us in a position to fairly pay a dividend within a short period; but as long as the capital value of the stock remains in this depreciated condition we shall have to make good the deficiencies of capital account before making any distribution of profits. The directors have had different proposals before them. One of them is amalgamation, which I have mentioned, though in that case we should not get as many shares in the Gold Trust Co. as we hold in this, and the practical effect would be a reduction of capital. I do not invite discussion on this point now, but mention it because I have been desirous of giving you the fullest information. I now call upon Mr. Tarbutt to second the motion, and to address you on the general position of the Randt mines, and particularly those in which we are interested. (Cheers.)

HOPEFUL POSITION OF RANDT MINES.

Mr. TARBUTT: Gentlemen, I have pleasure in seconding the adoption of the report, and in doing so I have been requested to give you some particulars concerning the more important of our investments. I have visited South Africa since our last annual meeting, and devoted a considerable amount of time to personally investigating many of the properties in which we are interested, and I venture to hope that the information I was able to gain has not been without benefit to the company. It is with a feeling of relief that one turns from the continued gloom of the South African share market to the steady improvement in the condition of the gold mining industry itself. When I last had the pleasure of addressing you I gave in detail (which I fear was tedious) the geological reasons for believing in the permanence of the Witwatersrandt Goldfields, and I ventured to predict that the output for 1889 would, in the near future, be doubled and trebled, that the cost of production would be materially lessened, and that the reefs would be worked at over four times the depth of what were then considered deep level properties. The experience of the last 12 months goes far to confirm these predictions. The output for 1890 was over 100,000 ozs. more than 1889, and that of the first two months of this year is at the rate of something like 240,000 more. The cost of production is, in almost every case, materially lower, and in one of the mines in which we are largely interested, the Kleinfontein, has been reduced to 15s. per ton. Several of the so-called deep level mines, working at depths of 300 or 400 ft., are beginning to make returns, and I have within the last few days seen a letter from an eminent French engineer, now at Johannesburg, advising his friends in Paris to take up and work claims on which the reefs will only be reached at depths of 1,500 and 2,000 ft. The depression of the last 18 months, and under which we are still groaning, is not an unmixed evil. Speculation being at a standstill, mine directors and managers on the Randt have devoted their attention to the proper development of their mines, with the result that many of the more important properties have never been in such a satisfactory condition of development as at the present time. Several of the companies have already returned to a dividend-paying state, whilst others are fast approaching that most desirable condition.

CITY AND SUBURBAN.

I will now give briefly some details concerning the properties I have referred to. We had a considerable holding in the City and Suburban Mine, which is one of the best properties on the Randt, but I found it in such a deplorable condition, as regards developments, machinery, and milling plant, as to render it impossible that any profits could be made for a long time to come, and there was every reason to fear that unless some energetic action were taken the company would be ruined. I urged my colleagues to take steps to obtain a committee of investigation, and an informal meeting of English shareholders was called with the object of requesting the directors in Maritzberg to consent to the appointment of a committee. But the friends of the directors here carried the meeting against us, and as we feared the continuation of the same bad management, we sold out. Our action, however, had the effect of bringing about the resuscitation of the mine. A consulting engineer was appointed, who reported to the City and Suburban directors exactly as I had reported to my colleagues. Works of development were commenced, new machinery ordered, and the new battery pulled down and removed to a proper site. We recently had the mine re-inspected, and the report was so satisfactory that we have re-invested, and I am pleased to say at a considerably lower figure than we sold at when the mine was in such a critical condition. We acquired a large interest in the re-construction of Kleinfontein Company on favourable terms. This property is well developed, having about 68,000 tons of ore in sight in the two reefs which are being worked. The mine is well equipped with machinery, and 50 stamps are now running. The south reef is the richest, but it is so close to the north reef that it is not safe to work them at the same time, consequently most of the ore now going to the mill comes from the old workings and the north reef. This yields 6 dwts. per ton, and at the cost of 15s. a ton leaves a good profit.

KLEINFONTEIN.

The whole 50 heads are only just started, but the manager estimates to crush 4,000 tons a month, which, at 6 dwts., will give a profit of 1,200*l*. a month, each additional pennyweight giving a profit of 750*l*. a month extra. We have also a large holding in Stanhope Geldenhuis and May Deep Levels, both of which are properties which promise to improve in value. Stanhope Geldenhuis have developed some 33,000 tons, estimated to yield from 1 to 3 ozs. per ton. A 40-stamp battery is in course of erection. May Deep Level: This mine has the north reef very rich, but the south reef is poor. The developments are not yet very far advanced, but in one drive, 120 ft. long, the north reef varies from 3½ to 10 ft., and assays all over an average of nearly 2½ ozs.; and in another drive, 120 ft. long, it is of the same width, and runs from 3 to 7½ ozs. Very little of this rich reef is yet going to the mill. Crown Reefs: We have acquired a good interest in this mine since my visit. It is one of the best managed mines on the fields, and is worked fairly and squarely to earn dividends. We have interests in buildings in Johannesburg and Pretoria, in conjunction with the African City Properties Trust. I am not an expert in real estate, but from what I could gather, by inspection and enquiry, I formed a good opinion of the value of these properties, which I am pleased to learn has been confirmed by the report of Messrs. Wm. Dunn and Co., who are much better judges. In conclusion, I am convinced that the prospect of South African mining and of our company are not as gloomy as the present despondent condition of the share market would indicate. I do not look, or hope, for any sudden return to wild speculation, but I do anticipate, with confidence, a gradual increment in values, based on the solid foundation of increased returns of gold and substantial dividends from the mines. (Cheers.)

Mr. SNELL and other SHAREHOLDERS complained seriously of the board having called the meeting for 11 o'clock on a Monday morning. He doubted whether the capital legally could be written down as proposed.

IMPORTANT QUESTION.

Mr. CLUFF: I wish to ask in what way you contemplate dealing with the founders' interests. If you write down the capital you write down the shares, and will you make any difference as to the proportion of founders' profits? If not it will be better for us to make up our losses out of profits and not write down capital at all. (Cheers.)

Mr. STOBART: When you are ready to declare dividends will be time enough to consider the writing down of capital, and the only way of getting dividends is to reduce expenditure. The salaries paid are enormous.

The CHAIRMAN: We represent companies with two million sterling capital.

Mr. STOBART: You have a little trumpery tin-pot office, and you pay 760*l*. a year rent, and assuming you have 20 clerks you must be paying them tremendous salaries all round—in fact you are killing yourselves with expenses. You have lost 37½ per cent. of the capital, and you pay yourselves 1,850*l*. in fees. You cannot expect a company to pay under such circumstances, and nine directors are not wanted. I think it would be ample if the directors took 100*l*. a year each, which is less than they are worth I know, but they would promote harmony by doing so.

The CHAIRMAN: I told you we would take that into consideration. (Hear, hear.)

JUSTICE TO DIRECTORS.

Mr. STOBART: Your expenses in Johannesburg are also excessive, but I do not blame you, because we have no dividends, for we are suffering from a general depreciation. I think you had better leave the capital alone, and not go into amalgamation unless you can do it on very advantageous terms.

A SHAREHOLDER: How did you come to invest in City and Suburban shares when the management was so bad?

The CHAIRMAN: We sold out when we knew it, and saved a considerable loss. We have now bought back at a lower price as the management has improved.

Mr. PEACOCK: I have not heard the chairman speak, but the accounts show a loss of from 40,000*l*. to 45,000*l*. of the original capital. I think a committee of investigation should be appointed. (No, no.)

Mr. ROBINSON described the company as a sort of Micawber affair, waiting for something to turn up.

IT DID.

Mr. STOBART: But something did turn up for Micawber. (Laughter.)

Mr. ROBINSON: Your principal business has been jobbing in the shares, and I want to prevent you from going further into a similar business. You have lost by that means well on towards half your capital—actually 37½ per cent admitted. The Gold Trust Co. is the parent of this one and should have mercy on it now, seeing that it must have made a very good thing out of it. A list of securities that company holds ought to be sent to the shareholders. (No.)

Mr. LOMAS was entirely opposed to amalgamation and to touching the capital.

AN APPEAL FROM THE BALANCE-SHEET TO THE PRIVATE LEDGER.

Mr. T. J. LAWRENCE: I would appeal to shareholders present whether in their personal dealings with South African mines during the period under review, their experience has been different from that of the company. We have suffered from a crisis, accentuated by the failure of two South African banks. I am sure we have an honest body of directors who are anxious to do their best for us, and we should support rather than discourage them. (Cheers.)

A SHAREHOLDER: Are not the offices shared with South African Gold Trust Co., and the services of the staff also? If so, why should the expenses be so large? I think the meeting should have an assurance that the expenses will be reduced.

CHAIRMAN'S REPLY.

The CHAIRMAN, in reply, said: I regret if the time chosen for the meeting is inconvenient. It happens that on a Monday morning the board meet at a quarter to 11, and we thought 11 o'clock would be suitable to you. I agree that the question of reducing the capital should not be raised now as it is premature. It is not usual to give a list of investments, and we must decline to do so for reasons that will be obvious to all business men. (Cheers.) That was the decision come to by the last meeting. (Hear, hear.) It is unfair to say (as one shareholder has done) that we have wasted your money, for in the first year we made 16,000*l*.; but we are not prophets; if we were we should have formed a small syndicate, and

RETIRED, LIKE ROTHSCHILDS.

(Cheers and laughter.) We thought we could do well for you with our special knowledge and means of communication, and we did do so until depreciation set in. We have nine directors, because last year, at your wish, we added Mr. Lockhart and Mr. Hale, who have been of great service to us, and now you complain there are too many. The founders have always met us very liberally, and last year might have claimed a share of the profits, but there was no difficulty

with them, and I do not think there will be. I repudiate the statement of Mr. Robinson that we are jobbers—we are nothing of the sort. We invest money for you, and we have done our best. As to the expenditure, we will see what can be done to reduce it, but I am not in a position to guarantee what the reduction will be, except from the side of directors' fees, where possibly a saving can be made. We have to conduct this business as we think right, and as long as we are at the helm we shall not spoil it by injudicious economy. (Cheers.) I only hope that next year we may meet under more favourable auspices.

The motion for the report was adopted, the auditors were re-elected, and the chairman was thanked.

WEST KITTY MINE CO.

DIVIDEND OF 11s. A SHARE.

A GENERAL MEETING of this company was held on Wednesday, at the Offices, 37, Wallbrook.

Mr. J. B. Reynolds

presided, and in moving the adoption of the report congratulated the shareholders on the continued prosperity of the company, which, he believed, would continue for a long time to come.

The motion was agreed to, and a dividend of 11s. per share was declared.

A motion was agreed to, allowing Mr. J. B. Reynolds 50*l*. a year, from Mar. 25 last, for rent of office.

A draft agreement with the Wheal Friendly Co., permitting them to work their mine through the West Kitty shaft, was submitted to the meeting, and approved.

A vote of thanks to the chairman closed the proceedings.

THE MYSORE-WYNAAD CONSOLIDATED GOLD MINING CO., LIMITED.

A MEETING TO CONFIRM RESOLUTIONS, BUT IMPORTANT INFORMATION IS GIVEN BY THE CHAIRMAN.

AN extraordinary general meeting of the shareholders of the company was held at Dashwood House, New Broad Street, on Tuesday, for the purpose of confirming, as special resolutions, the following resolutions which were duly passed on Mar. 10.

"That the 77th article of the articles of association be amended by striking out the words 'The number of directors shall at no time exceed seven or be less than five,' and substituting the words 'The number of the directors shall at no time exceed five, or be less than three.'" "That the 85th article of the articles of association be amended by striking out the words 'The directors shall be paid out of the funds of the company by way of remuneration for their services the sum of 1,000*l*. per annum,' and substituting the words 'The directors shall be paid out of the funds of the company by way of remuneration for their services the sum of 800*l*. per annum.'"

Col. Malleson, C.S.I.

(chairman of the company), presided.

Mr. L. J. WOODMAN (secretary) read the notice of meeting.

EXPENSE SAVED.

The CHAIRMAN: I rise to move the first resolution, as given in the printed notice. We found on the resignation of one of our directors, the total number being then five, that we could carry on the work of the board with the four remaining, but that we were not able to do so because the articles of association laid it down that the number should be in no case less than five. We were anxious to make it less than five, as we were anxious to reduce the expenses as much as we could, and the measure we now propose will be a saving of 200*l*. a year to the company. I therefore beg to propose the first resolution. (Hear, hear.)

Mr. SHAW KENNEDY (director): I second the motion.

Carried unanimously.

The CHAIRMAN: The second resolution is the necessary consequence of the first, and by it we propose to carry out the reduction of the sum allowed for directors' fees.

Mr. ROBERT WALKER, J.P. (director), seconded the motion, which was carried.

GOOD NEWS.

The CHAIRMAN: I can only tell you now that the accounts from the mine are very favourable. There is no doubt whatever we have the Champion reef in our mine, and if any gentleman present wants to know what having the Champion reef means he has only to look at the telegrams just received from India, from the Mysore, Ooregum, and Nundydroog Mines, to understand its significance. Those returns speak much more than I can to the value of the Champion Reef. Now, we have that reef in that mine, and the old workings go to prove also that we have other reefs which we believe will be fully as valuable. We have, we believe, quite sufficient money to work the mines to a success. (Cheers.) We have sent out all the necessary machinery, or are sending it. It was all ordered the minute we completed the purchase, and it is now going out, and we believe that at our next annual meeting we shall be able to give a good account of the mine to the shareholders.

Mr. SPENCER: If you receive any good news before the annual meeting I suppose you will publish it.

The CHAIRMAN: It is our practice to send the mining report every fortnight to the Press. Mr. Walker and I are constituted a committee to examine the letters the moment they arrive, and we then and there send them away for publication. The letters are fortnightly, and it is our policy, and always has been, to let the shareholders have as much information as we have ourselves. (Hear, hear.) At the last annual meeting shareholders were full of expectancy, and some of them full of hope, and I trust that when the nine or 10 months which will elapse before our next meeting takes place have expired that expectancy and that hope will have been changed into certainty. (Hear, hear.)

Mr. SNELL: Do I understand that the Champion reef runs through this property. Is it through Ooregum proper or the new part that they have acquired that it runs?

The CHAIRMAN: It is the same reef that runs through the Mysore and Nundydroog properties.

SEVERAL REEFS.

Mr. WALKER: It runs north and south, beginning at the southern part of Mysore, and has been proved all along. The Ooregum has proved it, and latterly the Nundydroog, and the Champion reef is so called because it has been the principal producer of about five reefs, though the results that are being telegraphed, to which the chairman has referred, are taken from other reefs as well as the Champion, though the Champion, owing to its richness, helps the average considerably.

Mr. SNELL: I think the Ooregum Co. returned gold last year to the value of 104,000*l*.

The CHAIRMAN having read the telegrams which appear in the usual place in our columns, added: We have the identical reefs which produced this gold.

Mr. SPENCER proposed a hearty vote of thanks to the chairman, which was agreed to.

The CHAIRMAN: We shall spare no effort to make the property the great success we all firmly believe it will one day become. (Cheers.)

PERSEVERANCE GOLD MINING CO., LIMITED.

(IN LIQUIDATION.)

RE-CONSTRUCTION LIKELY IN EVERY WAY TO BE SUCCESSFUL.

THE special resolutions passed on Feb. 26, 1891, for winding up and re-constructing the above company (hereinafter referred to as the old company), were unanimously confirmed at the extraordinary meeting held on Mar. 19, 1891.

The lines on which the re-construction scheme has to be done are already known to the shareholders, but it may be convenient to summarise them again, which we do as follows:—

A new company to be called the Perseverance Gold Co., Limited, to be formed with a nominal capital of 160,000*l*., divided into 160,000 shares of 1*l*. each, to take over the whole of the assets and liabilities of the old company, in consideration of an allotment to the liquidators or their nominees of the same nominal amount of share capital in the new company, as was issued in the old company. The shares are to be issued with the sum of 18s. credited thereon as paid up, leaving a liability of 2s. per share, of which the sum of 6d. is payable on application, and the balance of 1s. 6d. by calls not exceeding 6d., to be made at intervals of not less than three months.

We understand that the directors have received substantial promises of support, and that the re-construction is likely to be in every way successful.

THE NEW DEVALA-MOYAR GOLD MINING CO., LIMITED.

MESSRS. BEWICK AND MOREING MAKE RECOMMENDATIONS WHICH THE BOARD WILL CARRY OUT—LAST THREE MONTHS' CRUSHINGS.

IN forwarding a copy of Messrs. Bewick and Moreing's report upon Harewood Mine, Mr. A. N. Frewer, secretary, informs the shareholders that effect is being given to their recommendations for the development of the mine and the reduction of the ores. The Dec., Jan., and Feb. crushings consisted of 900 tons of ore, which yielded 226 ozs. free gold (of the value of 800*l*.) and 390 tons of concentrates, which have been stored for future treatment. The directors take this opportunity of announcing that, owing to the exhaustion of the coffee plants, bordering on extinction, and the low price of cinchona bark, they have decided to cease cultivating the estate, and to cut down and strip the cinchona trees. This course will avoid an almost certain annual loss, while the realisation of the bark is expected to add from 2,000*l*. to 3,000*l*. to the company's cash resources, which will thenceforward be exclusively devoted to the development of the mine.

THE YURUARI CO., LIMITED.

THE secretary advises receipt of the mid-monthly mail from the mines, dated Chile, Mar. 20. In it Mr. Pryor states:—I am making progress with the sinking of the water shaft, and keeping up the rate at which I started, a rate unequalled, I believe, in this district, viz., 25 ft. per fortnight. I am also driving westward in No. 5 level, where, the ground being hard, progress is necessarily slower. I note an improvement in the character of the quartz in this level, but shall be able to report more fully by next mail. I hope shortly to be in a position (developments having sufficiently advanced) to resume work with a full staff, and am now exercising all possible activity. Mine report and other documents will follow by next mail, as customary.

The secretary advises receipt of the following telegram from the mines:—"The vein improves as it goes down, showing a well-defined lode, with an average width of 5 ft. Sinking at the rate of 1 ft. per day.—PRYOR."

The chairman estimates that Mr. Pryor must have reached the depth (70 ft.) at which the late Capt. Pearce "expected to cut the Chile lode in the Water shaft."

LETTERS of regret in the Silver King Mining Co., Limited, have been posted. Letters of allotment will follow.

WE are requested to state that the title of the "Elmore's Austro-Hungarian Patent Copper Depositing Co., Limited," will, in future, be "Elmore's German and Austro-Hungarian Metal Co., Limited," and that the offices have been removed to 61, Cannon Street, London, E.C.

AUSTRALIAN MINES.—Mr. F. W. Nish, of Mansfield Chambers, Manchester, writes:—"In view of the satisfactory returns Australian mines generally appear to have turned the corner and entered upon a period of prosperity. Most of the shares now selling at low prices were dealt in at large premiums when originally introduced and an undoubted opportunity for advantageous investment presents itself at the present time."

YANKEE GIRL SILVER MINES, LIMITED.

DIFFICULTIES ON ACCOUNT OF THE SNOWSTORMS OVERCOME.

From cables received from the mine superintendent, it appears that the snow block on the railway prevented any shipments of ore during March, but the ore houses are full, and a large quantity of ore is stored in the levels, ready for shipment as soon as the railway is opened for traffic, which it is expected to be shortly. The subjoined report from Mr. Harvey shows that in the 7th level an important discovery has been made of ore carrying silver and gold, as well as a high percentage of copper. Other developments are most satisfactory.

MONTHLY REPORT, DATED MAR. 18, ON THE YANKEE GIRL, ORPHAN BOY AND ROBINSON MINES.

Yankee Girl.—No. 4 level—north-east drift: There is a streak of ore 2 ft. thick, worth 50 ozs. silver per ton, in the stope over this drift. Orphan Boy: The stope is now 61 ft. over the south level, with a length of 61 ft., and an average width of 6 ft. of good shipping ore. No. 5 level: The stope mentioned in my last as having been worked from 5½ level (south of shaft) to No. 5 level, is now 8 ft. above this point. The length of stope is 22 ft. with an average width of 15 ft. of ore, streaks of rich stromeyerite (a rich ore, composed of sulphide of silver and copper) ore are being met with. Orphan Boy: Operations are suspended here until the railroad is opened and being able to ship ore. In the west level, about 12 ft. from the shaft, rich stromeyerite ore has been met with. The length and thickness of this ore has not been determined. No. 6 level: The north-east drift has been driven during the past month 95 ft.; total length of drift, 135 ft. The object here is to prove the north-east portion of the property, and also to intersect the Robinson ore break. Winze: Drifting is being continued east; there is no change to report. Stope: The stope over the winze between 5½ level and No. 6 level is now up 31 ft.; the length of stope is 64 ft., having an average width of 17 ft. of ore, worth 90 ozs. of silver per ton. Rich streaks of stromeyerite ore are frequently met with. No. 7 level: The cast drift has been driven 50 ft. There is favourable mineral bearing ground in the face. South-east drift: 10 ft. from the face of the east drift a cross-cut has been driven south-east 9 ft.—the forebreast is in a mass of copper ore—samples from which have produced from 12 ozs. to 93 ozs. silver per ton; gold, ½ oz. per ton; copper, 17½ per cent. No. 8 level: Preparations are being made for raising on the west ore body. Some difficulty has been experienced in the drifts from caving ground, causing a lot of repairing work to be done. No. 9 level: Prospecting at different points is being carried on. Main shaft: The water has been pumped 15 ft. below No. 9 station. Robinson Mine.—No. 2 level: The south drift has been driven 20 ft. during the past month. In the forebreast there is a streak of ore, worth 60 ozs. per ton; 35 ft. back from the face of drift, a prospect drift has been driven south-east 37 ft.; good shipping ore has been met with at this poiut. No. 1 stope: Length of stope 110 ft., width of ore 4 ft., of good grade. Being blocked with ore, operations are suspended until shipping commences. No. 2 stope: There is a large quantity of low-grade ore in this stope; length of stope 43 ft. No. 3 level: The south drift has been driven for the month 22 ft. Ore in the face 3 ft. thick, worth 70 ozs. silver per ton. No. 1 stope, south drift: Length of stope 71 ft. There is considerable ore in this stope, but much broken and intermixed with decomposed porphyry. Some ore is being extracted of fair quality. No. 2 stope, south drift: Length of stope, 25 ft.; ore principally low-grade. No. 4 level: The north drift has been driven to the boundary. The winze sunk from No. 3 level has been communicated to No. 4 level. A stope has been started from the south end of this winze on fair shippiug ore. The south drift has been driven 95 ft.; there is good milling ore in the face. No. 5 level: The cross drift has been driven 75 ft. towards the ore break. Robinson mill: No trial runs have yet been made which will fairly determine the average value of the concentrates. Information respecting this shall be forwarded later.—B. McNeill, Secretary.

THE NEW GUSTON CO., LIMITED.

SNOW STOPS THE WAY.

Mr. Harvey cables on Apl. 9 to the effect, viz.:—"Mine expenses for Mar. month, 1,450*l.*; ore stored underground, 800 tons." On Mar. 14 he wrote:—Ore sorted (in ore houses), 320 tons; ore on sorting tables, 30 tons; total, 350 tons. Ore awaiting shipment as soon as snow-block on railway is cleared, 1,150 tons.—B. McNeill, Secretary.

[We dealt fully last week with the report of the directors, which shows a total amount paid in dividends in about 2½ years of 143,374*l.* 12s.—Ed. *M. W.*]

THE MONTANA CO., LIMITED.

MONTHLY RETURN.

The secretary of the Montana Co., Limited, begs to state that the following information has been received by cablegram from the resident director at the mine:—"Total weight of ore crushed during Mar. 6,574 tons; yield from the mills, $85,000; working expenses for the month. $54,100." N.B.—The estimated number of ounces contained in returns by assay being, gold, 2,989 ozs.; silver, 17,984 ozs.

Holloway's Pills and Ointment.—Some occupations tend to the development of certain diseases, and those who toil as miners are peculiarly liable to rheumatism, lumbago, and other allied complaints. In the goldfields and copper mines Holloway's remedies have been largely patronised by the workers to their very great advantage, and they can be confidently recommended as invaluable remedies for inward congestions, spasms and cramps in the bowels, and all those conditions of the lungs and liver to which those who work underground or in impure atmospheres are so peculiarly liable. For cuts, bruises, sprains and stiffened joints, the action of Holloway's Ointment is eminently healing and soothing, and a supply should always be at hand in case of need.

ST. AUGUSTINE, LIMITED.

DIRECTORS ISSUE A GOOD PROGRESS REPORT.

The report of the directors, issued in anticipation of the meeting on Monday, leaves nothing to be desired on the score of fulness, nor does a perusal of its contents induce us to alter in the least the favourable view we have taken of the company's prospects. Mr. D. T. Hartley is now in charge, and the high opinion Mr. Finlason formed of his ability has been fully borne out, and from the tone of his reports, which have been from time to time placed before the shareholders, the directors infer that he will shortly meet with success. On the present company taking over the property the main shaft was sunk to a depth of 450 ft., and has since been carried down to the 524-ft. level. From the 465 to the 495-ft. level, sinking operations were greatly impeded by the large volume of water which found its way into the shaft. This was successfully dealt with by the manager, and up to the present no more water has made its appearance. The shaft has been securely timbered, and dividers put in to the 511-ft. level, ladders fixed with staging and platforms, and it is now one of the safest shafts on the fields. On Aug. 21, 1890, Mr. Hartley cabled as follows:—"Whilst trimming, opened out face of good blue east corner of shaft, at 503 level; 3 ft. rock between blue and shaft on that side; started timber." Full instructions were sent to Mr. Hartley to take full advantage of the discovery of blue. This discovery verifies the anticipations announced by Mr. Finlason and by the late Government Inspector at Kimberley. The sinking of the shaft was stopped, and all energies were concentrated to pushing forward the work in the extension where Mr. Hartley put in a drive in a north-easterly direction, which is towards the Kimberley Mine, and one in a south-easterly direction, and on Nov. 6 he cabled that they had joined at a distance of 82 ft. from the shaft, with the reef going in the direction of the Kimberley Mine. A winze was then sunk, and after sinking it another 23 ft. the 700-ft. level will be reached. It was at this level that the De Beers Mine first reached paying blue equal to that of Kimberley. The board say that the results of the development of the mine have fully borne out the anticipations put forward by them and Mr. Finlason. "The mine is a proven diamond mine. The stones found in it are of the whitest and purest character, and it is the belief of the directors that it will ultimately command the same favour as the market has accorded to its older rival." In a trial washing about 400 loads yielded 32 diamonds, weighing 22 carats, and one diamond weighing 2¾ carats was found whilst screening the blue. The balance to the company's credit at Messrs. Robarts, Lubbock and Co., on Dec. 31 last, was 5,930*l.* 18s. 1d., and of this amount 3,000*l.* is now on deposit. There was also a balance on the same date at the credit of the company with the Standard Bank of South Africa at Kimberley of 137*l.* 2s. 7d., and in the London office of 85*l.* 15s. 11d. These are the chief points of a report that is interesting throughout and that will greatly encourage the shareholders.

THE COLORADO SILVER MINING CO., LIMITED.

ACCOUNTS SHOW A PROFIT, INSTEAD OF THE HEAVY LOSSES OF FORMER YEARS.

The accounts for the year show a profit, after the payment of all current expenses both in Colorado and London, and also that the liabilities of the old company, which appeared in the last balance-sheet at 1,933*l.* 9s. 5d., have been reduced to the sum of 407*l.* 5s. 4d. The balance previously standing to the debit of profit and loss at 1,083*l.* 18s. 5d. has now been reduced to 424*l.* 6s. 11d. The directors have completed and settled certain disputes and rights which for a long time past had caused much anxiety to some of the leading shareholders, and also to the late board of directors, who kindly retired to facilitate a settlement which has been made upon most favourable terms to this company. The company has purchased for cash and shares the whole of the Rainbow mining claims, mill site and water power, and the title deeds for the same are now vested in this company. The negotiations for this purchase have occupied the directors for many hours almost daily for three months, and the completion of them is a source of much congratulation, especially as the net cash outlay to the company is only 1,125*l.* The amount of work done for the year in sinking and driving levels has been considerable, viz., 1,972 ft., and with the exception of about $300, all this work has been paid for out of the mine and charged to revenue. The existence of a western ore body was not known until quite recently. The report is a great improvement upon those issued for many years past, and is sigued by Mr. Archibald J. Smyth, as chairman.

Copper, Tin and Lead.—It is now possible to take a view of the copper trade apart from the late embarrassing questions of finance. The continued fall of stocks in copper has certainly surprised the best authorities, and the broad fact remains that we have already got to normal figures, and with the preseut decrease continued, shall soon have below the average stocks. Since the Baring crisis, in the face of the paralysis of trade caused thereby, at a time of year when American shipments are always heaviest, our stocks have decreased 10,000 tons; of which not more than 3,000 tons, at the outside, can be explained by the state of affairs in Chili. More important still American speculators have been quietly buying bars here. This is, of course, completely turning the tables, as the main weakness of the situation arose from the continual pressure to sell from America. As to tin, the shipments from the Straits for the past month exceeded 3,500 tons, which made the statistics for the month (notwithstanding very good deliveries, amounting to nearly 1,800 tons, in London) unfavourable in comparison with those of the previous month. The visible supply, however, remains small, and the price is a low one, aud were it not for the uncertainty of the result of the McKinley Tariff Bill on the tin-plate industry, it would be safe to predict a considerable improvement. The demand for tin in America has been good, and the price above the parity here; in face, however, of the uncertainty as to the tin-plate industry, it is impossible to speak confidently with regard to the future. Lead: The market, which had been dull previously, became firmer at the end of the month, and a sale of Spanish lead was reported at 12*l.* 13s. 9d. The price to-day is 12*l.* 12s. 6d. buyers.—From the circular of Henry Rogers, Sons and Co., of London and Birmingham.

RIO TINTO COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN, that the EIGHTEENTH ORDINARY GENERAL MEETING of the SHAREHOLDERS will be held at the Cannon Street Hotel, London, E.C., on Friday, the 17th April, 1891, at Two o'clock precisely, for the purpose of receiving the directors' report and statement of accounts, for the declaration of a dividend, and for other purposes.

Holders of Share Warrants to Bearer will receive a Ticket of Admission, on depositing their Warrants, in accordance with the Articles of Association, three days prior to the meeting, either at the Company's Offices in London, or at the Société Générale, Rue de Provence, 56, Paris, or at the Deutsche National Bank in Bremen.

The retiring directors are Henry Doetsch, Esq., and John M. Macdonald, Esq., who, being eligible for re-election, offer themselves accordingly.

The retiring auditors are Messrs. Turquand, Youngs, Weise, Bishop and Clarke, who being eligible for re-election, offer themselves accordingly.

The Transfer Books will be closed from Monday, the 13th, to Saturday, the 18th, both days inclusive.

By order of the Board,
GEO. N. THOMSON,
Secretary.

METALLURGICAL CHEMIST. —

WANTED a METALLURGICAL CHEMIST, to make himself thoroughly acquainted with Chemical Gold Extracting Processes in England, with a view to his afterwards proceeding to work the same at a Gold Mine abroad. Must be young and practical. Apply by letter, stating qualifications and lowest terms, to Box No. 60, Post Office, Sheffield.

THE MINING COMPANY OF IRELAND, LIMITED.

(In Liquidation.)

VOLUNTARY WINDING UP OF THE COMPANY.

NOTICE OF SALES.

The LIQUIDATORS HEREBY GIVE NOTICE that they will be prepared to receive Tenders up to May 1, 1891, for the purchase of the following Properties, detailed particulars of which will be furnished on application :—

(1.) RINGSEND LEAD WORKS, Ringsend, Dublin, in which the manufacture of sheet lead, lead water pipes, composition gas pipe, Corporation alloyed pipes, &c., is being carried on. These Premises are held under leases for a long term, at a gross rent of £151 12s. 3d. a year and taxes. A small portion of land and a cottage adjoining are held under a short lease at £25 a year and taxes, and are at present sub-let at about the same rent.

(2.) BALLYCORUS LEAD WORKS, near Carrick Mines, County Dublin, in which the operations and manufactures of smelting lead ore, desilverising, making shot, and red lead, &c., are being carried on. The premises are leasehold, subject to the yearly rent of £148 and taxes. Premises let to tenants produce about £110 a year, and there are several workmen's cottages on the property. The mountain and land adjacent to the land on which the chimney is erected are held under a short lease, subject to the yearly rent of £30, and realise by grazing lettings about sufficient to pay the rent.

NOTE.

Tenders will be received for the purchase of the foregoing lots, either together or separately.

(3). The SLIEVARDAGH COLLIERIES, near Thurles, in the County of Tipperary. The Company's mining rights extend over a very large tract of country, a great portion of which is unworked, and there is an almost inexhaustible supply of coal and culm therein. The property is variously held, including surface land, part of it being in fee, and not subject to any rent or royalty whatever. There is a large number of cottages on the property. The collieries have been worked until quite recently, and are in working order. All particulars as to the takings will be given on application.

(4.) A large Stock of excellent Culm at the pits' mouths at Slievardagh will be Sold with the Collieries.

(5.) The MINES of KNOCKMAHON and ARDMORE (near Bonmahon, a shipping place in the County of Waterford, and within 5 miles of a railway station), held in fee, and not subject to any rent. Knockmahon was partially worked for many years with great success by the Company, and immense quantities of Copper Ore of good quality were raised, but Ardmore has not been worked by the Company. The property presents ample opportunity for further exploration.

Full particulars as to title and otherwise can be had on application to

The LIQUIDATORS, Mining Company of Ireland, Sun Chambers, Trinity Street, Dublin; or to
MESSRS. D. and T. FITZGERALD, Solicitors for the Liquidators, 20, St. Andrew Street, Dublin.

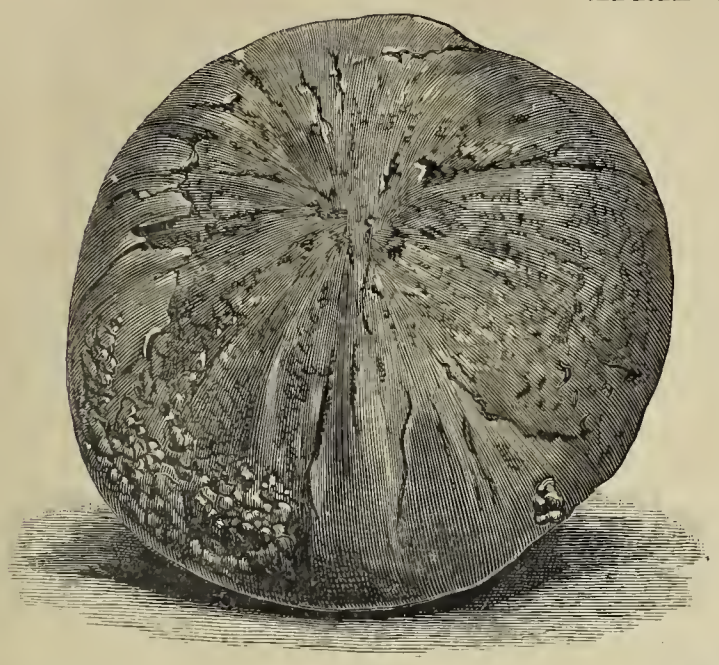
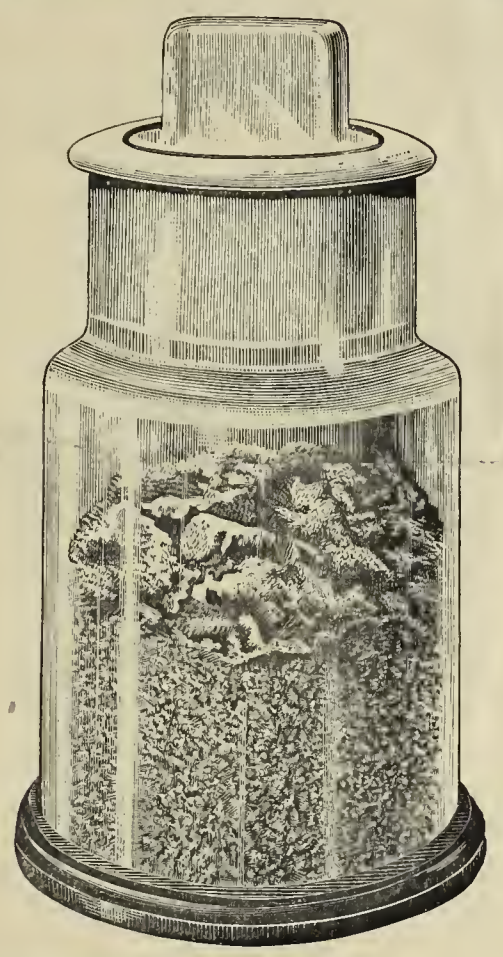
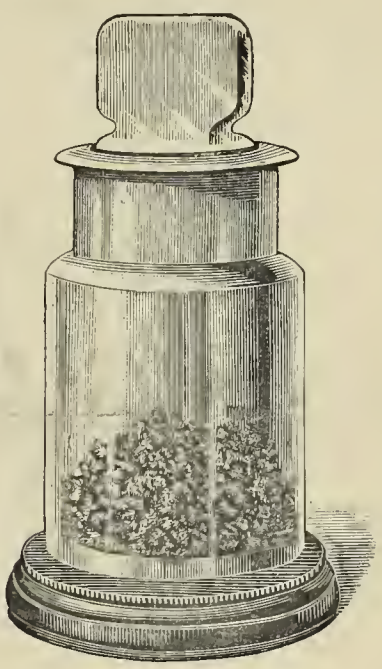
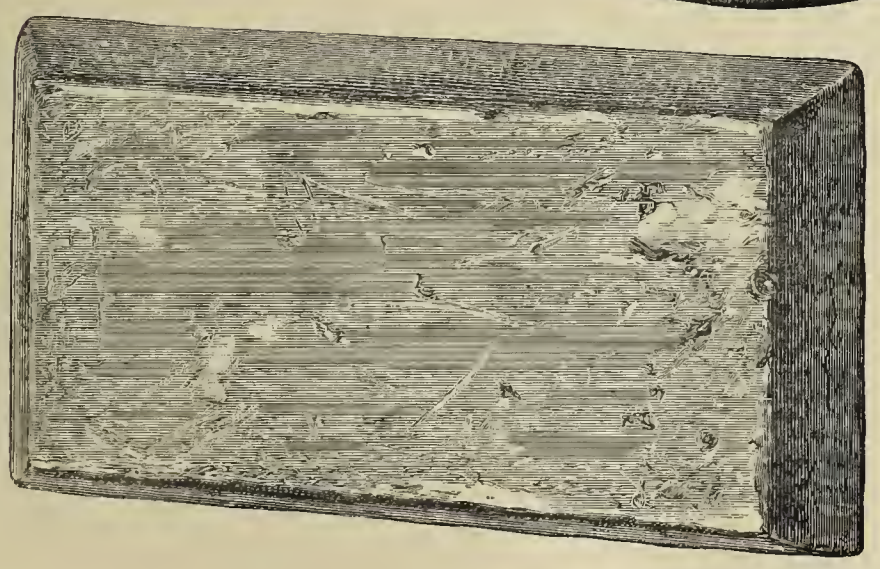
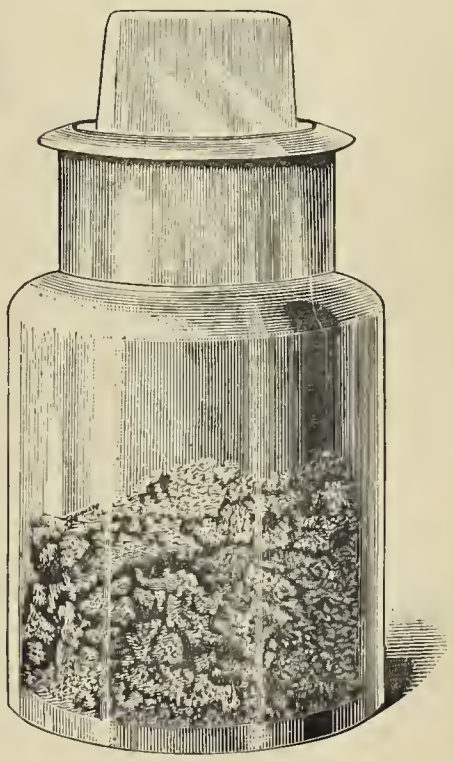
Extra Special Supplement to the "Mining World,"
APRIL 11th, 1891











THE LOMA GOLD MINES, LIMITED.

The above illustrates (natural size) the Gold taken during the last few months from the Loma Mines, as exhibited at the recent Meeting of Shareholders. The square blocks represent bars of gold, and the circular pebbles the gold after the mercury has been squeezed out of it through canvas. The gold shewn in the glass bottles is particularly interesting, as illustrating the great richness of the Loma Mines. In hydraulic mines the precious metal is usually found in the shape either of fine "dust" or tiny flakes. At Loma it is usually of "coarse grain," plentifully sprinkled with nuggets.

REPORTS OF MEETINGS.

THE ELKHORN MINING CO., LIMITED.

PROSPECTUS ESTIMATES EXCEEDED—BIG DIVIDENDS PAID AND IN PROSPECT—A VALUABLE PROPERTY THE ENGLISH PUBLIC NEARLY LOST—IMPORTANT SPEECH BY MR. T. A. BENNETT—GRATIFYING MEETING.

THE first annual general meeting of the shareholders of the above company was held at Winchester House on Thursday, "for the purpose of receiving and considering the report of the directors and the balance-sheet and revenue account for the financial period ending Dec. 31, 1890, to elect two directors in the place of those retiring by rotation, and auditors, and to transact any other business which, under the articles, ought to be transacted at an ordinary meetiug."

The Hon. A. G. Brand

(chairman of the company) presided.

Mr. CHARLES PAKEMAN (secretary) read the notice of meeting.

PROFITS, 54,000*l*.—DIVIDENDS, 40,000*l*.

The CHAIRMAN: Gentlemen, no doubt you have gathered from the report and accounts that during the period covered by the report a profit of 54,000*l*. has been earned, and dividends have heen paid amounting in the aggregate to 40,360*l*., and that 14,000*l*. odd has been carried forward. (Loud cheers.) 9,270 tons have been crushed, averaging $41.71. and 1,064 tons have been shipp d to the smelters, averaging $83.76. I dare say a great many of the shareholders will consider that these large amounts, having been taken from the minc, very possibly the property does not represent such a large value to-day as it did when it was bought, and I sh uld like, therefore, to give the shareholders some reassuring facts supplied to us by those who best know, and are most intimately connected with, the actual working of the mine.

IMPORTANT FACTS.

The chief interest is from the 850-ft. level downwards. At the 950-ft. level south the ore body is increased to 135 ft. long, and at the 1.050-ft. level to 64 ft. long. At the 65-ft. level north the diamond drill cut a new body of ore, which at the commencement assayed 90 ozs. to the ton, which was duly announced to the shareholders. This has now been modified to 45 ozs., but it has developed to 8 ft. wide, and at the 1,050-ft. level south an ore body was cut 30 ft. wide, which assayed 75 ozs. Capt. Plummer, in speaking of this, says it is a very rich section, and nothing has before been met like it in any other part of the mine. In the lower levels lead ore has also increased, and Capt. Plummer considers that he may very possibly be able to do without any engine, which at one time the board considered would have to be provided for in view of an enlargement of the mill. The average assay is 45 5, of which 86.83 per cent. was saved, and tailings 5 99. Since then considerable improvements have been made, and the latest reports give the saving at 89.8 and 95 5, the tailings being 5 and 2.6 respectively. As you will see in the report, the cost per ton for mining, milling, and prospecting is $18.52 per ton, as against $23.77 when the property was taken over, and $20.38 the basis on which the prospectus was issued when the property was taken over. I trust the shareholders will duly appreciate these facts. It is not often that we have the good fortune to become sharcholders of a property in which not only the prospects held out in the prospectus have been realised, but have been really improved upon, and where the cost of getting the ore out has been even less than was stated in the prospectus. (Applause.) You will also see by Capt. Plummer's report that the new hoist engine at the time the report was issued was in process of erection. A house has been built for Capt. Plummer, and also a club-room for the men. In addition to that, since the report was issued, we considered it necessary to buy a small piece of property for the deposit of tailings. When the mine was in possession of Mr. Holter he managed to get on without that, but we, thinking it best to live in amity and comfort with our neighbours, considered it desirable that it should be acquired. All the improvements mentioned have been made out of the working capital, which has been fully ample for everything required up to the present. Shareholders are aware that we hold a considerable number of shares (nearly 25,000) in reserve, and we consider those shares will amply provide for everything that may be required in the future. They will be issued *pro rata* to the shareholders should such an issue be required, hut we have no present idea of issuing them at all. All these improvements in the mine and in the machinery have been effected without any stoppage in the ordinary work, neither has anv stoppage occurred from the erection of new machinery. (Cheers.) I think that for this a great deal of credit is due to Capt. Plummer and his assistants. (Cheers.) There is another matter that has been mentioned in the directors' report, which is the

TIME OF PAYING THE DIVIDENDS.

We have thought it best to pay the dividends quarterly as from the time we took over the mine, which was on Mar. 1, and we propose to continue that policy. There is, therefore, no dividend to be voted by you at this general meeting to day, but we thought it desirable, as we commenced to pay the dividend from the three months when we began working the mine, that they should be continued as at present. (Hear, hear.) There is another matter, with regard to

SHARE WARRANTS TO BEARER.

This matter was mentioned at the statutory meeting, hut the board have considered for, various reasons, that it would be best for the shares to remain as at present. (Hear, hear.) I do not think it would be worth while to consider the extra expense of changing from the present form of certificates to share warrants, though there will be some slight expense connected with it, but it is exceedingly desirable for the board, and one of their duties, to know if there is any great accumulation of shares in any one particular place, and it is also desirable—at least the board consider it so—that shares should remain as at present. I dare say some of you have noticed in the papers this morning that Capt. Plummer is going to take over

THE MANAGEMENT OF THE DE LAMAR MINE,

as well as the Elkhorn, and possibly, I think, some question might be asked on this point, so that it is as well I should make a remark or two upon it. Capt. Plummer applied for leave to go and inspect that property, and subsequently to that sent in his resignation, as he desired to take over the management of the De Lamar property. We have, however, come to an arrangement with him that he shall retain the management of Elkhorn as well as De Lamar, and he has recommended to us a gentleman, who has the thorough confidence of a very large number of shareholders in America, holding 50,000 shares, as his sub-manager at Elkhorn, and we propose to place him in that position. The name of this gentleman is Mr. Molson, who is spoken of in most favourable terms, and as to whom we have received high testimonials. I may further mention that we intend to ask Mr. Henry Bratnober, before he leaves America, to visit the Elkhorn property and report to us anything he may have to say upon it. (Hear, hear). The only other matter I have to allude to is that I desire to express the thanks of the board (and I am perfectly certain that sentiment will be shared by the proprietors present) to Capt. Plummer and to his assistants at the mine, to the Mining and Financial Trust Syndicate in London, who obtained for us the property in a very short space of time subsequently to the sale being made, and also to our staff in London. (Cheers.) I do not know that any business with which I have ever been connected has run morc smoothly than this, and I personally, and I am sure my colleagues also, desire to tender thanks to all those gentlemen for the assistance they have given us in this enterprise. Perhaps I might say something as to the price of silver, but the shareholders will be able to judge of it as well as myself, and of the probable course of legislation in America with regard to it. Still, if the price of silver had remained as low as when we took the mine over you still would have had a handsome profit, and

A LARGER RETURN THAN WAS EVEN STATED IN THE PROSPECTUS.

Gentlemen, with these few remarks I will move the adoption of the report and accounts, and should like to say that Mr. Bennett is here. He has been on the mine himself, and if you would like to hear any remarks from him I am sure he will be pleased to make them. (Cheers.)

Mr. J. W. HART (director) seconded the motion, and said: I think from the statements made by our chairman you will not expect a word from me, and, in fact, I do not know that I could supplement anything that he has said.

IMPORTANT SPEECH BY MR. BENNETT.

Mr. T. A. BENNETT, who was loudly cheered on rising, said: Mr. Chairman, after the able and exhaustive speech we have had from you I really do not see why you should have called upon me to make any remarks, and I hardly know what there is that I can add to what has been said, but I may state I think we cau fairly congratulate ourselves on the satisfactory report you have been able to lay before us. Perhaps I may say, as one of those who reported on the mine originally, in concurrence with Mr. Bratnober and Capt. Plummer, that there can be nothing more satisfactory or gratifying to mining engineers than to hear authoritatively from the chairman of a company on whose property they have reported that everything they have said has not only been fully realised, but that the reports upon which the prospectus was based have been even more than carried out. (Cheers.)

POINTED QUESTIONS FULLY ANSWERED.

I have had one or two questions put to me privately about this property, and perhaps I had better take this opportunity of answering them. One is—why has Capt. Plummer not made any estimate of the reserves in the mine. Knowing the mine as I do, I can fully understand that a gentlemen so conservative and so anxious to be proved right in everything as Capt. Plummer is, would hesitate to make any deliberate statement as to reserves. If you have followed the monthly reports you will find that he constantly speaks of the intrusion of sandrock into the vein. This sandrock sometimes appears on one wall, and sometimes on the other. Sometimes it nearly fills up the whole of the vein, and sometimes the vein is perfectly full of ore, and quite free from sandrock, but as long as that irregularity continues it is utterly impossible for any man who respects his opinion to give an estimate, in tonnage, of what is in sight. But, sir, although I should be sorry to rush in where Capt. Plummer would fear to tread—(laughter)—I shall try to give a few figures which may enable shareholders, when they get their monthly reports, to follow the matter out, and form for themselves some idea of what the ore reserves may be from time to time. If you look at page 7 of the report of Capt. Plummer, you will find he says, "the length of the ore-body developed in the 850 south of shaft is 210 ft., with ore at both ends," and he adds, "the ends of the stopes are in ore." At the 950 level, he says, "the length of the ore body is 135 ft., and both the north and south stopes are in ore." At the 1,050 level, then slightly developed, he has "64 ft. of ore, and developments are still progressing." As you know from the monthly reports, those ore bodies have immensely increased in length as their development has progressed. We will, however, take matters as they stood on Dec. 31, and then those three measurements would give you an average length of 136 ft. If the whole of this fissure were filled with solid ore, you would have between the 750 and 1,050 levels (300 ft.)

ENOUGH TO CONTINUE YOUR PRESENT OUTPUT FOR FIVE YEARS.

(Cheers.) I think you may safely say that from the 750 upwards, on the same conditions, there would be ore enough for two years more, and then you have not reckoned both the ends of the levels. I do not think you need hesitate to say that if the whole contents were ore you would have an eight years' supply from the mine south of the shaft above the 1,050 level. Now comes the question of the sandrock, and in respect to this you must watch the monthly reports for yourselves, but whether we take two years, or three or four for sandrock, I think we shall all agree that we have a magnificent future in front of us for at least four years. (Cheers.) But, sir, I am going to draw your attention to another fact, and I think it finds mention in the report on the next page. I have taken the ore bodies as they were in December, but Capt. Plummer says that with the diamond drill he has proved the existence of ore some 60 ft. south of the ore visible in the stopes—that is, on the 850-ft. level, and in the next paragraph speaking of another body, he says, "We are pleased to see this ore, as it is 72 ft. 6 ins. north of the main body of ore at this level and in new ground." Therefore, in addition to the 210 ft. mentioned above, we have 130 ft. additional known to exist, or an ore body 350 ft. in length, whereas my estimate was on an average of only 136 ft. (Cheers.)

A POINT THAT HAS ESCAPED ATTENTION.

I am now going to draw your attention to a further matter to which, I think, full weight has not been given by the shareholders. You had a cable, about two months ago, that Capt. Plummer had struck an ore body in the 1,050 ft. north. In the last monthly report I see he states that it is 5 ft. wide, and carries 45 ozs. Now, gentlemen, I know that does not compare with the dimensions we have been describing, but though seemingly a small matter, it really means a net profit, for every fm., of 58*l*. Now the extent of that ore we cannot tell. In the upper levels it has not been long, but we cannot tell what length it will be below, nor can we tell—no one can do so in mining—how far up and down it may go. It may go up 1 fm. or 30 fms. to the 850-fm. level; it may go down a single fathom, or until you are tired of following it, but I think we may say this of such a case that where you have an ore-body that starts at the surface and goes down, as you see it has done on the map sent out with the report, to the 850 with great regularity, and there pinches, and then is found again at the 1,050-ft. level—I say, where you find an ore shoot of such a kind it is not going to give out in 10 fms. or 20 fms., but will, in all probability, be a very lasting piece of profitable ground. (Cheers.) Then we had another cable, only about three or four weeks ago, stating that at the 650 north he had struck 2 ft. wide, of 90 ozs. ore. That is interesting, because it has been found 20 ft. in the limestone footwall, and if you have read the reports in the prospectus, you will find it stated that we (the engineers) expected ore bodies would be found in the limestone footwall, and that the wealth of the mine was by no means confined to the contact vein. We have found ore on the south side of the shaft in the footwall some time ago; now we have found it on the north side of the shaft, and the advantage of this is that it is 20 ft. below any other ore body, so that you have the whole acreage of the mine in every direction before you. But small as this vein may appear, it means a net profit per fathom of 62*l*. 10s., and I think, as mines go, it is a very big thing. (Cheers.)

IT IS TRUE.

If these cables had come from some properties they would have raised the shares in which the discoveries had been made 1*l*. or 2*l*., and every mine in the neighbourhood would have participated in the rise, but, coming from Elkhorn, it did not change them a shilling. The reason, I suppose, is this, that we have had that great ore-body of 350 ft. in length and 30 ft. in width, and that is so big that you cannot see the advantage of a nice little addition of 5 ft. wide or of 2 ft. wide. (Laughter.) I think I have now answered the question about the permanence of the mine, and from this you can draw the inference as to the continuance of its dividends. You cannot see into the ground, but I think you can see four or five years above the 1,050 level. Now, sir, you have drawn attention to the price of silver. As you say, it is a matter that concerns us very greatly, but it is also a matter on which we are hardly justified in forming an opinion. The lowest year that silver ever experienced was 1889, and our estimates in the prospectus was based upon the price of 42 1/16d. as the average of the year. I find it very interesting to recall that our great profits last year did not depend absolutely on the price of silver, because if gentlemen calculate the output for the 10 months of last year at that price of 42 1/16d., they will find that we have

MADE A PROFIT IN 10 MONTHS OF 45,700*l*.,

whereas we promised you a profit only in 12 months of 44,500*l*. (Cheers.) The price of silver now is about 44 1/16d., or 2d. higher than the average of that year, and the best proof we can give of the mine's value is what has been done this month. You have had a profit of 6,300*l*., with an average price of silver of 44½d. or 44¾d., and that margin of 6,300*l*. profit, if maintained through the year, will give you 40 per cent., and a very handsome balance to carry forward. (Cheers.) Therefore I do not think that any price silver is likely to reach is going to hurt us very badly. I do not know, as the chairman has referred to Capt. Plummer's change in the management (not a change, for I am happy to say he will still be with us)—I say I do not know it will be out of place if I state that I have known Mr. Molson well, who is to be the assistant manager. He has a high reputation; he is a young man, but he has had a thorough engineering education; and has held already positions of great responsibility and importance. He was in charge of a mine at the time he left it to come to us. He was assistant with Capt. Plummer at the Granite Mountain for some time, so that he works well with that gentleman, and there will be none of that jealousy which sometimes exists between a subordinate and his principal. He will be always able and ready to obey Capt. Plummer's instructions, and will also be willing and anxious to have his advice. At the same time, he is a man of ability himself, and I have no doubt that if there is anything to be done which may not have occurred to Capt. Plummer, Mr. Molson will do it. Taking hold of a mine like the Elkhorn, especially when it has been badly managed, and bringing it into shape, is a task where you require a man of great ability. That has been done in this case by Capt. Plummer. When I visited the mine six months after it was in your possession—that is last autumn—I found that all the objectionable parts of the management had been removed, and thorough experiments had been made with the ore; the best way of treating it had been discovered, and the best way of developing the property had been arranged (if I may be pardoned for expressing an opinion). Everything was working smoothly, and the result you see in these immense ore bodies I have been describing, and, therefore, now with Capt. Plummer's monthly or six-weekly visits to the mine, and with the constant reports that will be made to him by Mr. Molson, I think Elkhorn will in no way lose anything from his absence, but will gain the additional advantage of having a new man and a young man, who may have ideas of his own that may not have occurred to Capt. Plummer. I am heavily

INTERESTED IN THESE MINES, BOTH IN MONEY AND REPUTATION,

and am perfectly satisfied—in fact, quite pleased with the change. I think that is all I have to say, unless anyone likes to ask a question. I fear I have detained you too long. (Cries of "No.") But with regard to the matter the chairman spoke of—share certificates—I have been requested by the Montana shareholders to bring before you their desire that share certificates should be issued to bearer or those who wish to have them, and that they should be changeable at the will of the holder into registered shares. I am not sufficiently acquainted with Stock Exchange matters to be able to judge of the entire effect of such an operation, but I may say this—I think when a body like our Montana shareholders, who represent more than a fourth of the shares in this mine, request such a thing I am sure your board will give the most thorough consideration to their request, and only refuse it if there are strong objections to it. Your company occupies a unique position in English mines. It was unique, at least,

UNTIL THE DAY WHEN DE LAMAR CAME OUT,

three weeks ago, where a similar state of things prevails. It is unique in this respect, that 45,000 shares were taken by the people residing in the neighbourhood of the mine, not as vendors' shares but as hard cash shares, and that number, so far from diminishing, has since increased. I believe there are over 50,000 shares to-day held by Montana people. (Cheers.) That, I venture to say, is not only a proof of the value of the mine, but it is—and I say it without flattery—a great proof of the confidence the Montana men have in the management of your board. I think, another reason (beyond their number) why they should have influence with you is this, that we all owe them a debt of gratitude. As you are aware, this property was brought forward at a time when there was great financial stringency in the City of London, and I do not hesitate to say that if it had not been for this 45,000*l*. coming from Montana, and the moral support in addition that that subscription also gave, that this company would never have been floated on the London market, and whatever you thought about it a year ago, you will all agree with me to-day that for it not to have been floated would not only have been a great loss to everyone in this room, and every shareholder in the company, but

A GREAT LOSS TO THE WHOLE OF THE MINING PUBLIC OF GREAT BRITAIN.

(Loud cheers.) Therefore, I say, I shall do nothing more than request, on behalf of Montana shareholders, your most earnest consideration to their request that share warrants should be issued to bearer. You can judge of the inconvenience of sending certificates home here on every occasion when they wish to make a transfer. (Loud cheers.)

The report was unanimously adopted.

The CHAIRMAN proposed the re-election of his colleague, Mr. W. A. Lindsay.

Mr. J. G. SMITH seconded the motion, which was carried.

Mr. LINDSAY: I wish to take this opportunity of saying, as my name is probably not familiar to gentlemen acquainted with mining matters, that two reasons made me enter upon this my first venture in mining. The first was the

PERSONAL CONFIDENCE I HAVE IN MR. BENNETT,

and the second was the fact that the Americans themselves were buying shares in this mine. (Cheers.) I beg, therefore, to tender my personal thanks to Mr. Bennett for the speech he has made to-

day—(cheers)—which has shown to the shareholders generally, and to myself particularly, how right I was in relying on Mr. Bennett's personal capacity and honour in dealing with matters of this character, and my justification for intruding myself into an industry with which I am not very well acquainted. There never has been a venture brought upon the market as this one has, and whatever may be the ultimate transactions of the Mining and Financial Trust Syndicate, this particular one reflects the [illegible] credit upon Mr. Bennett and all concerned. (Cheers.)

ROUTINE BUSINESS AND THANKS.

The CHAIRMAN proposed the re-election of the Hon. W. C. Pepys, which was seconded and agreed to unanimonsly.

Mr. CARR proposed the re-election of the auditors, Messrs. Ball, Baker, Rowe and Co., at a remuneration of 35 guineas.

The motion was seconded and carried unanimously.

The CHAIRMAN announced that a telegram had been received that morning announcing that the new hoist was in operation, and was working satisfactorily. (Cheers.)

Mr. HEPBURN: As a large shareholder, I beg to propose a cordial vote of thanks to the chairman and directors, to whom we are greatly indebted.

Mr. BENNETT seconded the motion, which was carried by acclamation.

The CHAIRMAN, in returning thanks, said: I only hope that we may meet in a similar state of mind for some years to come. At any rate we believe the mine to be a thoroughly good one, and that it will continue to pay the handsome quarterly dividends you have hitherto received. (Cheers.)

TELEGRAM.

The following cablegram is from the manager of the mine:—"Bullion shipped for week ending Apl. 4 was $8,200. Mill closed two days for repair."

LATER INFORMATION.

The manager of the mine sends a further cable as follows:—"During the month of Mar. the mill has crushed 1,037 tons; bullion shipped, $40,060; smelting ore sold 205 tons, $13,610. Total produce, $53,670. Total expenses, $22,486."

SOUTH DARREN, LIMITED.

STATUTORY MEETING—ENCOURAGING PROSPECTS.

AN ordinary general meeting of the shareholders of this company was held at the Registered Office of the company, No. 6A, Austin Friars, London, on Monday, Apl. 6, 1891, in pursuance of the Companies Act, 1867.

Mr. Thomas Henry Leak

presided.

The notice convening the meeting was read.

ELECTION OF DIRECTORS.

The CHAIRMAN: Gentlemen, the meeting is merely a formal one. The company was registered on Dec. 12, and we are compelled by Act of Parliament to hold the first meeting within four months, so that we are within a few days of the stipulated time. The whole of the directors retire at this meeting, and it is for you to re-elect them, or elect others in their places. We will first transact that part of the business, and then we will give you all the information we possess respecting your property.

Mr. KERLY proposed: "That Messrs. Thomas, Henry Leak, Francis Vaughan Williams, and J. H. A. Smith be, and are hereby elected directors of this company."

The motion was seconded, and carried unanimously.

Mr. J. H. A. SMITH, replying to various questions, said: Out of the 30,000 shares proposed to be issued, between 20,000 and 21,000 have been absolutely allotted; we have received further applications, bringing up the number to between 22,000 and 23,000 shares, and we are in negotiation for placing the remainder. The new works have been commenced by the agent, and he advises that the sinking of the shaft has been taken in hand and also the driving of the 130 west, these being the two most important points for the moment. The shareholders have so frequently had before them the full reports of the agent on the mine that it is unnecessary to go into detail again now. We may remind them the mine was for many years

ONE OF THE BEST DIVIDEND PAYING MINES IN WALES,

the silver being the richest in the United Kingdom. Were the mine in the United States it would be termed a silver mine, as the ores are of high value. All the indications lead our agent to suppose that, having passed through the slide which disordered the ground in the upper workings, we are now on the top of a deposit similar to that from which the previous large profits were made. Should this be the case the returns will be highly satisfactory. We have every confidence in our agent, and every effort will be made to secure, by economy and good management, the success we hope for. The mine is undoubtedly a first-class speculation.

A SHAREHOLDER asked whether any other mines were working in the district

Mr. SMITH: The nearest mine to us is the old East Darren, which, after getting into circumstances very similar to our own, has apparently reached another deposit in lead, but as this mine is being worked privately it is difficult to obtain exact information. The whole district round has formerly been extremely rich in lead, but owing to the fall in the price of the metal many mines stopped working. It is an important fact in connection with this mine that the whole of the motive power is derived from water, and consequently we are not put to any expense for coal.

A SHAREHOLDER: Is the shaft being sunk in ore?

Mr. SMITH: The operations at present are, of course, purely preliminary, but in a report issued to the shareholders, Capt. Mitchell expressed his opinion that the shaft would pay for itself, as good lead had gone down on both sides.

A vote of thanks to the chairman closed the proceedings.

NEWBERY-VAUTIN (PATENTS) GOLD EXTRACTION CO.

HARMONY RESTORED—THE NEW BOARD HOPEFUL.

AN ordinary general meeting (adjourned from Mar. 11) of the shareholders in this company was held at Winchester House, on Wednesday.

Major Elers

presided.

The SECRETARY (Mr. H. S. Baker) read the notice convening the meeting.

Mr. THORN, at the outset, requested to be furnished with a list of the directors, which the secretary wrote out, and handed to him.

DIFFERENCES SETTLED.

The CHAIRMAN: Gentlemen, I have no doubt you will think it rather peculiar that I should occupy the chair on this occasion, but Mr. Johnson, who presided at our meeting this day month, was taken ill on the following day, and had to go abroad. He returned only this morning in time for our meeting, but he has not had an opportunity of knowing the different things that have occurred during the past month, and consequently I have been asked to preside. You will remember that you elected me a month ago as one of the new directors, and the reason that the meeting was adjourned was that a difference of opinion had arisen between the present members of the board. I am glad to say—and I flatter myself upon it—that matters have been arranged, because I have done all in my power to make things pleasant, and everything is going on harmoniously. (Hear, hear.) There are two things I should like to mention before I go further. A little difference of opinion had arisen about some South African shares. There was a royalty of 100*l*. per barrel, and Mr. Vautin, although the directors, I think, disagreed with it, sold the right for 10,000*l*. worth of shares. We have, however, succeeded in getting him to give us 23,000*l*. more of African shares. Therefore, that matter is settled. That will make a considerable difference to our balance-sheet, because, if you only calculate those shares at the nominal value of 3s., it will make our loss a few hundreds, instead of several thousands. I think at our next meeting—if all I hear is correct, and I believe it is—it will be seen that the company is

NOT IN SUCH A TERRIBLY BAD STATE

as most of us anticipated when we joined the board. As the funds of the company were not very flourishing, I took upon myself to call a meeting of the old board of directors, and I must say that they have come forward in a most handsome manner. They have waived their directors' fees of 2,100*l*., and I have personally thanked them on behalf of you all. (Cheers.) I have not been a director long enough to tell you much with regard to the accounts, but they will be altered considerably by our next general meeting, because with these items taken off and the other shares that are to be allotted to us put down, it will make a material difference in the company's favour. I shall now move the adoption of the report, and if you leave matters in the hands of your present directors, I think by this time next year we shall come before you with a much better balance-sheet than you have ever had before.

Mr. O'DRISCOLL seconded the motion.

CRITICISM.

Mr. THORN: Under the very peculiar circumstances in which this board was appointed by the late directors, I was very much surprised to see that the old board did not wait a month or two longer in office to have met the shareholders; instead of which they retired at a time when the affairs of the company were in a mass of trouble. I should have thought they would at least have waited until the annual meeting and have explained their position, and allowed the shareholders to appoint the new directors.

The CHAIRMAN: They did so at the last general meeting, a month ago.

Mr. THORN: The late directors retired, I believe, in November?

The CHAIRMAN: Yes; but the new directors were elected at the last general meeting.

Mr. THORN: I thought by the late board.

The CHAIRMAN: No, by the shareholders.

Mr. THORN: I see that, according to the list the secretary has just handed me, we have nine gentlemen on the board. Surely this company does not require nine directors! We are quite aware that directors must be paid, and it is only fair that they should be paid for their services, but it must increase the expenses to have so many. (No, no, from several directors.) I think

FIVE DIRECTORS WOULD BE AMPLE.

I have not a word to say against any of the gentlemen on the board, but I think there are too many of them. I am very pleased to hear from the chairman of the increased property that we shall have through our friend, Mr. Vautin, and of the future prospects.

The CHAIRMAN: We have not asked for any fees, nor do we intend to do so.

Mr. THORN: I think you should.

The CHAIRMAN: We will wait for another year and see whether we have earned them, and then it will be left in the shareholders' hands.

Mr. THORN: I am sure the shareholders will never expect their directors to work for nothing, whether they produce a profit for us or not.

A DIRECTOR: Whatever sum is voted to us will be divided amongst us proportionately as to attendance at the board meetings, or in any other way we think fit.

Mr. THORN: That is quite true; but the shareholders will have to consider whether they have to vote a sum of money for nine gentlemen or for five. What would be reasonable and fair for five would be a small sum for nine.

A SHAREHOLDER: In the

MULTITUDE OF COUNSELLORS

there is wisdom, and if the nine gentlemen like to give us their united ability and influence on the board I do not think the shareholders should object. This is a company that requires the influence

of a number of people. Where one member of the board has not got influence another may have it, and thus we may successfully push our patents.

Mr. Claude Vautin: Previous to Nov. the late directors had not the slightest idea of resigning their positions on the board before the next annual meeting; but it arose in consequence of an opinion expressed by several influential shareholders that some fresh blood should be instilled into the management. It was suggested that the late board should remove themselves for a time, which they did. It was not done to avoid meeting the shareholders. Until four weeks ago there were only five directors.

NECESSITY FOR A STRONG BOARD.

Mr. Lumley: I think it is very much in the interests of this company that they should have a strong board. Inasmuch as this report has been submitted to the shareholders, it follows that it has the sanction of nine gentlemen—(hear, hear)—and if you refer to the report you will see that there are some very satisfactory features in reference to the future of this company. It states that:—"The company's patent rights and privileges have been maintained in all countries. It is to be noted that at the late Exhibition of Mining and Metallurgy, recently held at the Crystal Palace, Sydenham, a diploma of gold medal was awarded to the company for the excellence and efficiency of the process." That speaks for itself; but when you come to some other paragraphs on the other side, amongst others you will observe that certain negotiations took place, and that "Additional satisfactory proof of

THE STABILITY OF OUR BUSINESS

has been afforded during the year, inasmuch as works for using our method have been erected at such well-known centres as Ballarat, Daylesford, and Burdekin River, in Australia, also in Brazil and Asia Minor." These I take to be facts, because so strong a body of directors would not have allowed them to appear unless they were; and that being so, I think we have reasonable ground to expect that we shall, as the chairman has stated, have a better state of things by the next meeting. I merely make these observations because I heard it said that the company was in a terrible state, and I think it should go forth to the public that the company's patents have not yet had a fair chance of making a return. I think, with the energy and the attention of this strong board, no chance will be allowed to slip, and in their multitude of counsel they will bring this company into good deep water. (Hear, hear.)

The report was adopted.

Mr. Thorn proposed the re-election of the auditors, Messrs. R. Mackay and Co., at the same remuneration as before.

Mr. Bohm seconded, and it was carried.

A vote of thanks to the chairman terminated the proceedings.

Woodhouse and Rawson United, Limited.—The company has arranged for the erection of a permanent charging station on the banks of the river at Chertsey, under the management of Mr. J. Taylor. The station is now in course of erection, and will be quite ready to undertake the charging of all sizes of electric launches by the beginning of the river season.

PROSPECTUS.

This Company has been formed for the purpose of acquiring from the Australian Broken Hill Consols, Limited, and providing the necessary capital for further developing and working as Silver Lead Mines, two blocks of Mineral Land in the Barrier Ranges, New South Wales, adjacent to Blocks 95, 96, 97 of the Australian Broken Hill Consols, Limited, aggregating 80 acres, held direct under mining lease from the Crown. These blocks are numbered 98 and 99 on the map accompanying Prospectus.

The Railway Station is about two miles distant from the property.

During the past nine months extraordinary finds of wonderfully rich ore have been made on the property of the Vendor Company, who have confined the greater portion of their developments to Block 96, the position of which as regards Blocks 98 and 99 is shown on the accompanying map. Since the 1st October, 1890, 39 tons of ore have been shipped, containing by assay value at Adelaide 250,270 ozs. of silver. Several tons of this ore, already disposed of by public tender in London, have realised from £350 per ton up to £1,825 per ton, being mainly composed of sulphide of silver, native and horne silver.

While the shipments previously mentioned have consisted principally of ore of exceptional richness, large quantities of good payable ore equal in value to ore already sold for smelting purposes have been exposed to view.

Captain Richard Piper, Mr. H. Morish and Mr Lane, Mining experts well acquainted with the Broken Hill Field have expressed their opinion that the Main Lode now being worked by the Broken Hill Proprietary Company may be expected to be found upon the blocks to be acquired by this Company. The regular and magnificent returns shown by the Broken Hill Proprietary Company are well known.

The following five lodes have been proved on Blocks 98 and 99, as shown by the accompanying map, viz.:—

The North Lode underlying Blocks 98 and 99.
The Main Lode running through these two Blocks.
The Galena or South Lode bearing from the North end of Block 99.
No. 1 Lode running along the Eastern Boundary of Block 98.
No. 2 Lode running from Pit marked B on Map down to No. 3 shaft in Block 99.

The work done upon these Blocks, as reported by the Mining Manager on the 22nd of January last, was as follows:—

Block 98.—A new shaft has been sunk to a depth of 65 feet 6 inches on an ironstone lode bearing north and south, but on account of the great influx of water sinking cannot be continued without engine power. A cross-cut was put in across the lode, and 25 feet of driving done on the course South. The lode formation looks promising, and assays taken from same give silver, but I am of opinion that greater depth is required before anything of payable value can be found.

Block 99.—A new shaft has been sunk 67 feet 6 inches through very hard country to cut the galena, showing in No. 1 Shaft, but water here also stopped further sinking.

As will be seen, the shafts in these two Blocks having been sunk to water, further progress in sinking became impossible without the aid of machinery.

The Mining Manager reports on the 2nd of April that the Main Lode in Block 96 has been traced through Blocks 98 and 99, that it will be possible to sink upon this vein to a depth of 2,000 feet, and that it should be found to be as good in these two blocks as in Block 96.

Mining operations, which are being carried on on Block No. 70, adjoining Block No. 97, have proved the existence of the North Lode, shown on the map accompanying the prospectus. This lode is stated to dip in a southerly direction, and, as the Mining Manager reports on the 2nd of April last, underlies Blocks 98 and 99, and appears by recent developments to be as good as the Main Lode in Block 96 in the same level.

Captain Richard Piper, in his report, dated 27th December, 1889, says:—

"It has been fully demonstrated in all silver lodes that as depth is attained the lodes become more settled, and greatly increase in value. I have inspected Blocks 98 and 99, and find that the lodes traverse them. Although only a moderate amount of work has been done on them, it has been sufficient to prove their value, which I consider to be in each case equal to Block 96. Here, also, although no reservoir has been constructed, there is a splendid catchment area, ensuring a supply of water equal to any possible requirements."

Mr. H. Morish, in January, 1887, when Manager of the Broken Hill South Silver Mining Company, reported:—

"The Consols Blocks are traversed by a lode which is undoubtedly an offshoot from the main lode of the Great Broken Hill Mine, and which can be traced through Blocks 96, 97, 98, and 99, the main lode running along the North boundary of these sections and a branch lode starting from the main lode in Block 96, and lying on the Southern Boundary, both main lode and branch having almost a due east and west course. In Block 98 the Southern Lode is fully 28 ft. wide, and is composed of ironstone, carbonate of lead, and galena, the formation being strong and well defined. From the character of the lode, as far as it has been opened out, there is every probability that it will greatly improve in depth.

"On Block 99 a shaft is sunk on the North Lode to a depth of about 40 ft. in a strong lode of galena, grey ore, and ironstone. So far neither wall of this lode has been touched, so that the actual width of the lode is unknown. The Southern Lode is composed chiefly of lime and galena, and the character of the ground broken gives additional proof that the lode is really a branch of the celebrated Broken Hill Lode.

"The large amount of ore discovered, when compared with the small amount of work done, is a most remarkable and encouraging feature in the Broken Hill Consols property, indicating almost beyond doubt the existence of a strong remunerative lode, and fully justifying the expenditure of money to work the property."

Mr. William Nicholas, F.G.S., of the School of Mines, Melbourne, and Mr. G. Thureau, F.G.S., Inspector of Mines, and Geologist to the Government of Tasmania, have also both inspected these Blocks and reported very favourably of them.

The price to be paid by the Company for the Property has been fixed by the Vendors, who are the promoters of the Company, at £450,000, payable as to £150,000 in fully paid Shares, and the balance £300,000 in Cash or Shares at the option of the Directors of this Company, which will leave £50,000 for Working Capital. The Vendors reserve the right to nominate a Director of the Company within 18 months after incorporation.

The Vendors have agreed to pay all expenses attending the incorporation and registration of the Company, and also all brokerage, commissions, printing, advertising, and other expenses attending the formation of the Company, up to and including the first allotment. The Vendors have entered into, or agreed to enter into, certain arrangements relating to the guaranteeing the subscription of a portion of the shares now offered; and there are also various other Contracts in relation to the working of the Mines, and as these Contracts and arrangements may technically be Contracts within the meaning of Section 38 of the Companies Act, 1867, Applicants for Shares shall be deemed to have notice thereof, and to have waived all rights to have any particulars of such Contracts and arrangements, whether under Section 38 of the Companies Act, 1867, or otherwise.

The following Contract has been entered into:—A Contract dated the 16th April, 1891, between the Australian Broken Hill Consols, Limited, of the one part, and this Company of the other part, for the purchase of the property, the Contract also providing that the Company shall appoint Mr. Edmond Power, who is the Managing Director of the Vendors, Managing Director of this Company up to the end of the present year, Mr. Power receiving as his remuneration a commission of five per cent. upon the net profits made by the company, this company also paying one half of the fixed salary now paid to Mr. Power by the Vendors.

The Memorandum and Articles, together with copies of the above Contract, can be seen at the Offices of the Solicitors to the Company.

The original reports referred to, the assays, together with account sales of the ore, can be seen at the Offices of the Company.

Applications for shares must be made on the accompanying form and forwarded to the Bankers of the Company with the amount of the deposit. If no allotment is made the deposit will be returned in full, and when the number of shares allotted is less than that applied for the balance will be applied towards the payment due on allotment and any excess returned to the applicant.

Forms of Application for Shares may be obtained at the Offices of the Company, or from the Bankers, Brokers and Solicitors.

Telegraphic Address—

QUINLAND—LONDON.

MINING MARKET.

City, Friday Evening.

LIVELY TIMES — BROKERS BUSY — PRICES FIRM — PHENOMENAL ADVANCE OF WENTWORTHS—AUSTRALIAN BROKEN HILLS TOUCH 3½—FAILURE OF ANOTHER HARNHALLI "RIG"—SPECIAL NOTES *RE* FLAGSTAFF, EMMA, LISBON, AND OTHER MINES—HOME SHARES STILL ON THE DOWNGRADE.

We have had lively times on the market this week. Quotations which began to move upwards with a sort of slow waltz movement, increased in activity till the galop was reached, and brokers had some difficulty in keeping pace with the music. Every means of rapid communication was in vogue, and the receipts to the telegraph department alone, owing to the incipient mining boom of the week, must have been considerable.

When we wrote last week that the outlook was hopeful, and that "we should not be surprised to see a general revival of prices" we felt very much like a statistical Jonah preaching in the streets of a sceptical Ninevah. The prophet was in his own country, and therefore he had no honour, but happy are they who expect nothing for they shall not be disappointed.

Transactions in Mining shares have been more numerous than in any other department into which the Monte Carlo of Old Broad Street is divided. The tables have been there, but it has being around the mining one that the crowd has gathered. Reviled in the general Press, denounced in the law courts, thundered against by those who wish to gain a cheap reputation for wisdom, mining still holds its head, and has proved this week, as many a time before, that if its risks are great its profits are unique. Think of the sums netted by those who bought Australian Broken Hill Consols from 10s. up to 2*l*. and 2*l*. 10s., and realised at this week at 3*l*. and 3½*l*.!

The Kaffir Market has shown decided signs of improvement in the gold section, though Pigg's Peak (both classes) are again weaker in company with Auroras. Oceanas and Silatis have been firmer, but do not close at their best. The meeting of the latter company to-day was chiefly an extollation of the experts who reported favourably, and a condemnation, not by wholly disinterested persons, of Mr. Alford, who reported unfavonrably. Land shares generally have moved unevenly but with a tendency to firmness. Diamond shares are better, and for the first time for many weeks a rise is to be noted in North-East Bultfontein and De Beers. Elsewhere we speak of the encouraging prospects of St. Augustine, Limited. The reasons for the faith that is in us are made clear in our full report of the meeting. The shares rose on the meeting.

The latest communications of the Lisbon-Berlyn directors to their shareholders are voluminous, but their value is chiefly derived from the report on the Frankfort farm by Mr. Thos. Rickard, an expert personally known to us as of high repute and great mining attainments. This gentleman has not always been happy in his predictions, but his integrity and general mining knowledge have never been donbted. He speaks highly of this farm, of which the board have secured "an option to purchase." Mr. Rickard estimates that for what he calls "the first installation," 30,000*l*. will be required, and the annual profit, "as a beginning only," at 16,600*l*. To provide the money the board propose to issue 500,000 shares of 2s. 6d. each, thus increasing the total capital by 62,500*l*. The market did not receive the proposed issue favourably, and the shares fell on the week. It is difficult to see how the board could have acted differently under the circumstances.

In the Australian section the feature of the week has been the rapid rise in Wentworth Goldfields Proprietary shares.

The property in which this extraordinary rise has taken place is in New South Wales, and was brought out last November with a capital of half a million sterling, divided into 150,000 priority shares, and 350,000 ordinary shares, which are now fully paid. The latter will receive no profit until dividends aggregating 100 per cent. have been paid on the priority shares, after which both classes rank alike for future dividends. The ordinary shares were not offered for subscription, but were taken by the vendor in part payment of the purchase-money. When taken over the property was said to possess a complete plant, including 42 heads of stamps, pnmping, winding, air compressing, and other machinery. The gold is found in alluvial gravel, and also in lode or fissure formation, and at the time of purchase three shafts had been sunk 200, 300, and 400 ft. respectively, "proving the continuity of the shoots," and their increasing richness in depth. This is the property that the market, during the last two days has delighted to honour, and certainly the rise in the shares has been as unexpected as it has been substantial. It is the *priority shares* in which the dealings are now rampant.

Australian Broken Hills have divided with the foregoing the attention of the public. On the appearance of the prospectus of East Broken Hills this morning the market viewed Australian Broken Hill shares as through a glass darkly, and allowed shares to tumble, but with the prompt appearance of buyers quotations were re-established, and closed this evening from 3 to 3⅛, though at one time during the week 3½ might have been obtained. British Broken Hill Proprietary shares have also risen ½ on the week—in fact, there has been a general rise in the Australian market, in which Bonnie Dundee, Gympie Golden Crown and Mount Shamrock have participated.

Not so encouraging has been the Copper Market. Rio Tinto and Tharsis both fell on their respective meetings, but the former recovered towards the close of the market this afternoon. Cape Coppers and kindred shares are lower.

In the Indian section, Nine Reefs fell on the report of the directors, announcing an issue of preference shares, and the reduction of the present capital to half its nominal value. Indian Consolidated and Nundydroog have improved, but Mysore Reef and Mysore Gold are slightly weaker. We need only say here that the Ooregum meeting passed off most satisfactorily. Glenrocks are also firmer.

There has been another attempted rig in Harnhalli shares, with deplorable results to the public, who have been cajoled into buying them. Little cause have clients to thank the brokers who led them to buy Harnhallis round about 15s., whereas to-night one could scarcely get 10s. for them, though they have every prospect of being in a still worse plight later on. The reports from this property are deplorably bad, and a series of underground works in front of the mining door in Old Broad Street would probably be productive of quartz as rich as this company appears to possess—in fact it would "assay" considerably more if the sovereigns were thrown in that have recently been spent in circularizing the public. There have been

several previous rigs in these shares, and the pnblic know, to their cost, how much they have to regret the "disinterested advice" that persons with a superfluity of nanghtiness as well as of shares have tendered to them.

In the General Foreign Market there have been some noteworthy features. In the first place Don Pedros are up $\frac{3}{16}$ths, and there was a sudden move in Elmores on receipt of news from the manager that the Alturas vein had been cut 230 ft. from the shaft. The shares were at one time 3s. buyers, but close lower. The Almada fire has practically been extinguished. There has been an inquiry for Golden Feather and Gate shares, the season for working this concern having commenced on Monday last. New Gustons rose on the meeting when it was known that the Crabb and Askwith party had ceased from troubling the present board, and the two "professional beanties" in the same neighbourhood, "Yankee Girl" and "American Belle," were also firm in sympathy. Palmarejo, Frontino, Flagstaff, and Pahang are not so good, but in each case the market shows firmness.

The Flagstaff Market "flagged" on the issue of the director's report, which we by no means read unfavourably, and Emmas suffered in sympathy.

Here are a few facts that Flagstaff and Emma shareholders may not know. Both mines are in proximity. Emmas is 10,000 ft. above the level of the sea. Flagstaff is said to be 500 ft. higher still, but the report puts it at only 9,000 ft. From the nearest of the two mines to Alta City (a mere hamlet) is about 500 yards; from Alta City to Wasatch is about seven miles, and there is tramway communication in summer; from Wasatch to Salt Lake City is another 10 or 15 miles by railway, and it is to the latter place that the ore has to be sent. From Nov. to May the mines are several (sometimes many) feet under snow. About the middle or end of Apl. it begins to melt, and sometimes descends into the valley with avalanche force. Whilst the snow is in a settled condition there is no danger; when it begins to melt the greatest care must be exercised. In a settled condition, the journey to Alta City may be performed with snow-shoes; in what we may call the avalanche condition the pedestrian carries his life in his hands. The season for work will commence next month, and private advices from the spot speak of the coming campaign as likely to be more memorable in the history of these two enterprises than any they have passed through for a very long period.

Reverting to Flagstaff, quite a different complexion will be put on the report at next Thursday's meeting, "The ore is there," said one this week, who understands what he is talking about, "and after the meeting you will see what you will see." The report lays stress upon the difficulties which have had to be encountered, but not nearly so much stress as those on the market have done who are short of the shares and desirous of closing their bear accounts before the working season commences. The fire of July 3 was undoubtedly a great, but not an irreparable misfortune, for it prevented the realisation of the ore discovered in the previous May, the estimated value of which is from 12,000*l.* to 15,000*l.* The report bears upon its face the impress of honesty and truthfulness, and is in every respect such a one as we should have expected from Mr. Hopkins, the esteemed chairman, and the other gentlemen whose names are appended to it.

THE FOLLOWING STATEMENT SHOWS THE PROFITS AND DIVIDENDS OF THE LINARES, FORTUNA, AND ALAMILLOS COMPANIES TO MAR. 1891.

Name of Company.	No. of Shares.	Amount subscribed per Share.	Total Capital.	Total Profits made.	Total Dividends Paid.
		£ s. d.	£	£ s. d.	£ s. d.
Linares Co. ...	15,000	3 0 0	45,000	385,916 9 6	351,537 10 0
Fortuna Co....	25,000	2 0 0	50,000	329,284 8 1	287,187 10 0
Alamillos Co.	35,000	2 0 0	70,000	149,775 0 8	139,125 0 0

Name of Company.	Total Dividends paid per Share.	Period during which Dividends have been paid.	Average per cent. per ann.	Half-yearly Dividend, payable Mar. 26, 1891, and included in foregoing Statement.	
				Per Share.	Rate per cent. per annum.
	£ s. d.			s. d.	
Linares Co. ...	24 5 1	39 years.	20.03	12 0	40.00
Fortuna Co....	11 9 9	29 ,,	19.80	3 9	18.75
Alamillos Co.	3 19 6	24 ,,	8.28	1 9	8.75

Of these mines, Messrs. John Taylor and Sons have been managers from the commencement.

In the Home section we regret to say that the deplorable fall in prices continues, and that, with two exceptions, quotations are lower than a week ago. South Condurrow was unable to pay dividend this time; East Pool dividend was only 7s.; and the sale of West Seton realised but 3,250*l.* It has been decided to sell off Great Fortune and its belongings, and a committee has been appointed to carry out the sale. Botallack made a call of 7s. The sales of ore at Roman Gravels for the year realised 8,843*l.* 12s. A great deal of valuable work has been done since the re-organisation of the company, and the indications in the lower levels are very encouraging.

Under all the circumstances, we consider that the outlook for next week promises still better prices, and an even augmented flow of business.

KAFFIRS.

A much better tone has prevailed, and prices generally have improved, Ferreira having risen 10s., while in many cases an improvement has taken place of from 5s. to 1s. 3d. Pigg's Peak have again fallen on the issue of reports, which the market read unfavourable.

Business.—Those higher are as under:—Sheba, 6d.; Bothas Reef, 6d.; City and Suburban, $\frac{5}{16}$; Crown Reef, $\frac{1}{8}$; Durban Roodepoort, $\frac{1}{16}$; Ferreira, $\frac{1}{2}$; Geldenhuis, $\frac{1}{8}$; Glencairn, 6d.; Great Gold Zone $\frac{1}{8}$; Heriot, $\frac{1}{16}$; Johannesburg Waterworks, $\frac{1}{16}$; Jubilee, $\frac{1}{4}$; Jumpers, $\frac{3}{16}$; Langlaate, $\frac{1}{4}$; Ditto Block "B," $\frac{3}{16}$; Main Reef, 6d.; May Consolidated, 6d.; Moss Rose, 6d.; Robinson, $\frac{1}{8}$; Simmer and Jack, $\frac{3}{16}$; Stanhope, $\frac{1}{4}$; Vogelstruis, 6d.; and Wolhnter, $\frac{1}{16}$.

The following have receded:—Pigg's Peak, $\frac{1}{8}$; Ditto Preference, $\frac{3}{8}$; Aurora, $\frac{3}{16}$; Kimberley Roodepoort, $\frac{1}{8}$; and Witwatersrandt (Knights) 1s.

African Lands.

A more lively tone has been apparent in this market, and the shares chiefly dealt in have risen, Oceanas improving to the extent of 7s. 6d. South African Chartered, Goldfields of South Africa and South African Gold Trust have also risen in a lesser degree, while Horo Concessions are the only fall to note.

Business.—The following have risen :—Bechuanaland, ⅛ ; British South African Chartered, 3/16 ; Goldfields of South Africa, 5/16 ; Johannesburg Estates, 1/16 ; Oceana, ⅜ ; Silati River, 1s. 6d.; South Africa Gold Trust, 3/16 ; Transvaal Gold, 6d. ; and Zoutpansberg, 6d.

Those down are Horo Concession, 1/16 ; and Klerksdorp, 1s.

Diamonds.

A better tone has been experienced in this market generally, and a rise has taken place in De Beers and North-Eastern Bultfontein. These are the only changes to note.

Business :—De Beers has risen 5/16 and North-Eastern Bultfontein 7/16, but others are unchanged.

Making-np Prices. Apl. 8th, 1891.	Diamond Shares.	To-night's Prices.

Australian.

A very large business has again taken place in these shares, Australian Broken Hill having as usnal taken the lead. The price has varied from 2⅜ to 3½, and alterations have occurred almost every few minutes. To-day prices have varied between 2⅞ and 3⅜, closing at 3, 3⅛, or a rise of ⅝ on the week.

Some heavy dealings have also taken place in Wentworth Proprietary shares, which had a marked rise. Last week they closed 7/16, 9/16 prem., and have since been to 2¾, 3.

British Broken Hill have also met with favour and risen. On the other hand, Scottish Australians have fallen.

Business :—A rise in Australian Broken Hills of ⅝ ; British Broken Hill, ½ ; Bonnie Dundee, 6d. ; Day Dawn Block, 3d. ; Gympie Golden Crown, 1s. ; Mount Shamrock, 9d. ; and New Queen, 6d. Those down are Day Dawn P.C., 3d. ; Gympie Great Eastern, 3d. ; and Scottish Australian, ⅛.

Indians.

The market for this class, after having been favourably looked upon for some time past, received in the earlier part of the week a severe check on the three announcements of a call of 1s. in Balaghats, a call of 6d. in Mysore West, and a preference issue in Nine Reefs.

The Ooregum meeting, however, pnt a little more life in affairs, and the markets do not close at worst.

Business :—A rise is shown in Glenrock of 3d. ; Indian Consolidated, 1s. ; and Nundydroog, 1s. ; whilst a fall has taken place Balaghat of 6d. ; Mysore Gold, ⅛ ; Mysore Reefs, 9d. ; Mysore West, 3d. ; and Nine Reefs, 1s. 6d.

Copper.

A dull market has prevailed all the week, and prices generally have had a tendency to drop. Masons have suffered most, and Capes and Tintos have also fallen to a smaller extent.

Business.—There is no rise to record, whilst the following show a fall : Capes, ⅝ ; Mason and Barry, 1 ; Panulcillo, 1/16 ; Rio Tinto, ⅜ ; and Tharsis, ⅕.

General Foreign Shares.

New Guston and Yankee Girl have been in demand at higher prices, and a considerable business has been transacted in Don Pedro. Golden Gates have advanced not so much on news from the mine as on the bright prospects in the near futnre.

There has been an effort to support Lisbons, bnt the result is a fall of 9d.

Business.—The following have risen :—Amador, 1s. ; Don Pedro, 3/16 ; Elmore, 1s. ; Golden Feather, ⅛ ; Golden Gate, ½ ; New Guston, ¼ ; Orita, 1s. ; Pinos Altos, 6d. ; St. Augustine, 9d. ; Veneznelan-Austin, 3d. ; and Yankee Girl, ⅛.

Those down are Balkis, 3d. ; Emma, 3d. ; Flagstaff, 9d. ; Frontino, 1/16 ; Golden Leaf, 6d. ; Idaho, 3d. ; Lisbon-Berlyn, 9d. ; Pahang Corporation, 1/16 ; Palmarejo, 6d. ; Silver Mines of La Luz, 3d. ; and Tesoro, 3d.

The following list shows the principal changes which have taken place :—

LATEST FROM THE MINES.

Colonial Mines.

Australian Broken Hill Consols.—A telegram, received from the managing director resident at Broken Hill, dated Apl. 10, states :—"We have struck lode, shaft No. 2, block 95."

British Broken Hill Proprietary.—The return for 10 days ending 16th inst. of the furnace at the mine was 701 tons of low-grade ore treated, yielding 175 tons of lead, containing 9,814 ozs. silver ; result satisfactory ; estimated net profit, 15s. per ton.

Broken Hill Proprietary.—For the week ending Apl. 16 5,472 tons of ore were treated, yielding 876 tons of lead, containing 175,104 ozs. silver. Cable also gives price of the company's shares in Melbourne as 10*l.* 19s., and states that moderate rains have fallen in the Barrier fields.

Day Dawn Block and Wyndham.—A cablegram from the general manager at Charters Towers gives the result of the crushing for the fortnight ending 11th inst. :—"Tons crushed, 420 ; yield of gold, 800 ozs. ; approximate value, 2,760*l.* Total fortnight's expenses, 760*l.*"

Day Dawn P.C.—A cable gives the result of this company's crnshing for the fortnight ending Apl. 11, viz. :—"940 tons ; 763 ozs. ; lost two days holidays." (Estimated value, 2,594*l.*)

Mill's Day Dawn United.—Crushing for fortnight ending 11th inst. :—770 tons ; 594 ozs. ; 2,050*l.* approximate value.

Gympie Golden Crown.—Cable :—"350 tons for 198 ozs." (Estimated value, 712*l.*).

Mount Leyshon.—A cablegram, dated 13th inst., gives the fortnightly crushing :—"790 tons crushed ; 295 ozs. gold ; 20 stamps mill ran 288 honrs ; value, 720*l.*"

Mount Zeehan.—Telegram from the local committee, dated Hobart, Apl. 15 :—"Silver Queen Extended section : No. 1 lode, south drift, is improving. Montana section : Good ore continnes No. 3 lode. 20 tons first-class ore have been shipped from Hobart to England per the Wendouree (making total on the way, 168 tons)."

New Queen.—Cablegram, dated Charters Towers, Apl. 11 :—"300 tons, yielding 400 ozs. gold."

Wentworth Goldfields Proprietary.—Telegraphic advices have been received from the Local Advisory Board in Sydney, New South Wales, as follows :—"We are shipping per s.s. Parramatta 10 tons of rich crude ore. Assays have been made of 10 samples ; lowest, 45 ozs. to the ton ; highest, 6,100 ozs. ; average, 1,100 ozs. We have 150 tons ore at grass. Will start crushing same to-morrow. Jackass Mine has struck upon brown vein of great valnc.

Foreign Mines.

Almada and Tirito.—In reply to a message despatched to the superintendent at the mine on the 15th inst. asking for the latest information respecting the fire, the following cablegram has been received :—"No more signs of fire. Driving new road rapidly. Efforts being made to redeem tunnel road, and enter Mina Grande forthwith.

Cortez.—Results for Mar. :—Production, 52,272 ozs. ; expenses, $15,500 ; tons crushed, 787 ; development expenditure. $2,735.

Elkhorn.—Cable information from the manager :—"Bullion shipped for week ending Apl. 11, $8,000.

Elmore.—The following cable, in code, has been received from the manager, Mr. G. McCornick, dated Apl. 12 :—"Have cut the Alturas vein 230 ft. from the shaft. The vein is compact and well-defined, fully 10 ft. wide of gold-bearing quartz. Free milling ore. Cannot tell value of vein yet. Will make mill-rnn to find value. Prospects are encouraging." (One other word, the last, being unintelligible, is being repeated.)

Esmeralda.—Manager cables (Apl. 16) that he is still extracting ore ; the ore shoot is going down, and the indications are favourable for continuation.

Golden Gate Alluvial Syndicate.—Cablegram from Col. Frank McLanghlin, the company's general manager at Oroville :—"Will commence preparatory work on main flume Monday (Apl. 13). Everything is going well.—McLaughlin."

Jay Hawk.—Telegram from the manager : "On the 200-ft. level vein is fully 10 ft. wide ; ore of fair grade, in small quantities."

Kapanga.—Telegram from the manager, viz. :—"Have crushed 30 tons ; yield, 60 ozs. of gold."

New Pierrefitte.—The company has sold 150 tons silver-lead ore to Messrs. Quirk, Barton and Co., at 12*l.* 15s. 6d. per ton f.o.b. at Bordeaux. The company has also sent out dividend warrants for 2s. per share, or 10 per cent. on the capital, as an interim dividend, declared by the directors on the 8th inst., for the quarter ending Mar. 31, 1891.

Ouro Preto.—The directors have received a telegram giving last month's return of gold as follows :—"3,082 tons of quartz prodnced 8,005 oits. of gold (924 ozs.)

Pahang Corporation.—A cablegram annonnces the shipment from Singapore of a parcel of 12 tons of black tin per s.s. Oopack.

Pinos Altos.—The out-turn for the clean-up week ended 4th inst. was $8,000.

San Luis.—The bullion received from this company's mines in Nicaragua, Central America, being the result of crushing for the months of Jan. and Feb., has realised 2,180*l.* 7s. 5d., the proceeds of 273 tons of ore. The first crushing took place in Dec. last year, when the yield was 707*l.* for 80 tons of ore.

United Mexican.—Telegram :—"San Cayetano : Gross returns for week ending Apl. 11, $2,000 ; expenditure, $3,680 ; loss, $1,680. El Cubo : Gross retnrns for week ending Apl. 11, $8,000 ; expenditure, $4,850 ; profit, $3,150. Profit on mill for month of Mar., $315.

Home Mines.

Botallack.—A four-monthly meeting of Botallack shareholders was held on the mine on Wednesday, the purser (Mr. A. H. James) presiding. The accounts showed : Labour costs, 5,082*l.* ; coal, 930*l.* ; carriage, 355*l.* ; merchants' bills, 894*l.* ; timber, 150*l.* ; total, 7,532*l.* Credits : Tin sold, 128 tons 6 cwt. 2 qrs., 6,576*l.* ; balance loss, 1,004*l.* ; total balance against the mine, 1,337*l.* ; against which there is an item of 200*l.* of copper and arsenic on the mine, but unsold. The report and accounts were passed, and a call of 7s. per share was made.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

Crœsus.—Crushings for Mar., 269 ozs.

Wemmer.—The London agency advises the receipt ex Grantully Castle from Cape of 703 ozs. smelted gold.

George Goch Amalgamated.—The company advises the receipt ex Grantully Castle from Cape of 214 ozs. of gold.

Wentworth.—The company have removed their offices to Nos. 4 and 6, Throgmorton Avenue, E.C.

North-Eastern Bultfontein.—The company has telegraphic advice announcing 770 carats of diamonds for 3,800 loads washed.

City and Suburban.—Cable from head office :—"Conditions sound and encouraging ; dividend certain in the near future."

Moodies.—Cable :—"349 claims rented or leased. 2,200 tons crushed by claim-holders yielded 880 ozs. of gold."

Edwin Bray.—The directors have received cable advice from Barberton, stating that the ropeway has re-started work.

Simmer and Jack.—Previous to the preparation of the dividend the transfer books will be opened from Apl. 14 to Apl. 18, both days inclusive.

Akankoo.—Mr. Doering's letter appears to have missed the mail steamer, but a private note from the reduction officer of Mar. 16 states :—We are very busy, and all is going on well.

May Deep Level.—Cablegram :—"Mar., nine days' milling : Tons crushed, 234 ; result, 312 ozs. gold ; concentrates value, 400*l.* Machinery working well. Mine clear. Battery resumed work."

Glencairn Main Reef.—Cable :—"Mar. crushing, 488 ozs." They further state that the late manager has left the company, and that Mr. Reed, late of the Heriot Company, has been appointed in his place.

Crown Reef.—The crushing for Mar., during 27 days 13 hours was 5,340 tons, which yielded 2,906 ozs. of smelted gold. The revenue for the month was 10,388*l.* 19s., and the working expenditure was 6,031*l.*, leaving a balance of profit for the month of 4,357*l.* 19s. The expenditure on capital account was 1,117*l.*, making a total expenditure for the month of 7,148*l.*

Village Main Reef.—Cable :—"At this depth struck a reef in the shaft ; average assay over 10 ozs. per ton." In reply to further enquiries by cable the directors learn from their consulting engineer (Mr. Boucher) that the reef was struck at a depth of 485 ft., averaging 15 ins. in width, and that the result of two assays gave 9 ozs. and 5 ozs. respectively, of which 2 ozs. is free gold.

Transvaal.—Summary for Feb.—Mined, 491 tons : average assay, 7 ozs. per ton. Battery working 495½ hours crushed 660 tons Nu ore, yielding 881 ozs. retorted gold ; equal to 1 oz. 6 dwts. 16 grs. per ton. Pans treated 127¼ tons mixed tailings, yielding 119 ozs. 16 dwts., equal to 18 dwts. 20 grs. per ton, and 20½ tons rich Nu ore, yielding 490 ozs. 19 dwts., equal to 23 ozs. 19 dwts. 3 grs. per ton. Sundries : 11 ozs. 18 dwts. 22 grs. Total produce, 1,503 ozs. 13 dwts. 22 grs.

United Langlaagte.—From the profit and loss account it is seen that the profit accruing on the period under review amounted to 1,227*l.* 5s. 9d., exclusive of any redemption or depreciation, the consideration of which is omitted from this account for reasons detailed under the head of "re-construction." The actual working expenses showed an average of 17s. 2.06d. per ton treated during the six months. A cablegram announces result of Mar. crushing as 957 ozs. from 4,500 tons.

Wyldsdale.—A cable dated 14th inst., states : "The plans of the mine were sent you to-day ; report is favourable. We recommend putting up 10 more stamps at once." The manager was cautioned by the directors to thoroughly develop and explore the reef so as to make quite certain that it is payable and permanent before advising the erection of a battery, and they have found him extremely careful in his reports. They have, therefore, no hesitation now in acting on his recommendation, and are taking the necessary steps to erect a 10-stamp mill.

Pigg's Peak.—Cablegram from Barberton dated Apl. 10. :—"Have given notice the termination of agreement Havelock concession May 1." This clearly refers to the Havelock mill. The directors have cabled for further information. On receipt of the cablegram, which was published on 13th inst., the directors telegraphed the following enquiry to Barberton, viz. :—"Why, when, to whom was notice to terminate the agreement given? What explanation can you give contract to haul 1,000 tons?" And the following reply has been received to-day, viz. :—"Ore will not pay. Mar. 21, Mac Cubbin. I can cancel contract to haul at my option." This message is understood to intimate that the ore at present available will not bear the heavy cost of transport to, and the hire of, the Havelock mill. The gold obtained during Feb. realised 1,460*l.* 19s. 11d.

Sheba (Mar. 10).—The general manager reports as follows :—Mine : Very little work has been done in the quarry, Nos. 1 and 2 levels, owing to the boys working on the water race. Intermediate winze between Nos. 2 and 3 levels sunk 15 ft. in good ore, and connected with east stope on No. 3 level. No. 3 level : Have commenced to work the old west stope in fair milling ore. No. 5 level : Still cutting out chamber for horse whim ; the ore not quite as good as last month. No. 15 winze is now down 135 ft., 20 ft. having been sunk during the month, part of the time in very good ore. Construction department : The various works have been pushed on as fast as possible, and on Mar. 4 we commenced crushing, the mill working beautifully. However, we were not able to keep on crushing continuously, as there are many things connected with the tram line to regulate, and I expect it will be three or four weeks before we can get down to steady work. The water race has given considerable trouble, but is now in much better condition, and able to supply all the water we require.

Stanley.—Report from manager, Mar. 28 :—Sinking is going ahead quite slowly as the rock is very hard, but the crevice has greatly improved during the last week, and is now 18 ins. wide, showing considerable copper. We believe that when the hard country rock shall disappear, we shall have a good crevice of pay ore. The stopes and upraise in the 225 east looks very well, the crevice

containing a good deal of copper, and being from 18 ins. to 4 ft. wide. We have not yet received the returns from the ore shipped to the mill. We shall increase our output considerably next month. Will send assays of two samples on Monday which I took to-day in stopes and shaft.—Report from manager, Mar. 31.—There are now four men engaged in sinking the shaft—two working from 3 p.m. to 11 p.m. and two from 11 p.m. to 7 a.m. From 7 a.m. to 3 p.m. we hoist the milling ore and some little water. I am having some assays made of the ore taken out in sinking the shaft, but we hardly look for rich ore until the walls of the vein change to softer rock. By cable Apl. 15 :—The assay value of the ore above mentioned is over $27 per ton, mostly silver, equal to $216 per cord."

Graskop Mill and Mining.—A cablegram announces the result of the Mar. crushing as follows :—"Crushed 378 tons ; yield, 177 ozs.; estimated cost, 450*l*." The secretary reports receipt of advices from the manager, which will account for the falling off of the gold returns for the month of Mar. (Mar. 9.)—The Huntington mill is working 24 hours a day on tailings, and seems to be doing well. No ore has been hauled yet this month, and I fear the result for Mar. must be very short. The weather has become rather more favourable, and I hope to get down more stuff now. The roads have been in a terrible state, and have taken very much labour to put in any kind of order. At the new workings I am finding some more stuff of fair quality, and things promise an improvement generally in that neighbourhood. (Mar. 16.).—Another week of rain has again prevented ore from coming down. Although past the middle of the month only two days' crushing has been possible. The Huntington mill has been working on tailings pretty regularly. There is nothing new to report in mining or prospecting, which has been pushed on as much as the weather will permit.

Namaqua.—Abstract of superintendent's report for Feb. :—Tweefontein Mine :—73-fm. level east : About 12 ft. more have to be driven to reach No. 13 winze, which will be shortly accomplished. 73-fm. level west : The ground is mixed with a little copper ore, and is looking a little more promising. The lode is well defined, and when the ventilation is improved better progress should be made. 58-fm. level east : This point has rather improved ; the percentage of the ore is good and looks likely to further improve ; worth 8 tons of ore per fm. 58-fm. level west : There is very little change in this driving since last report. 58-fm. level west, north part of lode : This point will be communicated with the shaft in a short time, when the ore ground will be able to be stoped to better advantage. 33-fm. level west : There is no very great change in the stope. It is in a bed of ore running away into ground that has not yet been opened up ; worth 11 tons of ore per fm. 33-fm. level east : The stope is still being driven east of shaft, but is not of so much value as for some time past ; worth 7 tons of ore per fm. Wheal Julia Mine : No work has been done here during the month, being short of labour. New East Centre : The quantity of water is increasing, and rather retards the sinking. The ground is stained with copper. Shipping : The Gloria sailed from Port Nolloth for Swansea on the 6th inst., with about 1,000 tons of ore. Output for January : 310 tons of 31 per cent.

Cerro de Pasco.—The following report has been received from the manager, Mr. Hawse, dated Barberton Mar. 16 :—Middle Reef, 500-ft. level :—I am glad to have to report a great improvement in the appearance of the reef in this level during the past few days. The character of the ore has undergone a complete change, being impregnated with pyrites, and although there is but little free gold, the ore has by assay given as high a result as 13 dwts. per ton. We are only working day shifts here, consequently our progress is very slow, but as soon as we have got a few feet further in, I intend making a more careful examination, and will report to you the result. Of course you are aware that with a pyritic ore the ordinary plates in the mill will be useless for recovering the gold, and this is one of the chief reasons why I am, on principle, so opposed to the erection of reduction works, until I am convinced as to what mode of reduction will be most suitable for the ore produced :—Block F. Extension :—Our main shaft is down 96 ft., but owing to the influx of water we have commenced the cross-cut east at the 90 ft. level, and are pushing this work double shifts. At the 100 ft. east we are sinking a vertical air shaft, which when connected with the cross-cut will give us ventilation enough to enable us to continue the cross-cut some 300 or 400 ft. further. We hope to meet with a payable reef in this cross-cut before very long, upon which we shall drive northwards, as shown in the sketch enclosed.

COMMERCIAL NOTES.

Metals.

The Metal Market has been fairly active during the current week. Bank Rate was advanced to 3½ per cent. on Thursday. Bar silver, 44½d.

Copper has been easier. G.M.B. Warrants fairly active from 52*l*. 5s. to 51*l*. 15s. cash, and 52*l*. 15s. to 52*l*. 2s. 6d. three months. To-day's prices are 51*l*. 12s. 6d. cash, and 52*l*. three months. The arrivals of copper in Liverpool and Swansea during the last 14 days have been 5,799 tons. Deliveries, 4,664 tons ; increase in stocks, 1,135. Visible supply here and in France, 58,525, against 58,353 on Apl. 1. We quote English tough, 55*l*. to 56*l*. ; best selected, 57*l*. to 58*l*. ; strong sheets, 65*l*. to 66*l*. ; India sheets, 60*l*. 10s. to 61*l*. 10s. ; yellow metal, 5¾d. to 6d. ; ore, 9s. 3d. to 10s. 9d. per unit.

Tin has been quiet. Straits, after improving to 90*l*. 15s. has declined to 90*l*. cash and 90*l*. 5s. three months. To-day's prices are 89*l*. 12s. 6d. cash, and 89*l*. 15s. three months. The shipments from the Straits during the 14 days have been, to London, 420 ; to America, 500 ; Continent of Europe, 140—total, 1,060 tons. Delivery from warehouse here, 882 tons. The Dutch market has been steady. Banca fl54½. Billiton, fl54¼. English Ingots, 93*l*. to 93*l*. 10s.

Tin Plates in an abnormal position, ordinary coke for Apl.—May, quoted 17s. 6d. per box Liverpool ; July-Aug., 15s. There has been a meeting of tin-plate makers proposing to close their works during July.

Spelter quiet. Ordinary brands quoted 22*l*. 15s., sellers.

Lead dull and easier. Soft Spanish, 12*l*. 7s. 6d. to 12*l*. 10s. ; soft English, 12*l*. 12s. 6d. to 12*l*. 15s. ; L.B. China, 13*l*. 5s. ; sheets, 13*l*. 10s. to 14*l*.

Quicksilver dull. Rothschilds quotes, 8*l*. 5s. ; second hands, 8*l*. 2s. 6d.

Antimony.—Hallett's price for April for America, 67*l*. 10s. ; ordinary brands and delivery, 60*l*. to 62*l*.

Dividends Declared and Announced for Week Ending Apl. 18.

THE FORBES REEF GOLD MINING CO., LIMITED.

THE CHAIRMAN HOPES THEY HAVE "TURNED THE CORNER."

The third ordinary general meeting of the shareholders of the Forbes Reef Gold Mining Co., Limited, was held at Cannon Street Hotel, on Wednesday, Apl. 8, to receive the general balance-sheet and profit and loss account of the company for the year 189, with the report of the directors, and to transact all other business of an ordinary general meeting.

Mr. John Polson

presided.

Mr. William Gardner (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The Chairman expressed the regret that was felt by himself and his colleagues that they had not the chairman present that day to address them, as they hoped would be the case on his return from his visit to the property. That gentleman, however (Mr. Faviell), was laid up with an abscess in the throat, but they heard yesterday that it came to a head, and they were likely to have him amongst them again at an early date. Reviewing the history of the company, he (the speaker) alluded to the fact that they believed on the last occasion that the Forbes Reef had pinched out. They had

SPENT A LOT OF MONEY,

and they had had other reefs upon which they had worked, but which after all had been abandoned. It was decided last year that the chairman should pay a visit to the property, and he accordingly left in Nov. last and returned a few weeks ago, and they had hoped, had it not been for his ill-health, to have had a *viva voce* statement from him to-day. As it was, he had made a statement upon paper which had been printed, and would be circulated amongst the shareholders. Later on this would be read by the secretary. The opinion of the chairman was that on the whole he could give them an encouraging statement, and that the Forbes Reef had not pinched out, and he (the speaker) regarded the report that the chairman had made as a favourable one. He would not like to use strong terms in a matter so uncertain as mining. South Africa was

THE LAND OF SURPRISES,

and it was the unexpected that always happened. He moved the adoption of the report.

The Secretary then read the report of Mr. F. H. Faviell (the chairman), a lengthy document. In the report, Mr. Faviell said that, in his opinion, "the company had turned the corner."

Mr. Livingston seconded the adoption of the report.

In reply to a question,

The Chairman stated that their manager was not connected formerly with the Etheridge Co.

The report was adopted.

Mr. John Jack's, appointment as a director, to fill the vacancy on the board occasioned by the retirement of Mr. Clermont Livingston, was confirmed.

Messrs. F. H. Faviell and John Polson were re-elected directors.

The auditors, Messrs. J. O. Chadwick and Son, were re-appointed, and a vote of thanks to the chairman closed the meeting.

Woodhouse and Rawson, Limited.—In view of the large number of orders in hand for steam and electric launches, tugs, &c., together with others promised, and in course of negotiation, Messrs. Woodhouse and Rawson United, Limited, have resolved to extend their riverside premises, and have, therefore, just purchased a piece of ground situated close to Kew railway bridge, on the Surrey side, with a frontage to the river of between 600 and 700 ft., the total area being about 2½ acres. For the buildings, the necessary plant and machinery to carry out the work alluded to above, arrangements have already been made. The company will also have good dock accommodation in connection with the above, where tugs and barges can safely lie while undergoing any necessary repairs and alterations to machinery, propellers, shafting, or inspection of bottoms. The new works are nearly opposite the two existing yards of the company, and will, it is expected, be in working order in the course of the next two months.

BRITISH MINING INTELLIGENCE.

LEADHILLS (Apl. 13).—Brown's vein : The 145 men have cut the proper footwall of vein 6½ ft. wide, of a very kindly character, producing 30 cwt. of ore per fm. The stope above the 145 north of Jeffrey's shaft is worth 25 cwt. of ore per fm. The two stopes above the 145 south of Wilson's shaft are each worth 25 cwt. of ore per fm. The stope above the 145 north of Wilson's shaft is worth 25 cwt. of ore per fm. The 130-fm. level north of Jeffrey's shaft shows a vein 5½ ft. wide, almost wholly quartz of quite a promising nature, with occasional stones of ore not to value. The four stopes above the 130 north of Jeffrey's shaft are worth 25, 30, 15, 10 cwt. of ore per fm. respectively. The stope above the 130 south of Jeffrey's shaft is worth 30 cwt. of ore per fm. The stope above the 130 north of Wilson's shaft is worth 10 cwt. of ore per fm. The 115-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, mixed with quartz, but very dried, and, therefore, uncongenial for ore. The stope above the 115 north of Jeffrey's shaft is worth 15 cwt. of ore per fm. The drift above the 115 south of Wilson's shaft is worth 20 cwt. of ore per fm. The 100-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, showing a nice rib of quartz, but without ore. The 85-fm. level north of Jeffrey's shaft shows a vein 3½ ft. wide, and although mixed with quartz, it does not look well for ore. The 70-fm. level south of Wilsou's shaft is in a vein about 4 ft. wide, charged with quartz, but without ore. The 35-fm. level south of Flat Rod shaft is in a vein above 4 ft. wide, mostly stone, with ore worth 15 cwt. per fm. The stope above the 35 south of Flat Rod shaft is worth 30 cwt. of ore per fm.—T. Newbigging.

MID-DEVON.—Report for week ending Apl. 11.—Surface : Machinery doing good duty; does not take quite four revolutions per minute to cope with water, showing an abatement in the influx to shaft. A shaft : Water is being kept draiued to the bottom of the 80. C shaft : The 60 east has been driven by nine men 1 fm. 2 ft. ; total distance from shaft, 91 fms. 3 ft. 6 ins. The strata shows no perceptible change in its compositiou, occasional stones of yellow ore and arsenical mundic are being met with, but not to value. We have two men working at the level east of winze following up some small branches of ore that are showing in the sides, which at three points are embedded in congenial matrix, the geueral appearance of which would indicate an improvement, a little orc being met with, which will partially meet the expense.—J. Neill.

ROMAN GRAVELS (Apl. 16).—At the 155-fm. level the men are at present opening out upon the Caunter vein, and have driven south-east 5½ ft. As stated in last week's report, the lode is in two divisions, and the drivage is going forward iu the main division, in which there is at present a cavity containing massive cubes of blende and carbonate of lime, and producing of the former 1½ tons per fm. These divisions will certainly come together very shortly, and by driving in this direction we shall probably intersect the divisions of the main lode, which have not been seen at this level except in the cross-cut. The 140 south-east on this lode is producing about 1 ton of blende and saving stuff for lead ore ; the forebreast is a very promising one, and we are day by day expecting a great improvement, but the vein is so very wet that slow progress is being made in driving. The winze from the 125 to the 140 north is now through ; preparations are being made for stoping, and the drivage of the 140 forebreast has been resumed north of the winze, the vein being quite 6 ft. wide, and worth 1½ tons of lead ore to the fathom. The 140 south is driven 90½ fms., the vein in present forebreast being 3 ft. wide, worth 1 ton of lead ore to the fathom, and saving stuff for blende. The winze coming down in front of this forebreast is 8½ fms. deep, and the vein has improved in appearance since last week, and is producing some very nice stones of ore; the sinking is being done in the country rock, so that a part only of the lode is exposed. The stopes throughout are without any recent change. The 50 tons of lead ore sold to-day realised 412*l.* 10s.—A. Waters.

SOUTH DARREN (Apl. 16.)—The work in the shaft is going on satisfactorily. There is still a little ground to shoot out before fixing bearers, cistern, and pent-house. We hope to have all completed and begiu to siuk iu about a week. The lode in the 130 end west is strong, worth 10 cwt. of silver-lead ore per fm.—J. Mitchell.

WEARDALE.—Report for week euding Apl. 11. :—Ore raised for week, 86 tons ; ore dressed for week, 91 tons ; ore slag and fume smelted for week, 117 tons, producing 58 tons of pig lead.

WEST WHEAL GRENVILLE (Apl. 14).—The 130-fm. level driving north of engine shaft is extended 4 fms. 5 ft. We consider, from the appearance of this end, we have reached the north part of the lode, and have cut iuto same about 2 ft., which shows quartz, mundic, and a little tin. The 120 cross-cut driving north is extended 100 fms. 1 ft. There is no change of importance to notice in this drivage. Iu the 120 east of cross-cut on No. 4 the drivage has been extended south 2 fms. 3 ft. We have intersected in this drivage some small mineralised strings in granite of a well-defined character. The 120-fm. level driving east of cross-cut on No. 2 is extended 23 fms. 3 ft. The lode in this end is of a kindly character, from which, during the past week, we have broken some very good stones of tiu ore. Water is issuing more freely from this end, and the indications are such as to lead us to believe we are nearing the junction with the main lode.—J. Skeat, N. Temby.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO. — Extracts from letters from the superintendent at the mines dated Mar. 21.—On the 15th, morning, we discovered the fire, and I immediately took a force of men with buckets of water, and went in as far as the smoke permitted (about 80 ft. south of the Tirito shaft), but soon became convinced that the fire had taken gigantic proportions, and that manual efforts were of no avail ; had at once all the ventilations stopped, and a 3-in. current of steam (all that two boilers of 16 ft. by 4½ ft. could produce) run into the section in fire ; had the steam running for three days and nights, and then opened the bulkhead at the tunnel ; as soon as the heat permitted went in to examine, and found that the steam had done its work wonderfully, extinguishing all the fire overhead as far as its action could reach longitudinally, but there was still an enormous amount of fire along the floor, and to a height of about 4 ft. ; all the balance of the week has been spent in extinguishing this fire with a steam pump. The section burned embraces all the distance between the so-called north and south slides. Tirito : The fire is completely extinguished as far as the north slide, but at this point there was a cave, and we have not been able to go any further in. I am still uncertain as to whether there is fire beyond this cave, but am in hopes that there is none, because there is no considerable amount of smoke coming out of the San José shaft, which is the general ventilation of the whole mine. The damage is serious, but not very great if there is no more fire further in ; at any rate, not so great as I feared. The fire seems to have started near the Tirito shaft where there was a large amount of timberwork and about 1,000 timbers stored, most of which were burned. It seems to have begun on the 14th, early in the evening, and as there was a very strong current of air along the tuunel, and the timbers were dry, the fire spread very rapidly. So far we have not been able to ascertain how the fire originated, or whether it was purely accidental, or done by an incendiary. An investigation is being made by the local judge, and the judge of first instance spent a day here and promised to come again if necessary. I am pressing the authorities to make the most diligent inquiries in the matter, and take prompt action against any person that may be indicted. All operations are suspended, there being no entrance to the Mina Grande ; but all efforts will be made to have the road re-opened and secured, the steam and air-pipes (which were torn down) replaced, and work resumed as soon as possible. During this week we have had quite a force of men at work extinguishing the fire, the excessive heat requiring to relieve the men working the water-hose every five or ten minutes. Reduction : Our stocks of ores are being rapidly exhausted, and if the mine operations are interrupted by the fire for more than two weeks we shall have to stop reduction also. The clean-up of precipitate made on the 14th inst. was worth $7,047.39 (two weeks' leaching). From the refinery we obtained to-day seven bars silver, worth about $7,400, which are being taken to Alamos. There was a "conducta" of treasure to leave for Mazatlan yesterday, or to-day, and if it has not left yet, I instruct our agent in Alamos to send by it five bars of silver out of the seven, to be shipped to you at Bank of England.

— Extracts from letters from the superintendent at the mines dated Mar. 24.—Since writing you on the 21st I went underground as far as the cave in the north slide at the tunnel, and stayed there as long as the heat permitted, and could hear certain humming and cracking that convinced me that the fire continued beyond the cave and had taken new impulse with the restoration of ventilation, and there being no possibility to control it, as there is no access either from the tunnel or from the San José shaft, I could do nothing to check it, except stopping all source of ventilation, which was done immediately. It is probable that the fire is advancing northwards through the old eastern road, and as the timberwork has no solution of continuity as far north as the Providence shaft, it is to be feared that all the section of the tunnel between the south slide and the Providencia shoot will have to be condemned ; and considering that all hesitation would tend to aggravate our position, I immediately decided to start to open a new road to pass west of the Tirito shaft, and to connect with the drift on Primera Veta, and then form the breast of the latter to drive to the north-east, and connect with the tunnel beyond the connection of the two old roads in Providencia. The drivage will be at least 300 ft., and will take from 10 to 12 weeks to complete it ; but I have found no other course to pursue, and I started ou the new road on the 22nd inst. with machine drill.

BONNIE DUNDEE.—Mine manager's report for fortnight ending Feb. 28 :—We have continued the stoping from the back of No. 7 south-west level on an average of 18 ins. of reef in from 5 ft. to 12 ft. of formation. The stone looks well and should crush from 1½ ozs. to 2 ozs. per ton. The reef is still about the same size in face of stope at present. The contractors have driven No. 7 south-west level a further distance of 33 ft. for the fortnight, making a total distance from the old underlie shaft 255 ft. They had and still have particularly good ground for driving ; they will complete their contract next week. The reef has been very small, about 2 ins. or 3 ins. up to yesterday, when a new make of stone came in, and is now about 8 ins. in the face ; fair looking stone. Have sunk the winze from this level a further distance of 2 ft., making a total depth of 27 ft. from the level. As the ground continued hard it was thought advisable to stop sinking the winze and underhand stope a strip of ground one each side of winze down to its present depth. By doing this we may fiud a better run of ground to continue sinking the wiuze in. We have had an average of 15 ins. of good reef on both sides of winze since we started stoping. A trial crushing of 9 tons from this winze was completed during the fortnight for the splendid yield of 48 ozs. of retorted gold. A crushing of 325 tons of stone (the 9 tons from the winze included) was cleaned up during the fortnight for the satisfactory yield of 710 ozs. 5 dwts. of smelted gold. The estimated profit is 1,100*l.* (Cable received and published Feb. 23). The No. 2 tributers have been stoping from No. 6 south-west hanging-wall level on an average of 10 ins. of reef. They have about 12 tons of stone broken ready to pull, and expect to put through a crushing of 20 tons during the next fortnight. Have raised about 80 tons of quartz for the fortnight. About 20 tons of this is already crushed, leaving 60 tons in the stopper towards the next crushing. Water about the same. Machinery in good order.

BRATSBERG.—Report for week ending Apl. 4.—Hoffnung Mine : No. 2 adit level is now yielding ½ ton per fm. No. 1 rise in the back 1 ton per fm., and No. 2 rise ¾ ton per fm. At No. 3 level there appears to be more ore making towards the bottom of the level, but practically it is unchanged since last report, beiug considerably richer in the back of the level. We have resumed the rise in the back of this level where the lode for the present is worth ¾ ton per fm. No. 4 level is yielding only saving stuff, but its general character is exceedingly regular. Ball's shaft is carrying a lode about 2 ft. wide, containing during the last few days spots of ore occasionally ; however, we have now struck a leader of ore against the footway, which we hope will develop into something of value. At Murchison's section we have a lode worth 1 ton per fm. Johannes Mine : The level east on Howard lode for the present is unproductive, and the eastern eud is worth ½ ton per fm. The rise in the back is producing 1 ton per fm. Surface work and remarks : We have been disappointed iu several of the timbermen not coming back after the Easter holidays, as promised, hence progress with the dressing machiuery building has not gone with the dispatch we had hoped during the past week. The weather coutinues for the season very cold.—J. D. Holman.

BRITISH BROKEN HILL (Mar. 4.)—No. 1 shaft, 2nd level : The new section is getting on as well as usual. An opening is now being made on the thirteenth floor, while the bottom sets are being carried down to the sill floor. No. 2 shaft : At the first level the stoping is

being continued in the lead ore, which is being shipped at present to the Australian Smelting and Refining Co., at Port Pirie. At the 2nd level the timbering of the station is completed, and the opening sets for stoping away from it are being erected. No. 5 shaft: Only 5 ft. has been sunk during the week, as the men had to stop two days to arrange for storage of the water on the surface. The total depth is now 79 ft. below the 1st level, of which 72 ft. is timbered up. Surface: All works progressing satisfactorily.

CUMBERLAND.—Report for Jan.—I hereby submit my progress report for the month of Jan. :—No. 2 shaft: By Jan. 16 the contractors finished off, making the total depth of the shaft 772 ft. During the last 10 ft. of sinking a great change in the country was met with, the formation between the walls softened considerably, and where we left off there is 2 ft. of stone showing fair mineral, giving every indication of better stone beneath us. After the shaft was finished, the plat for No. 7 level was put in, the boilers were cleaned out, the winding engine was overhauled. Another contract being let in the meantime for the level, and the men started driving on Jan. 28, they commenced on about 2 ft. of stone, that will probably go from 8 to 10 dwts. to the ton through the mill. No. 1 winze: As you are aware we had to knock off the men here owing to an influx of water. As this has now drained, we shall at once put on two men to carry it down to meet No. 7 level as it advances northwards.—A. Gallagher.

DAY DAWN P.C.—The following telegram has been received by this company from the manager at Charters Towers, giving the result of the crushing for the fortnight ending Apl. 11, viz. :—"940 tons, 763 ozs. ; lost two days—holidays. (Estimated value, 2,594*l*.)"

— Report for fortnight ending Feb. 28 :—The output of quartz is 1,068 trucks of mineral stone and 20 trucks of brown stone. Sent to the Excelsior mill 1,104 tons. Your underlie shaft has been sunk a further depth of 11 ft., making a total depth of 97 ft. below the No. 12 plat ; there is a small make of stone coming in in the bottom of the shaft about 8 ins. thick, of fair-looking stone. Owing to the heavy influx of water caused by the late rains, progress in the shaft has been greatly impeded ; it has also hindered us from hauling the stuff broken at the 240-ft. level ; consequently very little work has been done at the latter place. The number of trucks of quartz hauled from each level is as follows :—Shaft, 2 trucks ; No. 12 level, 282 trucks ; Nos. 10 and 11 levels, 601 trucks ; No. 2 shaft : Stopes under No. 5 west level, 34 trucks ; stopes over No. 5 west level, 149 trucks ; brown stone from No. 1 level, 20 trucks ; total, 1,088 trucks. The formation is still about the same size as when last reported on ; its character, however, has undergone considerable change in the last few feet driven ; from a nice, soft, easy worked ground it has become comparatively hard, but it shoots fairly well. The stone has nearly pinched out, and is now only represented by a faint streak. The water has eased off considerably during the past week.—T. Lester.

DON PEDRO (Mar. 15).—Maquine Mine half-monthly letter:—Gold raising : All work in connection with this takes place at the two named places, viz., drivage from No. 4 and 50 cross-cut ; all other places are suspended, in consequence of not being able to get out the mineral whilst sinking Gordon's shaft. Adit level : This has been attended to as usual. Running work : A great many repairs have been done to launders at turbine station ; also a mason wall has been commenced to support pulley-stand that is conveying transmission wire-rope near turbine tail race. All other work in connection with the mine and its surfaces has been kept on.

EMERALD (COLUMBIA).—The manager at the mines, writing on the Mar. 6, states :—From the mine I have heard that all is going on well, and that 100 of the hands are employed in lowering the caual as well as widening it, rain falls of late permitting of continuing this latter work, while 30 hands are finishing the new road to the mine along the height.

ETHERIDGE UNITED (Feb. 11.)—Fortnightly report :—My last report was dated Jan. 21, and since that there have been no mails on account of the rivers being flooded. Caledonian No. 1 south mine: The south level in No. 1 shaft at the 80 ft. has been advanced 6 ft. ; total from shaft, 28 ft. ; the reef at present is very small, only being 6 ins., but the formation between the walls is 6 ft., and may turn into quartz at any time. I started a rise to connect with the old or upper workings, and is now up 20 ft. by 14 ft. ; the reef here is about 9 ins. thick, and would not pay to take out. There is about 5 ft. of a mundic reef in the bottom of the shaft, but I was unable at the time to get down for water, but now as there is nothing in the level I will try again to get down another 50 ft., and continue prospecting the present level. The mundic ore from this level has not turned out very well—from 38 tons we only got 18 ozs. of gold, and it may be that the shoot of payable ore that Prince and party have is deeper in our ground ; another 50 ft. sinking would prove it. I will forward you the plan of the mine, then you will be able to see that the angle the boundary has, and the position of the shaft, that the deeper we go we get more towards where they got their gold. I may not be able to sink for a month or so on account of the wet weather ; however, I shall try, and will inform you next report. No. 2 shaft: This shaft has been sunk a further depth of 3 ft. ; total depth, 40 ft., and the reef has been stoped out 15 ft. by 20 ft. ; it is 4 ft. in thickness. The stoping in No. 3 shaft is 70 ft. by 20 ft. ; this shaft is about worked out, and the ore is very poor. After the present crushing is over I will confine the work to the No. 1 shaft. The cause of our last crushing being so poor from the brown ore is, I think, it being so near the surface and getting mixed undiscernibly with decomposed granite, being mostly rubble and clay ; it showed on the tables very well, I thought ; it should have gone about 16 dwts. per ton, but when the boxes were opened to clean up there was very little in them. Therefore the crushing was poor all through.—M. Ferguson.

ESMERALDA (Mar. 26).—The manager reports :—The raise which connects with the south winze coming down from the 375 level of the Durand shows some very good ore. A stope was started on the ore shown in this winze, and we find there is every probability of this ore shoot having taken a wave and turned sharply to the north and east and dropped downward at a much sharper angle. Our stope is out about 11 ft., and the face carries about 15 ins. of ore that will mill 3 ozs. of gold to the ton, and it is improving in size. We will get another stope or two out to where stope No. 1 shows ore, and if we find it equally good we will surely get a milling before the end of April, which will be as soon as we can haul ore on account of the snow. There is room for the ore shoot to take a northerly strike, drop into the footwall (as now appears), and go down without coming in contact with our cross-cut below, in which case we will have 160 ft. of backs above the present lower level, and if the ore shoot increases in length it may extend a long distance north, but must go down pretty straight, otherwise we would have cut it in our raise No. 1, or one of the cross-cuts.

— Cablegram since received reports the ore above referred to as improved in quality and increased in quantity.

FLAGSTAFF (Mar. 28.)—I have the pleasure of again reporting to you the progress made in the mine during the past week. Sixth level: This is now in 55 ft., the seam of iron that I spoke of in my last report is still continuing on up and averaging about a foot wide, and is very good looking ore, but not rich enough to save as first-class, so I am putting it in a drift by itself. I have not had it tested so do not know what is its value. South drift : This is still continuing to turn out a fair quantity of first-class ore. We have raised on one pipe, 14 ft., the ore at this height seems to take a turn downwards. It is 5 ft. long and 18 in. wide. There are six other pipes here, they average 6 ins. up to a foot in diameter. Seventh level : I have found a small seam of good ore here. I think from the look of it, it is the best ore I have seen in the mine. I do not know yet what it will amount to, as I have not had time to open it up, but will let you know more by next mail. It is in a cross-cut which runs north from what Gundersen called the mineral winze that comes down from sixth level. It is about 300 or 400 ft. from the shaft, the seam is from 5 to 6 in. wide. We have taken out 10 sacks from it. It is very nearly solid silver-lead and yellow crystallize carbonates. The winze is now down 26 ft.; there is no change to speak of. Number of tons mined the past week, 15 tons, being 9 first-class and 6 second.—A. L. Swope.

FRONTINO AND BOLIVIA (Apl. 17).—In confirmation of the circular to the shareholders dated Mar. 9 last, giving the estimated excess of returns for Feb. month at about 2,700*l*., as telegraphed by the manager, the directors have now received advices from the mines showing the produce and cost for the month as follows, viz. :—Produce, 7,219*l*. 17s. 6d. ; cost, 4,501*l*. 18s. ; estimated excess of returns, 2,717*l*. 19s. 6d.

GYMPIE GOLDEN CROWN.—Report for fortnight ending Feb. 26 :—Since my report of the 12th inst. work on the Crown and March reefs has been carried on as usual, and from our washing up on Wednesday, the 25th, 350 tons of stone gave a return of 198 ozs. 7 dwts. smelted gold. The stone on the Crown reef is rather poor at present, and we are now crushing with five head on stone principally from the March reef, which is showing fair gold. Lease No. 777, two mile—Main shaft: The cross-cut east at the 210-ft. level is now advanced a total distance of 263 ft. We are now under the outcrop of the John Bright reef, which must either have an easterly underlie, or has been thrown east by a cross-course. On the Peter and Paul reef, the south drive is being continued. Stope north and south above the break are also being carried in, in the north, and drives, which is just below the slate break, the reef has been broken down ; the reef is about 1 ft. in thickness, and shows a little gold, but no reef has yet been broken down in the stopes above the break, where the gold was met within the rise. At the Eastern shaft, the cross-cuts which are being carried in east and west at the 130-ft. level are now advanced a total distance of 78 ft. each way.—T. Ramage.

HARRIETVILLE (Mar. 6.)—Fortnightly report: The following progress has been made during the past fortnight, viz.:—Mons Meg Mine : The rise on new shoot north of tunnel J has advanced 14 ft.; total, 21 ft. This rise is on the hanging-wall portion of the lode, which shows a little gold throughout. The shaft on the main shoot below the level of tunnel J has been sunk 5 ft.; total, 25 ft. ; the lode here is 1 ft. wide and shows gold very freely. In consequence of heavy influx of water we have had to suspend sinking pending the arrival of a Blake's pump, which will be worked by air from the compressor. The north drive 170 ft. above tunnel J has advanced 16 ft.; total, 82 ft.; the lode is 3 ft. wide and carries very good gold. The drive north of tunnel K has been extended 21 ft., making a total of 292 ft.; the lode is 6 ft. wide and carries a little gold throughout. South Mons Meg Mine : The rise at the back of the lower level south of No. 3 tunnel has advanced 20 ft.; total, 160 ft. ; the lode is small but carries a little gold. Guerdon Mine: Tunnel J has advanced 19 ft. towards the Guerdon ; total, 440 ft. from Mons Meg lode. The ground consists of hard sandstone, traversed by veins of barren quartz. We should tap the Guerdon main lode in a few days. Tiddledee Mine : The drive south of tuunel D towards Mons Meg has advanced 36 ft. ; total, 952 ft.; the lode is 5 ft. wide, but poor. New Lease : The shaft on the new shoot south of tunnel D has been sunk 9 ft.; total, 39 ft.; the lode is 5 ft. wide, and continues payable, and to produce some good specimens. The drive south-east of tunuel C towards new shoot has advanced 42 ft.; total, 177 ft.; the lode is small and poor as yet. The drive south of tunnel B towards new shoot has advanced 39 ft. ; total, 183 ft. ; the ground is softer than hitherto. Surface : The drive north of the shallow tunnel near tunnel D has advauced 5 ft. ; total, 38 ft. ; the lode is small and poor. The cross-cut east of the same drive is in 7 ft., and is intended to prospect the hanging-wall, as we should ere this have met with the continuation of the auriferous shoot discovered at the surface. Returns : The following are the returns for the past four weeks, viz. : —Mons Meg : 525 tons ore, and 75 tons poor sand, yielding 310 ozs. 10 dwts. Trial crushing, new shoot : 125 tons, yielding 14 ozs. New lease : 343 tons ore for 80 ozs. gold. Pyrites, 32½ tons, yielding 210 ozs. 18 dwts., making a total of 1,068 tons ore and 32½ tons pyrites treated for a yield of 615 ozs. 8 dwts. of melted gold. We have also saved 10 tons pyrites, assaying 4 ozs. per ton. Wheeler's pans : Since changing the shoes and dies in the pans we have still improved upon the results from treatment of pyrites ; the extraction for the past week being equal to nearly 90 per cent. of the assay contents. Furnaces : The roasting furnaces are working well, and the men are very attentive to the roasting of the pyrites. Machinery : All the machinery at mines and mill is working very satisfactorily. Drills : We have now a good set of men at the rock-drills, who, although their number has been reduced, are maintaining the average driving. —T. G. Davey.

KANGARILLA PROPRIETARY (Apl. 16).—Advices from Mr. Rosewarne, dated Mar. 10, just to hand, state that the deep adit level has intersected the lode, and that the 180 ft. level north at the bottom of the mine was being rapidly pushed on to meet it, and it was expected that the intervening ground would be driven through in about a fortnight from that date. When this work is accomplished, ventilation will be secured, and the adit tunnel will become the main outlet of the mine. A winze is being sunk in the bottom level on a good body of high-grade sulphide ore. As soon as the

180-ft. level and the adit tunnel are connected, Mr. Rosewarne will start contracts for stoping away the ore. All surface work is being pushed on, and the buildings for the machinery are in active progress. Mr. Rosewarne also reports that the engineers who are making the machinery, will be prepared to deliver it by the time the foundations for the same are built and ready to receive it.

MAMMOTH.—The manager reports that during week ending Mar. 22 south drift 350-ft. level was extended 27 ft. Face now beyond main ore shoot, as shown on 300-ft. level. Vein is stronger, and this shoot, as is the case all through the mine, is increasing with depth, in width, extent, and value. Drift north, same level, extended 14 ft., is being driven on foot-wall of vein all in ore. Developments on this this level highly satisfactory, exceed expectations, and give promise of good showing on 460-ft. level.

MYSORE REEFS (Mar. 25).—Fortnightly report.—Harvey's shaft: This shaft has been sunk during the past two weeks 8 ft., which makes a depth of 35 ft. 2 ins. below the 460-ft. level; the rock is extremely hard, we can hardly get the steel to stand to drill it. Winze below the 460-ft. level has been sunk 4 ft.; now 18 ft. 3 ins. below the level; a little more black rock and arsenical pyrites is intermixed with the quartz. This I am hoping will improve its value. A sample of the quartz gave, according to assay, 5 dwts. of gold to the ton. The 400-ft. level south has been advanced 6 ft.; now 77 ft. 11 ins. from shaft; the width of the lode is more than the size of the end. There is quartz and pyrites standing both east and west of the drivage. Unfortunately, it is of low grade, worth, according to assay, 5 dwts. of gold to the ton. Prospecting shaft north of Harvey's: We have commenced a cross-cut east from the bottom, which is extended 17 ft. 6 ins. —M. Scantlebury.

MYSORE-WYNAAD CONSOLIDATED.—The mining manager reports for the fortnight ending Mar. 25:—Tank Mine—North shaft: This shaft has beeu sunk 10 ft. 9 ins., making a total depth of 136 ft. 3 ins. from surface. This is good work for hand-labour, but I hope to improve upon it with the rock-drills, which are being started today. There is no change in the shaft; the hanging rock is hard, but in the foot it is very loose, but I think this shows that the old workings are close to the shaft, and still going down. South shaft: This shaft has been sunk 3 ft. 9 ins., making a total depth of 68 ft. 9 ins. from surface. The last week has been taken up timbering some of the ground which was not quite safe, and the shaft required close timbering down to about 50 ft.; below that I do not think any more will be required than is necessary to divide the shaft from the skip-roads. I expect the timbering will be finished, and the skip-roads carried down in about a week, when we shall start a rock-drill.

NEW DEVALA-MOYAR (Mar. 24.)—Bottom winze: This winze has been cleaned out aud a drill put here; sinking been resumed. We have been busy all the week cutting through the reef to the hanging-wall as the footwall runs out flat. We have cut through the reef which is 10 ft. wide, and we have now got both walls. The reef appears to be again dipping down, and we are following it; at present there are one or two slips of black-rock intermixed with the reef, but I look on this as of little moment; assay, 7 dwts. 20 grs. The stope in the 116-ft. level continues upwards in a fine large reef of from 10 to 12 ft. wide, which is yielding a large quantity of stone for the mill; assay, 11 dwts. 18 grs. gold. The underhand stope in the 78 level is not in such good stone as I expected to find, the reef being disordered and mixed with country rock, but we shall get better quality stone as we get eastwards, and we are pushing on with the drill to hole into the 116-ft. level stope; assay, 6 dwts. 12 grs. In the overhand stope in the 78 level we have holed into the drive west, leaving an arch of quartz on the wiuze 100 ft. west, and this facilitates the removal of our quartz to the winding-shaft. The westward extension of this stope has opened up a fine piece of good quartz, certainly much better than I expected to find from what we had in the drive west; assay, 9 dwts. 3 grs. Crushing is being carried on at the mill, and we shall clean up at the end of April.—R. B. Johnston.

NEW HOOVER HILL.—Report for March.—Provost shaft: Driving south at the 50-ft. level advanced for the month 10½ ft.; there is no change to note in the end, but there is still plenty of low, grade quartz. Following the various streaks of ore below this level it has improved since my last; the ore appears to be coming in on the east side. We have a good deal of water, and we are keeping it down with hand pump and bucket. The mill ran for the month six days, crushed 128 tons of ore, yielding 45.485 ozs. of bullion, which I am shipping you.

OSCAR (Apl. 11).—Hodgkinson lode: The shaft has been deepened during the week nearly 2 metres. The lode in bottom holds its usual width with about 2 ft. of quartz. The quartz is not showing so much mineral to-day, as when reported on last week, though the assays show the quartz to maiutain its value. General samples of lode quartz have given an average value of 11 dwts. 13 grs. The quartz in 200 level north has somewhat increased in width, though with a decreased quantity of galena—the assays have not run high—average samples assaying from 3 dwts. 9 grs. to 10 dwts. 6 grs. The 200-ft. level south is being driven in quartz, its whole width, 5 ft. The quantity of same has, however, not improved, assaying only 2 dwts. 17 grs. Hewlett lode: The level driving south is showing quartz nearly 2 ft. in width, of a very healthy appearance, carrying both copper and iron pyrites. Assay value 9 dwts. 12 grs. gold per ton. The quartz in level north has narrowed to 3 ins.; an early improvement may be expected at this point.

PINOS ALTOS.—(7th Mar.)—The manager writes as follows:—The 16th level east was driven 5 ft.; assays, foot-wall side, $36.42; hanging-wall side, $15.96. The 16½ level west was run 4 ft., assays, foot-wall side, $36.18; hanging-wall side, $16.71. The 17th level east was run 4 ft.; assays, footwall side, $11.18; hanging-wall side, $8.65. I intend to put air-drills in this drift as soon as I can find competent men to run them, as it is important to run out east as fast as possible. The 17th level west was run 17 ft. by air drills. As now we need be no longer delayed on account of water, I intend to continue driving east and west on the 17th level to prospect the ledge for ore beyond our present workings, and have no doubt that both east and west we shall find further bodies. We have now got the windlass station in position in the main shaft, aud brought down our other track to the 18th level, and shall recommence sinking iu a few days. In the mill department I have just installed a new mill boss, besides changing some of the *employés* and assayer. Mr. Holling has resigned his position, not feeling capable of attending properly to his business any longer owing to ill health. The tunnel has been going on slowly, as the contractor has not been able to get a full complement of men, but now he has a full set. The face is still in quartz, but drier than for some time. Only 11,720 gals. of water were pumped, and the water seems to be diminishing rapidly each week. On the 18th ult. he reports on work done during the week ended 14th ult. as under:—The 16th level east was run 5 ft. 5 ins. The ore is very good in the face. The 16½ level west was run 3½ ft. The face shows good ore. The 17th level west was advanced 14 ft. 5 ins. with air drills. This drift has now passed the winze from the 16½ level, and we are opening out the level round the winze. The 17th level east was running on in poor ground so before going further I gave orders to cross-cut towards the footwall to see if the ore did not lie further over in that direction. This cross-cut was driven 5 feet. The main shaft was sunk 3 ft. Only 9,448 gallons of water were pumped during the week, this being probably the last water we shall have to pump from the mine as the water seems to go off all right through the sink in the 17th level west, of which I wrote you before.

RUBY.—Report upon the mines for the week ending Mar. 28.—Dunderberg Mine: We have seven men on day's pay and 10 tributers at work here. No change of any note in the pitches. The 800 ft. drift looks more favourable, and we have advanced 20 ft. during the week; total, 88 ft. Lord Bryon: We have 26 tributers and two men on day's pay at work here. Fair progress is being made in the upraise to connect it with the winze. Bullwhacker: We have four men at work here. No change.

VALLEY.—Advices received from California on the 13th inst. show that up to Mar. 20 the cut had been carried 300 ft. further up the valley. The gravel has varied from 4 ft. to over 5 ft. The valley has also been cross-cut. The water is ample—in fact, is more than enough, as it keeps the flume and boxes chock full. The gravel is fairly good, quite up to the 3s. average. Advance would be much more rapid were it not for delay in carrying along the deep bedrock cut, which must be done by hand labour. When the bedrock sinks, the difficulty with the cutting will immediately disappear, and should auy suddeu dip in it occur, the manager expects the quality of the gravel will be even better than at present experienced.

VISHNU (Mar. 27).—Since writing you on the 22nd, we connected the Vishnu raise with the old incline. The distance up from the cross-cut being 130 ft., we now have in sight 12 ins. of rich ore. The vein is 3 ft. thick, and from present appearances will mill $25 per ton taken out as it comes from the ledge. This is a very important fiud. It is not the vein they worked on in the old incline, we are under them some 6 ft. We also have the old vein over us, which shows large quantities of low-grade ore, which would not pay to mill in early days. Most of this ore ought to pay a profit now. If nothing happens we will start up the mill about Apl. 5. I do not see any reason why we cannot keep from 20 to 30 stamps running pretty steady when we get our grouud opened up. Although the prospects for the Vishnu are quite flattering, we are all feeliug much better since our late find, and hope everything will run smoother in future, and that bullion shipments will soon follow.—G. McCornick.

REPORTS OF MEETINGS.

SILATI RIVER GOLD MINING CO.

TWO EXHAUSTIVE SPEECHES, WHICH CONVEYED LITTLE INFORMATION OF A DEFINITE CHARACTER—MR. ALFORD'S REPORT CRITICISED, BUT HIS FACTS UNSHAKEN.

An extraordinary general meeting of the shareholders of this company was held yesterday at the City Terminus Hotel.

Mr. C. V. A. Conybeare, M.P.,

presided.

Mr. Fox, the secretary, read the notice conveniug the meeting.

GLOOMY ENOUGH.

The Chairman: Ladies and gentlemen, I think I may congratulate you upon the fact that, whatever the future may have in store for us, we meet to-day, at any rate, under less gloomy circumstances than when I last had the privilege of addressiug you on Oct. 14. The very able and exhaustive reports of Messrs. Wrey, Halder, and McNellan on your property, which have been printed and circulated amongst you, and to which I hope you have devoted some careful study, backed up as they are by the highly satisfactory accounts we have recently received from our indefatigable manager, Mr. L. Pedersen, and the undeniably rich results of our crushings up to the present, should convince the most sceptical that we have a valuable property, which only needs skill, industry, and perseverance to make it highly productive. Our prospects for the future are doubtless far brighter. But we must not too early congratulate ourselves that our difficulties are at an end. For the persistent attacks upon your property by certain sections of the Press day by day raise up fresh obstacles which enormously add to the difficulties of our task, and, as you may easily believe, harass us with needless worry and anxiety. Fair and honest criticism we neither fear nor object to, but we have just cause to complain of the libellous insults of prints like the *Star* newspaper, which flaunts before the public eye untruthful paragraphs headed in the biggest type "The Silati Swindle."

SILENT SUFFERERS.

If, gentlemen, we have not taken legal proceedings against this notorious sheet it is only because we preferred to suffer in silence until we could appeal, upon the evidence of indisputable facts, to the fair-minded common sense of our shareholders, if not to the public at large, rather than risk wastiug a penny of your money upon punishing a pigmy print scarcely worthy of our powder and shot. We appeal confidently to your judgment upon the facts we are now in a position to lay before you, and if they do not satisfy most people that the attacks upon our property are as uufounded as the aspersions on ourselves, I cau only add that there will always be soue who will refuse to believe, though one should rise from the dead to convince them. It will be recollected that Capt. Williams commenced work after a long delay, owing to the unusually wet season, in the middle of May last year. From that date till the arrival of Mr. Henderson's party he was supposed to be developing the mine in a miner-like fashion.

What was there to show for those seven months of expenditure and labour? At the Swiss reef an adit tunnel 350 ft. long; draining Nos. 2 and 3 shafts to a depth of some 42 ft., and the emptying of No. 2 shaft down to 50 ft. Houses: Two iron houses for men's quarters, &c. Battery: Huntingdon mill in course of erection at a most unsuitable spot. Water: A small dam and a water furrow to the battery, which could not bring water to it. Prospecting: A little burning of grass, scratching of soil, and cutting of trenches in a desultory and unsystematic fashion, of which no details were vouchsafed to the London board. The shafts on the Swiss and Laing's reefs had been started before Capt. Williams' arrival, and were no more than prospectors' shafts, with the exception of No. 3, which had been started as a regular mine shaft after the collapse of No. 2, owing to the heavy rains. I wish to the best of my power to set at rest once for all any doubts that may still exist in any minds as to our possessing in the farm, Burghersdorp, a valuable property, with at least two important gold reefs, undoubtedly of true fissure formation, and of highly productive quality. As to the first, you, are of course aware that at the moment of gloom and difficulty into which Mr. Alford's report plunged us all, the Oceana Co. came forward with a spontaneous and generous offer to transfer to this company "upon terms to be agreed upon between the two boards," the Blauwberg block of six farms.

THE OCEANA "SOP."

I will refer you to what was then said on this subject, and to what Mr. Pasteur said at the subsequent meeting of the Oceana Co. The question has been very carefully and anxiously considered, and the opinion of counsel (Sir Horace Davey) taken, with the result that the Oceana board were advised that such a transfer could only be effected as a *bonâ fide* sale. Well, that being the case it would become the duty of the Silati to consider whether it should accept the offer on those terms. As a bargain between the two companies, this transfer may yet some day be effected. I do not wish now to say anything which would have the effect of committing us either for or against the proposal. All I would now remark is that Mr. Alford's theories as to the worthlessness of our property having been blown into the limbo of other fallacies by the irresistible force of the dynamite, which has given us not (as he said) a paltry 50 tons of ore, but up to date some hundreds of tons, giving 3 to 4 ozs. per ton of smelted gold from the Swiss reef, and about ½ oz. per ton from Laing's reef, and some thousands of tons of ore in sight. The question of our accepting *in forma pauperis*, so to speak, the offer made to us practically as a free gift from our parent company can no longer be entertained. It becomes a question whether the working capital of this company will not be better employed in developing our undoubtedly rich property of Burgersdorp, and providing additional machinery to work our reefs, and also in prospecting and developing the adjacent farms of the Oceana Co. with a view either to flotation into separate companies or working on joint or mutually agreed terms the reefs, which we have every reason to believe will be found to be payable on them, rather than to devote our capital to the prospecting of farms more than 100 miles away from Silati, and which may or may not prove to be rich in minerals. As to the future, we shall, of course, be guided mainly by the valuable advice contained in the reports of our engineers, and of our manager on the spot.

OTHER DISCOVERIES.

Although I have not dwelt upon it, you will gather for yourselves from the reports that there are numerous other croppings of auriferous deposits, many of which give very encouraging prospects of gold, to which I may add that upon several of the other five farms we have discovered even more promising indications, as *e.g.* Delaney's strike on Tours, which, according to our last cable advices, shows alluvial 5 dwts. per ton and reef 10 dwts. And again a highly important piece of information has just been cabled to us that at Finn's workings "a strike has been made rich in visible free gold." I am the more satisfied with this information (as I believe you, gentlemen, also will be) from the fact that Mr. Wrey in his report advised that the then indications do not warrant any further work being carried on," which proves how careful our engineers were to understate rather than overstate the facts in their reports. But, still more, because, from its position this new and important discovery would appear to be either an entirely new reef, or else an extension of Laing's. In either case it is making for a junction with the Swiss close to the dyke, so that whether it be a counter lode or an extension of Laing's we may expect at the junction to find a highly auriferous deposit. The chairman concluded by introducing Mr. Henderson, whom he asked to address the meeting.

ALFORD *v.* HENDERSON.

Mr. Henderson, in the course of a very exhaustive essay, which took nearly an hour to read, criticised Mr. Alford's report in very strong terms. He (the speaker) had no doubt Mr. Alford was unwell and knocked up by the trying journey he had made, but that was no excuse for reporting upon what he had not seen. The facts were these:—They had bought the property believing they possessed the Swiss reef. This had been denied. Investigation had shown that they had what they bought. In addition, they had the Laing's reef, a valuable property in itself. Still further, they had other reefs of value of which they (presumably the directors) did not know at present. They had the government contending to make a proclaimed goldfield, but holding back in courtesy, and they had for the money they had expended the right to deal with the valuable property of Tours. The hard facts were that this denunciation of their property instead of lessening the value of it had led to a proof, after investigation, that they had a property

PRESUMABLY

worth a great deal more than they had paid for it, and Mr. Alford's condemnation, like Balaam's curse, had proved a blessing.

Mr. Henry Knight proposed a vote of thanks to Mr. Henderson and the gentlemen who had made the reports.

Col. Fludyer seconded the motion, which was carried unanimously.

Mr. Douglas proposed a resolution that the ordinary general meeting should be held during the month of October or November.

The motion was carried, and the proceedings closed with a vote of thanks to the chairman.

SABI OPHIR MINING CO., LIMITED.

INCREASE OF CAPITAL BY CREATION OF 40,000 NEW SHARES.

The first annual general meeting of this company was held yesterday at Winchester House.

Major Genl. N. T. Parsons

presided.

The Secretary (Mr. Elkington) read the notice calling the meeting, and the report of the directors was taken as read.

The Chairman, in moving the adoption of the report, said that he regretted to say that Mr. J. Leverson, a member of the board, had been obliged, through ill health, to leave London, and also that Mr. H. Fletcher, who was really the chairman of the company, had been obliged to go to the Cape on important business, but he expected to be home next month. There was very little he had to say on that occasion, as

THE WHOLE OF THE INFORMATION IN THE POSSESSION OF THE BOARD HAD BEEN EMBRACED IN THE REPORT,

and all that had been done from the time the unfortunate expedition went out. The date of the meeting had been postponed until the return of the company's agent from South Africa, as the board thought that he would be better able to give information as to the prospects of the company. The expenditure on

THE ABORTIVE EXPEDITION

was 5,257*l.*, and the other expenses amounted to 2,500*l.*, which was for 22 months, and included office rent, salaries, directors' fees, printing and stationery, sundry expenses, and cablegrams, and also 1,114*l.*, the expenses of Mr. E. Kergariou. They would hold an extraordinary meeting at the end of that meeting for the purpose of increasing the capital of the company. That increase would only be made if required for special purposes. He was glad to inform them that

THEY HAD SECURED THE SERVICES OF A MINING ENGINEER,

who had been very highly recommended. It would be necessary shortly to make a call upon the shares, and it was proposed to call up the balance unpaid in amounts not exceeding 2s. at considerable intervals. The directors would do all in their power to obtain a satisfactory result, and to work the property as quickly as possible, and he trusted that next time he had the pleasure of addressing the shareholders, the Sabi Ophir would have taken a premier position amongst the mines of South Africa.

Mr. Pemberton seconded the resolution, and said that he thought they had

A VERY VALUABLE PROPERTY,

which only required development to make it a success. There was always a certain amount of dead work in opening up a gold mine, but he thought that that work would be done in 12 months.

A somewhat protracted discussion followed upon the accounts, Mr. Cassell asking several questions with regard to the different expeditions which he complained had not been sufficiently explained, and also expressed his opinion that the expenses in London were too high.

The report was then put and carried with three dissentients, an amendment, moved by Mr. Cassell, being lost.

Mr. Osborne having spoken as regards the development of the property,

Mr. J. Oakley Maund said that he thought the directors had done their best for the company, and he would not complain until they had done much worse than they had up to the present. He thought if a mining expert joined the board it would be much better for the company.

CONFIDENCE OF MR. MAUND.

He thought that the company would be paying a splendid dividend not very far hence. He had had some of the ore assayed, and gave very rich results, and he had every confidence in the mine. He had bought his shares at a much higher price than they stood at at the present time. Other formal business having been transacted

AN EXTRAORDINARY MEETING

was held, at which the following resolution, viz.:—

RESOLUTION.

"That the capital of the company be increased to 150,000*l.* by the creation of 40,000 new shares of 1*l.* each."

Mr. Pemberton seconded the resolution, which was carried unanimously.

A vote of thanks to the chairman closed the proceedings.

WEST SETON.

SOLD FOR £3,250.

Mr. W. T. Davey held an auction sale at West Seton account house Wednesday, when the mine was offered in one lot, including two pumping engines, two whims, a stamp engine, pit work, &c. There was a very large attendance. After reading the conditions of sale, the auctioneer explained that the mine had made 23,000*l.* in dividends in the copper days, and said everybody believed there were large deposits of tin below.

It was announced that Mr. Conybeare, M.P., had written asking if a week's grace might be given so as to enable him and his friends to make an effort to resuscitate the mine, and that Mr. Strauss had offered to take 700 of the reliuquished shares if the others would be taken up.

Mr. W. H. Rule: If Mr. Strauss takes 700 and Mr. Conybeare 700, I will take 100, and we may go on. (Applause.)

The sale was then proceeded with, and the first bid was made by Mr. John Mayne at 2,500*l.* After an interval Mr. John Holman, of Camborne, bid 2,600*l.* Successive bids were then made by Mr. Mayne of 2,700*l.*, Mr. Holman of 2,800*l.*, Mr. W. H. Rule of 2,900*l.*, and Mr. Holman of 3,000*l.* There the competition ceased, and no other offer was obtained for a considerable time.

The AUCTIONEER said he was not there to talk politics, but 3,000*l.* was nothing for a gentleman who aspired as a candidate for the division. Here was a chance for Mr. Strauss, Mr. Conybeare, or anybody else.

As no other gentleman made a bid, the auctioneer announced the reserve price of 3,500*l.* After some time Mr. Holman offered to split the difference and give 3,250*l.*, and his bid was accepted.

PRESIDENT LAND AND EXPLORATION CO., LIMITED.

THE ADJOURNED MEETING—RETIREMENT OF THE CHAIRMAN—LIVELY PROCEEDINGS.

THE adjourned general meeting of the President Land and Exploration Co. was held on Thursday, at Winchester Hotel, Old Broad Street.

Mr. John S. Prince

presided.

RESIGNATION OF MR. NEWTON.

The CHAIRMAN: Gentlemen, in consequence of the resignation of our late chairman, Mr. Newton, I have been requested to address you, and in doing so I must express, on behalf of my co-directors and myself, our great regret at his resignation. The day before yesterday we received a letter from Mr. Newton, which I will read to you. It runs as follows:—

"In view of the refusal by the shareholders at the annual general meeting held the 2nd inst., to adopt the report and pass the accounts as presented by the directors, I beg herewith, in accordance with my intimation at the above-named meeting, to resign my position as a director of the President Land and Exploration Co. (Cheers.) As the amount of directors' fees is the only matter in controversy, my withdrawal from the board will facilitate giving effect to the shareholder's wishes. I shall, at all times, be happy to afford the company any assistance in my power, and remain, &c."

That is the letter we have received, and before proceeding to the formal business of the meeting, and about which I think there need not be any great detention. I should like to say a few words upon the question of remuneration of directors, upon which there was some discussion at the last meeting. Taking into consideration the views expressed by certain of the shareholders, the directors have fully considered that matter, and I think it may save needless discussion if I place you at once in possession of our views in the matter. (Hear, hear.) The board will first have to consider the re-election of a successor to Mr. Newton. Then the board proposes to undertake the duties as heretofore for the current year, or until such time as the company is in a dividend-paying position for half the amount fixed by the articles of association. (Cheers.) Having said this much, I do not think there is anything else to say. I, therefore, at once move the adoption of the report and accounts as presented to you.

Mr. BENSTEAD seconded the motion.

SHAREHOLDERS STILL DISSATISFIED.

Mr. MUNRO: Will you allow me just to say that it is rather with regret we hear of the retirement of Mr. Newton. I want to ask whether the action of the directors is to be retrospective. Is the amount for the first 14½ months still in dispute? Mr. Newton spoke well, and evidently meant well, as the chairman of our directorate, but when he put his hand on 1,200*l.* per annum as the remuneration for 12 months for the board of directors, he acted properly. This reduction, if it refers only to the future, is ridiculous, and we should be very stupid to accept such terms. By the articles of association I find we could not legally withhold what was their right according to our articles, but those articles sprang a mine on me. I tell you, gentlemen, the secret of the position is this: When this company was launched affairs in South Africa were booming, and the excuse for the directors drawing such extravagant fees lay there; but now things are different, and we are all under a cloud, and under the peculiar circumstances is it not reasonable that you, as a board of directors, should say that the change shall be retrospective. There has really been nothing done. I do not like to look you in the face and feel you are going to fleece us. (Laughter.) Two of the directors are part vendors of this concern. What we really want is that you should curtail your ideas slightly under 600*l.* I was going to propose that the two gentlemen who resign by rotation should not be re-elected, and we should be content with three directors. I should then move that the remuneration be 100*l.* for each director until we get 10 or 20 per cent. We cannot bear the thought of being done.

Mr. TAPP: There is a proverb which says:—

"LET BYGONES BE BYGONES."

It was uot until the last meeting that the last speaker took the trouble to go and get the articles of association. Those articles state distinctly the terms upon which the directors are willing to work. I think the directors have met us very fairly. They have agreed to do the work for half the money.

A VOICE: There is no work to be done.

Mr. TAPP (continuing): I do not believe that any directors who are not well paid will do the work. I must propose that the directors' offer be accepted.

THE POSITION IN A NUTSHELL.

Mr. WOODHOUSE said he entirely disagreed with the last speaker. The whole position lay in a nutshell. The directors and their shareholders ought to work harmoniously to a common end. In order to do that their offer must be retrospective. He could not see that the duties were of so onerous a character that such high fees should be demanded. He proposed that the articles of association be altered into these terms:—"That the directors do each receive an annual remuneration of 100*l.* until such time as the company is paying say a dividend of 5 per cent."

The CHAIRMAN: It would be necessary to call a special meeting to alter the articles of association.

A SHAREHOLDER: I understand the last meeting was adjourned for the specific purpose of allowing time for the directors to consider what they would do with this specific charge of 1,446*l.* Until this is settled we cannot pass the report. The question is whether the directors will waive this claim.

A SHAREHOLDER: Considering the figures in the report, and considering that you, sir, are one of the vendors of this company, surely you will meet the company in this matter.

Mr. HOUSEHOLD: Is the Mr. Newton, who has resigned, the same Mr. Newton who is an alderman of the City of London?

The CHAIRMAN: Yes.

Mr. HOUSEHOLD: The inference I draw then is that Mr. Newton as chairman of this company, and alderman in the city of London, was not above taking 400*l.* or 500*l.* a year for fees, but when he thinks they are likely to be cut down to 100*l.*, he skedaddles from his position.

THE DIRECTORS REMAIN IMMOVABLE.

A SHAREHOLDER: Will you, sir, give us an answer as to this amount charged?

The CHAIRMAN: The directors do not refer to the past.

Mr. FRANKL: After your answer that you refuse to return any part of such a tremendous sum of money for work which any clerk at 10s. a week could do, I advise the meeting not to pass this report, but make all the directors resign and elect business men, who will work for merely a nominal sum, such as a guinea per meeting. (Laughter.)

Mr. BENSTEAD: As seconder of your proposal that the balance-sheet be accepted, I want to say I did not second the proposal merely to push the matter on. I seconded it because I felt you had reduced your fees. I certainly came here with the hope that I should hear you had decided to reduce to half the amount the sum charged in the accounts—(hear, hear)—but you have not done it, and we cannot get out of paying it. You, as gentlemen, I presume, have done a great deal of work for your money. (Cries of "No.") I certainly think we might now proceed to business without further trouble.

Mr. MUNRO: These disparaging remarks I abominate. We do beg of you, as gentlemen, unless you are going to have our esteem sent to the winds, to reduce your fees. I am sure nothing will then give us more pleasure than to pass the balance-sheet at once. Our esteem will grow in you as our directors, as well as faith in our property.

The CHAIRMAN: I think this matter has been fully discussed, and I now propose to put the resolution formally to the meeting. If we find the company does not progress as well as we would wish, it is possible we shall

REDUCE THE FEES STILL FURTHER,

or take nothing at all. I wish you gentlemen to trust us to some extent.

The motion was then put to the meeting, 22 hands being held up in its favour, and 28 against it.

Mr. BENSTEAD: I demand a poll.

VACILLATING SHAREHOLDERS.

Mr. MUNRO: We do not want a poll. I suggest the motion be put again.

A SHAREHOLDER: I think Mr. Munro should speak for himself. We have the courage of our convictions, and if a poll is demanded we will abide by it.

A SHAREHOLDER: I think we should all think carefully before filling up our voting papers. To throw out the present board would be to wreck the company. We have got

EXPERIENCED MEN AND GOOD MEN.

Good men cannot be sat upon beyond a certain point.

The CHAIRMAN thanked the last speaker, and said if he had not got so large an interest in the company he would feel inclined to resign forthwith. He had had large experience in South Africa, and had seen the progress of land companies there. He felt it was simply a question of time. The price of land was going to rise. If the shareholders thought his services were no use to the company he would willingly resign. (No, no.)

Several SHAREHOLDERS requested the chairman to put the motion again.

It was, therefore, put to the meeting, and carried amidst cheers, with only four dissentients.

The re-election of Mr. George Reid was then proposed, and carried unanimously.

The auditors were re-elected, and the proceedings closed with a vote of thanks to the chairman.

DE KAAP GOLD MINES, LIMITED.

DIRECTORS, BEING UNABLE TO DECLARE A DIVIDEND, HAVE A FIGHT AMONGST THEMSELVES.

AN extraordinary general meeting of the De Kaap Gold Mines, Limited, was held yesterday, at Winchester House, for the purpose of (1.) "Declaring the places of Messrs. Graumaun, Hosking and Dixon on the board vacated, and of filling up the vacancies thereby caused." (2.) "If thought fit, rescinding by a resolution proposed to be subsequently confirmed as a special resolution, article 79 of the company's regulations, and adopting a new article in place thereof." (3.) "If thought fit, increasing the capital of the company to such an extent as may be determined, and attaching preferential rights, both as regards dividend and capital, to any such increased capital."

Mr. W. F. Turner

presided.

Mr. DIXON, at the commencement of the proceedings, handed in a protest against the meeting being held, and all resolutions to be proposed at it, on the ground that the notice convening the meeting was not duly authorised by three duly-elected directors of the company, and that the notice was not issued in accordance with the articles.

The CHAIRMAN moved: "That Messrs. William Davison and Arthur Hibbert be and they are hereby appointed, jointly with Messrs. W. F. Turner and Henry H. Thompson, to be directors of the company, in the place of Messrs. Hoskiug and Dixon, whose places on the board are hereby declared to be vacated."

Mr. THOMPSON seconded.

Mr. DIXON said that the day after the last meeting Mr. Hosking and he received an extraordinary letter from the company or from

Mr. Turner, asking them to sign a paper for appointing, in accordance with a resolution passed at the late general meeting of shareholders, Messrs. Haldinstein, Thompson and Hibbert as directors in lieu of the previous directors, which were, of course, themselves. He characterised such action as idiotic. Mr. Dixon was proceeding to protest against the discreditable manner in which Mr. Hosking and he had been

KICKED FROM THE BOARD,

when

Mr. Haldinstein, intervening, said: What do you want, Mr. Dixon?

Mr. Dixon: You are a rude individual. You shut up. I thought you were in Paris, and I wish you had stopped there. (Laughter.)

Mr. Hosking, after remarking that he had been highly praised at the first meeting and then shunted to make room for Mr. Rait's nominees, contended that the election of certain members of the present board was not legal, as in their case the requisite seven days' notice had not been given.

The Chairman said he, personally, could make a good deal of allowance for gentlemen who felt so strongly as Mr. Dixon and Mr. Hosking appeared to do, although he could not understand the injustice which had been done them.

On being put to the vote, the resolution was declared carried, with four dissentients.

Mr. Dixon demanded a poll, which the Chairman fixed to be taken at the conclusion of the meeting.

After some discussion, the following resolutions were agreed to:—"That article 79 of the company's articles of association be and the same is hereby rescinded, and that in lieu thereof the following shall be a regulation of the company:—'The board shall be entitled to receive out of the funds of the company by way of remuneration in each year such sum as the company in general meeting may decide.'" "That the capital of the company be increased by the sum of 20,000*l*., divided into 20,000 shares of 1*l*. each, and that such shares be issued as preference shares, entitled to a cumulative preference dividend at the rate of 25 per cent. per annum on the amount credited as paid up thereon respectively, and entitling the respective holders thereof, in the event of the winding up of the company, to be repaid the amount credited as paid up thereon respectively before any payment shall be made in respect of the capital of the company already created."

A POLL AND THE RESULT.

The Chairman declared the result of the poll as follows:—For the resolution, 15,950 votes; against, 5,125; there thus being upwards of the three-fourths majority required by 575 votes.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

ELKHORN MINING CO., LIMITED.

To the Editor of the Mining World and Engineering Record.

Sir,—May I be permitted to draw your attention to a slight inaccuracy in your article on the above company in your last issue.

You stated: "The prospectus promised that in 12 months the dividends would be *44,500l*., but in 10 months only they have been *45,700l*."

The realised profits for the 10 months were *54,567l*. not *45,700l*.; this latter amount was referred to by Mr. Bennett, in the course of his speech, as being the amount that would have been earned had silver remained at the average price of the year 1889, the price upon which the estimates in the prospectus were based.

I shall be glad if you can find space to insert this correction in your next issue.—I am, &c.,

Chas. Pakeman,
Secretary.

6, Drapers' Gardens, London, E.C.
Apl. 16, 1891.

HARNHALLI "RIGS."

Sir,—I see there is another attempt to work up Harnhallis, and all sorts of circulars are being sent out by interested persons, who, I feel certain, from my knowledge of things in general, do not waste their postage on me without expecting some return. This return they hope to get by planting upon me their worthless stock. They succeeded some months ago with a poor friend of mine, who was severely punished for the credence he gave to the plausible communications that reached him. You have repeatedly warned the public of the paving-stone characteristics of the so-called quartz from this mine, and I trust you will not hesitate to do so whenever (as now) there is any attempt to "rig" these shares. Thanking you in anticipation for inserting this letter.—I am, &c.,

A Believer in Indian Mines, but not in Harnhalli.

Stockwell, Apl. 15.

FLAGSTAFF "BEARS."

Sir—I strongly advise your readers to receive as "interested," and not as "disinterested," the advice they are getting to sell their Flagstaff shares. Similar advice was tendered some months ago when the shares were 3s. 6d., but I remember that you spoke well of them at the price, and they rose to 11s. or 12s. *in the winter season*. The summer season is now before the company, and no wonder the "bears" are trying to frighten holders, and so close their accounts before worse befalls them. Do not take their advice, I say to shareholders, but act upon your own common sense and ability to appreciate the facts, and the result will be what the best well-wisher of Flagstaff could desire.—I am, &c.,

Anti-Bear.

Apl. 17, 1891.

FLAGSTAFF.

Sir,—As usual, we shareholders in this old-established—I mean *oft*-established, for is not the present our *fourth* appearance?—have been "had." We asked for bread, and our directors have again given us a stone. The report to end Dec. is at length to hand, and to those who have been buoyed up to expect something good it will be a bitter pill. Many and plausible have been the excuses given us for the delay in the presentation thereof, and as to the holding of the meeting, namely, that the mine, being at the high altitude of 9,000 ft.—nearly three times that of Snowdon—the tramway connecting with the Rio Grande Railway was buried in snow, but that it would be opened "in the spring," and, again, we were told "in May," whilst our formal report gives it as "June." But we were asked to possess our souls in patience, as "the ore on the dumps" was being regularly added to, and as most of it was "first-class," we should soon be having splendid, if kept back, returns, which, of course, cute sellers of the shares would reckon at the rate of "so much per cent. per annum," just as if these returns were being made regularly the year round, and that no pockets ever "pinched out." Turning again to the report, however, we find the estimate of the value at under 10*l*. per ton, against the former calculations of about 20*l*. for first-class stuff. It is now "estimated" that the value of the 1,400 tons on the dumps will be from 10,000*l*. to 15,000*l*.—not a very magnificent amount on a capital of 240,000*l*., even if it were all profit, which it is not by any means.

In view of this I feel certain that those shareholders who increased their holdings at the late phenomenal quotations will think with me that there are signs of a cool rig. We are now saddled with an increased holding, bearing the uncalled 6d. per share liability, and have to face a rapid drop in the price of our shares as soon as ever the report is received. As an enemy to all rigs, I protest against the tactics that have lately been pursued in regard to our property, say, letters to the Press, and even anonymous circulars sent to the shareholders, openly giving information of an ultra-sanguine kind, "supplied by the secretary." I simply state facts; and I think, moreover, Prof. Vincent should give us some explanation of this at the meeting next week, and also say whether the 650*l*. deficit to the end of Dec. has not since been largely added to, and whether he thinks the *net* returns on the 1,400 tons will wipe this deposit off? I should also like to know whether the expenses cannot be very considerably cut down. Our report tells us that to get the "prodigious" return of 5*l*. so far, no less than 10,000*l*. to 11,000*l*. was spent at the mountainous mine, together with a trifle of 850*l*. in London! And pray let the directors be candid—when may we expect the call notice? And do the directors hope to carry us through 1891 without making a further assessment; in other words, entering upon the fifth Flagstaff mining company of Utah?!—I am, &c.,

Flags.

Manchester, Apl. 16, 1891.

DICKENS CUSTER.

Sir,—Amongst American mines in for a large rise the Dickens Custer appears to be the most prominent. When its merits become generally known the shares must be a very different price. The mine will no doubt make large returns when the weather breaks up, which is generally the beginning of May. It has a 30 stamp mill cleaned up all ready for business, one of the finest in the district; they have been stoping ore all the winter, and have sufficient out on the floors to keep the mill running for 12 months, and the ore is of a rich character, worth from $100, $300 to $1,250 per ton (see report, which appeared in the Mining World of last week). An excellent report, dated at mine Mar. 7, says they have commenced stoping from No. 2 tunnel. Two samples of this ore have been assayed. No. 1 sample giving $114; and No. 2 sample, $915 per ton. This should not be lost sight of. They have plenty of cash in hand; no other call will be required, but a considerable portion of the last call will be returned in dividends. The workings are confined to the Custer property, which is developing itself most satisfactorily, and is in rich ore. As soon as the snow melts and the mill starts it will be a pleasing surprise to shareholders. The shares have been kept down for a purpose, the above facts not being generally known, except by the few and a syndicate buying up what shares have been offered on the market. They are 1*l*. shares, and should be largely secured at the present low price. Also Emmas, on the present flatness, should be largely bought and taken off the market, which would lift them to very different prices.—I am, &c.,

Observer.

RUBY MINING CO., LIMITED.

EARNEST WORK HAS NOT YET BEEN ATTENDED WITH SUCCESS.

The directors in a plain-spoken and candid report frankly own that "the expectations formed at the inception of the company have not as yet been realised, although the workings of the mines have been carried on under the supervision of a most efficient staff, and under the immediate direction of Mr. Hooper, of the well-known firm of Messrs. Bewick, Moreing, and Hooper, of London, and San Francisco, whose most encouraging report as to the value of the company's property was furnished on Aug. 15 last." With regard to the prospects of the mines, Mr. Hooper, in Aug. last, was strongly of opinion that "it is in depth, and consequently, virgin ground, that you must prospect for fresh ore bodies." The directors give details of what has been done at the various mines, and add that everything possible is being done to make the mines a success. This the shareholders will thoroughly believe. The directors deserve success, and it is quite on the cards that they will yet achieve it.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A Special Cable Code for Prompt and Economical Communication between the South African and London Offices.

Further information can be obtained at the Head Office of the Company.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Fireman.—We think you had better realise a part.
L.C.A. (Monmouth).—There is no reason for the fall as far as the mine is concerned. Market operations only.
Samson.—Yes. Low-priced ones should be bought now. A very good chance of a rise for those mentioned.
Subscriber (M.M.)—Very well held, and, in our opinion, will command a much higher price.
Anxious Holder.—Take the handsome profit.
Uncertain.—The buyer is entitled to the dividend. In the same way, he would have to pay a call should one be made. He is right in his demand.
Thankful.—A very good return. The shares should be held for better prices.
Patriot (S. W.)—Spread your money over four or five of the companies named. You have a better chance than investing it all in one.
Geraldine.—Too high in our estimation, and should not be bought.
Stoney Lane.—We expect a revival in them shortly as most shares of the class named are on the move.
B. W. Jakes.—Yes. Ooregum and Mysore are both good investments, but the Africans you select are not to our liking.
R. A. (Exeter).—The security is good and very cheap at present quotations.

The Mining World.

LONDON: SATURDAY, April 18, 1891.

The "Mining World" is not the property of a Mining Speculator nor under the control of any clique.

SILATI ONCE MORE.

Although Mr. Conybeare yesterday described the prospects of Silati as "less gloomy than they were when we met before," the facts he adduced to support the statement were not of a character to bring conviction to the mind. In truth they did not seem to bring conviction to his own, for he was careful to say "we must not congratulate ourselves too early." We should think not, particularly as the grounds for the congratulation are conspicuous by their absence. He talked of the "mischievous generalisations of Mr. Alford" having been pulverised, but the future historian of Silati, should anyone think its miserable record worth chronicling, will say that the facts were embodied in the Alford report, and the "generalisations" were the monopoly of Mr. Conybeare and his associates. Last week we devoted considerable space to a dissection of the reports of the latest "experts" who have taken up the Silati parable, and that of Mr. Alford, and then gave reasons why the public would have little hesitation in rejecting the former and accepting the latter. From that view neither the harangue of Mr. Conbeare nor the long-winded statement of Mr. Henderson has caused us to diverge. In fact, the hard things these gentlemen said of Mr. Alford strengthened rather than weakened our previously formed conviction. How differently would Mr. Alford have been treated had he reported favourably on Silati. The Conybearian dictionary would not have contained adjectives sufficiently numerous to extol him, nor the Conybearian vocabulary expressions sufficiently emphatic in which to praise him. As it is, how low has poor Mr. Alford fallen in the eyes of Silati directors, and in how little esteem is he held by the Oceana board. The only drop of consolation we can pour into Mr. Alford's bitter cup is that if he has declined in the good opinion of persons like those we have named, he has at least immeasurably advanced in that of the investing public who expect from mining experts plain spoken and candid reports. There is many a Silati shareholder to-day who in the bitter anguish of pecuniary loss is crying—"Would that we had seen Mr. Alford's report before it was only left to us to trust Mr. Conybeare's geology."

THE RIO TINTO CO.

A week ago we were enabled to place before our readers the main features of the report that had just been issued by the directors of the Rio Tinto Co., and in another part of the current issue of the Mining World will be found a verbatim report of the short but satisfactory meeting held yesterday. It is in the fitness of things, however, that we should take the opportunity thus afforded of devoting some attention to the history of this great undertaking, the most important of its kind ever carried on with British capital. The Rio Tinto Co. dates from Mar. 1873, the property, which is situated in the province of Huelva, Spain, now covering an area of over 16,000 acres, though in the early days of the enterprise the area was very much smaller. For many years now the company has been very successful, and has long stood at the head of the copper producers of Europe, turning out, on an average, betwen 10 and 12 per cent. of the copper annually consumed throughout the world; but it is not to be assumed from this that the Rio Tinto Co. blossomed forth into prosperity all at once. Indeed, the returns were very small for the first four years, and it was not until 1879 that the first dividend was paid, amounting for that year to 5 per cent.

There were not wanting at the time people who predicted that the company would never become a commercial success, just as there are pessimists now who are never tired of assuring us that the Rio Tinto undertaking has seen much the best of its days. A company which, with copper at about the normal level of recent years, has been able to make close upon a profit of 900,900*l.*, is certainly not showing any striking evidence of decay. On the contrary, the production of metal is being steadily increased year by year, while the bonded debt is being regularly reduced by annual drawings. In the past year the bonds so drawn have represented a total of 68,760*l.* for the year, and an aggregate reduction under this heading of 524,860*l.* Originally the bonded debt amounted to 3,700,000*l.*, it has now been lessened to 3,175,140*l.*, entirely out of revenue. Besides the 68,760*l.* required to pay off the drawn bonds, the company last year wrote off 42,183*l.* out of revenue under various headings, making in all a total of 110,942*l.*; the dividends will have absorbed 536,250*l.*, and the balance carried forward will amount to 157,756*l.*, contrasting with 152,787*l.* brought forward a year ago, after the 10 per cent. distribution. Results such as these place Rio Tinto in a very high position among the great commercial undertakings of the world.

We need not further eularge upon the operations of the past year, as they are so fully dealt with in the report of the directors and in the address delivered by the chairman at yesterday's meeting; but it may be of interest to show in a tabular form what the company has done in the way of copper-production and dividend payments since it started making returns. This we do in the following table:—

	Pyrites Extracted.	Average Copper Contents.	Pyrites Consumed.	Average Copper Contents.	Copper produced at Mines.
	Tons.	Per cent.	Tons.	Per cent.	Tons.
1876	349,158	1.5	158,597	1.5	946
1877	771,751	2.375	211,487	2.	2,495
1878	871,107	2.78	211,403	2.18	4,184
1879	906,600	2.78	236,849	2.45	7,179
1880	915,157	2·865	274,210	2.481	8,559
1881	993,047	2.75	256,827	2.347	9,466
1882	948·231	2.805	272,826	2.401	9,740
1883	1,099,973	2.956	288,104	2.387	12,295
1884	1,369,918	3.234	314,751	2.241	12,668
1885	1,351,466	3.102	354,501	2.270	14,593
1886	1,378,381	3.046	347,024	2.306	15,863
1887	1,182,438	3.047	385,842	2.283	17,813
1888	1,403,633	2.949	393,149	2.208	18,522
1889	1,214,323	2.854	395,081	2.595	18,708
1890	1,261,754	2.883	397,875	2.595	19,183

To the figures of "copper produced at the mines," have to be added the copper contained in the pyrites shipped. Last year this amounted to 9,592 tons, against 9,416 tons in the preceding year. It will be seen, therefore, that the aggregate production of copper from the Rio Tinto mines has reached very nearly 29,000 tons per annum. The dividend payments began, as we have said, in 1879; they have since been at the following rates per cent. per annum:—

Year.	per cent.	Year.	per cent.
1879	5	1885	5½
1880	8	1886	3
1881	14	1887	10
1882	14	1888	17
1883	14	1889	10
1884	8	1890	16½

We need not go into any particulars as to what the Rio Tinto Co. would have earned in the last couple of years if the prices of the Société des Metaux speculation had lasted, or if the range which existed when the company commenced its operations. It is enough to deal with accomplished facts, and these go to show that the holders of Rio Tinto shares possess an interest in an enormous and admirably managed property, and that they may look forward to the contiuuance of handsome dividends for many years to come.

THE OOREGUM MEETING.

The shareholders who attended the Ooregum meeting on Tuesday were delighted to see Mr. Malcolm Low back again from the useful trip he has paid to India. What may be called the text of his address is to be found in the words, "Wherever you go in Ooregum, whether you are sinking or driving, you find the persistency and richness of the ore shoots to be the dominant characteristics of the mine." It is a statement of this kind, aud the monthly crushiugs that back it up, that give to Ooregum the character it bears on the market of being a mining investment in the best sense of the term. The limited space at our disposal this week, caused by the unusual pressure of meetings, prevents us from doiug full justice to a meeting, which was encouraging throughout; but great as that pressure has been—so far as Ooregum is concerned, we do not grudge one inch of the space we have devoted to the *verbatim* re-production of the entire meeting. We might go on to mention the further remark that fell from Mr. Low, that "the deepest points of the mine are always the best;" that the tailings machinery may be expected to yield 7,000*l.* profit per annum; that the assurances as to the leases obtained by Mr. Low when on the spot have been of the most satisfactory kind; that the law suit is approaching its end; that first dividends have been declared upon

the preference and ordinary shares; that the expenses have been reduced by 10s. 4d. per ton as compared with a year ago; that the cholera scourge has disappeared; and that the latest telegram is the best, but we forbear. Equally must we be content to record in brief our impressions of the speech of Mr. John Taylor, who was truly described by the chairman as a past professional master of the craft of describing the workings of a mine, and making them as clear as they can be to any intelligent mind. Summarising the work of the year, Mr. Taylor said that it comprised close upon two-thirds of a mile of underground development "a good proportion of which has been in productive ground." Though 13,000 tons have been extracted, the reserves have been increased by 6,600 tons. The developments at Wallwroth shaft have been particularly encouraging, and the yield of gold in places has been simply surprising. At Probyn shaft the poor floor of ground which temporarily gave some uneasiness has been passed, and the lode is again looking extremely well. This is encouraging, for the reason that the workings are deeper here than at any other part of the property. Other points in the mine are also looking well, and we can readily credit the statement that the property, as a whole, is admirably laid out, and that the work has been done in a minerlike way. The discussion was brief, but important. It turned largely upon the law suit, and was the means of elucidating precisely those points upon which the minds of shareholders have been most exercised. It was made clear that with both ordinary and preference shareholders there is only one wish, and that is that equal justice may be meted out, and more than this neither class would wish. Mr. Low was particularly gratified at the manner in which the new purchase to the west was agreed to without discussion or even question. The importance of this acquisition had been so fully discounted by the recent Mysore meeting that possibly no amount of argument could have elicited any new fact. The meeting of Tuesday was without question the most satisfactory the Ooregum Co. has yet held.

NEW GUSTON—WOULD-BE DIRECTORS.

The gentlemen who proposed to try conclusions with the new Guston Board, as at present constituted, are now in the dust and ashes of a tardy repentance. Their contrition takes two forms. Their first proposal was to supplant those directors who were re-elected unanimously on Tuesday, but apparently abashed at their audacity, they subsequently affected a change of front, and merely wished to attach themselves to the board as at present existing. In view of the former proposition, it will be seen that these two gentlemen are not deficient in self-esteem, though, in regard to the latter, it must be admitted that the school into which they proposed to enter, we presume as pupils, was well selected. Sitting at the feet of New Guston board they would have learnt to discriminate between levels and winzes, and have gained a clear apprehension of the difference between shafts and rises. As time went on they might even expect to creditably pass a preliminary examination in the elementary rules of mining, and later on blossom forth into experts. It was, however, the voice of true wisdom that counselled the eloquent Mr. Askwith to stick to the legal profession, of which he is already a shining light, and that voice was emphasised by another—that of Mr. Askwith himself. His long speech may be searched in vain for any special qualifications that either he or Mr. Crabb possesses which would justify the shareholders in putting them on the board, much less in supplanting men of tried experience and with the best credentials of success. In fact, Mr. Askwith is rather to be congratulated upon the delivery of his speech than upon the matter it contained. It was not deficient in rhetoric, but suffered considerably on the side of fact. Much more to the point was that of his ally, the ungrateful Mr. Crabb. When this gentleman first seconded the motion by which the present board was called into office, New Guston was, as Mr. Crowther said, in a state of chaos and ruin, and the 6,000 shares held by Mr. Crabb were worth 150*l*. and "difficult to sell at that." They are now worth 22,000*l*., but instead of proposing a handsome testimonial to the directors, and becoming himself the chief donor, Mr. Crabb's gratitude takes the form of trying to turn his friends out of office. Queen Elizabeth used to say "ingratitude is a great sin"—but we should like to know what her defunct majesty would think of Mr. Crabb. Less cause for gratitude has his colleague, Mr. Askwith, who only joined the company last Aug.; but one would think that so young a shareholder, and a barrister withal, would be content to receive his dividends and occupy a back seat. But no. He, along with Mr. Crabb, wishes to be a director, but of that wish, so far as Tuesday's meeting was concerned, they have the entire monopoly. The shareholders who supported them were discreetly absent, or still more discreetly silent. They were the champions of their own virtues, and the chroniclers of their own mining experience, which appears to be as near *nil* as it well can be. Not another voice was raised in their favour. All the shareholders who spoke repudiated their candidature, from Mr. Bayliss downwards. The shareholders, as we predicted a fortnight ago, plainly showed that their fullest sympathies are with the directors, who have deserved so well at their hands, and not with gentlemen like Messrs. Crabb and Askwith, whose keen desire to be mining directors appears to be in inverse ratio to their nowledge of the duties that in this capacity they would have to

fill.

AFFAIRS IN SOUTH AFRICA.

Kimberley, Mar. 23, 1891.

The Wesselton Mine.

It will be necessary for the shareholders of the De Beers Consolidated Mines Co. to narrowly watch the movements and action of the Cape Colonial Government in the matter of the newly discovered diamond mine at Wesselton. Since I last wrote a strong public feeling has been displayed in favour of the throwing open of the mine as a public digging. Meetings have been held, not only here and at Beaconsfield, but at Port Elizabeth; deputations have waited on Town Councils, Chambers of Commerce, and other public bodies, and four delegates have been elected to stump the country, visit the various commercial centres, and generally to rouse up colonists to bring pressure to bear on the Government to issue a proclamation (which the law enables them to do provided the mine is declared a payable one) throwing it open to the public. I may remark that owing to the absence of the Governor, the acting Governor could hardly be expected to take upon himself so grave a responsibility. Sir Henry Loch only returned from England on Friday, and not only has he done nothing, as yet, but doubtless he will do nothing until the return of the Premier, Mr. Rhodes, who is on the water. So strong is the popular feeling, that in the event of the Governor declining to exercise his prerogative, the agitators are determined to appeal to the High Court of Parliament. A considerable sum of money has been subscribed to pay the travelling expenses of these delegates, and they have commenced their mission at Port Elizabeth, where a public meeting has been held, and resolutions passed in favour of throwing the mine open. How it will all end it is impossible to say, but an impartial observer must admit that the *vox populi* is acting first and thinking afterwards. It must also be admitted that the four gentlemen acting as delegates have neither standing nor influence; their evident aim is to make the most of the popular cry, and attain some amount of popularity. So far as their arguments go, they amount to this—the new mine is undoubtedly a payable one; indeed, so far as Mr. Ward and his co-partners (whoever they may be) are concerned, they are finding it to pay so well that outsiders are getting impatient to have a show in. This being so, the agitators say that if neither the Government, nor the Parliament, come to their assistance they will take the law into their own hands, and rush the mine. Of course, this is easier said than done. Then, again, they argue that the poverty and distress that exists on these fields is another reason why the mine should be thrown open to the unemployed. On the other hand, it is contended that the working of 600 or 700 claims in that mine must tend to a shrinkage in the price of diamonds, and in that case it will not pay to work the claims. As a matter of fact, the De Beers Co. have brought down the price of diamonds, so that the *débris* washers find it very difficult to make ends meet. They sell their diamonds every Saturday, and on Saturday last parcels were sold for 12s. a carat, which would have realised 16s. or 17s. a month ago. Now, as everybody knows, the moving spirit of the De Beers Co., Mr. Rhodes, is also Premier of the colony, and it can hardly be expected that he will readily consent to a movement which must necessarily depreciate the value of the company's shares. Naturally, there is a great division of opinion on these fields on the subject; numerically the agitators are the strongest; and whereas six months ago, when Mr. Rhodes was banquetted, he was looked upon as a sort of political demi-god (chiefly on account of his great political master-stroke—the opening up of Mashonaland), he is to-day the best abused man on the diamond fields. The consequence is that both his partisans and the agitators are looking forward to his return with considerable interest.

Another New Diamond Mine Discovered.

Mr. Rhodes is not immaculate, and, like other men, he can make mistakes, astute as he is. When he accomplished his great amalgamation scheme, he asserted—and his assertion went broadcast all over the civilised world—that the new company was one of the grandest and safest speculations in the world, because there was no likelihood of another payable diamond mine being discovered. However such a far-seeing man could make such an assertion puzzles me exceedingly, as I have endeavoured to show in previous letters. Putting aside the Koffyfontein Mine (about which there are considerable doubts), it has been placed beyond all cavil that the Wesselton Mine is equal to either those of Kimberley or De Beers. And now I have to report the recent discovery of another mine on the Vaal River, which also bids fair to turn out payable. Hitherto—and for the last twenty years—the Vaal River diggings have been accounted alluvial diggings only, and during that time have been worked with more or less success by individual diggers. Some months ago Mr. Cyrus, an old experienced digger, took it into his head that on a certain farm near the river there were more than surface indications. These indications turned out so promising that he had no difficulty in getting a syndicate to assist him. He accordingly set to work to sink a shaft, and his finds have been so good that some 700 claims have been applied for and marked off, and in all probability before this reaches you a new company, to be called the Cyrus Diamond Co., will be floated. Nor is this all. Some months ago I informed you that another syndicate—known as the Russell Syndicate—was also prospecting on the river and sinking a shaft. A large

number of claims have also been marked out on this farm ; and now I learn that engineers and machinery are now on the water, and when they arrive operations will be carried out on an extensive scale.

AND AGAIN.

As evidence of my oft repeated assertion that it is impossible to say when and where the next diamond mine will be discovered, I may mention that since I last wrote there has been a bit of a commotion in this town, owing to the report that another diamond mine had been discovered on the "Homestead" farm, about 3 miles from here. There was immediately a rush for the Civil Commissioner's office, and within 24 hours the Government profited to the extent of some 400 or 500 half-crowns, which is the registration fee for pegging out a claim. I will not say that the affair ended in smoke, because it is placed beyond all doubt that the two prospectors had found garnets and carbon—a sure indication of the presence of diamonds, but as yet diamonds have not been found. This only goes to prove that notwithstanding the thousands of people, who not beiug fortunate enough to get claims within the four original mines, prospected in a desultory sort of fashion for years and found nothing, whereas here we have, after all these years, a payable mine about 3 miles on oue side of Kimberley, and almost certain indications of another about 3 miles on the other side.

ST. AUGUSTINE MINE.

IT is now quite 18 months since we first took up our parable about St. Augustine, Limited, and must frankly own that we were led to do so by the well-considered addresses of Col. Malleson, the chairman, and of Mr. Finlason, who at that time was the manager on the spot. We regret to learn that the condition of Mr. Finlason's health has obliged him to leave South Africa, aud to become a resident in this country, though we are glad to know that the board benefits still by his matured advice and experience. The manager now in charge is Mr. Hartley, and the latest developments justify Mr. Finlason in describing St. Augustine as "a proven diamond mine." He anticipates that within a short time results may be expected "equal to those of Kimberley and De Beers." This may seem a strong statement, but these two concerns have no monopoly of success, and there is everything about St. Augustine to justify the holders of shares in, at all events, regarding present quotations as absolutely ridiculous. Kimberly and De Beers produced no diamouds until they reached the 700-ft. level—the level to which St. Augustine is now approaching. There was much of interest and eucouragement in the meeting for sensible shareholders, who are able to discriminate between idle criticism and solid statements of facts. There are some persons who always seem more anxious to say clever things than just things, and one of these appears to be the Mr. Jones who opened his mouth, not so much to aid the board with his advice — presuming he had any to give — but to criticise their action in what was described as "the language of sneering," which is very much to be deprecated. Much more to the purpose were the weighty words of Mr. Capper, who pointed out that the board hold largely, personally and relatively, in the company, and who at a later stage expressed himself perfectly satisfied with the explanations the chairman had given. It is in this spirit that the efforts of directors like those of St. Augustine, Limited, whose whole interest is bound up with those of the shareholders, should be received, and not in the spirit of sarcastic and even ungenerous criticism.

ENGLISH ANTIMONY CO.

THE speech of Mr. Rooke at the meeting of this company on Thursday was full of bright anticipations as regards the future. The most interesting piece of news, however, conveyed to the shareholders was contained in a telegram received from the manager just before the meeting, stating he had "cut a splendid lode of antimony." Both directors and shareholders will, no doubt, wait with interest the receipt of Mr. Joll's report confirming this discovery. It is a fact to be noted about this company that up to the present time neither the directors nor secretary have received any remuneration for their services.

ASIA MINOR MINING CO.

THE description which the chairman gave of his visit to the property, at the meeting on Wednesday last, was listened to with great interest by the shareholders. This gentleman spent 14 days at the mines, during which time he examined the workings thoroughly ; he appointed a young and energetic man as manager, and he obtained certain concessions from the Sultan, which are of great benefit to the company. The record of the year's working which he had to give was not so satisfactory as the shareholders could have desired, but still it was not without its encouragements. Though the production had not been so good as in the previous year, the quantity of silver contained was greater than it had been for several years. However, the principal news the chairman had to impart to the shareholders on Wednesday was the receipt of a telegram from the manager, announcing he had cut into rich ore. Telegrams are often misleading, as the chairman pointed out, but still in this case there are circumstances which would lead one to regard it as correct. In the first place, it is the first telegram of that nature that Mr. Cresswell has sent since his appointment, and in the next place the fact that the meeting was being held was not known at the mines. It is with regret we hear of the retirement of Mr. Reeves from this board. The company is well managed, and whether it ultimately attains success (which we believe it will) or not, the shareholders may be sure of this—that their money will be carefully handled and honestly disbursed.

COLORADO SILVER MINING CO.

AFTER wandering in the wilderness of promises and predictions for about the past two decades, it really seems that, under the energetic direction of Mr. Archibald J. Smyth, Colorado Silver Mining Co. will blossom into a success. It is actually at the present time making profits, and if there had been a wholesale charging of development work to capital account instead of to revenue, Mr. Smyth might have made his bow on Thursday as the chairman of a dividend company. He, however, prefers to make the position secure before arming himself with a fresh quill wherewith to sign the dividend warrants. He laid emphasis ou the fact that the 1,972 ft. of development work had been paid for out of revenue—in other words, that the mine has been its own Chancellor of the Exchequer. He referred with much satisfaction to the important developments now taking place in the western ground, from which the shareholders may expect an early realisation of those dividends which have been so long "promised to the ear but broken to the hope." Nothing could illustrate more the extensive nature of this property that the statement that it embraces 64 different lodes, of which only some four are now being worked. Altogether the remark of Genl. Feilding will be endorsed, that "the company is doing remarkably well," and it is likely to do all the better, seeing that it has settled all disputes with its neighbours.

SIERRA BUTTES AND PLUMAS EUREKA.

THE remarkable career of this company is best illustrated by the fact that the two mines it comprises—Sierra Buttes and Plumas Eureka—have to date paid to the shareholders the sum of 880,000*l*. in dividends. Unfortunately, that is a record of the past, and truth compelled the admission from Mr. Tendron, the esteemed chairman, that Sierra Buttes has now seen its best days, and is pretty well worn out, and that the later developments of Plumas Eureka have not been as satisfactory as could be desired. Fortunately, both companies made a successful purchase in Uncle Sam, which is proving a good relative, and not at all like the unfeeling one that left the babes to the care of robin redbreasts in the wood. Uncle Sam is opening out, to the great satisfaction of the management, and will actually enable a dividend of 6d. per share to be paid to each class of shareholders, that is, of shareholders iu Sierra Buttes and Plumas Eureka, although the cost of these two concerns was 520,000*l*., whilst up to the present time Uncle Sam has only cost 40,000*l*. There is an ample reserve fund with which to buy a fresh property should the suitable opportunity arrive. Shareholders in mining companies will applaud the action taken by the board with reference to Capt. Hosking. They could never permit that one of their agents should own a property contiguous to their own. One can easily understand, without a very profouud knowledge of mining, the unpleasant complications to which such a state of things might give rise.

THE EAST BROKEN HILLS CONSOLS.

THE off-shoot of Australian Broken Hill Consols has now appeared with a capital of 500,000*l*. in 1*l*. shares, of which 350,000 are now offered to the public, and 150,000 are taken by the vendors in part payment in addition to 300,000*l*. in cash or shares at the option of the company. These payments leave 50,000*l*. to the company as working capital. The map which accompanies the prospectus clearly shows the portion of the property which the new company will acquire, and the prospectus calls attention to "the extraordinary finds of wonderfully rich ore that have been made on the property of the vendor company." Since Oct., 1890, 39 tons of ore have been shipped, containing 250,270 ozs. of silver. Several tons have been disposed of in London from 350*l*. up to 1,825*l*. Experts have expressed the opinion that the main lode now being worked by the Broken Hill Proprietary Company may be expected to be found upon the blocks to be acquired by this company, and the phenomenal success of the original company is well known and understood in this country. A certain amount of work has been done of a satisfactory character—in fact the shafts had been sunk to water, when further progress became impossible without the aid of machinery. The reports down to this point from Capt. Richard Piper and Mr. H. Morrish, not to speak of those by Mr. William Nicholas and Mr. G. Thureau, speak favourably of these blocks, and the prospectus calls attention to the remarkable quotations of the shares of the various companies working on this range. In fact, quoting from the South Australian Register of Mar. 9 last, the selling value of four companies is represented by upwards of 14 millions sterling. It may be said that the capital is large, but it is not greater than that of the parent concern, though the area of the property is less. Still, the career during the past nine months of Australian Broken Hill Consols has been so remarkable that he would be a bold prophet who would refuse to allow a similar measure of success to East Broken Hills Consols.

THE MONEY MARKET.

City, Friday Evening.

ADVANCE OF THE BANK RATE.

The demand for gold for Germany on Russian account absorbed all the market supplies, and withdrew 600,000*l.* from the Bank. The demand for an unknown purpose greatly excited the markets, and fears prevailed that the directors would raise the rate to 4 per cent., but, with the understanding that the requirements were completed for the present, the fears subsided, and many thought that no change would be made. The directors, however, have advanced the rate ½, to 3½ per cent. as a precautionary measure, and discount, which had been only done at 2⅞, 3 per cent., subject to re-adjustment should an alteration be made, improved to 3⅛, 3¼ per cent. for all bills, whether short or long dated, while money has risen from 1 to 1½ per cent to 2 to 2½ per cent. With the advance in the rate, deposit rates have been revised; the banks allow 2 per cent., and the discount houses 2 and 2¼ per cent. for money at call and notice respectively. The exchanges have all responded to the better value of money, and with it the inquiry for gold has quite fallen off. The Bank return shows a decrease of 370,000*l.* in the reserve to 13,000,000*l.* against 15,642,000*l.* last year, but the proportion is rather better at 34¾ per cent. The repayment of loans has reduced the private deposits by over a million.

On the Stock Exchange firmness has fairly characterised the week. There has been no activity to speak of, only the generally over-sold condition of everything has compelled re-purchases, and these in themselves have promoted, as previously, an idea that markets are rising. Apart from monetary considerations, which were, however but evanescent, and the Continent, where optimism is less pronounced since politics have asserted a dominating influence, and the upward movement in Paris has at last paused, the situation appears hopeful enough, though the public hardly do anything except invest, and the black clouds remain over South America and her homogeneous complications, as proved by an advance in the gold premium to 244 per cent. There is some talk of an International Commission to control Argentine financial affairs, and dogmatic or assertive as such a proceeding would be, if tolerated, even anything would be better than the present uncertainty. Consols have touched 95¾, but are firmer now, while Indian and Colonial Inscribed Stocks are perceptibly lower, the last upon a partial failure of the Victoria loan. All Internationals are down, likewise Argentine, Buenos Ayres, Uruguay, Mexican, and particularly Chilian issues. In Home Railways prices have kept together tolerably well—for a miniature boom has continued in Sheffield "A," which is not unjustified entirely by circumstances. Canadian Railways are better, Graud Trunk included, notwithstanding the deficit of the board and a bad traffic, and Mexican (Vera Cruz) are not worse on balance. American Railways have risen in spite of realisations, for Wall Street appears determined to establish higher values whether the Western Association collapses, or sundry roads are boycotted, or peace is restored. Trusts, with one or two prominent exceptions, have reacted, likewise Breweries and conspicuous Industrial enterprises of a miscellaneous character.

The Money Market, so far as discount was concerned, was easier inclined, but nominal in the absence of business. Three months' bills remained at 3⅛ ⅛ per cent., while money at call, or for short loans, was lent at 2 per cent., but the Bank Broker has been taking for a week any loans offered at 2½ per cent., and for a month up to 3 per cent. The position has improved, but there was again a report that 150,000*l.* in gold packed at the Bank was to go to Lisbon—for Brazil. However, 40,000*l.* was sent in. Bar silver was unaltered and Rupee rather weaker.

Public securities have shown firmness, and a certain amount of activity led by American Railroads, but Consols were realised by speculators, and receded ⅛ to 96, ⅛ for money, and to 96⅛, ¼ for account. Indian loans advanced on buying for investment, and recent quotations were maintained. Foreign bonds show a further general fall, owing chiefly to depression in Paris, where an important industrial bank is reported to have failed. South American bonds are 1 to 2 lower, and the Funded loan closed at 69, 70, but Chilian exceptionally recovered on repurchases. English Railways improved chiefly upon finer weather, and the feature was Sheffield Deferred, which was freely bought up to 38½, owing to their bills for extending the company's control in Cheshire having been successful, but the final quotation was not higher than 38, or about 1 better on the day. Grand Trunk Railway securities advanced 1 aud 1½ owing to crop prospects, and Nitrate Railway shares were firm at 13¾, a fortnight's traffic showing an increase of 7,607*l.* United States Railways were well supported at a recovery of $½ to $1, in which Atchison, Milwaukee, Canadian Pacific, and Union Pacific shares took the most prominent position. Breweries improved, while Salt Union shares, Eastmans, and Hansards Union gave way. London Road Car shares appear depressed at 7¾, and the reason for this is that the negotiations for a working agreement with the London General Omnibus Co. have fallen through, as the latter officially informs us.

Annexed are the final quotations to-day:—Consols Account, 96⅛, 96¼; Egyptian Three and a-half per Cent., 91⅝, ⅞xd.; Egyptian Unified, 98, 98¼; French Four-and-Half per Cents., 104, 105; Hungarian, 91⅜, 91⅝; Italian, 92¾, 93; Mexican, 31⅛, 31¾; Peru Corporation, 9, 9½; Peru Corporation Preference, 26¾, 27¼; Russian, 98¾, 99¼; Portuguese, 55¼, 55½; Spanish, 75 5/16, 75 7/16; Turkish, 1871, 96¾, 97¼; Turkish Defence, 94, 94½; Caledouian, 117, 117¼; Great Eastern, 95⅝, 95⅞; Great Western, 158, 158¼; Brighton "A," 153⅞, 153⅞; North Western, 173, 173¼; Metropolitan, 82¼, 82¾; Metropolitan District, 30¾, 31¼; Midland, 150⅝, 150⅞; North British, 44⅝, 44⅞; North Eastern, 161⅝, 161⅞; South Eastern 125, 127; South Eastern "A," 95¼, 95½; Mexican Railway Ordinary, 41⅜, 41⅝; Grand Trunk 9⅛, 9⅜; Grand Trunk First Preference, 62¾, 63; Grand Trunk Second, 41⅝, 41⅞; Grand Trunk Third, 22¾, 23, Canadian Pacific, 81¾, 82; Denver, 17¾, 18; Erie, 20¾, 21; Milwaukee 62½, 62¾; Lake Shore, 113¾, 114¼; Louisville, 79⅝, 79⅞; Atlantic First, 32⅞, 33⅛; Ontario, 17⅝, 17⅞; Ohio, 17⅞, 18⅛; Norfolk and Western, 54¼, 54½; Reading, 16⅜, 16⅝; Reading Bonds, 81, 82; Union Pacific, 49, 49¼; Wabash Preference, 19¼, 19¾; Ottoman Bank, 14¼, 14¾; Anglo-Telegraph, 46¾, 47¼; National Telephone, 4¼, 4½; Hudson's Bay, 17¾, 18¼; Suez Canal, 98¾, 99¼; Guinness, 304, 306; Allsopp's, 30, 32; Bryant and May, 13⅞, 14⅛; Eastmans, 9½, 9¾; Hansard's Union, 1¾, 2.

NINE REEFS, LIMITED,

REPORTS BY MR. ROWSE AND CAPT. SCANTLEBURY ENCOURAGE THE DIRECTORS TO SUBMIT A SCHEME FOR RAISING MONEY BY PREFERENCE SHARES.

Notwithstanding the developments which have been carried out, chiefly upon the Malleson lode, the results have not yet been as satisfactory as they could have desired. In July last arrangements were entered into with Messrs. John Taylor and Sons for undertaking the management of the affairs of the company. These gentlemen, availing themselves of a visit which Mr. Rowse was making to India, on behalf of several of the companies working in the Colar goldfield, requested that he should make a complete inspection of the mines in company with Capt. Scantlebury, one of the manager's trusted agents on the field. Extracts from the reports of Mr. Rowse and Capt. Scantlebury show that they recommend the vigorous development of the Champion lode, which, in their opinion, is in Vivian shaft, confining the operations on the Malleson lode to the sinking of the main shaft for another 100 ft. The directors concur in these recommendations, and advise that the necessary capital should be raised for carrying them out. Passing by any scheme of re-construction, the following scheme is put forward, which, if carried out in its entirety, will provide an available sum of 50,000*l.*, out of which 12,935*l.* will be required to redeem the whole of the 10 per cent. mortgage bonds now outstanding, thus leaving the company free of debt, with a sufficient balance for the continuation of the mines. The plan is to reduce the capital (now 150,000*l.*) to 75,000*l.*, divided into 150,000 shares of 10s. each, by cancelling paid-up capital to the extent of 10s. psr share on each of the 150,000 shares issued, and by reducing the nominal amount of all the shares in the company's capital from 1*l.* to 10s. per share. Next the capital of the company will be increased to 125,000*l.* by the creation of 100,000 preference shares of 10s. each. An extraordinary general meeting of the company will be held for the purpose of submitting the first resolution necessary in connection with the above scheme. One thing is certain, that the shareholders will not let Nine Reefs die just now in the teeth of the reports of Mr. Rowse and Capt. Scantlebury.

THE AUSTRALIAN BROKEN HILL CONSOLS, LIMITED.

EXTRACT FROM THE "SILVER AGE" OF BROKEN HILL, MAR. 7.

"A number of visitors went down this mine yesterday, at the invitation of Mr. Power, the managing director, and were pleased and astonished by what they saw. The rich vein on the 280-ft. level is looking stronger than ever, and has lost nothing of its value as a producer of silver. In the rise where it has been followed above the level the vein shows a present width of quite 18 ft., and a thickness of 10 ins. to 12 ins. Of this 4 ins. in the centre of the vein consists of solid native silver, and above and below is to be noted sulphide of silver of remarkable richness. Of this ore 4 tons have beeu raised during the two weeks ending Mar. 5, and the parcel contains, by assay, 32,033 ozs. silver. This is now being packed in cases ready for early despatch to London. Below the main level the rich vein is being followed on an incline and very good results have been obtained. The euclosing rock is particularly hard, and progress by hand drilling is consequently slow. To better this, machine drills are being introduced, and will be at work next week; under the altered conditions greater progress will be made. The incline level has been driven a total length of 29 ft., and the flow of water continues strong. The main shaft has been sunk to 525 ft., and the lode has widened to 10 ft. It consists of galena and calcspar, and the indications are in favour of another vein of rich ore similar to that on the 280-ft. level being met with before long. First-class galena associated with rich canary and grey ore is being stoped on the 180-ft. level. Prospecting on block 95 is being pushed on, and altogether there are great possibilities of fresh and important developments occurring before long."

The mining manager's report for the fortnight ending Mar. 5.—Engine shaft, sunk 16½ ft. for fortnight; total, 525 ft. Formation, which has widened out to 10 ft., is showing galena and calcspar; the 280-ft. level west driven 20 ft.; total, 364 ft.; no change. Rise on rich vein: Rich vein showing better than ever, and lengthening out. Raised here during fortnight 4 tons of rich ores, comprising native silver and sulphide of silver, and containing 32,033 ozs. of silver, whole of which is now being cased for shipment to London. Incline following rich shoot driven 5 ft.; total, 29 ft. Engaged nearly whole fortnight in breaking down hanging wall over lode. Hard country still prevails and flow of water the same. Hope to have the rock-drills at work here next week. North-west cross-cut driven 3½ ft.; total 17 ft. Galena is now showing in the calcspar. 180-ft. level stopes raising good galena ore. Block 95: Shaft sunk 6 ft.; total, 110½ ft.; no change. Block 97: North shaft sunk 5 ft.; total, 26 ft. More iron appearing in lode, which is dipping faster. Surface: Air-compressor fixed, pipes laid down engine shaft and 280-ft. level, and connection now being made with receiver.

Telegram from the managing director at Broken Hill, dated Apl. 17:—"5½ tons of ore, containing 42,354 ozs. of silver, raised during the fortnight. Ninth shipment, consisting of 5½ tons of ore, containing 42,354 ozs. of silver, will be shipped for London per steamer leaving Adelaide Apl. 29."

Holloway's Ointment and Pills.—Counsel for the Delicate.—Those to whom seasons of chaugeable temperatures are protracted periods of trial should seek the earliest opportunity of removing all obstacles to good health. This cooling Ointment, perseveringly rubbed upon the skin, is the most reliable remedy for overcoming all diseases of the throat and chest. Quinsey, relaxed tonsils, sore throat, swollen glands, ordinary catarrh, and bronchitis, usually prevailing at this season, may be arrested as soon as discovered, and every symptom banished by Holloway's simple and effective treatment. The Ointment and Pills are highly commended for the facility with which they successfully conquer influenza: they allay in an incredibly short time the distressing fever and teasing cough.

REPORTS OF MEETINGS.

RIO TINTO CO., LIMITED.

SHAREHOLDERS RECEIVE THE REPORT WITH SATISFACTION AND ADOPT IT WITH UNANIMITY—GRATIFYING OUTLOOK FOR THE PRESENT YEAR.

THE eighteenth ordinary general meeting of the shareholders was held at the Cannon Street Hotel, yesterday, "for the purpose of receiving the directors' report and statement of accounts, for the declaration of a dividend, and for other purposes."

Mr. Hugh M. Matheson

(chairman of the company) presided.

Mr. GEORGE N. THOMSON (secretary) read the notice of meeting, and also the minutes of the last annual meeting.

The report of the directors was taken as read.

The CHAIRMAN: Gentlemen, the past year may be said to have been one of quiet, steady business for the company. Owing to the gradual diminution of stocks, prices of copper rose from about 48*l.* in the earlier months of the year to 60*l.* in Sept.: but they were sensibly affected by the financial crisis of the autumn, and fell to 54*l.* in Dec. The average price of G.M.B. copper for the 12 months was 54*l.* 5s., and although at the present time about 2*l.* 10s. lower, consumption progresses so favourably that with a return of commercial confidence we are likely to see some improvement. Our deliveries of pyrites for consumption in England, Germany and elsewhere, under contracts, have amounted to 397,875 tons. The average copper contents have been identical with those of the previous year, viz.: 2.595 per cent., and the copper produced from this source was 9,592 tons. The formation of The United Alkali Co., Limited, by a combination of the greater number of the Alkali makers in this country, is a fact that possesses interest for us. The company in question has been substituted for individnal firms, in the case of a large number of our pyrites contracts, and we have no reason to believe that the change will be other than favourable for us. The current three years' contracts came into operation at the beginning of this year, and, so far as we have gone, all our intercourse with the new company has been of a satisfactory character.

COPPER MADE AND MARKETED.

The copper made at the mines was equal to 19,183 tons of 20 cwt. The quantity brought to market was 19.997 tons, so that, with the pyrites copper, the company has delivered in all 29,589 tons. Owing to the high prices ruling for sulphate of copper, there had been overproduction of that article, and consumers have consequently been able to supply themselves out of stocks, which had accumulated to a considerable extent. What we made in the company's works at Cwm Avon has been all sold at remunerative prices. The plant erected at the mines has only recently been completed, and we are ready to avail ourselves of the revival of demand when it arises. All the works in Spain are carried on as usual. The overburden which is being removed from the north lode opencast has turned out to be composed of valuable hematite iron, and we are, therefore, not without hope that the usually costly operation of removing overburden, may prove to be done in this instance, free of expense, if it is not even directly remunerative to the company.

SMOKE QUESTION SETTLED.

We are glad to be able to announce that our unremitting efforts to represent to the authorities the real merits of what is known as the smoke question, have at length been successful. The Spanish Governmeut has suspended the Decree of Feb., 1888, which provided for the abolition of calcination in the open air, pending the introduction of a law for regulating the matter. I have only to say that we entertain every confidence that in the measures to be adopted the Government will do full justice to the rights of this company. As regards the accounts, you will observe that, including the large balance brought forward from the previous year, the gross profit amounting to 1,045,093*l.* 4s. 8d. After providing for the interest and redemption of mortgages, all administration charges, and writing off also against revenue, 42,182*l.* 8s. 8d., and other sums not detailed in the report, we come to a net revenue of 694,005*l.* 19s. 9d. Out of this we paid an interim dividend of 15s. per share, and are now enabled to declare a final dividend of 18s. per share, making together 16½ per cent. for the year, and to carry forward 157,775*l.* 19s. 9d. I cannot close these remarks without saying how much we regret the loss of Mr. Bruce, who was a valued member of the board, and a most agreeable colleague. The state of his health for several years was such that he was not so much with us as we should have desired. The motion which I have to submit is as follows: "That the report and accounts now submitted be received and adopted," and, as usual before putting the motion, I shall be glad to hear any questions that shareholders in the meeting have to put, and to answer them as far as I can. (Cheers.)

Mr. JAMES ALEX. CRAWFORD (director): I second the motion.

The CHAIRMAN (after a pause): If there are no questions to be asked I shall then put the resolution: "That the report and accounts be received and adopted." The resolution is carried unanimously.

THE DIVIDEND.

The CHAIRMAN: I beg now to move "That a final dividend of 18s. per share, making, with the interim dividend paid in Nov. last, 33s. per share, or 16½ per cent., for the year 1890, be now declared, payable on the 20th proximo, free of income tax."

Mr. HENRY DOETSCH (director): I second the motion.

ROUTINE BUSINESS.

The CHAIRMAN: I will put it. Carried unanimously. I have now to move "That the retiring directors, Mr. Henry Doetsch and Mr. John M. Macdonald, be re-elected directors of this company."

Mr. MACFARLAN: I beg to second the motion.

The CHAIRMAN: Carried unanimously.

Mr. HANNAN: I have much pleasure in proposing "That the auditors, Messrs. Turquand, Youngs, Weise, Bishop and Clarke, be elected the auditors of the company for the current year."

Dr. SCHNEIDER: I second the motion.

The CHAIRMAN: I put it to the meeting. Carried unanimously. That concludes the business we have before us.

THANKS TO THE CHAIRMAN.

Mr. MEATES: I think the best thanks of this meeting are due to Mr. Matheson for his continued efforts on behalf of the company. (Cheers.)

Mr. JOHN THOMSON: I have great pleasure in seconding the resolution.

The motion was carried by acclamation.

The CHAIRMAN: Your good opinion is very acceptable. When I first entered the room to-day, I felt it would be almost like a case of "dearly-beloved Peter"—there were so few shareholders present. (Laughter and cheers.)

The proceedings then terminated.

SIERRA BUTTES GOLD MINING CO., LIMITED.

TWO MINES THAT HAVE PAID THE SHAREHOLDERS £880,000 IN DIVIDENDS — SIERRA BUTTES AND PLUMAS EUREKA NOT LOOKING WELL—GRATIFYING POSITION OF UNCLE SAM.

THE forty-second ordinary general meeting was held at Cannon Street Hotel, on Thursday.

Mr. Fredk. Tendron

(chairman of the company) presided.

Mr. JOHN SAUL (secretary) read the notice of meeting.

SIERRA BUTTES SEEMINGLY WORKED OUT.

The CHAIRMAN: Gentlemen, the position of the Buttes is very little altered since our last meeting. Our desire was to turn as much property as we could into cash, to repair the flume, and to put a few stamps up at the old Hanks mill to crush the ore upon the dump, and the small quantity of mineral that still remains on the north cliff ledge. We always entertained the hope that in working out that mineral there was just the possibility of discovering some more ore, but we must act as though the mine itself were worked out, and we wish to have as much cash as we possibly can to put you in a position to bear your share in the cost of the purchase of a new mine, if the opportunity should offer. We hope that if Mr. Johns is successful in realising the surplus property, and in working up the ore which remains, you will, at all eveuts, have the command of 19,000*l.* in addition to the 20,000*l.* you now have invested in the Uncle Sam. I pass at once to

THE EUREKA MINE.

The quantity of ore milled during the past half-year was 27,628 tons, which is about the average of the preceding six half-years, but the quality of the ore was only $4 92c. against $6 80c., the average value of the six preceding half years—the explanation being that that very fine body of ore known as the Trezona shoot is worked out, and although we handled it as economically and sparingly as possible so as to make it last, and keep up the average of the ore obtained from other portions of the property, we have not been able to make it last long, and at the Eureka Mine we are almost entirely dependent now on such ore as they can get from the flat vein marked on the right of the plan, from the Mohawk vein marked on the left of the plan, and from the Hosking shoot, which is the main hope we have at present, and on which we mainly rely for the future of the Eureka Mine. This Eureka flat vein has been fairly profitable. It has been worked for some years, but the ore is of very poor quality. The same may be said of the Mohawk, which is some 700 ft. above, the average valuc of the ore only running about $4, and work as cheaply as we will I do not see how the costs can be further reduced. That is the average of the past six months as well as of the preceding six years. The Hosking vein is about the same distauce above as the other is above the Eureka, only instead of lying flat it runs down the hillside at an angle of 30 degs., and has been worked by a tunnel for about 600 ft., of which about 500 ft. consisted of a continuous vein, not very broad, nor of very good quality—you might take it at 3 ft. wide, and worth $6 to $7, and they are still going on with it. It is an uncertaiu vein, changing both in breadth and quality almost from week to week, but looking fairly well for the moment, and particularly so at the Marion raise, where they have gone up 70 ft. or 80 ft., and where the vein is 6 ft. wide, of $6 ore. In another rise the vein is only from 18 ins. to 2 ft. wide, aud not of very good quality. In Wright's drift and Saul's drift the vein was of a much better quality on the whole than in the level above, and for 400 ft. we have had a fairly good shoot of ore, and in the southern portion of the vein,

BETWEEN WRIGHT'S WINZE AND SAUL'S WINZE,

some portions have been so very good that we are obliged

to husband them as much as possible to try and work up the average of the other portions of the vein as well as of the two flat veins, so as to get a paying result. I told you at the last meeting we were driving a cross-cut to strike the vein 340 ft. lower down, and that, as far as we could judge, the future of the work would depend very much upon the kind of vein that we met with. If the vein were strong and lasting we might hope to meet it at a still lower level. It would pay us to sink upon it, and we might have some years of life before us in the Eureka Mine, because we consider the whole of this property as belonging to Eureka. Unfortunately, the vein is very poor and broken, going south, in the direction indicated on the plan. It is not to be relied upon so much, and going northwards in the other direction it is a mere string in places. They hope for improvement, and, as in the old story, we have to live in hope. 100 ft. above the vein is better, going both south and north. In six months they will probably have driven a considerable distance, and we shall see our position more clearly than we do at present, but we do not want to be caught as we were in the Buttes, and spend an enormous amount for nothing ; so that we trust Mr. Johns will give the matter fresh consideration, and we shall rely upon his judgment, and excuse him if he makes a mistake. But if he comes to the conclusion it is not worth while for us to spend the large amount that we are doing in prospecting and in attempting to sink upon the vein, he must then turn everything into cash as soon as he can. We do not want to work up to the end without profit, and then find that we have an enormous amount of property in the shape of reduction plant, mills, tramways, exploratory works, &c., the whole of which will not fetch $1,000, because there is uobody to buy it, and therefore we must turn as much into cash as we can by diminishing the large sum spent on prospecting. Last year in prospecting, dead work, and costs in connection with the misfortunes that befel us from the winter's snow, our expenditure was no less than 13,500*l*., so that what money can be got out of the ore must be brought out of it, unless they see that there is a fairer chance than appears to us in London at present of making further developments that will give us another shoot, something like the Trezona. Nobody can accuse the management there or here of not doing everything possible to find ore. (Hear, hear.) Having a large reserve fund, we thought it only right that the

SHAREHOLDERS SHOULD HAVE THE USUAL DIVIDEND,

and so we shall devote 5,000*l*. to the purpose of paying you 1s. per share, and after doing that we shall still have in our reserve funds, taking them at the market value of yesterday, 43,600*l*. in cash, and at cost price for the moiety of the Uncle Sam, another 22,500*l*., or 66,000*l*. altogether. (Cheers.)

REMARKABLE FACTS.

This, with the dividends we shallhave paid you, amount to 458,785*l*., which will make for the Eureka shareholders a return upon their investment of 524,845*l*. The Buttes shareholders will have had in like manner, with the reserve fund they now possess, 345,000*l*.—a total to the proprietors of the two mines of close upon 880,000*l*. I like to repeat these figures, so that it shall be clearly seen that if these mines work out, you cannot really blame those who have the control of them, or the men who bought them, and we are certainly not so foolish as to complain that nature is not differently constituted. Fortunately, for our feelings, we are able to speak, I will not say in glowing terms, but with the greatest satisfaction of our acquisition —the Uncle Sam. (Cheers.)

UNCLE SAM TURNS OUT WELL.

We commenced milling there in Feb., 1889, and up to Dec., 1890, we have milled a total of 14,651 tons. I do not think I saw a dump heap there—did you, Mr. Saul ?

Mr. SAUL : No.

The CHAIRMAN : Everything that was taken out of the mine was milled, so that there was no selection of ore, and the money that we have had from these 14,651 tons has been 10,214*l*. profit, and the average yield in free gold has been something like $9 74c., or 2*l*. a ton. If you take this 10,214*l*. as the profit on the 14,651 tons, the average profit has been something like 14s. a ton, and the cost 26s. That cost is being reduced considerably. During the last half-year, of 6,056 tons milled, the average cost was under $5, or 20s., per ton, which is very satisfactory. (Cheers.) The 10,000*l*.

PROFIT HAS ALL GONE IN DEVELOPMENT,

and in the construction of a first-class mill of 20 stamps, and of buildings for all the men who are employed, boarding houses, and work of an essential nature for the further enlargement and development of the property. We have authorised the erection of 10 more stamps, and the construction of a chlorination plant, which we found so successful at the Buttes Miue, and when the mill is erected and the chlorination plant in operation, we may fairly hope to have completed our surface works to such an extent as will justify us in using the Uncle Sam profits for dividends, both for Buttes and Eureka shareholders ; and that it will enable us to pay a dividend of 6d. a share to each class. (Cheers.) Now, that is but a very small dividend, but I do not see that Uncle Sam has to answer for it. Buttes and Eureka properties cost 520,000*l*., and you can hardly expect Uncle Sam, which, with developments, has only cost 40,000*l*. till now, is going to pay a big dividend on properties that have cost 520,000*l*. Nevertheless, that small return of 6d. to each class of shareholders is equivalent to a dividend of 2½ per cent. upon the whole capital of the company, or (mentally calculated) 30 per oent. upon the actual cost of Uncle Sam. I do not know how many of you are Buttes shareholders, but those who are may probably remember that I told them they might expect a dividend in Oct., and that when we once began to pay dividends we might expect to continue them. If they insist upon a dividend they can have it, but if they are wise they will wait till this time next year without one, because the mouey will help to put them in a much better position to have the share of another mine if we have the chance of buying one.

CONFIDENCE IN MESSRS. JOHNS AND JAMES.

It is only while Mr. Johns and Capt. James remain iu the service of this company that I will be any party to buying another mine. It is only my confidence in them that will induce me to take the responsibility of using the money you have allowed to remain in our hands for such a purpose, because I know that the price they pay is the price we shall pay, and that there will be no middlemen. (Cheers.)

UNCLE SAM WORKINGS.

With regard to Uncle Sam itself, there are two veins, one behind the other—north and south veins—and both dip northward into the hill. In the north vein, in a small level about 150 ft. long, you will see that they had ore about half the extent of it, and that it is pretty nearly worked out ; but you will see in the second level that the north vein has a much greater length—about 400 ft. The ore shoots from that are about 200 ft. long, so that we have a much greater body of ore available in the second than in the first level, and the No. 2 rise has gone through ore right to the surface, a distance of about 225 ft., so that it is only rational and reasonable to conclude that, as the croppings run along the hill some 140 ft., the vein will give us a good supply of ore. I need not deal with the quality for the reason that I think everybody will be satisfied that when you have crushed 15,000 tons and not made a single dump heap, but taken out the ore as you go, and when it has averaged something like 40s. to the ton—I say, you are satisfied that working one place with another, you have every reason to expect it to be as good in the future as it has been in the past. It is not like a little assay of ½ lb. in an assayer's office. In the 3rd level, reached by a cross-cut from the 2nd level south vein, the whole distance driven up to the present time (250 ft.) is all in ore, and the rise made from No. 3 to No. 2 level is also all in ore. We have every reason to expect a good body of ore the whole distance from No. 3 to No. 2 level, aud then from No. 2 pretty well to surface, a distance from No. 3 equal to 325 ft. That is a big reserve in the north vein, but the south vein is the bigger of the two. The No. 1 level is worked out to surface (150 ft.) The No. 2 has been extended west and east in a crooked line 1,100 ft. in length. About half of that distance (580 ft.) consists of ore shoots. After that comes broken vein, and now we are once more entering an ore shoot. It was so poor at first that it was not worth sending to the mill, but has gradually improved until the last information is that it is 4 ft. wide, worth $6. It is from these shoots we have had to average the ore, and the vein itself has beeu splendid —an average width of 7 ft., in places 11 ft. and 8 ft., and in others narrow, but much more regular than such a shoot would ordinarily be in the other mines. The men who have been accustomed to work in Californian mines and work here, feel such an amount of

CONFIDENCE IN THE PERMANENCE OF THE SHOOTS

that they are not discouraged by temporary disappointments. We have put up a rise reaching nearly to the surface in first-class ore all the way, so that it is only reasonable to suppose that the shoot (as the croppings are on the surface also) will last the whole of the way up, a distance of some 325 ft. The James tunnel, commenced some time ago, has reached the south vein, and this is the

TELEGRAM WE HAVE HAD THIS MORNING.

"James tunnel : The ledge is 6 ft. wide; $4 per ton ; ore will improve as drift progresses."

We knew perfectly well that where the tunnel did strike the vein there might be no ore at all, or it might be broken in any of the intermediate pieces of ground, because you do not drive to meet a small shoot. It does not follow it will go down straight. You drive in the most convenient way for working. I was quite prepared, therefore, when they first reached the vein to hear that it might be poor, but am pleased the telegram has taken this form. It is a positive assertion "the ore will improve as the drift progresses."

ORE RESERVES LARGE.

I think we may feel pretty confident that we have a large amount of ore in reserve at Uncle Sam—so large that I am justified in saying that at no one time in the history of the Buttes and Eureka Mines had we a larger reserve than we have at the present time in Uncle Sam. (Cheers.) Capt. Hosking has left our service, and the main reason is that although he knew perfectly well, and was told in the plainest language by myself when in California in 1882, that we would not tolerate our officers owning mines, or shares in mines, contiguous to our own, yet he has infringed this rule. We have seen far too much of how English companies have been treated when their officers have been allowed to hold shares in neighbouring properties. When Mr. Saul and I were out in 1890, although he saw us day by day, and evening by evening, it did not rest upon his conscience that he should be keeping secret from us the fact that he was president of a mine which is a continuation of our own. How are we to get a property worth having if the mining captain is interested in it? (Cheers.) If it is worth anything he wants his own share, and if it is not worth anything it often happens that an *employé* is only willing enough his master should have it. (Hear, hear.) That is a kind of thing we cannot and will not tolerate, and consequently his connection with the company is severed. Personally I liked the man, and I regret what has occurred, but it was inevitable. (Cheers.) I move the adoption of the report and accounts.

Mr. WRIGHT (director) : I second it.

VIEWS OF SHAREHOLDERS.

Mr. GROVE : As to page 41, you have not touched upon where Mr. Johns says he would advise paying $5,000 for the extension of Uncle Sam. Do you approve or disapprove of that? I am glad of the explanation you have given about Capt. J. Hosking, and commend the directors very much indeed for the course they have pursued. It is the only one you could pursue in a case of that sort.

The CHAIRMAN : We should be satisfied to give Mr. Vanoy $5,000 for the extension, but I do not know that he would be satisfied to take it ; but at all events he will wait long before he gets more.

Mr. PHILLIPS : Is it proposed to increase the stamping power at Uncle Sam ?

Mr. GROVE : The new work that I suppose you have approved of will be about $3,000.

The CHAIRMAN : That has been approved of, and also putting up more stamps.

The report was unanimously adopted.

DIVIDEND OF 1S. TO EUREKA SHAREHOLDERS.

The next resolution is "That a dividend of 1s. a share on the Plumas Eureka shares be paid to the holders thereof on and after 17th inst."

Mr. RYAN : I second the motion, and wish to express my strong approval of the way in which the affairs of this company have all along been conducted. I think we have in Mr. Tendron not only a

very valuable man as a miner—almost a practical miner—but we have had from the first an able financier, and the shareholders should congratulate themselves. Speaking as to Eureka alone—I think we have at the present time 25 per cent. of the original capital intact, and a reserve fund of 40,000*l*., and in the Uncle Sam another 25,000*l*.; and this too will amount to about one-fourth of the original capital of 280,000*l*. on the Eureka Mine. Our chairman has led us to expect a dividend of 1s. per annum on Eureka shares. There are 140,000 shares in Eureka, which would mean 7,000*l*. Capitalise that over 10 or 15 years and it would represent a sum far in advance of the 25,000*l*. we have paid for our moiety of the Uncle Sam. Why, then, should the shares be at such a low price in the market? If we were to wipe out the Eureka Mine as worthless it seems to me we have in positive cash a value representing more than the nominal quotation of the shares. (Hear, hear.)

The motion was carried unanimously.

The CHAIRMAN proposed, in complimentary terms, the re-election of Mr. Liddell, and the motion, on being seconded by Mr. HEYER, was carried, and responded to by Mr. LIDDELL.

The CHAIRMAN: I propose a most hearty vote of thanks to Mr. Johns and Capt. James, the officers at the mine abroad, and the secretary and officers at home for their zealous and energetic services on behalf of the company. A great deal of the credit for the purchase of Uncle Sam was due to Capt. James as well as Mr. Johns, and we have never had a hint that they ought to have a present or testimonial for what they did.

MANAGEMENT OF THIS COMPANY UNIQUE.

Prof. LAMBERT, in seconding the motion, said: My experience of mining companies is this, that you may have a splendid mine, but if it is badly financed the end is ultimate ruin. I think we must not forget that much as we owe to the staff abroad, we owe not a little to the directors at home. In 19 cases out of 20, if we had not had the present board, and the chairman at the head of it, this company, valuable as its property has been, would have been wound up. What has saved it has been the judicious putting aside of earnings in prosperous years to meet times like the present. Where should we have been if we had not the promising baby, Uncle Sam, when both its parents are practically dead? (Hear, hear.)

MR. TENDRON'S FUNERAL SERMON.

I regard the speech of Mr. Tendron as a funeral sermon upon Plumas Eureka, only he was putting it in such a way as to smooth down and assuage our anguish. (Laughter.) In all my experience of mining companies I am bound to say that the management of this one has been unique. (Cheers.)

The motion was carried unanimously.

The CHAIRMAN: I take it that that vote of thanks includes the directors, and we appreciate your kindly feeling and uniform courtesy very much. The Professor says that my speech is a "funeral oration on Eureka," but though I like to prepare you for the worst, I cannot help feeling hopeful both as to this mine and, in a limited degree, even as to the Buttes, but I must not allow my feelings to run away with my judgment. We shall not deplete the reserve fund to too great an extent, and, therefore, when you get a dividend such as has been declared to-day, you must bear in mind that it is not out of present profits but past earnings—in other words, capital coming back. (Hear, hear.)

THE ENGLISH ANTIMONY CO., LIMITED.

SATISFACTORY TELEGRAM RECEIVED FROM THE MINE—ENCOURAGING PROSPECTS.

THE ordinary general meeting of the shareholders of this company was held on Thursday, at Winchester House.

Mr. W. Rooke

presided.

Mr. E. FEWINGS (the secretary) read the notice calling the meeting, and said that the chairman would address the shareholders.

The CHAIRMAN said that he was very pleased to see the shareholders on that occasion, that being the first time he had had the pleasure of addressing the shareholders of the English Antimony Co. He was very pleased to meet them on the present occasion, although he was afraid that if the meeting had been held some months since his duty would have been a more painful one than it was at present.

IT WAS, THEN, QUITE A PLEASURE TO ADDRESS THEM,

as about four or five days ago the developments of the mine had proved beyond doubt that they had what the original directors of the English Antimony Co. had always believed to be there, namely, antimony in payable quantities, and an exceptionally good property—which they had always believed, having always gone fully into the reports. They had been shorn of two of their directors, owing to the pressure of their business. One, a solicitor, who had found that he was not able to give all the attention to the business that he would have wished, and the other had been obliged to go abroad, but Mr. Thompson, a friend of his, of great experience in all mining matters, had joined the board, which made the present number of directors three. At the time of the inception of the company, the present board of directors, and those who had retired, had nothing to do with the property, but before they took upon themselves the responsibility as directors of the English Antimony Co., they took the precaution to inspect the property. They found that it was impossible to work on the shaft already on the property, as if they worked two ways they would have been travelling into someone else's property. He took upon himself to personally survey the ground, and the board decided to sink a shaft about 200 fms. to the south of the old one, as they had been informed that the lode ran in that direction. The lode had been traced for about 15 fms., and they sunk the shaft 10 fms. at a considerable cost; and at 10 fms. they struck antimony, but no lode of antimony in payable quantities. They then held a council of war, or at least a committee of ways and means, as to what should be done, and it was decided to sink the shaft another 5 fms., when they drove out again about 40 fms., where they came upon five or six branches of good antimony, but nothing in the shape of the solid lode. Their next step was to consult Capt. Josiah Thomas, of Dolcoath, and to get some advice as to the direction in which they should drive, and the operations which they should carry out. With his counsel they sunk a trial shaft, about 30 fms. south of the old shaft, out of which a large amount of ore had been taken by the former proprietors of the mine. The work there had been as disheartening, as distressing, and as heart-breaking as a body of men had ever had to deal with until a few days ago, and in the interim they, as directors, had had to put their hands in their pockets for 2,502*l*. They had paid that 2,000*l*. odd and had received nothing in exchange, not having been interested in any way with the promotion of the company. They had done it purely for the interest which they had in the company, and with the result that on Apl. 12 the directors instructed Mr. W. H. Hosking to again inspect the property. The report had now come to hand.

The CHAIRMAN then read the following report:—

"Mining Offices, Newton Abbot, Apl. 14, 1891.

"Messrs. Rooke and Herbert.

"Gentlemen,—I again inspected this property last week, and am pleased with the new features developed in the recent explorations. Since my survey in November last the water has been pumped out of the trial shaft, which is 8 fms. deep, and situated near the northern boundary, and the operations that have since then been extended from the bottom of this shaft have within the last few days disclosed the fact that they have not been conducted on the main lode, but only on parallel branches, which from their uniform bearing and mineralized composition were mistaken for the main lode.

"From the accompanying section, which I have prepared to illustrate, the position of your workings and the lode, it will be seen that you have three branches west of your main lode. One of these—the No. 2 branch—was intersected in the bottom of the trial shaft, and a level driven 15 fms. on its course both north and south. Finding this drivage less productive than was anticipated, a cross-cut was driven eastward 4 fms., intersecting the main lode a day before my visit. At the point of intersection, the lode is 6 ins. wide, and will produce ½ a ton of antimony per fm. I broke several hundredweight myself from a piece that had been uncovered, and found the mineral to be of the richest kind and very concentrated, many of the lumps being quite solid, requiring only to be crushed down to make it ready for buying. This intersection of the main lode was effected at a point 15 fms. north of the trial shaft, and as this lode is standing only 5 fms. east of, and parallel with, the trial shaft, a cross-cut is now being driven there from towards it, and will, I think, disclose it equally productive at this point also, and as the ground is soft, enabling rapid progress, this should be proved within a week or 10 days, unless the lode is heaved further east by a cross-course, which is passing through obliquely in a north-easterly direction. The main feature, however, of this part of your property consists in the fact that those three western branches, or small lodes, are as shown in the sectional plan, converging towards the main lode in depth, and it is in that direction that your main chance of laying open a permanent quantity of antimony lies. As those branches fall into your main lode

THEY WILL INCREASE ITS SIZE, AND PROBABLY ADD TO ITS PRODUCTION,

and I, therefore, recommend you to sink your present trial shaft to reach this intersection as soon as possible. and from 8 to 10 fms. will effect this. The ground is favourable for rapid sinking, and the necessary depth can be reached in three months. This work will definitely determine the value of the lode, and decide you as to future operations, and I can add that it certainly, at present, has a strong promise of satisfactory results.

"(Signed) W. H. HOSKING."

The following letter, dated Apl. 16, had been received that morning from their mining captain:—

"Dear Sir,—I have forwarded the cost-sheet for the month ending Apl. 11, which will be due Apl. 18. The lode we discovered by driving a cross-cut east from the 8-fm. level, driven north of trial shaft, continues to look well. We are raising some splendid antimony from this point. I am daily expecting to strike the lode at another point by driving a cross-cut east of trial shaft. The ground is letting out a large quantity of water, which is a good indication of the lode not being far off. We have already discovered several small branches by driving this cross-cut, carrying some good stones of antimony. I have every reason to believe that all the branches we have discovered will come together in depth. The engine and all machinery is working well.

"J. JOLL."

The manager, although he was unaware that the meeting was to be held on that morning, and was connected with nothing except mining operations, had dispatched the following telegram, which had arrived just before the meeting:—

"WE HAVE THIS MORNING CUT SPLENDID LODE

of antimony in the cross-cut east of trial shaft.—JOLL."

(Applause.) He thought that that was a most satisfactory telegram. With regard to the present position of the mine, there had been engine houses, blacksmith's shops, and other houses erected on the property at a considerable cost, and a large amount of money expended thereon. There was one matter which happened last year, to which he thought he had better refer. It had been said that a telegram had been received from the mine stating that an extraordinary lode of antimony had been struck only 11 fms. from the surface, that had turned out not to be a lode, but they had taken rich deposits of antimony out, which had been forwarded to Messrs. Johnson and Matthey for sale. Capt. Hosking said in his report that the present lode would give ½ ton of antimony per fm.; 20 tons of antimony per month of 40 per cent. ore at the present price would give

5,000*l*. A YEAR NETT PROFIT,

after paying all expenses. He (the speaker) believed that they had at last reached a rich lode, which would repay them for their past labours. The directors had worked practically for nothing, and what money they had spent had been their own. Every shilling spent had been provided by the directors and their friends, including the expenses of development, of machinery, of erecting costly buildings, and even the wages. He did not, therefore, come before them on that occasion with any apologies, but simply with a straightforward statement. They had done all they could to put the property

in a satisfactory state, and when the results were obtained they would share and share alike. He would put the accounts before them, although they were somewhat of a personal character, the whole of the expenses having been borne, as he had stated, by the board. The share capital was 50,000*l*., of which 38,000*l*. went to the vendors; 1,100 shares had since then been allotted, and he thought that he was right in saying that that 1,100 shares had been allotted wholly amongst the directors with the exception of 1,00 shares, which had gone to a brother of one of the directors. Since Dec. 31, 1,030 shares had been placed, and they were arranging through brokers for the placing of the whole of the share capital of the company, or at least, he believed, it was now an accomplished fact. So in future they would not have to raise money themselves for carrying on the development of the company. There had been a great demand for their antimony, and they had received many letters applying for it; but they were bound to supply Messrs. Johnson and Matthey with all they could obtain for the first five years at market price. He concluded by moving the adoption of the report.

Mr. POOLE said that he had very much pleasure in seconding the adoption of the report. He thought that they were very fortunate in having such clever and experienced men at the head of their affairs as they had. He thought that they were much indebted to the chairman and directors for the labour which they had given to the affairs of the company, and he hoped that they would continue to have as satisfactory telegrams as they had received that morning. He would like to know what depth had been reached in the trial shaft? What was the quality of the metal, and also how long the present board of directors had been connected with the company?

The CHAIRMAN, in reply, said that the trial shaft had reached a depth of 9 fms., and Capt. Hosking estimated that they would get at the lode in three months. He (the speaker) might say, to use a vulgarism, that they could do it on their heads in that time. They sunk a fathom a week, and they had 7 or 8 fms. to sink. It was a simple sum how long it would take. The quality was between 40 to 45 per cent. He had before explained that two of the directors had been obliged to resign — Mr. Quick, a solicitor, and Mr. Terry, who had been obliged to leave for Morocco, and that Mr. Thompson had joined the board. The present board consisted of that gentleman, Mr. Herbert, and himself. Mr. Thompson joined the board about three months ago.

THE RESOLUTION WAS THEN PUT, AND CARRIED UNANIMOUSLY.

Mr. BIRD moved a vote of thanks to the chairman.

Mr. MARTIN said that he had much pleasure in seconding the motion, and he would like to add the other directors and the secretary, to all of whom they were equally indebted for the manner in which they had worked for the interests of the company since its formation.

The CHAIRMAN, in reply, said that on behalf of himself and his colleagues he must thank the shareholders for the vote of thanks. The whole of the board worked as one, and he trusted he would soon be able to meet the proprietors with a dividend.

The proceedings then terminated.

COLORADO SILVER MINING CO., LIMITED.

A DIVIDEND WOULD HAVE BEEN DECLARED HAD NOT ALL DEVELOPMENT BEEN PAID OUT OF REVENUE — AFTER YEARS OF WAITING THE SHAREHOLDERS OF THE COMPANY, UNDER MR. SMYTH'S ENERGETIC MANAGEMENT, MAY EXPECT DIVIDENDS.

THE third annual general meeting was held at the Cannon Street Hotel, on Thursday, to consider the report of the directors and the accounts up to Dec. 31, 1890, and to elect director and auditors.

Mr. Archibald J. Smyth

(chairman of the company) presided.

Mr. ERNEST E. PROBERT (secretary) read the notice of meeting, and the report of the directors was taken as read.

POSITION FULLY DESCRIBED.

The CHAIRMAN: Gentlemen. we have endeavoured in the report to give you, as clearly and as fully as possible, the true position of the company, and the few remarks I shall make will be based upon that document. It appears from the balance-sheet that the directors have been able to show a profit after the payment of all current expenses both in Colorado and in London, and that the liabilities of the old company, which stood in the last balance sheet at (1,933*l*. 9s. 5d.), have been reduced to the sum of £407 odd—(cheers)—and also that the balance which previously stood to the debit of profit and loss as 1,083*l*., has been reduced to the sum of 424*l*. 6s. 11d. Another matter of more vital importance to the company than the actual profit upon the year was the settlement, final and complete, made under the guidance of Mr. Shirreff (of the firm of Morley and Shirreff) —the settlement of various aud many disputes which existed for years past between ourselves and neighbouring mine owners. You are all aware of the difficulties that companies registered in London, owning miues in America, have at various times been subjected to by reason of suits, litigations, and jumpings, in consequence of their close proximity to the properties of American miue owners. I do not say that has been the fault of the neighbouring owners in our case—I think not, and therefore we had as far as possible to consult these neighbouring proprietors. Our difficulties were very great, and when I tell you, gentlemen, that we, as business men, sat at

THIRTY-FIVE BOARD MEETINGS FROM MAR. 25 TO JULY 12

last year—board meetings lasting from three to five and even up to six hours each, you may well imagine the labour we had to undergo, and had it not been for the arrival in London of one of the principal men who owned portions of the property adjoining us, I think we never should have been able to have settled those difficulties; but I am now in a position to state that they have been

FINALLY AND COMPLETELY ADJUSTED.

The difficulties we had to contend with were not so much the purchase price of the properties, as the arrangements between the owners, who were divided upon the point of selling. The ground in question lay immediately below our property, and the railway and river, or creek. This ground we have absolutely acquired. It is situated on the fall of the hill, and, naturally, all our waste ore fell on to that ground. Of necessity, this was choked up more or less with our *débris*, and we had to buy the whole of it. The railway runs through it, so that we have now an uninterrupted intercourse between our tramway and the railway. The Rainbow claim is some 3,000 ft. in length and 800 ft. broad in some places, and 500 ft. in others, so that we have made a purchase, which, although the cash price is very small, yet the value to us is incalculable. Had we waited a longer period before deciding the purchase, we should have had to pay a far higher price. As it is, the sum paid amounts to an outlay of 1,125*l*., and we gave shares as well. (Hear, hear.) The next matter we have to deal with is the amount of work that has been done during the year, and as that is somewhat mixed up with the amount of tribute which has been paid to those who extracted the ore, I propose to deal with that now to some extent to save time. The amount of work done for the year in sinking and driving has been considerable—1,972 ft.—and with the exception of $300 (60*l*.) this work has been

PAID FOR OUT OF THE MINE AND CHARGED TO REVENUE.

(Hear, hear.) That I desire to lay emphasis upon, and beg you will take note of it, for this reason, that it is a most unusual course. It is very much better, we know, to pay as we go—that is, to charge the balance-sheet with all the work that is done, but it is not always possible or expedient if you want to pay a dividend to do so. In this case *we have charged all this work to revenue account, and have driven 1,972 ft.* If you take the average cost of driving each one of these levels, both now and formerly, you will find it to be somewhere about $11 or $12 a foot. 1,972 ft., therefore, at that price (44s.), comes to 4,180*l*. That is the sum whfch has to be taken off the amount deducted from the sales of the balance-sheet and credited to tributers, 11,232*l*. 4s. 7d. We have sold ore to the value of 15,001*l*. 2s. 7d. The tributers have received 11,232*l*. 4s. 7d. out of that sum, leaving a net amount to the company of 3,768*l*. 18s., to which now I wish you to add, for argument sake, the sum of 4,180*l*., which is the actual cost we sbould have had to pay to drive these 1,972*l*. ft., had we done so on our own account. (Hear, hear.) That, gentlemen, we have not done. The tributers have done it for us, but we have allowed for it in the accounts. Therefore, you will be good enough to add 4,180*l*. to the 3,768*l*., and you will find it makes a sum of 7,900*l*. and a little over, which represents about 50 per cent. to the company—that is, we have worked at about 50 per cent. The railways of this kingdom are worked in a scientific and systematic manner, and I find the working expenses to be from 52 to 53 per cent. The chairman of a railway company thinks he has done very well if he has achieved such results. Formerly it was not so, but with the present system of accounts, they are able to control everything to the smallest detail, and bring them within that compass. I think the result of the year you will find very satisfactory. (Hear, hear and cheers.) Had we not charged that sum of 4,180*l*. we should have been

ABLE TO HAVE PAID YOU A SMALL DIVIDEND.

Now we come to the most important feature in the year's work, that is, the extension of the levels and the general exploration of the western ground, the improvement in which has now assumed a definite and permanent character. (Cheers.) The mineralised quartz has recently given place to fair grade ore—in fact, I may say, in one or two places to very high grade ore, so much so, that our latest accounts have given the ore value in the 8th level at 1,412 ozs. silver to the ton. (Cheers.)

THE WESTERN GROUND.

Now, gentlemen, with your permission, I propose to deal with this western ground, and I desire that you will carefully consider what I say upon that subject, for this reason—that we found our hopes, not entirely, but principally, upon the ground lying west of the main shaft. We have, as you are well aware, been working for 20 years, sinking the two shafts—the old Terrible shaft and the Silver Ore shaft—and driving the levels which are situated east upon those two shafts, and it is only due to the former board—particularly to Genl. Feilding and Mr. Richardson—to state that they were maiuly instrumental, with the assistance of suggestions made by myself and others, in commencing to drive this eighth level west.

IMPORTANT NEWS.

This eighth level west, I am happy to tell you, gentlemen, has uow come into solid ore. (Cheers.) Our last return from there gives 1,412 ozs., and I expect that this ore will increase in size and body as we continue our drift. My belief is founded upon the fact that on the east side of the shaft there was in these three levels such a body of ore. I have been looking to-day at the old reports, which show that that vein of ore was from 6 ins. to 8 ins. wide, and the average of the whole lot, without any sorting, was 167 ozs. You are, therefore, driving upon the same plane or parallel as you were there in that eighth level. The seventh and eighth levels were the two levels which paid off a debt of $40,000, and paid two or three dividends as well. Therefore, you have reason to hope, and believe, that you will get from this eighth level west a result, if not absolutely better, somewhat similar to that which you gaiued on the other side of the shaft, for these two chutes of ore (pointing to the plan) are merely separated by an intrusion of trap-rock, which has forced itself up into the formation and split the two like a wedge. This western ore-chute lies on the western side of the shaft, with the eastern on the east side and the wedge in between. The eastern ore-chute is not played out by any means; on the contrary, that ore-chute has crossed the shaft at the bottom, and we have it in the bottom of the shaft. We also have it in a winze (marked in blue on the plan), and we have what is

A NEW FEATURE IN THE MINE—

from ½ to 1½ ozs. of gold per ton in the bottom of the winze in the

eastern side of the shaft. The plan, which you see upon the wall, does not represent the whole of your property; it does not even represent 1-50th part of the ground which you have in store for future work. Immediately behind the Terrible lode, which has been traced for miles across the country, you have

THE BROWN LODE,

which is also the property of this company, with some others which are between and still further north. This Brown lode has proved itself very rich, and has given us a good deal of money from the surface workings. There is a cross-cut, which in the near future I hope to continue, driven from the 12th level to intersect the Brown at a very great depth—probably 1,800 ft.; but we are working now upon the Brown at the surface, as well as upon the Terrible, through the Brown and Mammoth tunnels, and we are extracting ore in good quantity and of a very fair grade—in fact, a higher grade than that which has been extracted of late years from the Terrible Mine. Our average taken from the Brown will run over 240 ozs. of silver to the ton. (Cheers.) Of course it is merely surface work at present, but we are going on working quietly in depth, and we have opened up a very large block of ground in this Brown property—a block of ground which is 600 ft. long by 380 ft. high, and from that I expect we shall receive very good returns; in fact, we are receiving them to-day. (Cheers.) We have recently met with a party of tributers who are willing to spend a sum of 2,000*l.* to drive levels and sink small shafts upon the W. H. Brown lode, situated to the north of the Coin and the Brown. We shall there receive a royalty, I think, of 20 per cent. clear, after all expenses are paid.

ROYALTIES.

That brings me to the question of royalties. We had, as you may have been aware, considerable doubt in our minds as to the expediency of letting ground on royalty on the one hand, or working the same on the company's account on the other. It is a very moot point. If you can receive a royalty of 35 or 40 per cent., and all the expenses paid, you will do well. The miners during the past year have opened up for us, as I said before, 1,972 ft. of ground, and in some cases the royalty has been over 30 per cent.; and I am happy to say that we have just concluded a bargain with respect to the seventh and ninth levels, above and below this rich eighth level, at 35 per cent. royalty, which I think is very good. (Hear, hear.) You will notice that our average percentage of silver has jumped up considerably. The average per ton of all the ore which we produced is 134 ozs. of of silver besides the lead. (Cheers.) Should the gold in the bottom of the eastern portion of the Terrible Mine turn out to be better than it appears at present (for I should tell you that it is not long since the discovery was made) we shall have a considerable sum in addition.

A PROBABLE GOLD MINE.

Many people believe that our mine in depth will change its character, as the copper mines in Cornwall do, and that we shall change from a silver mine to a gold mine. Upon that point, however, I am not quite clear, but, I believe, there may be a good deal of truth in it, and that we shall probably find considerable quantities of gold mixed with the silver as we attain a greater depth.

FINANCE.

You will notice in the balance-sheet that we owe next to nothing. Our creditors here are 145*l.*, and those in Colorado have been discharged out of the proceeds of the stock of ore, 244*l.* So that practically you have, gentlemen, a clean bill of health as far as debts are concerned. There is no debenture debt, and the whole of the property is freehold. It would take me all night to explain to you what the different lodes are, their bearings, their dips, and their angles. You have a property embracing in one sett

64 DIFFERENT LODES.

We are working about four or five of these—the Terrible, the Brown, the Coin, the Gunboat, and the Chelsea Beach; and we have now started upon a new one, the W. H. Brown, which is situated to the north of the Coin, and to which I referred a few moments ago. I shall presently have to submit to you a resolution, of which you have had notice, with respect to the claim made by the former directors for fees. In support of that resolution, I would say that Genl. Feilding, Mr. Richardson, Mr. Clarke, and the other gentlemen who composed the late board of directors, had a great deal of work to do—more than you can possibly estimate—and their time has been very much taken up with the business of this company, and I beg that you will consider that in voting upon the resolution. The chairman then concluded by formally moving the adoption of the report and accounts.

Mr. CHAS. R. DAWSON (director) seconded the motion.

GENL. FIELDING: I must congratulate the chairman and his colleagues upon the way in which they have carried this arrangement through with Mr. Hamill. I think that the company is doing remarkably well, and I hope it will continue to do so. It has my very best wishes, and the directors will always have my hearty support. (Cheers.)

ENTERPRISE URGED.

Mr. CRANE: Can the board give us any information as to whether it is intended to work any of these lodes ourselves, because I think the policy of the board, while safe and cautious, is at the same time a little wanting in enterprise.

50 PER CENT. GOOD ENOUGH.

The CHAIRMAN: In answer to Mr. Crane, I would point out in the first place that we cannot possibly, had we a million of money at our bankers, do better than 50 per cent. I do not believe that if Mr. Crane and myself were both sent out to control this affair in our own way that we should do any better than 50 per cent., therefore Mr. Crane's argument must fall to the ground on that score.

The report and accounts were unanimously adopted.

FORMER DIRECTORS' FEES.

The CHAIRMAN: The next resolution I have to move is "That the directors be, and are hereby, empowered to settle the claims of former directors in respect of fees in such manner as they may deem advisable in the interests of the company."

Mr. JOHN SLADE seconded the motion.

Mr. EALDEN: Over what period does this 407*l.* extend?

The CHAIRMAN: Four or five years, I think.

Mr. EALDEN: I do not see any fees put down for the present directors.

The CHAIRMAN: The present directors have not drawn anything. (Hear, hear.) The sum of 100*l.* which you see in the balance-sheet was drawn by the old board before they retired.

A SHAREHOLDER: Is this a proposition to pay the full sum, or to arrange it?

The CHAIRMAN: To arrange it as we think best.

A REWARD TO THE PRESENT BOARD.

Mr. JOHN PETERS: After the observation that has just fallen from the chairman in regard to the present directors' remuneration, I feel it to be my duty to say a word or two. I am connected with a few companies, and have had some experience, and, I say that if you are content to work without fees, the shareholders should not be content to allow you to manage a large business like this without any remuneration whatever. I think I heard you say that you held 35 meetings from the month of April to July last year, and that must have occupied a considerable portion of your time. I am a large shareholder in the company, and I shall be very pleased to vote some remuneration to the board for their services. I should say that 100*l.* a year to each of the directors is the least that we can offer you for your services. (Hear, hear.) I will propose that

Mr. EVANS: I beg to second the motion.

The motion was put, and carried.

FORMAL BUSINESS.

The CHAIRMAN: The retiring director is Mr. Chas. R. Dawson—a thorough business man. I have great pleasure in moving his re-election.

Mr. ROHDE seconded, and the motion was carried unanimously.

On the motion of Mr. ROHDE, seconded by Mr. BATES, the auditors, Messrs. Ball, Baker, Rowe and Co., were reappointed, at a remuneration of 20 guineas.

The CHAIRMAN: I wish to say publicly a word of thanks to Mr. Shirreff, the solicitor of the company, for the able way in which he assisted us in carrying through the arrangements, which seemed at first almost impossible, with the local owners in Colorado. These arrangements have been made complete and final. (Hear, hear.) I much regret to announce the death of our late secretary, Mr. Norris, who acted for us for many years. During his long illness of nine months Mr. Probert fulfilled the duties of secretary so well that we have appointed him to fill the vacancy.

The proceedings terminated with the usual vote of thanks to the chairman and directors.

NEW GOLD COAST EXPLORATION CO., LIMITED.

EXPEDITION ARRIVES AT ELMINA UNDER THE BEST AUSPICES IS COURTEOUSLY RECEIVED BY THE CHIEF, AND AT ONCE PROSPECTS FOR GOLD.

THE first general meeting (being the statutory meeting) was held at Winchester House Buildings, Old Broad Street, London, E.C., on Saturday.

Major Burnaby

(chairman of the company) presided.

Mr. CHARLES O. GREENWELL (secretary) read the notice of meeting.

A GOOD COMMENCEMENT.

The CHAIRMAN: Gentlemen, I am very glad to meet you here, particularly as we assemble under very promising auspices, Of course, this is simply the statutory meeting, which we have deferred till the latest day almost, because, as you are well aware, a business of this kind, 6,000 miles away, is not easily conducted, and your representatives not so readily communicated with, as in the case of many other companies whose works are only a mile or two from the head offices. It is now only four months since the company was commenced. The expedition left England Jan. 17, 1891, that is just about four months ago. It left under extremely good auspices. Everything was fitted out to the entire satisfaction of the very able men who are to conduct the actual workings at the West Coast, and it consisted of very important officers. In a climate like that of the West Coast it was very necessary to have a medical man, and the gentleman we have been so fortunate to secure is Dr. Kavanagh.

STAFF APPOINTMENTS.

In a climate like that it was very essential that we should get a man of his education and skill. Now, in addition to his ability as regards the faculty, he is eminently fitted for the post of commander. He is extremely interested in the business; he had only a short time previously visited the West Coast, and he is full of enthusiasm with regard to it, and he told me he believed it would be a most complete success. This was not only his opinion but that of others now present. In addition to Dr. Kavanagh, we have also a distinguished officer, who is an excellent surveyor. He had a great knowledge of prospecting, and we supplied him with the best instruments of that kind, so that I do not think we could have had a better man for that very essential work. Then we have an experienced miner—so experienced that he has been engaged for 33 years in mining in all parts of the globe. He has also worked on a district adjoining our concession, and was so much struck with the alluvial soil, that though he was working a quartz mine, he ultimately gave that up, because he thought the alluvial would pay him better. An arrangement was made with him of a satisfactory kind, for so convinced was he about gold in quantity being found in the alluvial deposit that he actually gave up an appointment, producing him a large annual income, merely to take half that salary and a small percentage of the gold, which he is quite sure will be found. I think that highly satisfactory. (Hear, hear, and cheers.) He took half the salary he was then receiving for the sake of getting 1 per cent. of our gold. We have an able man to look after the stores, the son of a distinguished officer, at a small salary, who keeps

the accounts, and holds direct communication by letter and telegram with the directors in England. The

EXPEDITION ARRIVED AT ELMINA

on Feb. 15, 1891; its members were all well and in good health, and we had a telegram on Feb. 22 to that effect. The stores were landed successfully at Elmina, which we also heard of in the same letter. Here comes a very important point at which we get assistance. We are 70 or 80 miles from Elmina, but the road is rough and in no sense can it compare with Old Broad Street outside. (Laughter.) It, therefore, takes a little time to get a runner over the ground with a message. The chief Tow Ashantio very courteously met the party, and conducted the members to their destination. The chief met the expedition, and proposed to assist them in what they were doing, and in addition to that gave Capt. Matthews and Dr. Kavanagh a very good idea that he

KNEW WHERE TO TAKE THEM TO WORK FOR GOLD.

The third portion of the concession has been obtained from Mr. Eminsan, as we hear by a telegram dated Feb. 22. That is important, and it is now actually conceded, so that the whole business is made clear. It is a great advantage to have obtained the services of Capt. Matthews, because he is a man of great experience, and has come to us under the favourable conditions I have named. (Cheers.) The character of our staff I think is exceptional, because it is composed of men qualified in every way. We have an eminent doctor to take charge of it, and so we cannot have the Humane Society down upon us. (Laughter.) Not only that, but they are all eminently clever, and I was perfectly delighted with them the evening before they started. They were full of enthusiasm, of health, and of ability. The conversation held between Mr. Matthews and the chief from whom the concession was purchased immediately before they started or arrived at Elmina is thus described in the letter:—"He has given us very good news regarding gold in the river bed, so we have rigged up sluice boxes and expect excellent results." We will have thus both the wet and dry processes. The machinery is entirely for dry earth. We saw an exhibition of it before it left England, and when I tell you what that machinery did in our presence you will be surprised. We put 3 dwts. of gold into 1 cwt. of earth, poured it into the top of the machine, and in 35 seconds those 3 dwts. of gold were separated and weighed out in the scales in our presence, and found to be precisely the same as when put in. (Cheers.) The machinery will work 75 tons a day, and we have two machines. We fitted up these sluice boxes so as to be able to work either by the wet or dry process. Mr. Matthews is very sanguine as to results. At our board meeting the other day I was rather disconcerted at the idea of not being able to give you something more explicit, but I think we can hardly expect more news. Still, after I had returned home from the board meeting I received from the secretary this telegram—which arrived most fortuitously a few hours before the meeting: "The machinery has arrived at the concessions; seven shafts sunk; large alluvial gold-bearing flat found; wolf-hunt." That is a code word with reference to financial instructions. I think that telegram is admirable. (Cheers.) The machinery would naturally take longer to advance into the interior than the head of the column, and therefore they preceded it. They did not waste time, but immediately went on, the prospector, the surveyor, and Capt. Matthews, saying, "We will devote our time to finding the best part to begin as soon as the machinery arrives." The reason we did not get an earlier telegram was no doubt because they had been dodging about the country with a view of seeing where they could get the quickest return. They waited only till they found a large alluvial gold-bearing flat, and into this they have sunk their seven shafts. (Cheers.) We have no other business, but I hope in a short time we shall have good accounts to render you.

A Shareholder: I propose a vote of thanks to the chairman, and can assure him that we hardly expected so much news to-day. I am satisfied with the very clear explanation he has given us.

The motion was seconded and carried unanimously, and the meeting ended.

THE CARDIFF AND SWANSEA SMOKELESS STEAM COAL CO., LIMITED.

RESOLUTIONS UNANIMOUSLY CONFIRMED, AND BY A LARGER MAJORITY OF SHARES THAN AT THE PREVIOUS MEETING—APPROXIMATE DATE OF THE DISTRIBUTION.

An extraordinary general meeting of the Cardiff and Swansea Smokeless Steam Coal Co. was held at the Cannon Street Hotel, Cannon Street, on Saturday, Apl. 11, "when the subjoined resolutions, which were passed at the extraordinary general meeting of the company held on Mar. 18, 1891, will be submitted for confirmation as special resolutions":—

(1.) "That the company be wound up voluntarily under the provisions of the Companies Acts, 1862 and 1867."

2. "That Paget Peploe Mosley, of 27, St. James' Square, Pall Mall in the county of Middlesex, chairman of the company, and William Thomas, of Bryn-Awel, Aberdare, in the county of Glamorgan, mining engineer, be and they are hereby appointed liquidators for the purpose of such winding-up."

3. "That an agreement dated Mar. 3, 1891, and made between the Cardiff and Swansea Smokeless Steam Coal Co., Limited, of the one part, and Cory Brothers and Co., Limited, of the other part, be approved and confirmed, and that the said Paget Peploe Mosley and William Thomas be authorised to carry the same into effect, and to do all acts necessary for that purpose."

4. "That the remuneration of the liquidators be the sum of 200 guineas each, exclusive of out-of-pocket expenses."

Col. Paget P. Mosley

(chairman of the company) presided.

Mr. Walter Curtis (secretary) read the notice of meetiug, and also the minutes of the meeting held on Mar. 18.

POINTS FOR SHAREHOLDERS TO REMEMBER.

The Chairman: Gentlemen, this is a purely formal meeting, and I have nothing to say beyond what I said at the last meeting. Every shareholder has had a notice sent him, which contains the conditions of the agreement, and the only thing I should like to mention, in order that it may go in the hands of every shareholder and prevent misunderstanding, is that under the agreement it is needful to remind you that the final distribution of the money coming from the Messrs. Cory Brothers cannot take place until after six months from this date, as those are the terms on which the agreement stands, and as soon as those six months have expired the liquidators hope to lose no time in making the final distribution. There is one other thing I wish to mention, which is that after to-day no transfers can possibly be accepted. I now beg formally to move the confirmation of the first resolution as above.

Mr. Bird: I secoud the motion.

RESOLUTIONS CONFIRMED.

The Chairman: It is carried unanimously. I now propose the confirmation of thc second resolution as above.

Mr. Bird: I second the motion.

The Chairman: That, too, is carried unanimously, and I now propose the confirmation of the third resolution.

Mr. Bird: I second the motion.

The Chairman: That is carried unanimously, and I propose the confirmation of the fourth resolution as above.

Mr. Bird: I second the motion.

The Chairman: That, too, is carried, and I am very much obliged to you for your attendance, and that concludes the last meeting of the Cardiff and Swansea Smokeless Steam Coal Co., Limited.

A Shareholder: I think, as the number we have to-day is limited, and we are so near a quorum, that the names of all present should be taken down.

The Chairman: That has been done already, but the board have taken every precaution to secure as representative a meeting as possible. I called the attention of the shareholders present at the last meeting especially to the fact that we must have a certain number present, and so we have invited a great many people to come, and to show that there is

UNANIMITY OF OPINION

on the matter I may tell you that the proxies exceed in number those we had at the last meeting. We then had two-thirds of the shareholders in our favour, and this time the proportion is still greater.

A Shareholder: It is very desirable that the shareholders should know we are so unanimous.

The Chairman: At the last meeting we had in our favour about 21,000 shares, but this time we have 22,123 shares, showing a considerable increase. I have only to thank you for your kindness in attending to-day and your uniform courtesy to myself.

The proceedings then closed.

NEW ZEALAND ANTIMONY CO., LIMITED.

COMMITTEE PRESENT THEIR REPORT AND THE MEETING IS ADJOURNED.

The adjourned ordinary general meeting (adjourned on Friday, Apl. 3) was held yesterday at Winchester House, for the purpose of electing directors, transacting the ordinary business of the company, and receiving the report of the committee appointed at the last meeting,

Mr. James Gibberd

presided.

Mr. Everard Calvert (secretary) read the notice calling the meeting.

The Chairman called upon Mr. Jackson (chairman of the committee) to read the report.

Mr. Jackson then read the report as follows:—

REPORT OF THE COMMITTEE APPOINTED AT THE ANNUAL GENERAL MEETING OF SHAREHOLDERS, HELD ON APL. 3, 1891.

We beg to report that we have conferred with the two remaining directors of this company at three several meetings, and we have also carefully considered the letters and reports received from Mr. Richardson and the manager of the mine, also the report of the meeting of shareholders at Wellington. We are unanimously of opinion that there is good ore in the mine, which when reached, will yield a substantial profit to the shareholders, but that up to now the lode in which the rich ore is deposited has not yet been reached. We think, therefore, that a determined effort should be made to re-construct the company rather than to go into liquidation, and thus lose all the money and labour which up to now have been expended, and the fruit of which would in such a case be reaped by the vendors, who would doubtless purchase the mine at a small price from the liquidators, who would be compelled to sell. We think, however, that the re-construction should only be proceeded with upon the following lines: 1. That a cablegram be sent at once to Mr. Richardson to stop all further outgoings of every description until the re-construction of the company is completed. 2. That all moneys to be obtained on the re-construction should be devoted exclusively to determined efforts to win the rich ore which undoubtedly is in the mine, and which alone can be remunerative, subject, however, to all existing obligations save the claim of the vendors. 3. That the 4,000*l.* claimed by the vendors should be taken by them in shares of the re-constructed company, and this should be a *sine qua non* with regard to re-construction. 4. That the winning of the low grade ore, and consequently the shipment be absolutely stopped, as it is perfectly clear that having regard to its poor quality and the present market price of antimony it can only be shipped here at considerable loss. 5. That on re-construction the expense of working must be considerably reduced, as with the staff of 50 men now employed, and inclusive of Mr. Richardson's fee, and that of the mine manager, we are paying at the rate of 1,000*l.* a month. 6. That on re-construction the board shall be augmented by the addition of three shareholders to the present directors. 7. Seeing that the directors here are absolutely without funds, and that an amount of 300*l.* is required for outstanding accounts, office, clerk's salary, and other expenses in London, it is a matter of necessity that this amount should be forthcoming, pending the arrangement for re-construction, and we venture to hope that the shareholders will cheerfully subscribe at the rate of 1d. per share for this purpose, which should be repaid

out of monies received for re-construction. 8. We are convinced that the assay of tbe ore made at the mine in New Zealand is incorrect, and that that obtained by tbe directors in this country can be relied on. Full particulars of the method adopted by the directors here for obtaining their assay have been communicated to Mr. Richardson. Dated Apl. 17, 1891. We are, gentlemen, your obedient servants, GEORGE G. ARBUTHNOT, H. A. BRETT, H. COMFORT, ARTHUR A. JACKSON.

The CHAIRMAN then read extracts of letters received from the property, giving a much more encouraging statement, and expressing the opinion that if the mine were properly worked success would be ultimately achieved.

The report of the committee was adopted, it being understood that a certain amount of latitude should be allowed in regard to the matter of the shutting down of the mine.

The CHAIRMAN stated that influential shareholders were *en route* for this country to negotiate on behalf of the colonial shareholders with regard to re-construction, &c.

The meeting then adjourned *sine die*.

THE BARRETT GOLD MINING CO., LIMITED.

ENCOURAGING STATEMENT—NUGGETS FROM THE PROPERTY EXHIBITED AT THE MEETING.

THE annual general meeting of shareholders of the Barrett Gold Mining Co., Limited, was held at the Terminus Hotel, Cannon Street, London yesterday, for the purposes following, namely:—1. To receive the annual statement of accounts and balance-sheet, and tbe report of tbe directors. 2. To elect directors and auditors, and to transact the ordinary business of the company.

Mr. John S. Prince

presided.

Mr. H. HODGES (the secretary) read the notice calling the meeting, and the directors' report, and accounts were taken as read.

The CHAIRMAN said: Gentlemen, before moving the adoption of the report and accounts, a few words on the work of the past year may be of interest to you, although the full and exhaustive nature of the report leaves me very little to remark upon. Tbe statement of account show the exact position of the finances, but I shall be glad to answer any questions, and explain any items that are not quite clear. Unfortunately, there is again a small adverse balance to carry to profit and loss, but we quite hope that when we have the pleasure of meeting you next year that the balance will be on the opposite side of the account. If you will refer to the Berlin working account, you will see how the principal part of the money spent this year is accounted for. Salaries and wages are more than last year, Kaffir labour having been more scarce and costly, and because an enormous quantity of hard work has been done, entailing the employment of a larger body of men. Mine, mill and repairs account speak for themselves, large quantities of stores and materials have been necessarily expended in the upkeep of the property, but with this result, that instead of having to write off a considerable amount for depreciation, everything in connection with mine, mill, tram line, &c., is in perfect order and repair.

"THE FEARFUL WEATHER."

Very heavy expenditure was entailed by the fearful weather in the early part of the year, bridges being swept away, and much damage done to the tram liue and other works. Turning from the subject of the account, I now proceed to offer a few remarks on the work of the year. Homeward Bound continues much the same as when last we met you. There is a vast mass of ore which, as far as at present ascertained, is, if low grade, too good to reject altogether, and too poor and mixed to allow of picking, all goes to the mill as it is, and the result is an average of about 2 dwts., a certain quantity of the gold being lost in tbe tailings. Whilst we were working this reef our manager decided once more to try the Rautenbach reef, and the result is that it has, for some months past, yielded an average of 4 dwts., whilst the two first trial crushings of 100 and 325 tons gave respectively 5 dwts. and 6 dwts. I may here incidentally mention that a return of 4 dwts. per ton more than covers expenses. Rautenbach has always been hopefully regarded by all those who have known the property in the past, although several previous attempts to discover payable ore have proved disappointing. We are now working from an entirely different point to that where previous work has been done, and our manager believes that we are at last in tbe right track. So far as already developed there appears to be an immense quantity of ore which, up to the present, maintains its character of 4 dwts., or thereabouts.

AN ERRATIC REEF.

This reef twists and turns about in a most erratic manner, and requires to be followed up and opened out before any definite opinion as to its extent or value can be formed. This much, however, our manager says, "that every week shows the reef or deposit to be more extended, and that he expects to work all this year from that source alone; there seems to be no reason to fear any giving out of either Homeward Bound or Rautenbach, and the quality of the ore is more likely to improve than deteriorate as depth is attained if the supply of ore continues as at preseut. The question of increasing our stamping power will soon have to be considered. By last mail we received from Mr. Acutt

THE LATEST ADVICES

to Mar. 17, as follows:—"Mine, mill, transport: All running well, though occasional stoppages absolutely necessary, owing to bad weather; 27 days incessant rain, and everything in a state of pulp. Bridges, water-races, dams, &c., standing the strain well so far. Baunister's reef: My work here leads to the conclusion that there is a body of ore certainly somewhat better than the Rautenbach. It might be well to put 500 tons through the mill. It is possible it would prove better than we can see at present. I will give the matter more attention as soon as the weather is better." I may here mention that the average yield of gold per month during the past year is about 177 ozs., and the returns for Jan. and Feb., 1890, were respectively 165 and 100 ozs., whereas Jan. and Feb., 1891, have produced 200 and 240 ozs. respectively—a very satisfactory increase, and which if maintained throughout the year would soon clear away the adverse balances to which I have already referred. During the early summer Mr. Acutt, our general manager, visited this country on leave of absence to recruit his healtb, and his presence here afforded the directors the opportunity of frequent consultations on all matters connected with the working of our property. Mr. Acutt also availed himself of every opportunity of inspecting the various descriptions of gold mining machinery now in use. To Mr. Acutt's energy and perseverance the board are only too happy to avail of tbis opportunity to bear record, and to congratulate shareholders upon having such a good all-round man to look after their interests. As to the Bankct formation—the finances of the company have not allowed of any deep sinking being undertaken. A lot of surface work has, however, been done, but whilst there is no reason whatever to doubt that the same formation which exists on the adjoining properties runs right through Antim; still, it is equally plain that unless prepared to spend a lot of money in actual deep mining our best policy is to keep quiet and await the results of development being carried on by others on the adjacent properties. And now as regards our alluvial prospects. The report tells you the finds during the past year have exceeded those of 1889, although during the last months of the year the run of the gold was temporarily lost. Since the turn of the year, however, fair finds have been made, including the

SEVERAL HANDSOME NUGGETS

which are now on the table for your inspection. The peculiar feature attaching to some of these specimens is that they are mixed with quartz in such a way as to induce the belief that they have been torn off a parent reef of marvellous richness, and that reef situated at no great distance from where tbe nuggets were found. The clear, sbarp points show that the gold has neither travelled far or been subject to the action of water. As a matter of fact they were found in high ground on a bed of yellow clay—no wash or gravel being apparent, and Mr. Acutt quite tbinks that he is approaching the spot from whence all the nuggets in the district come. Whether this theory is the correct one remains to be proved; but the mere fact that the company's property contains lumps of gold like these now presented to you cannot but be regarded as an eminently hopeful and satisfactory feature. Mr. Acutt is making arrangements for regularly working this ground throughout the year, and there is every reason to believe tbat "alluvial" will figure in our regular monthly returns. In conclusion, gentlemen, I would ask you to have a little more patience, remembering that with our limited capital we can only work gradually to develop what I firmly believe will eventually prove to be a most valuable property, and leave us a handsome return for the time, labour and money expended in its development. I sball be happy to answer any questions, and I beg now to move the adoption of the report and accounts.

Mr. REID: I will second it.

Mr. HILL: What is the depth of the reef.

The CHAIRMAN: I think it is

MORE A DEPOSIT THAN A REEF.

We heard from the people who had the property before, that there wasla good reef, but that the former owner had not properly timbered it, and it had fallen in. That, however, is only a rumour, and I give it to you as I heard it.

Mr. DODD:

I HAVE MADE A CALCULATION,
